1962 – Pause or Progress?

AFTER-EFFECTS of New Year festivities apart, it is difficult for the average citizen to feel otherwise than depressed as he contemplates the state of the world in general or the state of the British economy in particular. It would be remarkable indeed if Her Majesty's Ministers felt any differently from us lesser mortals for, although MR MACMILLAN can hardly be blamed for not ensuring universal peace throughout this unhappy world, he and his colleagues can be held largely responsible for the current state of the British economy. Since 1945 there has been only one really fundamental problem confronting the economy: how the country can live within its income. As 1962 opens, with one devaluation and three major sterling crises behind it, Britain is apparently no nearer achieving this particular goal than in the immediate post-war period. In 1960 the current balance of payments deficit totalled £344 million; in the first nine months of 1961 the deficit was £118 million and by the end of the year probably reached £200 million.

The significance of this improvement over the past twelve months can be better assessed when it is borne in mind that to ensure long-term stability the United Kingdom should be earning a surplus on current account of over £400 million annually. Hence the call in the last issue of the Bank of England's *Quarterly Bulletin* for an increase in Britain's exports of 10 per cent per annum over the next three years. The current account forms only part of the story. For the past three years, Britain has invested annually overseas about £200 million net; this despite the fact that the surplus on current account needed to finance this volume of lending has never been achieved. The overseas capital account would have looked even worse last year if it had not been for the Ford payment and an advance instalment by Western Germany of her post-war debt repayment. The publicity accorded the United Kingdom repayment of the International Monetary Fund loan and the fact that the gold and dollar reserves have reached a new high level is unfortunate, for they merely conceal the effectiveness of Bank rate in bringing foreign funds to London and mislead public opinion as to the true state of affairs.

Failure in recent months of British industry to take the opportunity of increasing its exports is especially disturbing. For some time now there has been sufficient slack in the British economy, especially in the engineering trades, for export orders to be met without encroaching upon domestic orders. Furthermore, for nearly two years British export prices have been competitive and more recently our biggest trade rival, Western Germany, has

started to experience the cost-induced inflation which has been so marked a feature in the post-war economy of the United Kingdom. Despite a small increase in British exports to Western Europe, the recent modest improvement on current visible account is due in the main to a reduction in the volume of imports.

In the flood of speeches, articles and Parliamentary discussion that has surrounded the 'pay pause' and the setting up of the National Council for Economic Development, the only point of any relevance – i.e. how they will help Britain achieve its export target – seems to have been largely ignored. Whichever way one looks at those twin pillars of MR LLOYD's policy, their effectiveness in 1962 remains a matter of doubt. The 'pay pause' provided a very temporary halt in the cost-push inflation of recent years, but has now become so riddled with exemptions and exceptions that in its present form it may well prove more of an obstacle to the formulation of policy than a help. In any case, it seems to have been forgotten that in a free economy, prices should be free to move; and wages and salaries are, after all, merely prices.

Assuming that the CHANCELLOR's conception of 'planning' is realistic, it is difficult to see just what will be achieved when the T.U.C. finally enters the N.C.E.D. Does anyone really believe that any impartial review of Britain's post-war economic record would differ, at least in its essentials, from that contained in the first ill-fated report of the Council on Prices, Productivity and Incomes? For if planning is needed in any one sector of the economy, where else is it more necessary than in the jungle of wage negotiation? Even if official trade union co-operation is achieved, possibly as a *quid pro quo* for the introduction of a capital gains tax and dividend limitation (any inconsistency between these two policies will doubtless be overlooked), can there be any certainty of co-operation from the rank and file as long as the sellers' market for labour remains? It is surely ironic that the major success against the 'pay pause' should have been achieved by MR FOULKES and his colleagues of the E.T.U.

This is the depressing background to MR HEATH's efforts to introduce Britain into the Common Market, and the recent G.A.T.T. report on international trade which stresses the continuing decline of Britain's share in world exports. It is at this moment that PRESIDENT KENNEDY is urging American industry to redouble its export efforts to strengthen the dollar, while Western Germany seeks to maintain the momentum of its economic drive by increasing its exports, despite the handicap of a revalued Deutschmark and rising domestic costs. The United Kingdom outlook is certainly serious but there are grounds for hope too. For example, rising world commodity prices should provide better markets for British exports among the primary producers. Surprisingly enough, Britain's competitive position is favourable, since during the past two years this country's costs have risen more slowly than those of its major competitors. If only the present relationship can be maintained, the export target may not seem quite so remote a few months hence.

There is no short-cut to achieving the expansion of exports upon which the future of sterling depends. Imports have almost certainly reached their nadir and if the British economy should revive, some expansion of imports is inevitable. Devaluation, whether it be *de jure* or *de facto* by means of a floating rate of exchange, is out of the question as a policy. It would merely initiate a chain reaction in which the present tenuous apparatus of international credit would be the first victim, while competitive devaluations elsewhere would rapidly eliminate any advantages devaluation of sterling might seem to confer upon the British economy.

A policy of trade restrictionism would be equally futile, because it would lead to retaliation, and destroy all the progress of recent years towards liberal trading policies. Some restriction on the Government's overseas spending is overdue, and a case for limiting the scale of private investment overseas can also be made out. At the same time Britain should encourage the less developed members of the Commonwealth to seek their capital needs from the international organizations, rather than from the heavily pressed Mother Country.

The purpose of the 'little Budget' last July was to give the Government an opportunity to evolve new policies and to provide the time to bring them into operation. At the present rate of progress the reserves may have gone, a 6 per cent Bank rate notwithstanding, long before MR LLOYD's plans come into effect.

Surtax Directions

APPORTIONMENT ON TIME BASIS

CONTRIBUTED

THE complications that can arise in relation to surtax directions and apportionments are numerous, as the recent case of *Spencer, Garside & C.H.W. (Huddersfield) Ltd v. C.I.R.* ([1961] T.R. 259) demonstrates. A number of important points were involved in that case, particularly on the question of determining the respective interests of the shareholders for the purpose of the apportionment, but before examining them it is as well to give a clear summary of the material facts, which are of a somewhat complex nature.

Material Facts

In setting out the facts, it may be advantageous to detail the relevant dates and circumstances in chronological order, as follows:

April 1st, 1956
Opening date of relevant accounting period. The company had a capital of £50,000, divided into Preference and Ordinary shares, the *whole* of which was held by four individuals.

January 31st, 1957
Closing date of accounting period. Net profits of the company for the accounting period April 1st, 1956, to January 31st, 1957, were £32,103. Shortly before this date all the trading assets of the company were transferred to new companies, the only remaining assets consisting of two sums of £25,000 and £279,000.

The four old shareholders ceased to hold any shares in the company on this date, their former shareholding being now represented by £60,000 worth of shares in the new companies and £219,500 of bills of exchange given by those companies.

The whole of the issued capital of the old company, i.e. £50,000, was increased by an additional £750 and was held as to nine-tenths by A.F. Co Ltd and as to one-tenth by S.I. Co Ltd.

The old company accordingly became a subsidiary of the A.F. Co which never was a section 245 company.

On this date also, January 31st, 1957, the old company ceased to trade and its accounts were shortly afterwards made up for the period April 1st, 1956, to January 31st, 1957.

February 14th, 1957
These accounts were adopted by the old company in general meeting. The company resolved to confirm the payment of the dividend on its Preference shares, but – and this is a point which should be noted very carefully – resolved to pay no further dividend on the Ordinary shares for the period ended January 31st, 1957.

August 27th, 1957
The Special Commissioners issued a notice under section 250 (1) of the Income Tax Act, 1952, requiring information which might lead to a surtax direction in respect of the period April 1st, 1956, to January 31st, 1957.

December 13th, 1957
At an extraordinary general meeting the company resolved to pay a dividend on the Ordinary shares, amounting to £34,000 net. The company still, however, had undistributed profits amounting to £54,800 odd.

July 7th, 1958
The Commissioners made a direction and an apportionment on a time basis. During 303 of the 306 days in the period which ended on January 31st, 1957, the four individual shareholders had held all the Ordinary shares, the two new companies holding these shares during the remaining three days. The apportionment accordingly was made on the basis of 303/306ths to the shareholders, and 3/306ths to the two new companies, in respect of the undistributed profits of £54,800 odd. In effect, therefore, practically the whole of the undistributed income of the company was apportioned to the four previous individual shareholders, notwithstanding, *inter alia*:

(1) the fact that they had ceased to have any further interest in the company before the last date of the accounting period to January 31st, 1957, their interest having ceased somewhat earlier in January 1957, when there had been a transfer to the two new companies as stated above; and

(2) the fact that a substantial dividend had been paid on December 13th, 1957, on the Ordinary shares, although, one might point out, the declaration of this further dividend had been made after the Commissioners had issued the notice requiring information, and the declaration itself was a complete reversal of the policy indicated by the resolution earlier in the year on February

19th, 1957, not to declare any further dividends on the Ordinary shares.

Was the Old Company a 'Subsidiary'?

The first important question was whether or not the old company was a subsidiary of the A.F. Co which held nine-tenths of its capital at the date when the take-over took place in January 1957; for if the old company could be regarded as a 'subsidiary' then it could not be a section 245 company and it would not be open to a surtax direction.

In determining this point, the further question had to be answered as to whether or not, assuming that an apportionment were made in accordance with the respective interests of the members of the company, more than half of the income of the company could have been apportioned to the four individual members, and accordingly among not more than five persons. If the answer to this question was in the affirmative, then the old company would have satisfied the first essential to be a section 245 company, in that it would have been under the control of not more than five persons for the purpose of section 256 (1) of the Income Tax Act, 1952.

The second essential, however, would be that the old company should not have been, at the material time, a subsidiary within the definition of section 256 (4). According to that subsection a company shall be deemed to be a subsidiary of another company, if by reason of the beneficial ownership of shares therein, the control of the company is in the hands of a company not being a section 245 company.

By the proviso to subsection (4), a company which is deemed for the purpose of section 256 to be under the control of not more than five persons shall not be deemed to be a subsidiary company, unless the circumstances referred to at the end of the proviso to the subsection, and which do not appear to be relevant here, are present. So that one is thrown back again on the question of control by not more than five persons.

The Time Factor

If, therefore, more than half of the company's income could have been apportioned to the four individual shareholders, the company would clearly have been a section 245 company. Now in this case the four shareholders, although they were shareholders and as such were interested in the income fund of the company during the larger part of the relevant accounting period (April 1st, 1956, to January 31st, 1957) had ceased to have any such interest before the end of that period.

The Court, however, held that it was sufficient that the person or persons on whom it was sought to make an apportionment had an interest in the income fund of the company during some part of the accounting period, even though they had none on the last day of that period.

This principle was established by the House of Lords in *Fendoch Investment Trust Ltd v. C.I.R.* (24 A.T.C. 41; 27 T.C. 53), although under a different provision, i.e. section 15 of the Finance Act, 1939. It was there held that an apportionment could be made under the extended powers of section 15 of the 1939 Act, against a person of whom it could be predicated that at any time in the year of assessment he was able to secure the application, directly or indirectly, of income or assets for his benefit

> 'to a greater extent than is represented in the value for apportionment purposes of his relevant interest in the company considered in relation to the value for those purposes of the relevant interests of other persons therein'.

In that case the taxpayer who had control of the company during part of the relevant accounting period, had ceased to have control at the end of that period, but it was nevertheless held that the apportionment against him had been properly made.

There are, of course, points of distinction between the *Fendoch* case and the *Huddersfield* case. The former was an investment company, while the latter was a trading company and the relevant statutory provisions were different. In the latter case the *quantum* was to be determined by reference to the respective interests of the members; in the former the *quantum* to be apportioned was such as appeared to the Commissioners to be appropriate.

The principles, however, that may be regarded as having been determined by the Court in relation to the above points were:

Firstly, that an apportionment could be made against any person who was a member of the company during *any part* of the relevant year, and that accordingly it was necessary for this purpose that he should have been a member on the last day of the accounting period;

Secondly, that the apportionment as far as *quantum* was concerned was to be made by reference to the interests of the members as they existed not at the end of the year but at the time when they were members.

The further point of interest in the *Huddersfield* case relates to the question of what is a reasonable

time in which the distribution must be made in order to avoid the impact of a surtax direction.

In the view of the Court, the relevant point of time by reference to which the question of reasonableness was to be determined, was the date of the resolution of February 14th, 1957, by which the company determined not to make any further distribution of income.

Section 245, it is to be observed, speaks of a failure by a company to make a distribution of a reasonable part of its income 'after the end of any year or other period for which accounts have been made up'. In the instant case, the accounting period ended on January 31st, 1957, and in the view of the Court, the reasonable time thereafter within which the failure to distribute took place ended with the passing of the resolution on February 14th, 1957. The fact that a distribution was made later in the year did not, in effect, cure that default.

In any event, the question was one of fact for the Commissioners, and on the evidence there was no reason to disturb their finding to the effect that a distribution had not been made within a reasonable time.

Conclusion

In conclusion, it should be pointed out that the Court left open the question whether it would have been sufficient for the Crown to establish that the company was not a subsidiary company, and therefore *ceteris paribus* was a section 245 company, by showing that at any time during the relevant accounting period ending on January 31st, 1957, the company was not a subsidiary company, even if it was a subsidiary at that date. (A point which on the facts it did not become necessary for the Court to determine.)

This case is one of considerable importance and should be carefully studied. If one may make an observation, would a surtax direction have followed had there not been the resolution on February 14th, 1957, not to make any further distribution of income? Would the Revenue, but for this resolution, have been satisfied with the further declaration of dividend on December 13th, 1957, after the service of their notice requiring further information? If the scales were evenly balanced, the resolution might have had the effect of tipping them adversely against the company.

THE ACCOUNTING WORLD

The Profession in West Germany

NEW FEDERAL REGULATIONS

by W. VOORS, Wirtschaftsprüfer

THE professional title of *Wirtschaftsprüfer* (public accountant) was established in Germany in 1932 by decree of the President of the former German Reich, and practising accountants were invited to sit an examination to acquire this qualification. At that time compulsory annual audits of the accounts of *Aktiengesellschaften* (public companies) by *Abschlussprüfer* (independent auditors) were introduced, and a stipulation was made that only *Wirtschaftsprüfer* were eligible to be auditors of public companies. Regulations for the exercise of the profession of *Wirtschaftsprüfer*, the protection of their title, their professional organization, etc., were simultaneously issued. These regulations, which were uniform in the entire former Reich, were replaced in 1946 by differing rules and regulations introduced in the several *Länder* (States) or occupation areas.

For several years past both the profession and the Federal and State Governments in West Germany have wished to introduce Federal legislation with uniform rules throughout the country covering admission to the profession, the duties and rights of public accountants, their association in partnerships and companies, their professional organization and disciplinary control. Not the least important reason for the need of Federal legislation was the fact that, under both the 1932 decree and the post-war *Länder* regulations, any *Wirtschaftsprüfer* admitted to the profession by one of the *Länder* was authorized to practise throughout West Germany.

Wirtschaftsprüfer are not the only and were not the first accountants to practise in Germany. The *Vereidigte Buchprüfer* (accountants not eligible as statutory auditors but permitted to practise as advisers and auditors of private limited companies and of other forms of business enterprises) exercised the accountancy profession for many years before

This article has been contributed by a member of the profession in Germany, with the knowledge and approval of the German *Institut der Wirtschaftsprüfer* We hope it will remove any misunderstanding of the new Federal German regulations to which difficulties of translation and compression may have given rise in the brief note on the subject in our issue of November 4th last.

1932. Their present Association has been in existence for sixty-five years.

New Act

Although, originally, separate legislation was envisaged for *Wirtschaftsprüfer* and for *Vereidigte Buchprüfer*, an Act has recently been promulgated covering both branches of the accountancy profession. This Act, which became effective on November 1st, 1961, provides certain facilities enabling *Vereidigte Buchprüfer* to become *Wirtschaftsprüfer*: they may, within seven years from 1961, take a special course of tuition and subsequently sit an oral examination to become *Wirtschaftsprüfer*. The intention is that, as no additional *Vereidigte Buchprüfer* will be appointed, the title will ultimately disappear. So long as *Vereidigte Buchprüfer* are in practice, most of the provisions of the Act will apply to them. In this article, where provisions of the Act apply to both *Wirtschaftsprüfer* and *Vereidigte Buchprüfer*, only the former are mentioned.

The new Act, dated July 24th, 1961, regulating the profession of *Wirtschaftsprüfer* which, as previously stated, came into force on November 1st last, comprises 141 sections, and briefly described below are matters contained therein which may be of interest to readers in Britain and elsewhere.

Appointment of *Wirtschaftsprüfer*

Wirtschaftsprüfer are appointed (*bestellt*) by the appropriate Ministry of the *Land* in which he or she intends to exercise the liberal profession of accountancy. Appointment is made following acceptance by an admission committee and the passing of an examination before an examination board.

A *Wirtschaftsprüfer* candidate must possess an academic degree (economics, law technical or agricultural) and must have had six years' practical experience in business, four of these in audit work (two of which in the service of a *Wirtschaftsprüfer*), before he can apply for permission to sit the examination. The demand of an academic degree may be waived for a candidate who has had ten years' practical experience in the service of a *Wirtschaftsprüfer*. The foregoing rules can be modified in special cases.

Examinations for *Wirtschaftsprüfer* candidates consist of a written, followed by an oral, examination.

Before being handed their certificate of 'appointment' *Wirtschaftsprüfer* must swear an oath confirming that they will exercise the profession of a *Wirtschaftsprüfer* conscientiously, that they are aware of their professional responsibilities, that they will not disclose knowledge gained in the exercise of the profession and that they will furnish impartial reports and opinions.

Association of *Wirtschaftsprüfer*

The association of *Wirtschaftsprüfer* in the form either of a partnership or in the managing board of a company is frequently found in Germany. Such partnerships or companies exercise the profession as a *Wirtschaftsprüfungsgesellschaft*. The right to practise in this way, either in the form of a partnership of or that of a company, also requires acceptance (*Anerkennung*) by the appropriate *Land* Ministry.

'Accepted' partnerships or companies formed by *Wirtschaftpsrüfer* may open one or more branch offices in Germany or abroad, but a sole practitioner may have only one branch office in addition to his or her main practice.

A *Wirtschaftsprüfungsgesellschaft* may be organized in any one of the following legal forms:

Aktiengesellschaft (A.G.) – a public limited company.

Kommanditgesellschaft auf Aktien (K.Ga.A.) – a public company with shareholders of limited liability and at least one shareholder with unlimited liability.

Note: In the case of these two types of companies only registered shares may be issued and the articles (statutes) must provide that transfers of shares are subject to the company's approval.

Gesellschaft mit beschränkter Haftung (G.m.b.H.) – a private limited company with registered shares.

Note: The articles (statutes) must provide that share transfers are subject to the company's approval; the share capital must be not less than DM50,000 nominal and must be fully paid up.

Offene Handelsgesellschaft (O.H.G.) – a partnership with unlimited liability of all partners.

Kommanditgesellschaft (K.G.) – a partnership with partners of both limited and unlimited liability.

Note: Partnerships must be registered in the Trade Register.

A company or firm which has been accepted as a *Wirtschaftsprüfungsgesellschaft* must include that word in its firm name.

The acceptance (*Anerkennung*) of any one of the foregoing types of organizations as a *Wirtschaftsprüfungsgesellschaft* is subject to the conditions that:

(1) in the case of the three types of companies, the board of management must be entirely composed of *Wirtschaftsprüfer*, at least one of whom must be a resident of the town in which the company is registered;

(2) in the case of the two types of partnerships, all partners with unlimited liability must be *Wirtschaftsprüfer*, at least one of whom must be a resident of the town in which the partnership is registered.

The following exceptions to these general rules are permissible:

(*a*) The appropriate *Land* Ministry, following consultation with the *Wirtschaftsprüferkammer* (the 'Chamber' of German accountants), may allow persons who are not *Wirtschaftsprüfer*, such as *Vereidigte Buchprüfer* (previously mentioned), tax advisers, lawyers or engineers, to be members of the board of management of existing *Wirtschaftsprüfer*-companies, provided their aggregate number does not exceed the number of *Wirtschaftsprüfer* in this board. A similar

concession may be granted to such persons to become partners with unlimited liability of existing *Wirtschaftsprüfer*-partnerships.

(*b*) The appropriate *Land* Ministry, following consultation with the *Wirtschaftsprüferkammer*, may allow persons, who are qualified accountants of a foreign country, to be members of the board of management of companies, or to be partners with unlimited liability in an existing *Wirtschaftsprüfer*-partnership, provided that the conditions of obtaining their qualification are in the main similar to those stipulated by this Act and provided that in such foreign country similar privileges are enjoyed by German *Wirtschaftsprüfer*.

The number of such non-*Wirtschaftsprüfer* board members or partners with unlimited liability, including those mentioned under (*a*) above, may not exceed that of the board members or partners with unlimited liability who are *Wirtschaftsprüfer*; for this purpose accountants with foreign qualifications, who are partners with unlimited liability in a *Wirtschaftsprüfer*-partnership but who are excluded from the management of the partnership, are not taken into account.

'Certificates', as required by law, issued by a *Wirtschaftsprüfungsgesellschaft* may only be signed on behalf of that firm or company by one or more *Wirtschaftsprüfer*. German accountants do not issue 'opinions' in the United States sense or 'reports (short form)' in the United Kingdom sense, but a certificate to the effect that the accounts conform to the legal requirements.

A public register of *Wirtschaftsprüfer* and *Wirtschaftsprüfungsgesellschaften* and on their branch offices is maintained by the *Wirtschaftsprüferkammer* (see below). *Wirtschaftsprüfer* and the representatives of *Wirtschaftsprüfungsgesellschaften* must report all changes of address within two weeks.

A *Wirtschaftsprüfer* may not engage in any trading activities, he must not enter the employ of anyone except a *Wirtschaftsprüfer* or a *Wirtschaftsprüfungsgesellschaft* or similar organization. As an employee of a *Wirtschaftsprüfungsgesellschaft*, a *Wirtschaftsprüfer* should have the legal position of a *Prokurist*[1], but he must be under no obligation to sign any document which he, as an independent practitioner, would not be prepared to sign.

A *Wirtschaftsprüfer* may undertake joint professional work abroad or associate with foreign accountants, provided such foreign accountants exercise the profession broadly in conformity with the standards foreseen under the Act. But *Wirtschaftsprüfer* must retain the right to carry out audit work prescribed by German law; in other words, he must be permitted to continue to act as a statutory auditor of an *Aktiengesellschaft*.

A branch office must be headed by a *Wirtschaftsprüfer* resident in the town where the office is registered.

Wirtschaftsprüfer must observe professional ethics on announcing the establishment of their practice and on accepting clients' instructions. Advertising is not allowed. They must insure against professional risks.

The Federal Minister of Economics may issue binding orders for fees to be charged for work required by law.

[1] A *Prokurist* is a person with a limited or unlimited power to bind his company or firm.

Wirtschaftsprüferkammer (Chamber of Accountants)

All *Wirtschaftsprüfer* and non-*Wirtschaftsprüfer* (including qualified accountants of a foreign country), who are members of the board of management of *Wirtschaftsprüfer*-companies and those members of a *Wirtschaftsprüfer*-partnership who have unlimited liability and the right to represent their firm, must be members of the *Wirtschaftsprüferkammer* (Chamber of Accountants). The recognized *Wirtschaftsprüfungsgesellschaften* are also members of the Chamber.

The Chamber supervises the professional activities of its members. It also furthers and protects their professional interests, advises its members on matters of professional standing and ethics and is authorized to issue rules for the exercise of the profession. In addition, the Chamber may organize the professional training and study of prospective members of the profession.

The *Wirtschaftsprüferkammer* should not be confused with the *Institut der Wirtschaftsprüfer*. The former is a legally recognized body of which membership is compulsory; membership of the latter is voluntary. The *Institut* renders those services to its members and fulfils those functions which are not specifically assigned to the *Kammer* by statute.

Disciplinary Control

If so requested, a member of the Chamber must attend a disciplinary hearing before the Chamber, its board or any committee appointed by it and is obliged to answer questions by the board or a committee, always provided that professional secrecy is observed. If the board of the Chamber then decides that an offence has been committed, it can pronounce a 'reprimand' where the offence is not considered serious and where a case in Court against the offender does not appear justified. An appeal against a reprimand may be made to the board and, if this is rejected, to a Court of law.

A *Wirtschaftsprüfer* who is guilty of non-observance of his duties may be cited before a special Court of law. Sentences may be either a warning, a censure, a fine (up to DM10,000) or expulsion from the profession.

A non-*Wirtschaftsprüfer* who is a member of the board of a *Wirtschaftsprüfungsgesellschaft* or a member with unlimited liability of a partnership may be likewise sentenced. As he cannot be expelled from the profession, he may be pronounced unfit to represent a body of *Wirtschaftsprüfer*.

The Courts of law, i.e. Ordinary, Appeal and Supreme Courts, will establish special divisions to

deal with cases concerning the professional activities of *Wirtschaftsprüfer*. Such special Court divisions consists of a Jurist-President and two *Wirtschaftsprüfer*.

Conclusion

Existing *Wirtschaftsprüfungsgesellschaften* which do not comply with the rules of the new law, have three years in which to achieve compliance (in exceptional circumstances eight years).

The Act prohibits the use of the title of *Wirtschaftsprüfer* by non-qualified persons and the use of additional unprotected titles (such as *Wirtschaftsberater*) by *Wirtschaftsprüfer*.

The Act does not create a professional monopoly. Anyone may continue or commence to practise accountancy and auditing in Germany, provided 'protected' titles are not used and, of course, such practitioners are not eligible as statutory auditors of *Aktiengesellschaften*, for which only *Wirtschaftsprüfer* are allowed to act. Other practitioners may, however, function as auditors of any other form of company or partnership for which, at present, statutory auditors are not required.

Weekly Notes

NEW YEAR HONOURS

IT is with pleasure that we offer our congratulations to those members of the profession whose names appeared in the New Year Honours List.

Mr C. H. Pollard, C.B.E., F.S.A.A., F.I.M.T.A., city treasurer of Kingston upon Hull until his retirement last month, and President of The Institute of Municipal Treasurers and Accountants in 1952, becomes a Knight Bachelor, as does Mr James Robert Lumsden, C.B.E., D.L., J.P., C.A., of Alexandria, Dunbartonshire, for political and public services in Dunbartonshire.

Five members of the profession receive the C.B.E.; they are Mr Leonard C. Hawkins, F.C.A., a member of the London Transport Executive and a member of the Council of The Institute of Chartered Accountants in England and Wales; Mr Hugh H. Goodwin, M.B.E., F.C.A., chief executive

Mr C. H. Pollard
Knight Bachelor

Mr L. C. Hawkins
C.B.E.

officer, Herring Industry Board; Mr J. Matson, F.C.A., managing director, The Monotype Corporation Ltd; Mr J. Dunlop, O.B.E., C.A., F.F.A., chairman, Scottish Health Service Council, and (in the New Zealand List) Mr C. H. Perkins, B.COM., F.P.A.N.Z., partner in the firm of Pickles, Perkins & Hadlee, Public Accountants, of Christchurch, and President of the New Zealand Society of Accountants 1946–47, for services to accountancy and education.

The O.B.E. has been awarded to Mr Herbert Wellard Archer, F.C.A., finance officer, British Red Cross Society; Mr J. C. Dickinson, F.C.A., who is resident in Sweden where he is a partner in the firm of Price Waterhouse & Co, Chartered Accountants, of Stockholm; Mr Herbert Kennewell, F.C.A., director, National Hosiery Manufacturers' Federation, and Mr A. R. Laurie, C.A., A.C.W.A., managing director, Welch Margetson & Co Ltd.

The M.B.E. has been awarded to Mr Frank Wild, A.I.M.T.A., treasurer, Trent River Board.

We also extend our congratulations to Sir Alexander Johnston, chairman, Board of Inland Revenue, who receives the G.C.B.

COMMON MARKET FREEZE-UP

ONE of the casualties of the cold spell has been a diplomatic one. The member-countries of the European Common Market failed last week-end to agree formally that the targets set for stage one of the implementation of the Treaty of Rome had been in fact achieved. The failure was over a common agricultural policy on tariffs, subsidies and price supports. On this issue it is Western Germany and France which cannot reach agreement. According to the treaty, in what may seem in this country an excess of formal and juridical zeal, ministers of the member-countries must agree formally that stage one has been completed before stage two can begin.

Much play has been made of the crucial nature of the date of December 31st, for the formalists would have it that failure to reach agreement on that date means a postponement of the beginning of stage two for a whole calendar year. If agreement can, however, be reached a few days after zero date it seems unlikely that a legal loophole cannot be found to cover the situation and there are reports that such a loophole has been discovered and that there will be agreement before the end of this month. Thereafter stage two will begin.

From this country's point of view, failure of the European Common Market countries to agree on

agricultural policy would make even more difficult negotiations for Britain's entry into the market. Opinion this week in London did not take a tragic view of the failure to meet the deadline in Brussels but expected agreement early in January which would enable talks with this country to proceed.

MORE PRODUCTION WITH LESS INFLATION

THE Engineering Industries Association, through its Financial Problems and Taxation Committee, has made representations to the Chancellor of the Exchequer in which it states that the main economic problem is to encourage a climate which is favourable to steady increases in efficient production and which does not produce inflation. 'The test is whether we can achieve a flexible and developing economy, in which expanding industries can grow healthily.'

On perhaps six occasions in the last fourteen years, successive Governments have been compelled to take relatively drastic decisions, to check or accelerate the tempo or direction of economic development. These measures, says the Association, have borne exceptionally heavily on the industries which could and should be expanding; for example, frequent credit restrictions affect development and exports, and there is the hindrance of hire-purchase restrictions and changes in purchase tax.

If the purpose is to foster a flexible and developing economy, the following measures would help, suggests the Association:

(*a*) The availability of reliable productivity indices for every sector of industry, so that wages negotiations can be related to increases in production.

(*b*) Further experiments with 'seniority pay', i.e. an element in wages calculation related to long and loyal service.

(*c*) 'Severance pay', falling not on the releasing industry and employer, but spread through National Insurance.

(*d*) More housing in expanding areas.

(*e*) A reform of the tax system.

(*f*) More effective taxation capital allowances, to encourage building and expansion of plant on a long-term basis: industry must plan development programmes some years in advance.

(*g*) A review of the whole system of apprenticeship, with small annual grants to firms undertaking training, on the basis long advocated by the E.I.A.

(*h*) Development of higher education, particularly at universities and colleges of technology.

(*j*) Investigation on 'portable' superannuation benefits, to facilitate the movement of management personnel.

(*k*) Further development of export finance in line with new commercial developments.

(*l*) A progressive reduction in Government expenditure (particularly on subsidies and, later, on defence) and a progressive reduction in taxation, with some movement towards a greater proportion of indirect taxation.

Small- and medium-sized firms continue to pay more profits tax than they did prior to the Finance Act, 1958, when they were entitled to non-distribution relief. The larger companies which customarily make annual dividend distributions are better off. The plight of the smaller companies which are most greatly reliant upon self-finance out of profits, was again accentuated by the increase in the flat rate of profits tax last year from 12½ per cent to 15 per cent. The Association again advocates the following adjustments to the exemption and abatement reliefs: (*a*) exemption of profits up to £5,000; (*b*) abatement relief to be one-third of the difference between the profits and £20,000.

Profits tax at the present rate of 15 per cent is far too high, the Association states, taking into consideration the fact that profits tax is a direct levy on the equity profits which are available for self-finance of industry. The flat rate should be reduced as soon as possible or alternatively the idea of a consolidated rate of corporation tax applicable to all companies (to cover the present income tax and profits tax) should be considered. In the event of a corporation tax being levied, some form of abatement for the smaller and medium-sized companies earning profits up to, say, £20,000 per annum should be devised.

B.M.C. AND ROLLS-ROYCE

THE announcement that the British Motor Corporation and Rolls-Royce are to enter into discussions about technical co-operation in motor-car engineering is intriguing but vague. Both companies have outstanding reputations in the field. The B.M.C. has a comprehensive distribution system to offer, great experience in mass production and a reputation for using modern techniques of management and cost control in production. Rolls-Royce have their unique reputation for batch production in cars.

So far as Rolls-Royce are concerned it is a long time since their cars made a significant contribution to their profits. Their big line is aero-engines, and even their diesel output far exceeds that of their cars. Their attitude to cars is largely pride in a quality product with an essentially limited market. Yet it is clear from the announcement that even this brand of nostalgia cannot hold out for ever against the corroding effects of high taxation. In other words, if a Rolls-Royce cannot be charged as an expense how are enough to be sold to make it worth while (on the most indulgent definitions of these two words) to keep expert and experienced teams of motor engineers together?

It is difficult to know which adage to choose. Does misery acquaint companies with strange bedfellows or is it true that necessity is the mother of invention – even when you start with an invention as good as a Rolls-Royce?

E.C.G.D. ACCOUNTS FOR 1960–61

DURING the financial year ended March 31st, 1961, the Export Credits Guarantee Department increased its credit balance on cumulative account for commercial business from £20,478,232 to £27,872,964.[1]

Premium income for the year was £7,454,981 (compared with £6,633,808 in the previous year). Operating expenses were £1,395,257 (compared with £1,361,923), while claims paid amounted to £4,020,298 (compared with £5,084,809) of which it is estimated that about three-quarters will eventually be recovered.

Guarantees given in the national interest 'for the purpose of encouraging trade with countries outside the United Kingdom' and outstanding amounted to £68 million (compared with £47 million): arrangements made under the same section 'for the purpose of rendering economic assistance to countries outside the United Kingdom' involved liabilities in respect of principal and interest of £157,766,011 (compared with £105,095,763).

This is My Life . . .

by An Industrious Accountant

CHAPTER 105

IT'S always interesting to study the impact that the accountancy profession makes on outsiders. The indications are that our neighbours sometimes misguidedly view us in a light that is far from accurate. So I turned to Charles Dickens to see how we looked a hundred-odd years ago.

True, most often he satirized the legal profession, as witness the long roll-call of names from *Bardell v. Pickwick* to *Jarndyce v. Jarndyce*, but few categories of contemporary English life escaped his searching glance. There are doctors, architects, patriots, publishers, thieves, rebels, poets, teachers . . . the list would fill pages. The only omission seems to be the auditor, so far as I have searched; it's rather disappointing.

But there *is* a tiny glimpse of our ancestor, the head book-keeper, and his functions, in *Nicholas Nickleby*. Nickleby *père*, it will be remembered, had died destitute, leaving his 19-year-old son to support a mother and sister; in those days starvation faced many such stricken and helpless dependants. So Nicholas sought manfully for a job.

His first effort was as assistant master at the infamous Dotheboys Hall with Mr Squeers, at £5 per annum and keep; his second with Mr Crummles' troupe of strolling players, who forecast buoyantly £1 per week and perhaps nearly double, 'if we had a run of good houses'. At the third attempt, he rang the bell.

The columns of *The Accountant*, though of ancient lineage, were not available in 1839, so Nicholas sought aid where a blue board inscribed in letters of gold proclaimed 'General Agency Office' where a long and tempting array of written placards listed 'unimpeachable masters in want of virtuous servants'. Outside the door, by a freak of chance, he met one of the Cheeryble twins; by a further stroke of luck, the brothers were even then seeking a clerk. They picked Nicholas.

It must be admitted that Dickens, perhaps in common with the Victorian middle-class, had but the haziest idea of commercial book-keeping duties. The Cheeryble twins, who started as barefoot boys, had made a fortune in their trading, but we only hear of 'a warehouse which presented every indication of a thriving business'. The staff, on analysis, turns out to be but four warehousemen and porters and Tim, an elderly clerk, in 'a little partitioned-off counting-house, like a large glass case'. He had worked there for forty-four years, in which time he had not slept out of the back attic one single night. It was time to groom his successor. Nicholas was to receive £120 per year, a little cottage rent-free, and a couple of small loans (non-repayable); he has arrived.

Nor do his duties appear to be onerous. For two weeks 'all his spare hours were incessantly devoted to acquiring the mysteries of book-keeping and some other forms of mercantile account'. He then reports his proficiency (Final exam students may note the bogey for the course in those unenlightened days), and is allowed to make his first entry in the massive ledger. It is a momentous occasion for Tim – 'suppose there should be any mistake – any scratching out!'

Tim turns pale, the brothers come to watch, Nicholas wields his quill; after a tense moment he is approved rapturously. 'His capital B's and D's are exactly like mine', cries Tim. He never looks back and the last chapter tells of the firm of Cheeryble & Nickleby. Clearly his fortune is made also, but we never learn any more than this outline of the duties of a chief accountant in 1839, which seems a pity.

G. K. Chesterton said in his glowing eulogy of Dickens: 'There may be any number of shabby swindlers in fiction; but there is only one who said, after unsuccessful attempts to borrow five shillings and half a crown: "why, then we come to the ridiculously small sum of eighteenpence." ' If each shilling was a million pounds and Dickens had described the steps taken by an auditor to foil and expose the swindler, it would have heralded admirably the arrival of the profession in the business world.

Reviews

Cost Reduction Guide for Manufacturing Management

by E. E. WYATT and H. CLIFTON MORSE (Wyatt & Morse Inc., $18). Distributed by Hitchcock Publishing Co, Wheaton, Illinois.

If one asks how costs are controlled in a manufacturing business, the most frequent answer is in terms of budgetary control and standard costing. The value of these methods, from the point of view of minimizing costs, will obviously depend on the basis used in setting standards. Provided that current selling prices show a reasonable margin of profit when compared with current standards it is possible that no great pressure is brought to bear, in many cases, on the improvement of the standards. If standards are loose, it is clear that income margins are being dissipated; in other words, that 'cost control is not in fact effective, and what is needed is a positive effort for *cost reduction*'.

Accounting control is indeed one tool of cost reduction, but, as the authors of this book point out, to take a strictly accounting approach to cost reduction is to confine cost reduction efforts to only one group of experts, and to ignore the talents of other members of the organization. Top management exhortation, the establishment of non-accounting standards, the standardization of forms, equipment and procedures, work simplification and other methods of operations analysis are all tools for cost reduction; but one to which high importance must be given is the asking of questions.

Nearly half of the volume under review is devoted to the tabulation of over 1,200 questions related to the cost-efficiency of every aspect of a manufacturing organization; and there can be few businesses which would not find here some suggestions by which the efficiency of their work could be improved.

Taking a few of the 175 questions dealing with financial control, one finds, for example:

> Are the methods used for obtaining burden rates sound in the light of today's operations?
>
> Is inventory investment in each major area warranted by profits?
>
> How does your company compare, currently as well as in the past, with competitors, as to ratio of inventory investment to sales, current ratios, etc.?
>
> Is unnecessary expense incurred in capitalizing many low-cost items?

The main questionnaire is supplemented by specimen wall charts displaying causes of waste on which junior management action is possible.

The remainder of the book gives suggestions for the organization of a cost reduction programme and illustrates it with case histories. Cost reduction is classified into: waste prevention; operations analysis; feed-in of new ideas; and each class is examined in detail.

It is possibly in the method of organizing cost reduction, by the appointment of a cost reduction co-ordinator and a series of cost reduction specialists in the various units of the business, where the reader outside the North American field will find himself least in sympathy with the authors' approach. Departmental managers as a whole are jealous of their autonomy. They feel that they are appointed to do a job and should be trusted to do it effectively without the interference of 'specialists' having no higher qualifications than they themselves.

As far as Britain is concerned, it is possible that this attitude is as typical of, and as damaging to, industry and commerce as the equivalent attitude is to British sport. As it was recently expressed in a national Sunday paper, 'we prefer the natural athlete, the man who wins by sheer innate ability with the minimum of preparation or effort'.

The great advantage of making a cost reduction programme the specific responsibility of selected people is that they can give undivided thought and attention to its responsibilities. The authors of this book have no doubts on the subject. They state unequivocally that 'a planned company-wide approach which places company cost reduction activity on a level with other major organizational functions is the most productive approach'.

It is possible that in bringing to the reader these hard fruits of experience the authors will provide their most valuable service.

The Structure of Industry in Britain

by G. C. ALLEN, PH.D., M.COM. (Longmans, Green & Co Ltd, London, 12*s* 6*d* net.)

The contents of this book, which are intended primarily for the economics undergraduate, are better described by the sub-title – 'a study in economic change'. Professor Allen does not so much describe the present state and structure of British industry, although that emerges very clearly from the text, as show the various forces which have moulded it over the past century and a half into its present form. In this context the role of Government intervention has been all important and Professor Allen has much to say about this. He is disturbed by the growing tendency of governments to provide financial assistance to decaying industries, just as he is aware that political considerations often frustrate the development and implementation of sound commercial policies for the nationalized industries.

As a member of the Monopolies Commission the author has strong views about the decline of competition before the war which often took place with the Government's blessing. He is of the opinion that the 1956 Restrictive Practices Act has dealt a death blow to cartelization in British industry but believes

that the full effects of this legislation will not be apparent until a new recession brings about tougher competition. This is a readable summary of academic thinking of trends in British industry.

Economics

An Introductory Analysis. *Fifth Edition*, by PAUL A. SAMUELSON. (McGraw-Hill Publishing Co Ltd, London. 58*s* net.)

The appearance of this new and revised edition of this popular textbook serves as a reminder, in case any were needed, of the excellence of a text which has probably sold more copies throughout the world than any other comparable economics book. Quite apart from the beautifully clear type, the excellent lay-out and division of the text, as well as the coloured diagrams, this book owes everything to the remarkable facility with which Professor Samuelson has contrived apparently to concentrate on those branches of economics which the student is anxious to study, yet to provide at the same time an understanding of the theoretical analysis. Each chapter is summarized to enable the student to refresh his memory and there are questions which enable him to test his understanding. This is American textbook writing at its very best.

Price-level Adjustments of Financial Statements – An Evaluation and Case Study of Two Public Utility Firms

by ELDON S. HENDRIKSEN, B.S., M.B.A., PH.D., C.P.A. (Washington State University Press. $4.)

In the United States, as in Britain, the view that depreciation should be based on the historical cost of assets receives official support, although there also, in certain limited fields, it is accepted that depreciation should reflect current price-levels.

The argument for the latter view is that it shows whether progress in real, as opposed to monetary, terms is being made or not, i.e. gains or losses arising merely from changes in prices do not obscure the accounting results. What militates against the use of replacement costs is the difficulty of choosing a consistent and acceptable price index.

In this book, Professor Hendriksen works out the effect of applying no less than six different indexes to the figures for the years 1937 to 1956 for two public utility concerns. The figures he studies are net income, investment in plant and equipment, return on investment and certain current assets and liabilities.

The results so obtained vary very much depending on the index used, and illustrate some of the difficulties of selecting a suitable index. Apart, therefore, from stating admirably the theoretical case for adjusting for price-level changes, Professor Hendriksen, by actually working out the effect of applying different indexes, emphasizes one of the main problems connected with this subject.

Slater's Mercantile Law

Fourteenth edition by LORD CHORLEY, M.A., Barrister-at-law, and O. C. GILES, LL.M., Barrister-at-law. (Sir Isaac Pitman & Son Ltd, London. 30*s* net.)

It is five years since the publication of the previous edition of this well-known vade-mecum into the realms of mercantile law. In that time the Restrictive Trade Practices Act has been passed, as well as the new Copyright Act, which have involved some rewriting, not to mention the Cheques Act. The chapter on insurance has been recast to bring out the common features of several branches of this law. In the corresponding chapter in the previous edition the stamp duties on the various policies were set out, but now all reference to stamp duty is omitted from this chapter, although stamp duty is still mentioned in relation to receipts and to agreements under hand. This may mislead some students into thinking that where no stamp duty is mentioned, none exists, which is far from the truth. The sixpenny agreement stamp is mentioned only in relation to guarantees, where the following sentences occur:

> 'A guarantee, like any other agreement under hand, requires a sixpenny stamp. The document must be stamped within fourteen days of the date of the guarantee.'

A guarantee is not necessarily under hand. An agreement under hand does not necessarily attract sixpence duty; it may be more or less, depending on the facts. Finally, the time limit for stamping was extended from fourteen days to thirty days in January 1956. As regards bills of exchange, whose very validity depends on their being stamped, the necessity for stamping is mentioned only by the way in relation to foreign bills. Perhaps in a book of this kind the safer course is not to attempt to deal with stamp duties at all.

The Theory of Capital

by Professor F. A. Lutz and Professor D. C. Hague. (Macmillan & Co Ltd, London. 50*s* net.)

The ninth conference of the International Economic Association in 1958 was devoted to a discussion of the theory of capital. This is undoubtedly one of the most unsatisfactory branches of economic theory and the thirteen papers comprising this volume, together with a summary of the discussions following each paper, did little to produce a synthesis of ideas, much less a new theory.

The impact of the new concept of the capital-output ratio is clearly evident but empirical evidence in support or otherwise of the theory was inadequate, not least because of the unacceptability of some of the statistical material adduced in its support. It should be stressed that all these papers are at a very high level of sophistication and, unlike preceding volumes in this excellent series, are of interest only to the specialist.

Business Consortia

by A. Harding Boulton, LL.B.(LOND.), F.C.I.S. (Sweet & Maxwell Ltd, London. 30*s* net (U.K. only).)

The content of this slim volume would have made several useful articles in one of the publisher's journals and in this way would have enjoyed a wider readership than is likely in its present expensive format. The subject-matter is the business consortium formed by a number of companies or other types of business undertaking for the carrying out of contracts in which their diverse skills must be merged.

An outstanding example in this country is the grouping of the electrical and heavy engineering combines specializing in atomic energy plants. Similar consortia have been formed in other industries and in most of the main European countries. The author sets out the main problems of management as well as the legal considerations which confront the consortium, but throughout this quite interesting study one is left with the impression that the really important and new contribution of the work could have been contained in a couple of long articles.

Whillans's Tax Tables and Tax Reckoner 1961-62

by GEORGE WHILLANS, F.I.B. (Butterworth & Co (Publishers) Ltd, London, 1961. 5*s* 6*d* (5*s* for six–twenty-four copies; 4*s* 6*d* for more than twenty-four copies.)

These well-known tables are in precisely the same form as last year except, of course, that there are minor changes in figures and 1961–62 now figures as the important year. There is an addendum showing new rates of National Insurance contributions, which can be stuck on the tables at the appropriate place.

When My Girl Comes Home

by V. S. Pritchett. (Chatto & Windus, London. 16*s* net.)

When looked at through the microscope, insects scarcely visible to the naked eye become creatures of enormity with distinct and often eccentric personalities. This also is what happens to the ordinary men and women upon whom Mr V. S. Pritchett concentrates his perceptive gaze. Further, in each story, the main character has a problem which appears to be magnified in keeping with the personal image which his creator projects on to his pages. That preoccupying the mind of Charles Peacock, attending a professional annual dinner in the Midlands (as recounted in the second story in the book, entitled 'The Fall'), is the overwhelming personality of his famous actor-brother, Shelmerdine.

Mr Pritchett brings about the discomfiture of his puppet deftly, but with a certain compassion. With the assembled guests in the mass, however, he is rather less than kind. There is 'the bullocky noise of two hundred-odd chartered accountants in black ties' taking their aperitifs and the laughter greeting the after-dinner speeches comes from 'a pack of wolves, hyenas, hounds in dinner jackets'. Would a gathering of authors or critics sound any less bovine in the bar? Does the broadcast laughter which emanates from the glittering company at Royal Academy banquets sound any less gregariously animal? Perhaps Mr Pritchett chose accountants because he regards them as the exact antithesis of actors. At any rate, it is not a very flattering glimpse of the profession *en fête* which he gives to his readers.

The Hospitals Year Book, 1962

Editor: J. F. Milne, M.C., B.SC.(ECON.). (The Institute of Hospital Administrators, London. 63*s* net; by post 65*s* 9*d*.)

The new edition of this work of reference has again undergone a thorough revision planned to provide up-to-date and authoritative information for all branches of administration and management in the hospital and allied services. The hospital directory sections give full particulars of hospitals and hospital authorities in Great Britain, Northern Ireland and the Isle of Man. Other sections provide details of hospital finance, Government departments and statutory bodies, organizations concerned with hospital and health services, local health authorities, executive councils, the National Health Service, Whitley Councils, and hospital contributory and provident schemes. The substantial reference section includes notes for hospital administrators on legal, technical and general subjects, as well as detailed indexes to statutory instruments. As in previous years, the final section consists of a comprehensive guide to hospital purchasing.

In his review of the hospital service during the past year, the editor discusses the hospital building programme, the effects of the Mental Health Act, 1959, the aspects of the geriatric services, the welfare of patients, and the continued activity of the central O. and M. unit at the Ministry of Health, which has now widened the scope of its work. The publication of abstracts of efficiency studies is, he says, enabling the results of studies of general interest to become widely known throughout the service.

Finance and Commerce

Rolls Razor

THE reprint in this first issue of a new year features what would appear to be the last accounts of Rolls Razor Ltd, as the company has been known since its formation in 1927 to make and market the Rolls razor – the last word in safety razors of the time. Since then the introduction of the electric shaver has largely revolutionized the shaving situation.

Note 2 on the accounts shows what is now happening regarding the company. The option held since December 31st, 1960, to acquire the capital of the Electromatic Washing Machine Co Ltd, is being exercised with effect from January 1st, 1961. A yet further recent development has added a dishwasher to the company's products. Rolls has, with Charles Colston Ltd, gone fifty-fifty with Sir Charles Colston (a one-time Hoover chief) in a new £¼ million subscribed-capital company which takes over his company's automatic dishwasher, to which will be applied the 'Electromatic' direct-selling-to-the-public system. 'Electromatic' washing machine sales are approximately 40 per cent cash and 60 per cent hire-purchase.

In these circumstances, the Rolls accounts are very properly accompanied by a statement on the financial position of Electromatic as reported by its auditors. This statement forms part of our reprint.

Growth

Rolls ceased to be a 'quoted' company when Mr J. Bloom, who developed the Electromatic business in such short time, acquired an interest which is now just over one-third of the capital. Mr Bloom, with the exercising of the option, receives a further £100,000 in the form of two million 1s Rolls Deferred shares. His rise to business fame dates only from August 1958 when his Electromatic company was formed to import washing machines from Holland to sell direct to the public.

Initially, the machines were imported complete; then, later, without motors which were bought in England. In January 1960, an agreement was entered into whereby Rolls became exclusive manufacturer of the Electromatic machine, the price to be manufacturing cost (as defined) plus 10 per cent. A new agreement in the following October imposed a maximum price for each type of machine manufactured with effect from June 1st of that year.

Electromatic also operates as Cricklewood Finance Co, a hire-purchase division handling a proportion of the company's hire-purchase business; and

Electromatic owns 51 per cent of the issued share capital of E.M. Central Heating Ltd, recently incorporated to develop domestic heating and which purchases its appliances from Rolls.

Interim accounts of Rolls and Electromatic, it is stated, have been prepared for nine months to September 30th, 1961, showing a net profit after depreciation, of approximately £280,000, achieved on washing machine sales averaging 1,100 a week for the first quarter, 1,300 for the second and 1,400 for the third. Sales are now running at 1,700 a week with an outside sales force of 170. With the submission of the 1961 accounts, application will be made as soon as practicable for re-grant of share quotation.

Shares for Employees

CURRENT interest in shares for employees justifies the inclusion in this column of the broad lines of a scheme being introduced from the beginning of this new year by Campbell's Soups Ltd. The company is the first overseas operation of the Campbell Soup Co of America, 'the largest maker of soups in the world'. It began operations at King's Lynn in 1959.

The scheme is a voluntary one which provides a means for employees to save up to 10 per cent of earnings. For every £1 of the first 5 per cent, the company adds 8*s* which is invested in the parent company's stock. Employees, each "plan year", can decide on the same investment for their own contribution or choose one of two British Government securities selected by bank trustees to whom is turned over for investment the employees' and the company's contributions.

Partial withdrawal of both contributions is permitted, the employees are told, 'from your account for any "plan year" that ended at least three years before.' Total withdrawal at current value is permitted subject to forfeiture of the company's portion and related earnings for the two previous years. Employees who leave the company withdraw in full either the British Government or the Campbell Soups stock. But, they are warned, stock-market prices fluctuate. 'The company does not guarantee the value of your investments.'

Answering Questions

On taxation, employees are told that their own and the company's contributions will be subject to income tax 'but, says the company, as you have no vested right to receive the company's contributions until the expiration of twenty-four months after the date each contribution is made, the Inland Revenue has ruled that the company's contributions do not constitute taxable income to you until the end of that period'. The assessment, therefore, in 'year three' is on the value of the company's contribution of 'year one', value being determined according to the dollar market value of Campbell stock during the tax year in question on the New York Stock Exchange converted into sterling at the rate of exchange applicable to reinvestment dollars.

'The Personnel Department will be glad to answer any additional questions you may want to ask', the company helpfully tells its workers – and it would not

NOTES ON ACCOUNTS

1. INTEREST IN WHOLLY-OWNED SUBSIDIARIES

The active Subsidiary ceased to trade in May 1959, and the Directors consider that, in view of the insignificant amounts involved in accounts of the Subsidiaries, group accounts would be of no real value to Members of the Company.

Expenses incurred by the Subsidiaries in 1960 amounted to £252; in the accounts of the Holding Company a corresponding amount has been written off the Interest in Subsidiaries, which, at 31st December, 1960, was represented by a Bank Balance of £884.

2. OPTION TO ACQUIRE ELECTROMATIC WASHING MACHINE CO., LTD.

At 31st December, 1960, the Company held an option to acquire the whole of the issued share capital of Electromatic Washing Machine Co., Ltd., for an amount not exceeding £100,000 to be satisfied by the issue, at par, of fully paid Deferred Shares of Rolls Razor Ltd.

GENTLEMEN,

Re: ELECTROMATIC WASHING MACHINE CO., LIMITED.

We have examined the books and audited Accounts of Electromatic Washing Machine Co.,'Limited (previously known as Continental Washing Machine Co., Limited) for the year since the date of its incorporation to 4th August, 1959, and for the period of one year and twenty-one weeks to 31st December, 1960, and report as follows:—

1. The profits of Electromatic Washing Machine Co., Limited, arrived at as on the basis stated below, were as follows:—

	Profits before Taxation (as defined below)
	£
Year ended 4th August, 1959	2,887
Period ended 31st December, 1960 (One year and twenty-one weeks)	135,952
	£138,839

The profits set out above are stated before deducting taxation, but after charging all expenses of working and management including depreciation, amortisation, Directors' emoluments and interest and after making such adjustments as we consider appropriate.

The aggregate emoluments of the Directors of Electromatic Washing Machine Co., Limited for the year ended 4th August, 1959, were £9,246, and for the period ended 31st December, 1960 (one year and twenty-one weeks) were £3,131. On the basis of the arrangements now in force, the emoluments in a full year would amount to £10,250, of which £7,500 has been waived in the year ending 31st December, 1961.

2. The Net Tangible Assets of the Company based on the audited Balance Sheet as at 31st December, 1960, were as follows:—

	Cost	*Depreciation to date*	
FIXED ASSETS—	£	£	£
Leasehold Property	4,750	651	4,099
Plant, Machinery, Fixtures and Fittings, Equipment and Motor Vehicles	203,269	44,089	159,180

Less: Balance of Income Tax 1960/61 and amount set aside towards future Income Tax 1961/62, being Income Tax based on the profits for the period 5th August, 1959 to 31st December, 1960	26,097
NET TANGIBLE ASSETS after deduction of amount set aside towards balance of Income Tax 1960/61 and future Income Tax 1961/62	£82,306
Representing:—	
ISSUED SHARE CAPITAL—	
100 Shares of £1 each fully paid	£100
Capital Reserve	446
Profit and Loss Account	81,740
	£82,306

NOTES: 1. There is a Contingent Liability in respect of Machines sold on hire purchase amounting to £1,068,162 0s. 6d. However, the Board is of the opinion that the value of machines that would have to be taken back under these circumstances would exceed any liability.

2. There are four indemnities to British Railways Executive totalling £2,624.

3. There are Contingent Liabilities in respect of Documentary credits totalling £18,750.

3. No dividends have been paid or proposed in respect of the period from 5th August, 1958 to 31st December, 1960.

4. Audited Accounts have not been made up for submission to the Members of the Company for any period subsequent to 31st December, 1960.

Re: E. M. CENTRAL HEATING CO., LIMITED.

This Company was incorporated on 26th June, 1961.

The authorised and issued Share Capital of the Company is £1,000 divided into 1,000 Ordinary Shares of £1 each, fully paid.

Electromatic Washing Machine Co., Limited acquired by allotment for cash at par 510 Ordinary Shares of £1 each.

1. No dividends have been declared in respect of the period from the date of incorporation to date.

2. No audited Accounts have yet been prepared in respect of this Company.

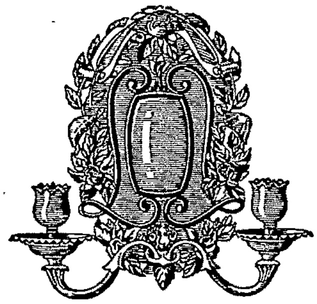
Yours faithfully,

GERALD EDELMAN & COMPANY,

Chartered Accountants.

be surprising if the department is kept busy, for while the scheme is basically simple, it involves quite a deal of 'know-how' on the subject of dollar investments. From that angle alone, it is worth the study of those who read this column apart from the general interest in any stock-investment plan for employees. We understand a limited number of copies of the plan are available from the company's public relations division at 40 Berkeley Square, London W1.

One point in the scheme is somewhat puzzling. Why British Government securities? This question is not a criticism, but some might think a form of unit-trust investment would more appropriately fit the circumstances.



THE ACCOUNTANT

ANNUAL AWARDS for 1962

Selection of this year's winners of *The Accountant* Annual Awards for company reports and accounts has been started by the Panel of Judges, under the chairmanship of Mr K. W. Mackinnon, M.B.E., T.D., Q.C., but companies still have until *January 31st* to submit their reports and accounts presented at annual meetings held in 1961.

Entries should be addressed to The Secretary, *The Accountant* Annual Awards, 151 Strand, London WC2. The only condition of entry is quotation on a recognized United Kingdom stock exchange.

A new member of the Panel this year is Mr J. E. Harris, B.COM., F.A.C.C.A., Immediate Past President and a member of the Council of The Association of Certified and Corporate Accountants, and managing director of Sogenique (Service) Ltd, who fills the vacancy caused by the retirement from the Panel of Lord Latham, J.P., F.A.C.C.A. The other members are: Mr A. S. H. Dicker, M.B.E., F.C.A., Mr C. D. Gairdner, C.A., Mr A. W. Giles, M.B.E., M.A., C.A., Mr Donald V. House, F.C.A., Mr J. A. Hunter, M.B.E., T.D., Mr Ian T. Morrow, C.A., F.C.W.A., Sir Richard Yeabsley, C.B.E., F.C.A., and Mr Arthur E. Webb, Editor of *The Accountant*.

The Lord Mayor of London, Alderman Sir Frederick Hoare, has kindly consented to present the Awards at the Mansion House on May 29th.

CITY NOTES

TIMING of the easing of last July's restrictions bids to be the most crucial decision of 1962. There is evidence in industry that order books are not so full as they were and that production is being adversely affected.

Restriction is always more easily accomplished than the consequent re-expansion. The time lag between easing of credit restrictions and their effect on trading can be dangerously long.

The danger is that in its preoccupation with its 'pay pause' policy, the Government may be inclined to maintain the July restrictions for too long.

A higher level of production is essential if export competition is to be met. And it must be met if exports are to be increased and the balance of payments position improved.

Little assistance in the latter respect can be expected from improved 'invisible' earnings. The Bank of England has described the immediate invisible earnings outlook as discouraging. The only real prospect of reduction in Government overseas expenditure is through assistance in meeting the cost of forces in Western Europe.

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Hong Kong Commissioners of Inland Revenue *v.* Four Seas Co Ltd

In the Privy Council – November 27th, 1961

(Before Lord DENNING, Lord DEVLIN and THE RIGHT HONOURABLE L. M. D. DE SILVA)

Corporation profits tax – Assessments on partnership – Losses made by partner trading separately – Whether losses can be set off against partnership profits – Hongkong Inland Revenue Ordinance, sections 2, 14, 15, 19, 22, 42.

The respondent carried on business as an importer and exporter on its own account; and during 1954 and 1955 it also traded in partnership with another company. The partnership made a profit of 49,885 dollars in 1954 and 73,618 dollars in 1955, and these profits were shared by the two partners equally. During the same two years the respondent made losses on its sole trading, and during the two previous years it had also made losses which were available for set-off against future profits.

Assessments were made on the partnership for the years of assessment 1955–56 and 1956–57, and the respondent contended that it was entitled to set off against the amount of tax due from it in respect of the partnership trading the losses it had made in trading on its own account.

Held: in the case of partnership trading the person assessed was the partnership; and that as the partnership was not the person that had incurred the losses, they could not be set against the assessments made on the partnership.

C.I.R. *v.* Ridge Nominees Ltd

In the Court of Appeal – November 9th, 1961

(Before THE MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice DONOVAN and Lord Justice DANCKWERTS)

Stamp duty – Sale of stock in company – Transfer deed by accepting stockholder – Transfer deed of dissentient stockholder – Whether transfers on sale – Stamp Act, 1891, section 54 – Finance Act, 1895, sections 1, 12 – Companies Act, 1948, section 209.

On November 14th, 1958, an offer was made by Ridge Securities Ltd (Ridge) to the stockholders of Gresham Trust Ltd (Gresham) for the purchase of their stock units in Gresham. The offer was conditional till December 4th, 1958 (or till such later date, not being beyond December 16th, 1958, as Ridge might stipulate), on the acceptance of the offer by the holders of 90 per cent of Gresham's issued capital or such smaller percentage as Ridge might, on or before December 30th, 1958, elect. Acceptance was to be by the signing of a form which, together with deeds of transfer of the stock, was to be forwarded to a stated address. The transfer deeds were to be in favour of the respondent. The offer became unconditional on December 12th, 1958.

Two of the stockholders in Gresham, who had accepted the offer and had signed the acceptance form and had executed transfer deeds of their stock to the respondent, did so before December 12th, 1958. Another stockholder declined to accept the offer, and her shares were acquired by the respondent under section 209 of the Companies Act, 1948. In pursuance of section 209 (3) a transfer on her behalf was made by a person appointed by the respondent.

It was contended on behalf of the respondent that the transfer deeds of the shares acquired while the offer was still conditional, and of the shares acquired under section 209 of the Companies Act, 1948, were not transfers on sale and should be stamped 10*s*. It was contended on behalf of the appellants that both classes of transfer deeds were stampable *ad valorem*.

Held (reversing the decision of Mr Justice Buckley on this point only): the transfer deeds of the shares acquired pursuant to section 209 of the Companies Act, 1948, were transfers on sale, and were stampable *ad valorem*. There was no appeal as to the other transfer deeds.

C.I.R. *v.* Henty & Constable (Brewers) Ltd

In the Court of Appeal – November 16th, 1961

(Before THE MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice DONOVAN and Lord Justice DANCKWERTS)

Stamp duty – Sale of shares in company – Liquidation of company – Direction to liquidator to transfer assets to vendors of the shares – Conveyance by company and liquidator of other assets to purchaser – Whether a conveyance on sale – Stamp Act, 1891, section 54 – Law of Property Act, 1925, section 53 (1) (c).

On April 17th, 1921, all the shareholders in a company (Constable) agreed with another company (Henty) for the sale to Henty of their shares in Constable. The consideration was to be satisfied by the allotment of fully paid-up shares in Henty. Completion was to take place on April 25th, 1921, and after completion Constable was to be wound up. By clause 6 of the agreement it was declared (in effect) that the consideration for the shares was arrived at without taking into account the value of the unlicensed premises of Constable, and it was agreed that Henty, before completion of the sale of the shares, should give an irrevocable authority for those premises to be made over to the vendors or their nominees, free from the mortgages on them, and with the income less outgoings as from April 1st, 1920. Henty was to be entitled to all dividends on the sold shares as from the same date.

On April 25th, 1921, at a meeting of the directors

of Henty, it was resolved that the completion of the sale should be carried out forthwith; and that as certificates and transfer deeds of the shares in Constable had been received with forms of authority signed by the shareholders as to the distribution of Constable's assets, 81,255 shares of £1 each in Henty should be issued to the vendors. On December 31st, 1921, a deed of conveyance between Constable and its liquidator of the one part and Henty of the other part was executed. It recited that Constable was seized of (in effect) its licensed premises and that Constable had been put into liquidation, and that its shareholders had delivered to the liquidator the authorities aforesaid; and the operative part of the deed of conveyance was:

'Now this indenture witnesseth that in consideration of the premises the Constable company as beneficial owner acting by the said William Beldam as the liquidator thereof hereby grants and conveys . . .'

the freehold licensed premises to Henty. The leasehold licensed premises were also assigned. The deed was stamped 10*s*.

The appellants contended that the conveyance of December 31st, 1921, was a conveyance on sale; and that *ad valorem* duty in the amount of £985 was payable thereon. It was contended on behalf of the respondent that on April 25th, 1921, it had discharged all its obligations under the agreement for sale, and was, when Constable had been put into liquidation, entitled to all the assets of that company distributable in the liquidation; and that the conveyance was by a liquidator to the person who had become entitled to the assets in question.

Held (affirming the judgment of Mr Justice Buckley): the conveyance was not a conveyance on sale, but was a conveyance by a liquidator to the persons entitled in the liquidation; and that the proper amount of stamp duty was 10*s*.

Company Profits and Dividends

SIR, – With reference to the article by Mr A. Dale on comparative taxation as applied to company profits and dividends which you published in your issue of December 16th, the machinery of our own and other countries' systems was, I thought, most admirably summarized. However, I would criticize the author in one respect.

In putting forward a case for the abolition of our own profits tax he mentions that the amount of revenue which the Government would lose from the discontinuance of this source could be more justly recouped by imposing a general sales tax on non-essential goods. Presumably, among his reasons for suggesting such an action are that:

(1) the consumer of essential goods would benefit generally in that the volume of company taxation, which he is currently called upon to bear in the form of high prices, would be reduced;
(2) the introduction of an internal indirect tax would not affect export sales prices and would, therefore, encourage and increase the volume of our export trade; and
(3) by abolishing profits tax, the companies themselves and their shareholders would benefit in the form of reduced taxation and consequently higher profits.

Under the present-day reluctance to reduce prices in ideal trading conditions, but rather to plough back profits into the business with a view to consolidation and expansion, to hope that the abolition of profits tax would see price reductions in the range of luxury or essential goods is, to my mind, rather wishful thinking unless some form of Government price control were simultaneously established.

Also, the consumer who is not blessed with the good fortune of being a shareholder would be asked to bear an even heavier burden.

No sir! As an unfortunate consumer, both of essential and luxury goods, who is mindful of the old axiom that 'charity begins at home' I do not agree with Mr Dale's suggestion. The profits tax, although it might act as a general sales tax on all goods and services, is fair in that it does 'go where the money is' and ensures that its incidence is equitably spread over consumers both at home and abroad.

If a greater share of the export market is to be acquired by us, as it inevitably must if we are to survive in the Common Market, then surely a 'carrot' in the form of an export tax rebate scheme is the answer, and not, as Mr Dale suggests, the transfer of the existing load to a specific class of the internal consumer.

Yours faithfully,

Tadworth, Surrey. N. A. WRIGHT.

Union of Chartered Accountant Students' Societies' Conference

SIR, – Some comment is required on the report of the Union of Chartered Accountant Students' Societies' annual conference which appeared in your issue of December 16th. The proposals referred to in the fourth paragraph were made by the Leeds

Society, and we feel that the report misrepresents both the proposals and the feeling of the conference towards them. The suggestions are not designed to reduce practical experience as such, but to enable the profession to take advantage of the recent great advances in the technique of full-time education.

(1) The report states that strong views were expressed against the proposals, as is true of any controversial ideas. It should, however, be understood that still more delegates spoke in their support.

It is also stated in this paragraph that we seek to increase the academic element of training, and then goes on to say that this would probably result in the deterioration of the academic standard. It is generally acknowledged that full-time education is the most effective and thorough method of gaining knowledge.

(2) The report states the 'purpose of (these suggestions) was to reduce the practical experience required for membership and to increase the academic element of training'. This interpretation is misleading. In fact the proposals are designed to:

(i) improve the methods of theoretical training, by two years' full-time education at an accountancy college;

(ii) enable the knowledge thus gained to be used much more effectively and rapidly by the articled clerk in gaining practical experience and in serving his principal;

(iii) give the articled clerk a broader education, allowing him to fulfil the increasing demands of his clients.

Yours faithfully,
W. H. J. MORDY, *Hon. Secretary*,
Leeds. THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LEEDS.

[Following our correspondent's letter, the report has been carefully checked with the record made during the conference. It is quite clear that the effect of the terms of the proposals brought before the conference and the nature of the reception they were given, were in fact as set out in the report. Whatever may have been the wishes and hopes of the promotors, it is felt that the report gives a true and fair view of what actually happened at the conference. – Editor.]

Graduated Pension Scheme

SIR, – Employers who are in the habit of giving annual bonuses to their staff at this time of year will have observed that certain employees have to pay contributions for graduated pensions in respect of these bonuses. Unless employees are receiving sufficient pay to make them regular contributors, they will receive no benefit from these contributions and neither from the employers' part. Regulation 10 (3) of S.I. 1960 No. 921 tries to regularize this anomaly by permitting the formation of trust funds for the benefit of employees with the purpose of avoiding graduated pension contributions provided that not more than two annual bonuses are payable to employees.

Can readers advise on the operation of such trust funds:

(1) Are the payments to the trustees an allowable expense in the employers' Schedule D assessment?
(2) Are paymnets to the employees subject to P.A.Y.E.?
(3) Does tax at standard rate have to be deducted from these payments? or
(4) Are these payments unearned income in the hands of the employees?

Yours faithfully,
COMMERCIAL.

Mining Company's Problems

SIR, – May I invite the comments of your readers on the following points which I met recently in actual practice?

(1) A mining company has acquired by way of gift from one of its main shareholders a substantial holding in the share capital of another company thus turning that other company into a subsidiary of the mining company. The directors have recorded the shares gifted to the company at their market value crediting a like sum to capital reserve. Is this the right procedure or is there any better solution to this problem?
(2) The same mining company uses the following method of treating losses on the sale of any of its fixed assets:

On the sale and ascertainment of the resultant loss no transfer is being made to profit and loss account but such loss remains as part of the remaining assets of the company. Is this a correct way, in the case of mining companies, of treating losses realized on the sale of any of their fixed assets?

Yours faithfully,
A.A.C.C.A.

Thoughts on our Present Discontents

SIR, – Mr Alun Grier Davies's article in *The Accountant* of December 23rd is remarkably explicit and thereby a clear exposition of an iniquitous system imbued with anomaly so deep, penetrating and involved as to perplex the layman, and doubtless some members of the profession too! It is equally an analysis born of sincerity and conviction, and a positive directive to those who will read and study its purport and intention – the sober reflection of how long overdue is tax reform in this country. I like Mr Davies's apparent witticism when quoting:

> 'that the incidence of investment allowances on such profits as those of shipping companies must make even the Revenue wonder whether, when they repay tax which has not been paid and never will be paid, they are sacrificing common sense to the *continuance of an ancient shibboleth*' (my italics).

That could be singularly true of the entire fiscal system of the United Kingdom.

It is also a gem of thought and reasoning for Mr Davies to say that our fiscal system is almost as ludicrous as the position in Japan where so many complications had been built in the social and economic life of that country that Japanese

> 'business men need to devote most of their time and energy to unwinding those bonds which enfold them like so many *mummies*' (my italics).

One must agree that there is no particular virtue in blaming the Revenue for the idiosyncracies current in our system at the close of the year 1961, and that most likely the officials who have to perpetrate and unravel the intangibleness are often mindful of how wide is the scope for simplification to make their own task less onerous and misunderstood.

Far too frequently is it being said that the legislative process of our laws, and taxation, are so antiquated as to be reminiscent of medieval England; this is to our discredit; but are we likely to look elsewhere for a lead – to a similar type set-up as the Canadian Tax Foundation – to examine all the major tax anomalies and to suggest remedies?

Alun Grier Davies is obviously a staunch supporter of Harold Wincott who writes so splendidly and convincingly in *The Financial News*; for both quote without fear or favour

> 'It is pitifully clear that the Government draftsmen and the Inland Revenue between them are about as capable of putting together a Finance Bill of this character as the average jobbing builder is of building a nuclear reactor.'

(That was said during the public outcry on the Finance Bill last year.)

Come, gentlemen all, we need taxation reform *now* to help all manufacturers to be on equal terms with competing countries when embarking in a free trade system under the Common Market.

Yours faithfully,
FRANCIS B. WILLMOTT.

Birmingham.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND

MEETINGS OF THE COUNCIL

Special and ordinary meetings of the Council of The Institute of Chartered Accountants in Ireland were held in Dublin on Thursday, December 21st, 1961.

Attendance

The President, Mr A. E. Dawson, was in the chair, and there were also present:

Messrs R. E. McClure, *Vice-President*, G. A. P. Bryan, G. E. Cameron, Frank Cleland, M. M. Connor, J. F. Dempsey, James Graham, N. V. Hogan, John Love, R. J. Neely, W. H. O'Donnell, R. P. F. Olden, H. W. Robinson, James Walker and D. McC. Watson, with the *Secretary* and *Assistant Secretary* and the *Joint Secretary and Treasurer.*

Apologies for absence were submitted from Messrs John Bacon and A. S. Boyd.

Deaths

The deaths of the following members were reported and noted with regret:

William Duffield, F.C.A. (Belfast), joint auditor to the Institute since 1956; T. P. K. Gaffney, A.C.A. (Dublin).

Fellowship

Patrick Thomas McGilligan, A.C.A., Dublin, was elected a Fellow of the Institute with effect from January 1st, 1962.

Practice

Cormac James O'Rourke, A.C.A., Dublin, was admitted to practice with effect from January 1st, 1962.

Membership

The following candidates, who were successful in Part V of the Institute examination held in October 1961, and in Final examinations held during the year under the syllabus of The Society of Incorporated Accountants were admitted to membership as associates not in practice:

Ardill, Albert Eric (Dublin); Daly, James Terence (Dundalk); Hyland, John Jeremiah (Cork); McConnell, Kenneth Somers (Dublin); Phelan, Thomas Patrick (Dublin); Roe, William Arthur (Waterford).

Applications from two former members for readmission to Institute membership were granted.

Articles of Clerkship

Approval was given to an application for reduction in the period of service under articles on the grounds of age and service.

Committees

Reports were received from the following committees: Finance and General Purposes; Education and Training; Parliamentary and Law; Policy; Premises and Taxation.

Congress of European Accountants 1963

A report was received from the President on a meeting of representatives of European accountancy bodies held in Glasgow on November 28th, 1961, at which it was decided to hold a Congress of European Accountants in Edinburgh in September 1963.

For Students

TAXATION

Deductions for Surtax

UNTIL quite recently, it was a long-standing grievance on the part of the surtax payer that in computing the liability to surtax no deduction from income was allowed in respect of the various reliefs granted for the purposes of income tax. This grievance was partially removed by Section 14 of the Finance Act, 1957, which allowed the personal relief (to the extent that it exceeds that applicable to an unmarried taxpayer), the reliefs for children, housekeeper, dependent relatives and similar reliefs, to be deducted from income in charging surtax. The deductions permitted by this section did not, however, include any relief in respect of earned income, despite strong and persistent representations that the existing high taxation of individual earnings operates as a disincentive to personal effort, which cannot fail to have a deleterious effect on productivity and the national economy.

These representations have now borne fruit and surtax relief for earned incomes has been given, on what is regarded in some quarters as an over-generous scale, by the Finance Act, 1961. It is enacted by Section 14 of that Act, that in respect of the year 1961–62 or any subsequent year, for the purpose of charging surtax there shall be deducted from an individual's income:

(*a*) the earned income relief given for the purposes of income tax (2/9ths of the first £4,005 and 1/9th of the next £5,940, and

(*b*) if the net amount of the earned income, after deducting the above-mentioned earned income relief, exceeds £2,000, the amount of such excess, or £2,000 if less.

The effect of these deductions is to exempt from liability to surtax earned incomes up to £5,000, as is shown by the following illustration.

	£	£
Total income (all earned)		5,000
Deduct: Earned Income Relief		
2/9ths × £4,005	890	
1/9th × £995	111	
		1,001
Net earned income		3,999
Deduct: Excess of £3,999 over £2,000		1,999
		£2,000

Since surtax is only chargeable on incomes in excess of £2,000 there is no liability.

TABLE A

			Total	*Apportioned between* Husband	Wife
			£	£	£
Earned Income			5,750	5,000	750
Deduct: (*a*) 2/9ths × £4,005	£890				
1/9th × £1,745	194				
	1,084				
(*b*) Lower of excess of £5,750 *Less*	1,084				
	4,666				
Over	2,000				
	£2,666				
and	£2,000				
	2,000	3,084		500/575 2,682	75/575 402
		2,666		2,318	348
Unearned Income		534		82	452
		3,200		2,400	800
Deduct Reliefs					
Personal	£100			£	
Child	100			24/32 150	8/32 50
	200				
Dependent Relative	75	275		75 225	
		£2,925		£2,175	£750
Chargeable:					
£2,000		Nil			
500 at 2*s* 0*d*		50 0 0			
425 at 2*s* 6*d*		53 2 6			
		£103 2 6		2,175/2,925 £76 13 8	750/2,925 £26 8 10

Where, however, part of the total income is unearned, a liability for surtax may arise, even though the earned income is less than £5,000, as shown below:

Married man with one child under eleven.

Earned Income		£3,300
Deduct: 2/9ths × £3,000		667
		2,633
Excess of £2,633 over £2,000		333
		2,300
Unearned Income		300
		2,300
Deduct: Reliefs		
Personal £(240 — 140)	£100	
Child	100	300
		£2,300
Chargeable: £2,000		Nil
500 at 2*s* 0*d*		£50 0 0
100 at 2*s* 6*d*		12 10 0
		£62 10 0

A British subject who is not resident in the United Kingdom, but is entitled to claim a proportion of personal etc. reliefs under Section 227 of the Income Tax Act, 1952, may claim a similar proportion of the relief given under (*a*) and (*b*) above.

Where a husband and wife claim to be assessed separately to surtax, the aggregate deduction under (*a*) and (*b*) is to be apportioned between them in proportion to their respective earned income. The deductions for personal etc. reliefs granted by Section 14 of the Finance Act, 1957, are then to be apportioned between husband and wife in the ratio of their respective total incomes as reduced by the deductions for earned income under (*a*) and (*b*) above.

Illustration

Married man with one child aged 10. Husband pays £200 premium on life policy for £5,000, and supports his widowed mother, who has no income.

It will be observed from Table A on the preceding page that no deduction is allowed in charging surtax for the wife's earned income allowance of £140 (or 7/9ths of the wife's earned income if lower) or for life insurance premiums.

The income tax computation in Table B below contrasts the allowable deductions and the methods of apportionment thereof between husband and wife, from those applicable to surtax.

TABLE B

			Total	*Apportioned between*						
				Husband				*Wife*		
Earned Income			£5,750	£5,000				£750		
Unearned Income			534	82				452		
			6,284							
Deduct Earned Income Relief			1,084	500/575	5,082			75/575	1,202	
					942				142	
			5,200		4,140				1,060	
Deduct Reliefs	£

THE ACCOUNTANT

Index to Vol. CXLV: July–December 1961

The general index to Vol. CXLV – July to December 1961 – is published with the present issue. The parts of this volume, with the index, can now be sent for binding.

PROFESSIONAL NOTICES

MESSRS ALEXANDER SLOAN & Co, Chartered Accountants, of 142 St Vincent Street, Glasgow C2, announce that Mr WILLIAM INGLEBY, C.A., retired from the firm on December 31st, 1961, to take up a commercial appointment, and that they have assumed Mr JOHN WILLOUGHBY, C.A., as a partner, as from January 1st, 1962. Mr WILLOUGHBY served his apprenticeship with the firm which he is rejoining after a period in commerce.

MESSRS ARTHUR ANDERSEN & Co announce the moving of their London office as from January 8th, 1962, to St Alphage House, Fore Street, London EC2. Telephone: National 9711.

MESSRS BINDER, HAMLYN & Co, Chartered Accountants, of 121 Queen Victoria Street, London EC4, announce that on January 1st, 1962, they admitted into partnership Mr T. C. FRANKLAND, A.C.A., and Mr J. T. S. BOWER, A.C.A., both of whom served their articles with the firm and have since been members of the staff. They also announce that Mr K. M. B. WRIGHT, A.C.A., who was a member of their staff in London for some years after serving his articles with the firm, is now resident in Sydney and was admitted as a partner in their Australian firm on January 1st, 1962.

Mr C. L. HAMER, F.C.A., practising as CHARLES HAMER & Co, at 107 Grange Road, Middlesbrough, and Commercial Row, Stokesley, announces that Mr R. L. WADE, A.C.A., who served articles with him, becomes a partner as from January 6th, 1962. The firm name remains unchanged.

MESSRS C. NEVILLE RUSSELL & Co, Chartered Accountants, of 11 Poultry, London EC2, announce that as from January 1st, 1962, Mr P. L. HARDEN, B.SC.(ECON.), A.C.A., and Mr G. R. NORDEN, A.C.A., have been admitted as partners. The name of the firm will remain unchanged.

MESSRS DERBYSHIRE & Co, Chartered Accountants, of Bentinck Buildings, Wheeler Gate, Nottingham, announce that they have admitted Mr ALFRED MASTERS, A.C.A., into partnership as from January 1st, 1962. The name of the firm remains unchanged.

MESSRS F. ARTHUR PITT & Co, WOMERSLEY & TWEEDALE and GREENHALGH, SON & DUTTON, Chartered Accountants, of 14 John Dalton Street, Manchester 2, and 20 Acresfield, Bolton, announce the retirement of their senior partner Mr SYDNEY BARLOW, M.B.E., F.C.A., as from December 31st, 1961. Mr BARLOW will be available to the firms after his retirement in a consultative capacity in connection with the affairs of their clients.

MESSRS FINCHAM, VALLANCE & Co, Chartered Accountants of 3 & 4 Clement's Inn, Strand, London WC2, announce that as from January 1st, 1962, Mr GEOFFREY JOHN PARR, A.C.A., who has been a member of their staff for some years, has been admitted into partnership. The style of the firm will remain unchanged and the practice will be carried on at the same address by MESSRS ARTHUR D. FINCHAM, F.C.A., JAMES P. VALLANCE, F.C.A., IAN D. VALLANCE, A.C.A., PETER G. ROBERTS, A.C.A., and GEOFFREY J. PARR, A.C.A.

MESSRS HARVEY PREEN & Co, Chartered Accountants, of Lawrence House, 3 Trump Street, London EC2, announce that as from January 1st, 1962, Mr R. D. BARRETT, A.C.A., and Mr F. W. TUNBRIDGE, A.C.A., who have been members of their staff for some years, have been admitted to partnership. Mr BARRETT will practise from the Yeovil office and Mr TUNBRIDGE from the Birmingham office.

Mr H. A. SMITH, F.C.A., practising as RADLEY, SMITH & Co, Chartered Accountants, of Devonshire House, Great Charles Street, Birmingham 3, announces that as from January 1st, 1962, he has taken Mr M. S. THORNTON, F.C.A., into partnership. The name of the firm will be unchanged.

MESSRS JOHN GORDON, HARRISON, TAYLOR & Co, Chartered Accountants, of 7 Bond Place, Leeds 1, announce that Mr LESLIE TEMPEST, F.C.A., retired from the partnership on December 31st, 1961, owing to ill health, after forty years' association with the firm. Mr PAUL DUNCAN TAYLOR, A.C.A., who served his articles with the firm, and who is the son of the senior partner, has been taken into partnership with effect from January 1st, 1962.

MESSRS MCCLELLAND, MOORES & Co, Chartered Accountants, Glasgow, announce that Mr J. E. BOYD, C.A., retired from the partnership on December 31st, 1961, to take up a full-time appointment with the Lithgow group of companies. Mr IAN H. OGLE, C.A., has been assumed as a partner as from January 1st, 1962.

MESSRS M. SPENCER ELL & Co, Chartered Accountants, of 81 Bell Street, Henley-on-Thames, and 1 Honey Lane, Cheapside, London EC2, announce that as from January 1st, 1962, they have taken into partnership Mr JACK WYATT, F.C.A., who has been on their staff since 1953. The practice will continue to be carried on in the name of M. SPENCER ELL & Co.

MR E. J. NETTLE, F.C.A., who has hitherto practised as E. H. SHERREY & Co, Chartered Accountants, at 8 Newhall Street, Birmingham 3, announces that he is discontinuing the use of this name and that as from January 1st, 1962, is entering into partnership with Mr C. S. SHAW, F.C.A. The new firm will practise under the name of E. J. NETTLE & Co, Chartered Accountants, at 36 Bennett's Hill, Birmingham 2.

MR C. S. SHAW, F.C.A., announces that as from January 1st, 1962, he will practise as NETTLE, SHAW & Co, Chartered Accountants, at 36 Bennett's Hill, Birmingham 2, to which firm Mr E. J. NETTLE, F.C.A., will act as consultant.

MESSRS PANNELL, CREWDSON & HARDY, Chartered Accountants, of 9 Basinghall Street, London EC2, announce that as from January 1st, 1962, they have

admitted to partnership in the London firm Mr CECIL HEATHER, F.C.A., and Mr RICHARD HUGH MORCOM, F.C.A., both of whom have been members of their staff for some years.

MESSRS PONSFORD, BRADDY & CO, Chartered Accountants, of 28A Basinghall Street, London EC2, announce with great regret that MR RICHARD THORPE BAETLEY, F.C.A., died suddenly on December 26th, 1961 The practice will be carried on by the remaining partners.

MESSRS SHARP, PARSONS, TALLON & CO, Chartered Accountants, of Suffolk House, 5 Laurence Pountney Hill, London EC4, announce that Mr A. A. DAY, F.C.A., who has been a senior member of their staff for many years, has been admitted into partnership as from January 1st, 1962.

MESSRS W. H. WALKER & CO, Chartered Accountants, of 42 Castle Street, Liverpool; 6 Iddesleigh House, Caxton Street, London; and 50 Athol Street, Douglas, Isle of Man, announce that Mr GEOFFREY ROBERT LEECE, A.C.A., has been admitted to the partnership as from January 1st, 1962. Mr LEECE has also been admitted as a partner in the associated firms of MESSRS E. C. PRICE, SON & REID and MESSRS SLADE, LEWIS & SLADE, both of London. The practice of the firms will be continued under the same style as heretofore.

MESSRS DAVID LINCOLN & CO, Certified Accountants, of Victoria House, Southampton Row, London WC1, and Prudential Buildings, St Andrews Street, Cambridge, announce that Miss P. I. BRIDGE, A.A.C.C.A., has been admitted into partnership as from January 1st, 1962.

Appointments

Sir Julian Pode, F.C.A., deputy chairman and managing director of The Steel Company of Wales Ltd, became president of the British Iron and Steel Federation on January 1st, 1962.

Mr Walter Charles William Thompson, F.C.A., has been appointed financial director and chief accountant of Negretti & Zambra Ltd.

Mr J. Ferguson Smith, F.C.A., has been appointed to the board of Vickers-Armstrongs (Aircraft Ltd, Weybridge, Surrey, as commercial director.

Mr E. W. Lumb, F.C.A., has been appointed an associate director of Blakey's Boot Protectors Ltd.

Mr J. L. Brooke, B.COM., A.C.A., A.C.W.A., M.B.I.M., has been appointed chief accountant of A.E.I. Lamp & Lighting Co Ltd, Leicester, from January 1st, 1962.

Mr Alan A. Wylie, F.C.A., a director of the Namunakula Tea Estate Co Ltd, will become chairman of the company as from January 1st.

Mr P. W. L. Mitchell, F.C.A., secretary of Mansill, Booth & Co Ltd, has been appointed a director of the company, with effect from January 1st, 1962.

Mr J. A. Goldsmith, M.A., A.C.A., has been appointed deputy secretary and office manager of The United Steel Companies' Steel, Peech & Tozer branch.

Mr P. H. Brealey, B.SC.(ECON.), A.C.A., chief accountant of the Perkins group, has been appointed general financial analysis manager on the Massey-Ferguson group's corporate staff, in Toronto.

Mr J. F. Harper, C.A., formerly general manager of Bristol Aircraft Ltd, has been appointed managing director of that company.

NEW CHAIRMAN OF I.S.H.R.A.

Mr W. H. Lawson's Appointment

Mr W. H. Lawson, C.B.E., B.A., F.C.A., has been appointed by the Chancellor of the Exchequer as Chairman of the Iron and Steel Holding and Realization Agency in succession to the late Sir Herbert Brittain. The appointment will be for the period from January 1st, 1962, to June 9th, 1963, in the first instance.

Mr Lawson, who is 62, is senior partner in the firm of Binder, Hamlyn & Co, Chartered Accountants, and a Past-President and a member of the Council of The Institute of Chartered Accountants in England and Wales. Educated at Lancing and Trinity College, Cambridge, he served as a delegate on the Austrian Treaty Commission in Vienna in 1947, was a member of the Transport Arbitration Tribunal 1948–57, a member of the Purchase Tax (Valuation) Committee in 1952 and of the Royal Commission on Local Government in Greater London. He is also a member of the Jenkins Committee at present inquiring into company law, and of the Southern Electricity Board.

EAST MIDLANDS ELECTRICITY BOARD

Chartered Accountant Appointed Chairman

The Minister of Power has appointed Mr A. N. Todd, F.C.A., to be chairman of the East Midlands Electricity Board from January 1st, 1962, in succession to Mr N. F. Marsh, M.A., M.I.E.E.

Mr Todd has been deputy chairman of the London Electricity Board since September 1st, 1956, having previously been chief accountant of that board since 1954. After service with Messrs Deloitte, Plender, Griffiths & Co from 1929–48, Mr Todd was assistant chief accountant and deputy chief accountant of the Merseyside and North Wales Electricity Board until 1951, when he became assistant chief accountant to the British Electricity Authority.

ULSTER RAILWAYS

Chartered Accountant to Investigate

Mr Henry A. Benson, C.B.E., F.C.A., of Messrs Cooper Brothers & Co, Chartered Accountants, has been appointed by the Minister of Commerce, Northern Ireland, to investigate the position of the railways, to make recommendations about their future, and to report on the effect which the recommendations will have on the transport system of the Ulster Transport Authority.

ACCOUNTANCY TUTORS' SECRETARY RETIRES

We have learned of the retirement of Mr E. G. Robinson, A.A.C.C.A., secretary of H. Foulks Lynch & Co Ltd, the accountancy tutors. Mr Robinson joined the staff of H. Foulks Lynch as secretary after the last war, following demobilization from the Army with the rank of Major, and is known to many thousands of chartered accountants, certified accountants and students for the accountancy examinations. His experienced advice so readily given was sought by principals and their clerks on all matters concerning tuition for the examinations. He is succeeded by his former assistant, Mr A. G. Wrigglesworth, A.C.I.S.

OBITUARY

Bernard H. Brigham, F.C.A.

We have learned with regret of the death on December 7th, 1961, of Mr Bernard H. Brigham, F.C.A., formerly secretary of the Friends' Provident, and The Century Insurance Co Ltd.

Educated at Handsworth Grammar School, Birmingham, Mr Brigham served his articles with the firm of W. F. Bridgwater & Co, Chartered Accountants, of Birmingham, and was placed second in both the Intermediate and Final examinations of The Institute of Chartered Accountants in England and Wales being awarded the Robert Fletcher Prize. He was admitted an Associate of the Institute in 1908 and was elected to fellowship in 1941.

In 1919 he joined the Friends' Provident and Century Life Office as accountant at their head office in Bradford and in the following year he moved to London, where a new head office was established. Mr Brigham served with the company throughout the remainder of his active career, being appointed assistant general manager in 1933 and secretary of the group in 1936, which position he held until his retirement in 1952.

Mr Brigham held a number of directorships, of some of which he retained after his retirement from full-time business life.

Arthur Morris Hobbs, F.C.A.

It is with regret that we record the death, at the age of 74, of Mr Arthur Morris Hobbs, F.C.A., the senior partner of Messrs Hobbs, Peskett & Co, Chartered Accountants, of London.

He qualified as a member of the former Society of Incorporated Accountants in 1916 and, after war service in France, commenced to practise in London in 1919, subsequently being joined by Mr G. A. Peskett and Mr G. S. Judd, to form the firm of Hobbs, Peskett & Co.

Mr Hobbs was a members of St Olave's Lodge and of the Lodge of Benefaction and holder of London Grand Rank. He was a director of William Glass Ltd.

DOUBLE TAXATION: UNITED KINGDOM AND MALTA

The terms of a double taxation agreement between Malta and the United Kingdom are contained in the schedule to a draft Order in Council published on December 19th, 1961. Before the agreement can take effect in the United Kingdom it will require the approval of the House of Commons. The agreement relates to taxes on income and is expressed to take effect in the United Kingdom from April 6th, 1962.

NEW FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT

The Family Allowances and National Insurance Bill has received Royal Assent and a number of changes in the Act will come into operation immediately. They include:

Incapacitated Children
Children incapable of regular employment because of long-term disability can now be counted for family allowances and national insurance purposes up to the age of 16, whether or not they have been able to go to school.

Industrial Accidents
Certain additional risks are now covered under the Industrial Injuries Scheme. An accident, occurring in the course of employment, which results from another person's misconduct, 'skylarking' or negligence, or is caused by an animal, or results from the injured person being struck by an object or by lightning can be regarded as an industrial accident, provided the injured person did not contribute to the happening of the accident by any conduct or action unconnected with his employment.

Special Hardship Allowance
This allowance under the Industrial Injuries Scheme is to compensate people who as a result of industrial injury or disease are unable to follow their regular occupations or employment of a similar standard. The Act extends 'regular occupation' for this allowance to include employment to which people in an occupation normally advance and of which a claimant, had he not been injured, would have had at least the normal prospect. A man will now be treated as incapable of following his regular occupation so long as he is deprived of these prospects because of the effects of an industrial accident or disease.

A similar change has already been made in the administration of the allowance for lowered standard of occupation in the War Pensions scheme which is the corresponding provision under the Royal Warrants.

Unemployability Supplement and Workmen's Compensation Supplementation
The amount a person can earn without affecting his entitlement to unemployability supplement under the Industrial Injuries Scheme or the allowance under the Workmen's Compensation and Benefit (Supplementation) Act, 1956, is increased from £52 to £104 a year.

Other changes are dependent on the making of Regulations and will be brought into effect at later dates. The main ones are listed below, with the approximate dates when they will come into operation.

Workmen's Compensation
The Act includes further provision for persons incapacitated as a result of injuries or diseases due to employment before July 1948, when the present Industrial Injuries Acts came into force. The allowance for the totally disabled under the Workmen's Compensation and Benefit (Supplementation) Act, 1956, is to be raised to 32*s* 6*d*. The partially disabled entitled to workmen's compensation at the maximum rate will receive an increase of up to 10*s* in existing supplementation, where they were injured before 1924, or a new allowance of up to 10*s* where their injury was later. The benefit for partially disabled persons (mainly pneumoconiotics)

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON, SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

coming within the special schemes made under the Industrial Diseases Acts, 1951 and 1954, is to be increased by 7*s* 6*d*.

These changes will affect some 20,000 people. It is expected that those affecting the totally disabled will come into operation on January 17th. No application for increases of their existing supplements will be needed; the order books of those qualifying will be adjusted by the Ministry. Those changes affecting the partially disabled are subject to schemes requiring the approval of Parliament and it is hoped that they will become operative on February 28th.

Retirement Pension Increments for Certain Widows

There will be improvements in the total retirement pension which some husbands, who defer their retirement beyond 65 for periods after December 25th, 1961, can earn for their wives, in widowhood.

For every twelve contributions a husband paid during deferred retirement after August 1959, and before December 25th, 1961, he can earn, for his wife's retirement pension on his insurance, an increase of 6*d* during his lifetime and 1*s* on widowhood, provided she herself was over the minimum pension age of 60 at the time they were paid. Under the new provisions, for such contributions paid on or after December 25th, 1961, a husband can, in addition, earn a 6*d* increase for her retirement pension in widowhood for every twelve of these contributions he pays while she is under 60. (*Note:* The new arrangements do not alter either the retirement pensions payable during the husband's lifetime or the amounts payable where the wife was over 60 throughout the husband's deferred retirement.)

A further improvement will provide a widow who becomes entitled to retirement pension on her own insurance with half of all the 1*s* increments which her husband earns by deferring retirement and paying contributions on or after December 25th, 1961. She can receive these in addition to any increments which she may earn by deferring her own retirement and paying contributions beyond age 60.

CENSUS OF DISTRIBUTION AND OTHER SERVICES FOR 1961

Forms for the census of distribution covering trade in 1961 have been sent out this week to half a million shopkeepers throughout the country.

The prompt return of completed forms will reduce the cost of taking the census, states the Board of Trade, and increase its value by enabling the results to be published earlier. Estimated figures are acceptable, and it is not necessary to wait until final accounts are prepared. The census form asks traders who intend to have their forms completed by accountants to pass them on at once, having first answered the questions relating to the description of the business, the persons engaged, and the kinds of goods sold.

Returns should preferably be made for the calendar year 1961 even where this is not a firm's business year; but if this is difficult a business year ending not later than April 5th, 1962, may be used. If the return is to be made for a business year ending later than December 31st, 1961, the form should be completed and returned as soon as possible after the end of the business year.

The census of distribution for 1961 will provide a full analysis of retail business for the first time since the census for 1950, which was the first to be taken. All traders are being asked to give a description of their business, and to state their total turnover, the number of persons working in the business, and whether certain kinds of goods were sold. Other information will be obtained from a sample of traders only.

The census is being taken under the Statistics of Trade Act, 1947. The information given will be treated in strict confidence and will be seen only by the staff of the Statistics Division of the Board of Trade. Under no circumstances will information about an individual trader's business be disclosed to any other Government department.

If a trader or his accountant thinks the wrong form has been sent or that the business concerned is exempt from the census, he should return his form to the Census Office at once, explaining the circumstances. Anyone engaged in retail trade who has not received a census form may obtain one from the Census Office, who will also be glad to answer any questions about the completion of the forms. The address of the Office is as follows: Board of Trade, Census Office, Eastcote, Ruislip, Middlesex. Telephone: Pinner 8771, Ext. 227.

SOUTH WALES AND MONMOUTHSHIRE SOCIETY

New Secretary

The new honorary secretary of the South Wales and Monmouthshire Society of Chartered Accountants, as from January 1st, 1962, is Mr Howard N. Jones, B.A.(ECON.), A.C.A., of Messrs Horace Jones & Co, 63 Park Place, Cardiff.

CITY DISCUSSION GROUP

The next meeting of the City Discussion Group of Chartered Accountants will be held on Wednesday next at 6 o'clock for 6.30 p.m. at the Tiger Tavern, 1 Tower Hill, London EC3. The topic for discussion will be 'Are accountants more progressive in North America than here', introduced by Mr John Smurthwaite, A.C.A.

INCOME TAXES IN THE COMMONWEALTH

Several inquiries have been received regarding the availability of reprints of the eleven-page study on 'Income Taxes in the Commonwealth', published in *The Accountant* of November 25th, 1961. We are prepared to supply reprints, if the demand is sufficient, at the price of 15*s* for ten copies (minimum order). Other interested readers should write to the Editor at 151 Strand, London WC2.

THE INSTITUTE OF INTERNAL AUDITORS

Birmingham Chapter

The next meeting of the Birmingham Chapter of The Institute of Internal Auditors will be held at the Chartered Auctioneers' and Estate Agents' Institute, Regent House, St Philip's Place, Colmore Row, Birmingham 3, on Thursday, January 11th, 1962, at 6.30 p.m. Light refreshments will be available from 6 p.m. Three short talks will be given by Chapter members, they are:

'Varying the approach', by Mr D. Lawrence;
'Communications' by Mr H. J. Lorton; and
'Separation of duties', by Mr F. W. Smith.

Inquiries regarding the activities of the Chapter should be addressed to the Secretary, Mr R. C. J. Lucas, West Midlands Gas Board, 39/41 Hagley Road, Birmingham 16.

CONFERENCE ON USE OF RESOURCES

A one-day conference on 'Planning for maximum profits' intended for accountants, directors and senior managers is to be held at the Connaught Rooms, Great Queen Street, London WC2, on January 11th, 1962.

Organized by the British Institute of Management, speakers will include Mr H. L. Bingham, director and financial controller, Viscose Division, Courtaulds Ltd, who will examine the most effective use that can be made of available resources at a time of shortage of capital, aggravated by the credit squeeze, Mr W. J. Lloyd, managing director, Wood Hall Trust Ltd, will discuss how to sell at the right price, the right kind of products in the right market, and Mr H. H. Norcross, F.C.W.A., managing director, Norcross & Partners Ltd, will examine how overheads can be controlled without hindering growth and development at a time when automation and rising prices bring a rapid increase in costs. The chair will be taken by Mr R. F. Hunt, A.F.R.AE.S., A.F.C.AE.I., deputy chairman, Dowty Group Ltd.

Further details regarding the conference are obtainable from the British Institute of Management, 80 Fetter Lane, London EC4.

OFFICIAL RECEIVER APPOINTMENTS

The Board of Trade have announced that the appointment of Mr D. Atkinson as Official Receiver for the bankruptcy district of the County Courts of Carlisle, Barrow-in-Furness and Ulverston, Kendal, Whitehaven and Millom, and Workington and Cockermouth expired on December 31st, 1961.

The bankruptcy district is now administered within the salaried service of the Board of Trade. Mr W. Armstrong, the Official Receiver for the Newcastle and Stockton districts, with an office at Clarendon House, Clayton Street West, Newcastle upon Tyne 1, will also be the Official Receiver for the bankruptcy district of the County Courts of Carlisle and Workington and Cockermouth. Mr J. Tye, the Official Receiver for the Manchester 'B' district, with an office at 20 Byrom Street, Manchester 3, will also be the Official Receiver for the bankruptcy district of the County Courts of Barrow-in-Furness and Ulverston, Kendal, and Whitehaven and Millom.

It is also announced that Mr K. H. Bidmead, an Assistant Official Receiver for the Newcastle and Stockton districts, has been appointed an Assistant Official Receiver also for the bankruptcy district of the County Courts of Carlisle and Workington and Cockermouth with effect from January 1st, 1962, and that Mr J. A. Sell, an Assistant Official Receiver for the Manchester 'B' district, has been appointed an Assistant Official Receiver also for the bankruptcy district of the County Courts of Barrow-in-Furness and Ulverston, Kendal, and Whitehaven and Millom, with effect from January 1st, 1962.

ANNOTATED TAX CASES

Part 6 of Volume XL of the *Annotated Tax Cases*, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is published today and contains reports with notes on the judgments of the following cases: *C.I.R. v. J. B. Hodge & Co (Glasgow) Ltd* (H.L.); *Hutton v. Hutton (No. 2)* (C.A.); *Jamieson v. C.I.R., Wills v. C.I.R.* (Ch.D.); *Coates v. Holker Estates Company* (Ch.D.); *British Commonwealth International News Film Agency Ltd v. Mahany* (Ch.D.); *Rae v. Lazard Investment Co Ltd* (Ch.D.); *Brogan v. Stafford Coal and Iron Co Ltd* (Ch.D.); *De Voil v. Welford Gravels Ltd* (Ch.D.); *Erddig Motors Ltd v. McGregor* (Ch.D.).

The annual subscription to the *Annotated Tax Cases* is 50s post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

THE ACCOUNTANTS' DIARIES

Users of *The Accountants' Diaries* are asked to note the following amendments:

Foolscap, page 50; Pocket, page 181: Tax Reserve Certificates: interest now (as from November 25th, 1961) 3½ per cent; the rate as at August 12th, 1961, was 3½ per cent, not 3 per cent as shown.

Foolscap, page 63; Pocket, page 137: Yorkshire Insurance Co Ltd; last declared bonus rate in the Endowment Assurance table is misprinted 50s; the rate should be 60s as shown in the Whole Life table.

Foolscap, page 124; Pocket, page 284: Annual meeting of The Institute of Chartered Accountants in England and Wales is now to be held on Thursday, May 3rd, and not on May 2nd.

Small Estates: Grants of Representation

ORDINARILY a grant of representation in respect of the estate of a deceased person must be obtained at either the principal registry or one of the district registries or sub-registries – there are in England and Wales twenty-six of the former and seven of the latter – of the Probate, Divorce and Admiralty Division of the High Court. While no particular difficulty attends the obtaining of a grant in a straightforward case, a simpler and cheaper method of taking out representation has long existed in the case of very small estates, the procedure being to apply to an officer of Customs and Excise in England or Wales, within which there are 273 offices of H.M. Customs and Excise approved for the receipt of applications for grants of representation.

In the case of a deceased person who died on or after June 1st, 1881, and before August 2nd, 1894, the procedure in question was available only if the gross personal estate (exclusive of property settled otherwise than by the will of the testator) did not exceed £300 (Customs and Inland Revenue Act, 1881, section 33). In the case of persons dying on or after August 2nd, 1894, the procedure was extended, by section 16 (1) and (2) of the Finance Act, 1894, to cases where the gross value of the property, whether real or personal, did not exceed £500. This limit remained in force until the Small Estates (Representation) Act, 1961 (which received the Royal Assent on July 19th last), was brought into force on January 1st, 1962, by the Small Estates (Representation) Act (Commencement) Order, 1961 (S.I. No. 2147 of 1961).

Section 1 (1) of the Act of 1961 provides that the limits on the operation of section 33 of the Act of 1881 (as subsequently amended) shall be that the value of the net estate is less than £1,000 and that the gross estate is less than £3,000, and provides for the consequential amendment of various statutes which are specified in the First Schedule. Subsection (2) of section 1 provides that 'gross estate' means the aggregate of the property real and personal (but excluding property settled otherwise than by the will of the deceased) in respect of which estate duty would be payable if the duty were payable in respect of estates however small the principal value thereof, and that the value of the net estate is to be taken to be the amount appearing from the affidavit for the Commissioners of Inland Revenue referred to in section 30 of the Act of 1881 to be the value of the net real and personal estate passing under the grant of representation. The Act of 1961 has,

however, no application where the death occurred before April 10th, 1946 (section 3 (3)), so that the limit provided for by the Act of 1894 is still applicable in a case – and such a case will obviously be extremely rare – where a grant is sought in respect of a deceased person who died before that day.

The Act of 1961 applies to Scotland, which has legislation parallel with the Acts of 1881 and 1894, and where application may be made either to an officer of Customs and Excise or to the sheriff clerk. It does not apply to Northern Ireland, save that section 3 (5) enables the Parliament of Northern Ireland to pass similar legislation.

Clearly the time for increasing the £500 limit had come, and the increase to £1,000 net is not a large one bearing in mind the difference in the value of money between 1894 and today. The limit of £3,000 has been selected for two reasons. First, if the gross value of an estate exceeds £3,000 but the net value is less than £1,000, it is likely to be fairly heavily encumbered, in which case there may be legal complications which can be dealt with more satisfactorily in a probate registry than in a Customs and Excise office. Secondly, no question of estate duty assessment arises in the case of an estate within the £3,000 limit, since section 32 of the Finance Act, 1954, exempts from estate duty an estate the principal value of which does not exceed £3,000.

Section 2 of the Act of 1961 provides for the replacement of the fixed fee of 15s laid down by section 33 (1) of the Act of 1881. The Supreme Court (Non-Contentious Probate) Fees Order, 1961 (S.I. No. 2186 of 1961), made under section 213 of the Supreme Court of Judicature (Consolidation) Act, 1925, substitutes a sliding scale of fees.

Research Activities under the Microscope

FOR some years there has been discussion of the adequacy of research and development activity in Britain in the face of American and European competition. Information as to the recent extent of such activity was derived mainly from surveys made by the Department of Scientific and Industrial Research in 1955 and 1958, but indications of the quality and effectiveness of research and development effort were difficult to establish.

A considerable accession of knowledge is now provided by the publication of the results of a survey carried out during 1959–60 by the Federation of British Industries, in conjunction with the National Institute of Economic and Social Research.[1] The figures quoted are derived from F.B.I. members only, but comparisons with earlier surveys indicate that these firms account for more than 90 per cent of the research and development expenditure of all manufacturing industry.

Within the framework of F.B.I. membership, revenue expenditure on research and development is now estimated at £250 million per annum – a fourfold increase over ten years. Total personnel employed in these activities has doubled over the same period. The distribution by industry of this expenditure may be summarized as:

	£
Aircraft	89,000,000
Electrical engineering	55,000,000
Other 'research industries' (chemicals, man-made fibres, general engineering, metal manufacture, and vehicles) ..	83,000,000
All other ('traditional') industries	23,000,000
	£250,000,000

About two-fifths of the total is Government financed, the preponderant shares going to aircraft and electrical engineering.

[1] *Industrial Research in Manufacturing Industry, 1959–60.* Federation of British Industries, 21 Tothill Street, London, SW1. Price 40s.

More than 60 per cent of the firms reported plans for expansion of research and development, but it is obvious that a major limiting factor is shortage of qualified manpower. At the date of reporting there were over 2,000 vacancies for qualified scientists and engineers, representing some 13½ per cent of existing establishments. A possible means of economizing scientific manpower might be greater use of research associations, expenditure through which (excluding the aircraft industry) amounted to only 4 per cent of the total research expenditure of the reporting firms. Comments submitted on the services given by research associations, however, indicated that in many cases only background information was being provided, or that the associations' research effort was in some way inadequate.

Accountants, no doubt, will be most interested in using the report as a yardstick against which to measure the performance of the firms with which they are connected. Four sets of figures give guidance in this respect:

(1) Ratios of research and development expenditure to net output and to total payroll.

(2) Percentages of research and development expenditure on various stages of research and development.

The report indicates that 6½ per cent of research effort was reported as 'basic research', 37 per cent as new product development, 41 per cent as improvement of existing products, and 15½ per cent as technical services and miscellaneous.

(3) Indications of the extent to which research and development expenditure is useful, in the sense of finding a commercial application.

Overall some 18 per cent of total expenditure was reported as abortive in this sense.

The fact that the percentages were higher for smaller than for larger firms, and that in certain industries percentages in excess of 50 per cent were returned, may indicate that much effort is in some way misdirected.

The N.I.E.S.R. commentary cogently suggests that to realize research and development potential, firms must have qu people in management and produc capable of seeing and using the potent gains.

(4) Correlation between research and development expenditure and growth and profitability.

The conclusion from the information provided is that although there is a general positive association between the factors, and in a few cases this is significant, no causal relationship can be generally established. The greater part of the difference between firms in rates of growth and profitability is probably due to factors other than differences in the amount of research and development.

A disappointing reflection on the state of industrial accountancy is provided by the report on criteria used in choosing research projects and in measuring the return from such projects. Only seventy-five firms (apparently about 10 per cent of the total) acknowledged any specific criterion for choosing projects, normally the relationship between forecasts of cost and profit; and only thirty-nine reported any method of measuring return after the research work had been completed.

It is possible that these replies are not fully representative, but it would obviously be helpful to accountants in industry and to the profitable utilization of research and development effort in the country if one of the professional bodies could contrive the wider dissemination of information on methods of control currently in use.

Only a minute part of the wealth of information contained in this report has been mentioned, but one further comment demands quotation:

> 'Concentration on basic research is an effect of our failure to develop appropriate methods of training and selecting managers. The number of research managers with a grasp of the principles of organization and of the economics of research is small.'

We trust fervently, in the face of the facts adduced, that this last statement is not true also of members of the accounting profession.

Coding Notices

by FÉLICE V. SLADE, A.C.A.

CHECKING a coding notice is normally a straightforward matter but in unusual circumstances some difficult points can arise which call for a sound knowledge of the machinery of the Pay-as-you-earn system and, in particular, of the Tax Deduction Tables.

There are two basic principles to remember. Firstly, the 'free pay' figures shown by Table A represent the taxpayer's total allowances *grossed up by the fraction 9/7ths* to give earned income relief to the extent of those allowances. Secondly, Table B then automatically allows further relief on the taxable part of the income.

Various circumstances which call for special adjustments to be made in a coding notice will now be considered separately.

1. Earned Income in Excess of £9,945

It is important to remember that Table B alone gives earned income relief up to the full limits provided by the Income Tax Act, i.e. at 2/9ths on income up to £4,005 and at 1/9th on further income up to £9,945. Accordingly, where the income exceeds these limits and personal allowances are due, it is obvious that Tables A and B together can operate to give excess earned income relief. To prevent this a deduction for 'earned income relief restriction' is made in the coding.

If the earned income exceeds £9,945, the 2/9ths relief given on the coded allowances or on the excess income, whichever is the less, must be withdrawn. In other words, the deduction (in terms of allowances) to be made in the coding notice is 2/9ths of the total coded allowances, the formula for that adjustment being:

'Free pay' = 9/7ths C.A. (coded allowances)

Earned income relief allowed in free pay = 9/7ths C.A. – C.A. = 2/7ths C.A.

Therefore deduction (in terms of allowances) to be made in coding = 7/9ths × 2/7ths C.A. = 2/9ths C.A.

2. Earned Income between £4,005 and £9,945

What one has to do in this instance is to substitute earned income relief at 1/9th for 2/9ths on the coded allowances or on the income in excess of £4,005, whichever is the less. In this case the deduction, in terms of allowances, is 1/8th of those coded, the formula being as follows:

Earned income relief allowed at 2/9ths in free pay is, as above 9/7ths C.A. – C.A. = 2/7ths C.A.

Amended earned income relief at 1/9th = 9/8ths C.A. – C.A. = 1/8th C.A.

Excess earned income relief = 2/7ths C.A. – 1/8th C.A. = 9/56ths C.A.

Therefore deduction (in terms of allowances) to be made in coding = 7/9ths × 9/56ths C.A. = 1/8th C.A.

3. Charges Exceeding Earned Income

If a taxpayer's charges exceed his unearned income he is allowed earned income relief only on the earned income as reduced by the excess charges. But as the tax tables automatically allow earned income relief on the full amount of the earnings a restriction has to be made in the coding to avoid an excessive allowance.

Example:

A single man earns a salary of £1,650, receives taxed investment income of £150 (gross) and pays loan interest of £400 (gross).

The amount on which earned income relief must be restricted is £250, i.e. loan interest £400, less taxed investment income £150.

The coding then becomes:

Personal allowance	£140
Earned income relief restriction, 2/9ths of £250	56
Allowances to be set against pay ..	£84

4. Expenses Restricting Earned Income Relief

Because the tax tables automatically give earned income relief on the full amount of the gross pay, whereas a taxpayer is entitled to relief only on his net earned income (i.e. after deducting expenses), only 7/9ths of the expenses should be included in the coded allowances.

5. Allowances Exceeding the Maximum Covered by the Highest code Number

Example:

Married man with two children aged 14 and 16 (still at school) respectively, life assurance relief due on £150, retirement annuity premium £750 p.a. (all allowable).

The allowances for inclusion in the coding notice are firstly calculated as follows:

	£
Personal allowance	240
Child allowance	275
Life assurance	150
Retirement annuity premium	750
	1,415
Less Family allowance 7/9ths £20 ..	16
	£1,399

But the maximum code number provided for in the P.A.Y.E. system is No. 225 which is equivalent to allowances of £1,062–£1,067.

As the total allowances in the example above exceed the maximum shown in the list of codes by some £334 the Inspector of Taxes will issue two compensating instructions to bring the P.A.Y.E. treatment into line with the circumstances. Firstly, he will deduct, say, £334 'maximum code restriction' from the total allowances of £1,399 thereby reducing the total to £1,065.

Secondly, to compensate for this deprivation the inspector will issue instructions to the employer to apply the tax tables (code No 225) only to the remuneration as reduced by £334 per annum or by, say, £28 per month.

The 'maximum code restriction' is therefore a technical adjustment which, provided the complementary instructions to the employer are correctly carried out, will ultimately have no effect on the amount of income tax deducted from the remuneration.

6. More than one Employment

As the tax tables treat each employment as if it were the sole source of income of the taxpayer, it is obvious that some adjustment must be made where there are in fact several employments, to avoid an excess allowance of earned income relief and reduced rates relief. A variety of methods are available to achieve this end.

A principal source of income may be selected and the other sources may be either charged at the standard rate (a special 'S.R.' coding is notified) or exempted altogether from deduction of tax (in which case a 'N.T.' code is notified). In the first instance, which is probably the most usual, the earned income relief based on an estimate of the prospective subsidiary income (within the total limit of such relief) is added to the total allowances determining the code of the principal source of income. In the second instance, the coding for the principal source is modified to take into account the liability on the subsidiary income; for example, if the principal source is sufficient to absorb the full reduced rates relief, the amount of the subsidiary remuneration, less earned income relief thereon, is deducted from the coded allowances for the principal source.

It is not usually practical to divide the reliefs and issue two ordinary code numbers, as difficulties arise over the reduced rates relief, but sometimes this is done.

Example:

Single man earns the following:

Source 1 Salary £950 *less* expenses £150
„ 2 „ £420 „ „ £100
„ 3 „ £100

Life assurance relief due on £63.

In such a case the codings (which have been chosen to illustrate the point rather than to show the most practical method) might be as follows:

Source 3
Earned income relief only, = Code 0

Source 2

Expenses £100 *less* earned income relief £22	£78	
Personal allowance	140	
	£218	= Code 56

(Earned income relief and reduced rates relief given automatically).

Source 1

Expenses £150 *less* earned income relief £34	£116	
Life assurance relief ..	63	
	179	
Less: Double reduced rates restriction (see below) ..	68	
	£111	= Code 24

(Earned income relief and reduced rates relief given automatically).

In the example above, if the restriction of £68 had not been made in the coding for the salary from source 1 an excessive amount of reduced rates relief would have been given in respect of

the remuneration from sources 1 and 2. The restriction is calculated as follows:

	£	£
Salary (2)		420
Less: Earned income relief ..	94	
Allowances (as above) ..	218	
	—	312
		£108

	£	s	d
Chargeable – £60 at 1s 9d	5	5	0
£48 at 4s 3d	10	4	0
Tax recovered by coding	15	9	0
But the correct liability is £108 at 7s 9d	41	17	0
Therefore the undercharge is ..	£26	8	0

which is approximately equal to £68 at 7s 9d

In any event it is the practice for the Inspector of the General Claims District to allocate the various allowances and to notify his colleagues in the Districts in which the subsidiary sources of income arise, of any restrictions that may be necessary in the codings in those Districts.

7. Remuneration Paid to a Non-resident British Subject

A non-resident British subject is entitled, under section 227 of the Income Tax Act, 1952, to proportionate allowances and this restriction of allowances must of course be reflected in the coding for any United Kingdom source of earned income. The practice in such a case is for the Chief Inspector of Taxes (Claims) first to estimate the total income tax liability for the year in question, based on the anticipated earnings, and then to calculate the coding from that estimate.

Example

NON-RESIDENT ARMY OFFICER

Liable income and charges 1960–61:

Service pay £1,740; Uniform allowance £40; Family allowance £20; Untaxed interest £34; Taxed dividends £187; National Insurance Contributions £11=£1,930.

Non-liable income:

Foreign dividends £792; 3½ per cent War Loan interest £38=£830.

Allowances:

Personal allowance £240; Child allowance £200; Dependent relative relief £60; Life assurance £75=£575.

Estimate of liability:	£	£
Liable income		1,930
Non-liable income		830
		2,760
Earned income relief (2/9ths of £1,720)	383	
Other allowances	575	
	—	958
		1,802
Chargeable at reduced rates ..		360
Chargeable at standard rate ..		£1,442

	£	s	d
Tax payable at reduced rates ..	84	0	0
Tax payable at standard rate ..	558	15	6
	£642	15	6

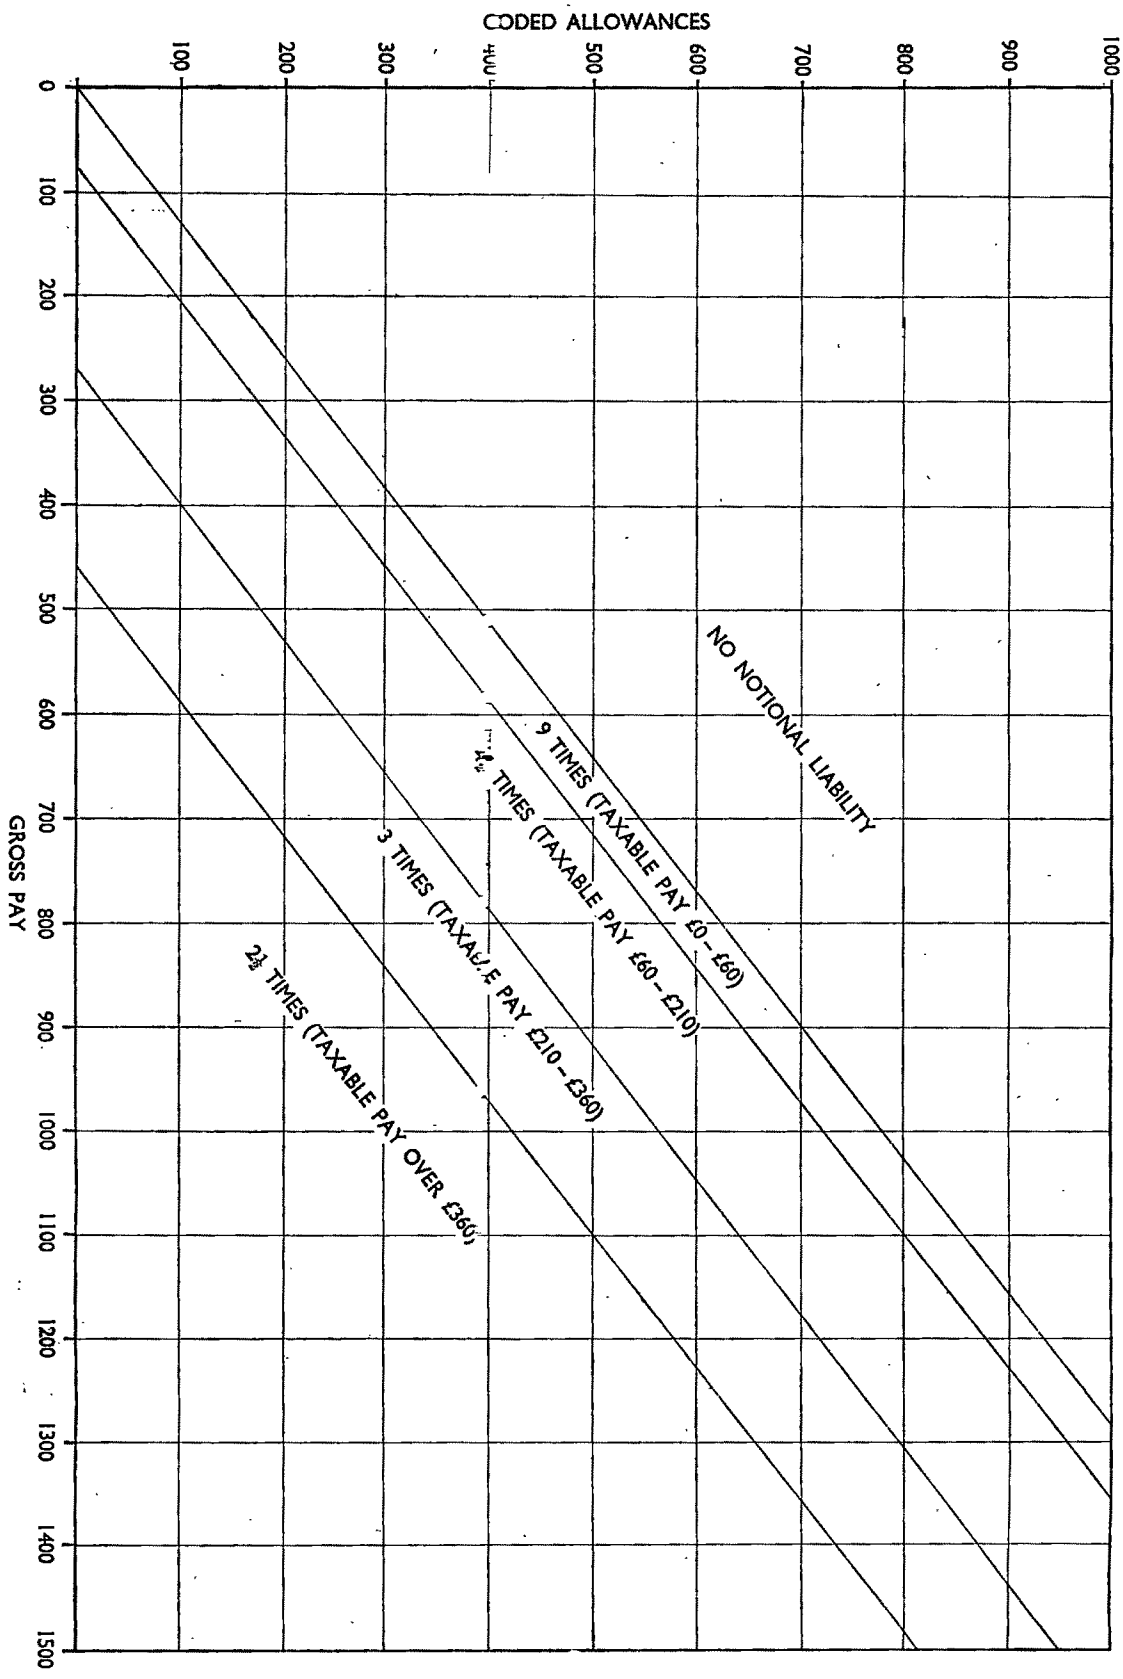
	£	s	d
Proportion applicable to liable income 1930/2760 of £642 15 6	449	9	6
Less Tax deductible at source from dividends – £187 at 7s 9d	72	9	3
Estimated liability to be deducted from Service pay	£377	0	3

The following calculation is then made to determine the amounts to be charged at the reduced rates and standard rate, respectively, in order to collect, as nearly as possible, the sum of £377 0s 3d arrived at above:

	£	s	d
£360 at reduced rates	84	0	0
756 at standard rate	292	19	0
£1,116	£376	19	0

Bearing in mind that the 'gross pay' is £1,740 and the taxable income according to the foregoing calculation is £1,116, it is then a simple matter to compute the proportionate allowances, thus:

	£
Gross Service pay	1,740
Less Earned income relief	387
	1,353
Deduct Amount to be charged as above	1,116
Net allowances due	£237



CODED ALLOWANCES
100
200
300
400
500
600
700
800
900
1000
GROSS PAY
0
100
200
300
400
500
600
700
800
900
1000
1100
1200
1300
1400
1500
NO NOTIONAL LIABILITY
9 TIMES (TAXABLE PAY £0 - £60)
4½ TIMES (TAXABLE PAY £60 - £210)
3 TIMES (TAXABLE PAY £210 - £360)
2½ TIMES (TAXABLE PAY OVER £360)

The coding notice will then read as follows:		£
Uniform allowance £40×7/9ths	..	32
Personal allowance	..	240
Child allowance	..	200
Dependent relative	..	60
Life assurance	..	75
National Insurance Contributions	..	11
		618
Less Interest	£34	
Family allowance £20×7/9ths	16	
Section 227, Income Tax Act 1952 adjustment ..	331	
		381
Allowances to be set against Service pay		£237
		(as above) Code No. 64

8. Underpayment of Tax Brought Forward from Previous Year

Tax underpaid under P.A.Y.E. for any year may be recovered by reducing the total of the allowances to be included in the coding for a subsequent year. The amount to be deducted is the sum, tax on which would equal the underpayment at the rate for the year for which the coding is being calculated (not the year in which the underpayment arose) and at the highest rate likely to be applicable. The aim is so to adjust the coding that the tax deductible (and not merely the 'taxable pay') is increased by a certain amount. In order to do this, it is necessary to deduct from the allowances 2½ times, 3 times, 4½ times or 9 times the amount of tax underpaid, depending on whether the particular employee's highest rate of tax is 7*s* 9*d*, 6*s* 3*d*, 4*s* 3*d* or 1*s* 9*d*, respectively.

Any practitioner who has frequently to check coding notices may find it worth while to draw up a simple graph for working out the number of times by which an underpayment should be multiplied in any particular instance. The graph will save him the trouble of working out the highest rate of tax in each particular instance – admittedly a simple enough task, but one that involves (*a*) calculating the appropriate earned income relief, (*b*) deducting this relief and the total allowances from the gross pay and (*c*) ascertaining, from the resultant taxable pay, what is the highest rate of tax payable.

Such a graph is illustrated herewith and it will be seen that one merely has to pinpoint on the graph by reference to (1) the gross pay, and (2) the total coded allowances of the particular individual, to ascertain by how many times the underpayment should be multiplied for deduction in the coding notice.

Thus a taxpayer earning £850 with total coded allowances of £480 must have his underpayment multiplied 4½ times for deduction in his coding.

9. Reduced Rates Relief on Taxed Dividends

If it appears that part of the first £360 of an employee's taxable income will consist of dividends from which tax is deductible at source, a provisional allowance is given in the coding for 'Reduced rates relief on dividends'.

Example

Married man (no children) earns £700 for 1961–62 and is expected to receive taxed dividends of, say, £300 (gross).

The estimate of his Schedule E liability for the year will be:

	£	£
Salary		700
Less Earned income relief ..	156	
National Insurance Contributions	18	
Personal allowance ..	240	
		414
		£286

	£	£ s d
Chargeable at 1*s* 9*d*	60	= 5 5 0
,, ,, 4*s* 3*d*	150	= 31 17 6
,, ,, 6*s* 3*d*	76	= 23 15 0
	£286	£60 17 6
Less Balance of reduced rates relief against dividends £74 (£150–£76) at 1*s* 6*d*		5 11 0
		£55 6 6

The taxpayer's highest rate of tax on his salary is 6*s* 3*d* and his coded allowances are therefore increased by a sum, tax on which at 6*s* 3*d* will equal as nearly as possible the balance of the reduced rates relief. Tax on £17 at 6*s* 3*d* is £5 6*s* 3*d* and £17 should therefore be added to the coded allowances.

Another way of looking at this point is to regard the balance of the reduced rates relief of £5 11*s* as if it were an *over*payment of tax brought forward from an earlier year. The graph previously described shows that if the gross pay is £700 and the coded allowances £258, the overpayment must be multiplied three times for inclusion in the coding notice. If one multiplies £5 11*s* by three one gets the same answer of £17 (to the nearest £) for inclusion in the coding.

Notes on Information Required from Companies Seeking Quotation on the London Stock Exchange

by J. A. HUNTER, M.B.E., T.D.

THE main purpose of the London Stock Exchange is to provide an efficient market for the purchase and sale of securities. An efficient market can only operate when all who use it have confidence that within reason they are in possession of the same facts as their opposite number in a bargain. The availability of all relevant information concerning the quoted securities and the speedy dissemination of that information are two important factors in the maintenance of an efficient market. Of the 9,355 securities quoted on the Stock Exchange, London, at March 31st, 1961, 8,470 were securities relating to companies.

Educating Investors

The stock exchange attaches great importance to the very high standards of investigation carried out and the accuracy of the information supplied by the issuing houses, sponsoring brokers, reporting accountants, solicitors and others who are engaged in the preparation of prospectuses and statements of information as a preliminary step to an application for quotation. The stock exchange does not, however, rely solely on the fact that the economic and financial aspect of the company has been examined by a reputable institution. Nor by granting a quotation does it guarantee the worthiness of the security or the company. Instead it works on the basis that all the relevant information must be available to enable the investor to judge the merits of the security. Once the information has been made available through the stock exchange the onus is put on the potential investor to draw his own conclusions. This approach develops a greater sense of shareholder responsibility and encourages a keener interest in investment. The encouragement of these responsibilities and interests are important because the holders of Ordinary, Deferred, and Founders shares are joint proprietors of the business and will be called upon from time to time to exercise their vote in a responsible manner. By educating investors in this way it becomes more difficult to market doubtful propositions to the public.

In order to ensure that sufficient information is sent out the stock exchange requires the documents which relay the information to be submitted in draft form. The documents are then examined by officials who check that the requirements which are contained in Appendix 34 to the rules and regulations of the stock exchange are complied with. A records department is maintained which checks on the personalities connected with the company.

These draft documents are treated in the strictest confidence and, in order to ensure that all the stock exchange requirements are complied with, they are normally lodged a number of weeks before being published.

Types of Application

The securities in respect of which this information must be given fall into three groups. In the first group are applications by companies no part of whose share or loan capital is already quoted, i.e. original applications. In the second group are applications by companies part of whose share or loan capital is already quoted. In the third group are applications of companies wishing to issue securities which will become identical with existing quoted securities. If none of the securities is already quoted information about the activities of the company in addition to the information about the securities is required by the stock exchange. These requirements are additional to the conditions set by law which must also be complied with. The formal details such as the capital, rights appertaining to the security, details of the names of directors and relevant parts of the articles of association, statutes, trust deed or other regulations must, of course, be given.

MR J. A. HUNTER, M.B.E., T.D., author of this paper, is a partner in a leading firm of City stockbrokers and a member of the Council of the London Stock Exchange. He is also a member of the Panel of Judges of *The Accountant* Annual Awards.

The paper was given at the recent Conference of European Stock Exchanges.

However, in order to enable the potential investor to assess the merits of the security the following information must also be given; the profit figures of the company and its subsidiary companies (if any) for the preceding ten years in order to enable the trend to be judged; a description of the business and its products; the management; the assets and liabilities of the group (if a holding company) and of the company. With regard to this last point only certain types of companies are by law allowed to have secret reserves. The assets appertaining to the different sorts of business are also shown. The report on assets and liabilities must include a valuation of the stock and work in progress supported by a statement from the reporting accountants to the stock exchange that they are satisfied that they have been properly taken and valued throughout the period in question. In the case of a property company, an up-to-date valuation of the properties made by independent valuers. In the case of a mining company or oil prospecting company reports by mining engineers and geologists on the prospects are required to be included. A statement on the financial and trading prospects together with material information which may be relevant thereto. In some cases a request is made for these estimates to be accompanied by evidence supporting the basis on which they have been determined.

There is a note at the beginning of Appendix 34 to the rules and regulations of the stock exchange which reads:

> 'These requirements are not exhaustive and the committee may add thereto or subtract therefrom in any particular case.'

This provides a great measure of flexibility to the requirements and enables the stock exchange to call for additional information in special circumstances or to waive requirements where they would be unduly burdensome.

Additional Information

Often additional items of information are requested. For example, disclosure of information about the relative importance of a particular branch of the business or of a particular product; where a valuation of fixed assets is used to indicate the assets cover for the share capital or for information purposes, and this valuation has not been written into the books, the company is asked to state whether it is the intention of the directors to adopt that valuation in the books and accounts and to increase the depreciation charges in view of the enhanced values. Companies are also asked to state whether there is any litigation or claims of material importance pending and whether there are any arrangements such as life or long-term service agreements with the holding company or any of its subsidiaries whereby the holding company is unable, without a claim for substantial damages arising, to make such changes as it desires in the board or higher management of the subsidiaries.

Although the stock exchange does not stop an issue of securities merely because it does not appear to be attractive, the full amount of disclosure required and the scrutiny to which it has been subjected and the information required to be revealed act as a deterrent to a bad proposition.

The information which must be given when quotation is sought for the securities of a company, part of whose share or loan capital is already quoted, is based on the assumption that certain details about the company are already known. The company will, of course, have given the basic information detailed above when it first sought quotation and this will be available to the public, through the media of what are known as the statistical services.

The further information required to be given includes: rights as to the capital; dividend interest; voting; particulars of current indebtedness or guarantees of the company or group; particulars of capital of the company or subsidiaries under option together with certain details relating thereto.

If, since the date to which the last published accounts were made up, capital of the company or its subsidiaries has been issued either for cash or for a consideration other than cash, the terms of such issue must be stated. Any material change in the financial position since the date of those accounts must also be given.

Where shares are to be identical, the document must set out the purpose of the issue, the estimated expenses which will produce the net proceeds; what will happen if all the shares are not taken up; whether the issue is being underwritten and changes in the capital of the company since the last accounts.

'General Undertaking'

Having secured the above information when securities first come for quotation, the stock exchange ensures the continued supply of information by requiring companies to sign what is known as a 'general undertaking'. By signing this a company undertakes to take certain administrative actions with regard to its securities; meetings of shareholders; communications of interim and final dividends; preliminary profit statements upon which a final dividend decision is taken, and particulars of any new issues of capital.

The company also undertakes to inform the stock exchange without delay of any acquisition by the company or any of its subsidiaries of shares in another company. It also agrees to supply any other information which the stock exchange may require so as to ensure that the shareholders can assess the activities of the company and prevent a false market developing in the shares. This part of the undertaking covers a wide field deliberately, because the best assurance of the right price is the complete disclosure of all information which might affect the price. By reason of the fact that draft documents are submitted to the stock exchange it is possible to ensure that statements made by the company are

expanded where necessary. For example, when a business of another company has been acquired which is material in relation to the purchasing company, the purchasing company may well be asked to issue a circular to its shareholders setting out details of the purchase together with an accountant's report on the company acquired.

This requirement of submitting proof documents together with the requirement of providing proxies enabling the shareholders to vote for or against a proposal on all matters other than those of a purely routine nature are also important steps in the cultivation of shareholder interest in the company's affairs.

The stock exchange does not lay down any special requirements as to the annual report and accounts of United Kingdom companies as the form and contents are already governed by the Companies Act, 1948. In addition the recommendations of the various bodies of accountants and particularly those of The Institute of Chartered Accountants in England and Wales carry great weight in the company world.

In regard to companies other than United Kingdom companies the stock exchange requires similar standards to those set up by the Companies Act and its own requirements, but is prepared to consider some relaxation in exceptional circumstances.

The stock exchange also welcomes semi-annual financial statements or progress reports and has informed the Government Committee at present considering a revision of company law that any legislation providing for the publication of such reports would be welcomed.

Co-operation

As the stock exchange is an independent institution not a Government controlled body its requirements do not have the force of law. It therefore depends entirely on the co-operation of the companies and the sponsoring bodies to adhere to its requests. These requirements have grown up over the years and have developed from the practice followed by the more enlightened companies and from suggestions put up by, or to, the stock exchange and agreed by the various interested professional bodies. The stock exchange persuades other companies to follow this practice. As an example of this, in 1945 the stock exchange requested companies which were either holding companies or conducted business through one or more subsidiary companies to make up and circulate consolidated balance sheets and profit and loss accounts. This was subsequently adopted by the Government when they came to enact a new Act governing companies in 1948. An example of co-operation between independent bodies occurred in 1959 when there were a large number of take-over bids being made the conduct of which was causing considerable adverse comment in the Press. A committee consisting of prominent City institutions, of which the stock exchange was one, met and produced a code of conduct to be followed for such cases. This code together with certain subsequent provisions which the stock exchange had called upon companies to produce were subsequently adopted in a Government enactment.

Detailed in previous paragraphs is the process whereby the stock exchange elicits information from companies. It now remains to show how this information is passed on to the public. In addition to advertisements in the Press, the stock exchange requires, in some circumstances, the financial information produced by companies when they first come for quotation to be reproduced in the statistical services (which are represented by the Exchange Telegraph Co Ltd and Moodies Services Ltd). In other instances these services, of their own accord, reproduce the material parts for permanent record. Current news is disseminated by passing copies of announcements made by companies to The Exchange Telegraph Co at the same time as the ordinary announcement is fixed to the notice-board on the trading floor.

The stock exchange considers that an efficient market is obtained when the above information is generally available. It means that all persons using the market, so far as is possible, can put themselves in possession of the same amount of information. If information is available to all, rumours cease to have the same value and both parties to a bargain can with reasonable confidence feel that neither has special knowledge not known to the other. This is an ideal which is sometimes difficult to attain; obviously it can never be fully reached. But it is the principle behind the requirements relating to the information to be supplied on the activities of companies quoted on the stock exchange.

Passing on Company News to the Public

Above is set out the type of information required by the stock exchange from companies. Our basic principle is to ensure as far as possible that all relevant information is available to enable investors to assess the merits of a proposition or the position of a company.

As mentioned above, a large amount of information is obtained from companies when their securities first come for quotation. At that time this information is made immediately available to the public since the stock exchange requires the company to advertise the particulars in two leading London newspapers. Much of this information is also reproduced for reference purposes in *The Stock Exchange Official Year-Book*, which is revised annually, and the statistical services. The information supplied by these statistical services is available to subscribers in the form of reference cards which are kept up to date by the substitution of fresh cards at varying intervals.

At the time companies come for quotation they are required to sign a 'general undertaking' in which they undertake in specific terms to notify a depart-

ment of the stock exchange of what may be described in general terms as relevant information which might affect the price of the shares. This information is conveyed to members of the stock exchange by means of the notice-boards which are situated on the trading floor of the House. Copies of the announcements or notices are also available to The Exchange Telegraph Co and Reuters who transmit the information on their news wire services. In this way we ensure that the public are informed through the financial sections of the Press. In many cases companies send copies direct to the Press. Daily, Sunday and weekly newspapers today devote more and more space to financial news.

The difference between the Press and the financial services is that the Press as well as reporting facts offer opinion. The services only give facts. The Press of course do not report nearly as fully on facts as do the services but the combination of opinion and fact serves the investor well. We in the stock exchange gain greatly from the critical comment of the financial Press and especially when they think facts are being withheld by a company.

All companies other than those which have exemption have to reveal all their reserves. Since the dividend paid is regarded as an important factor reflecting the financial state of the company, it is of great importance to obtain the simultaneous release of this information to all concerned.

The stock exchange tries to obtain the co-operation of directors in ensuring that information is given to the public as a whole as early as is possible. The less time that elapses the smaller is the chance of a leakage of information. As a first line of defence against a leakage the stock exchange is advised by companies of the date of such announcements. The second line of defence is the immediate release of that information.

There are naturally loopholes in the system outlined above which we do our best to seal. We are at the moment actively engaged in examining new and improved methods of passing on information.

Weekly Notes

MORE NEW YEAR HONOURS

IN last week's issue we had pleasure in congratulating members of the profession whose names appeared in the New Year Honours List. We should now like to congratulate also the following members of the New Zealand Society of Accountants who have been awarded the C.M.G.: Mr Edwin Lloyd Greensmith, M.COM., A.R.A.N.Z., Secretary to the Treasury in the New Zealand Government; and Mr Alexander Paterson O'Shea, B.COM., F.R.A.N.Z., general secretary, Federated Farmers of New Zealand.

Two further members of the profession in the United Kingdom have received the M.B.E.; they are Mr Thomas Bourne, F.C.A., senior partner in the firms of Thomas Bourne & Co, and Thompson & Sherratt, Chartered Accountants, of Burton-on-Trent, who is secretary and treasurer to the 351 (Burton-on-Trent) Squadron, A.T.C., and Lieut-Col Geoffrey Saville Smith, M.C., T.D., F.C.A., director, Field, Sons & Co Ltd, for political services in Glasgow.

MUTED OPTIMISM – OR WARNING?

THE measures adopted at the end of last July were intended to relieve pressure on sterling and to give early benefit to the balance of payments. By the end of October, states the latest Bank of England *Quarterly Bulletin*, published last week, 'it could be claimed that the short-term aims had largely been achieved'. Unfortunately, the very success that has attended these short-term measures creates 'a risk that the vigorous pursuit of longer-term policies, designed to secure increased efficiency and flexibility of the economy, will be relaxed'.

That the long-term problems are still far from being solved is evident from an analysis of the 'invisibles in the United Kingdom balance of payments', which as this journal has in the past stressed, are no longer adequate to offset the traditional deficit on the visible trade account. Nor is the importance of the invisible transactions always fully recognized, but as 'regards debits and credits, invisibles are equal to over 50 per cent of transactions on visible account', i.e. of exports and imports. The invisible items comprise four main groups of receipts and payments; (*a*) those by the Government which are mainly military, together with grants to dependent territories; (*b*) the income from British overseas investments less corresponding payments in respect of foreign investments in the United Kingdom; (*c*) the value of services provided or received in respect of shipping, travel, banking and insurance, etc.; and (*d*) gifts and similar transactions not included under Government transactions.

While it is much more difficult to obtain reliable statistical information about these 'invisibles', the subject is sufficiently well documented to enable international comparisons to be made, as well as a breakdown of the United Kingdom figures. The United States apart – which has especially heavy military and economic aid expenditures to meet – Britain is conspicuous among the West European countries for her persistent and growing deficit on Government account. A most interesting analysis of

receipts and payments of interest, profits and dividends between 1955–1960 for the United Kingdom and six other countries reveals that in the last three years the United Kingdom receipts have been declining, while those of all the other countries have been increasing. In fact, the United Kingdom invisible balance between 1958–60 has deteriorated by some £200 million and the causes of this fall cannot be attributed to any single experience; rather the decline is evident in all the components. When the European picture is studied overall, the conclusion 'seems inescapable that in many fields the United Kingdom's recent experience has been notably worse than that of other countries'.

PLANNING WAGES

THE current issue of *Crossbow*, the quarterly political journal has a pamphlet by Professor Thomas Wilson, Adam Smith Professor of Political Economy at Glasgow University, on 'Planning and growth' and deals with the proposed plan for wages and personal incomes. Professor Wilson thinks that the strongest argument for it is that the feasible arguments for alternative schemes are so poor.

Discussing the problems facing the National Economic Development Council he says that it would be hopeless to try and determine the earnings of every grade of labour in all places of employment. Only the national rates should be tackled. Further, part of the trouble arises because wage demands come in at various times and the aggregate effect seems not to be labour's concern. This is the same point as the Cohen Committee made about the problem of ensuring that wage increases were related to average productivity in industry and not to the rate of productivity in the most efficient industries.

Thirdly, he thinks it would be necessary to persuade the unions where productivity was growing fast to accept less than proportionate rises in wages. The reason for this would be that in the more stagnant industries the unions would want to keep wages in some relationship with those in more progressive industries. He also thinks that the Council might be able to deal with other personal incomes but it could not control total profits.

He is sceptical of the influence the T.U.C. would have on its member unions since it can only advise and guide and cannot commit its members to a decision made by the Council.

Professor Wilson comes to the conclusion that planning on the Monnet lines (that is, of the French variety) will not succeed in bringing about the hoped for psychological change if it is adopted in Britain in the tepid, cautious way which a scientific assessment would warrant. It would have to be done with vigour and enthusiasm involving an act of faith by the Government. The alternative is for the Government to abandon any such idea of planning and to concentrate on creating an environment favourable to growth. While one is bound to accept, to a degree, Professor Wilson's cautious attitude to planning, the history of such recent international ventures as the Iron and Steel Community and the European Common Market, suggests that planning and enthusiasm can be reconciled provided that the planning is not doctrinaire and that the planners move with the consent of the representatives of those who are being planned for and do not try to plan the details as well as the broad lines of advance.

DECIMAL COINAGE AND THE METRIC SYSTEM

A USEFUL explanatory note has been issued by the Economic League (No. 721 of January 1962) on the issues involved in Britain's proposed adoption of decimal coinage, and a metric system. The leaflet makes a useful contribution towards clarifying the issue, which is apt to be commonly confused, on the difference between a decimal and a metric system. It also goes into the question of which would be the best unit of account to use for a British decimal coinage system.

It points out that so far as decimal coinage is concerned there is general approval in the United Kingdom for its adoption. It points out that a number of influential bodies, including The Institute of Chartered Accountants in England and Wales, have come down in favour of this system. The pamphlet states that this is a domestic matter and the two main issues involved are the cost of the change-over, which is mainly a question of converting machines, and the confusion to the general public. While, it says, the disadvantages are transitional, the advantages would be perennial. The pamphlet makes the point that the recent experience in South Africa proved a change-over to be easier and less costly than was expected.

On the other hand, the adoption of a metric system would be a far more complicated matter, for there is a big international vested interest in the 'inch-pound' system. This system is used in the United States, Canada and in other parts of the Commonwealth as well as in Britain and while there is a wide usage of a metric system among scientists throughout the world, there is in fact a growing commercial usage of the 'inch-pound' system as the world trade of the United States and the British Commonwealth expands. The pamphlet concludes by saying that there are great advantages in the spread of education in metric usage and the elimination of archaic imperial measures.

OFFICE CONGESTION IN LONDON

IN a study by the Town and Country Planning Association a recommendation is made for measures to be introduced to stop and gradually put into reverse the growing volume of office accommodation in London. A summary and conclusions of the expert

study group which was appointed a year ago, was published this week. This will be sent to the Government and the detailed results of the investigation will be published in a report at the end of January.

Unless such a policy of control on office employment is initiated, the summary says that the public cost of dealing with congestion will mount alarmingly. It goes on to say that if Britain enters the European Common Market further forces may be set to work to concentrate offices in the south-east. It adds that this year may well be the last opportunity for central government to initiate an effective policy.

It says that the basic problem is that the trend of places where people work and where they live are in direct conflict, resulting in more people travelling long distances to work in central London. Nevertheless, it goes on, severe overcrowding continues in London and the root cause of this, and the disturbing plight of homeless families, is the great excess of employment in London. It states that many concerns could well expand their offices in the outer suburbs or beyond with gains in efficiency and cost. Offices should be decentralized on towns between twenty and forty miles from Charing Cross which are at present largely dormitories, on the new towns and on the larger towns forty to eighty miles away which should be substantially expanded to counter London's pull. The same applies to the large provincial cities.

This is My Life . . .

by An Industrious Accountant

CHAPTER 106

IT seems that the profession has been the target again. I notice from *The Accountant* of December 23rd, that what it aptly terms 'that professionally infamous feature', 'A Tune on the Old Tax Fiddle', was broadcast by I.T.V. on the previous Sunday. This was the original 'Professional Portrait' of October 1960, for which the B.B.C. 'expressed regret'; I hadn't expected it to raise its ugly head again.

There are two rather disquieting aspects of this sort of lampoon. Firstly, of course, it typifies the present tendency to harp on the humorous side of the accountant, without counterbalancing it by anything more complimentary. Remember the fun poked at the work-study man and his misjudged economies on the stage: '. . . but look at the time I save!' Or the brilliant but biting impression, in *I'm all right, Jack*, of the accountant watching the workmen through his binoculars. While *Guilty Party* at the St Martin's is anything but flattering to us.

But we can take these jibes; no profession is immune from them. One's only regret is that we have never as a profession adequately replied in kind.

It is true that 'official' reaction in 1960 was most creditably quick and sharp. There was an apology from the B.B.C.; and the subsequent radio discussion when two members of the Council expressed cogently and eloquently the views of the Institute. This undoubtedly contributed most valuably to our professional prestige amongst those who listened to this feature. But that was all. No counter-attack has since been mounted.

Let's face it, radio and television present new problems; but also, let us not forget, new opportunities as well. These media are based on entertainment value; they cater for the masses; they must be slick and gay. Danny Kaye would draw ten times a greater audience than a panel made up of Aristotle, Plato, Euclid and Aquinas. I dream of a TV series which would hold young and old entranced, calling them from 'Panorama' and 'Robin Hood' and 'Wagon Train', proudly featuring an accountant and his exploits, making our ethics and our services household words. What about 'Accountants through the Ages', isn't it a natural?

Look at Olivier tapping his snuff-box: 'Egad, Sir Jasper, you hold an accountant's honour plaguey light that you ask me to sign yon knavish prospectus. Yet methinks I spy a brace of silver-mounted pistols on yonder wall, and you were once counted the best shot in Watiers. Shall we say coffee for one?'

Or Redgrave serene but firm: 'My lips are sealed, Sire. Ere they divulge the secrets of her ladyship's expense account you may well see an auditor spill his blood at Tyburn as freely as ever he spilt ink.'

Richardson would be more choleric, slamming his palm on the table: 'Ye schemin' muckrakers, there'll be nobbut straight dealings with t'trust foonds. Ba goom, no Bradford bairns will hunger through your devilry!'

It could be played for laughs, too, with perhaps a fatly cheerful sluggard with a heart of gold; or Carmichael as the luckless lad who always got into trouble; and of course, enough pretty typists and the like to have the teenagers fighting for front places. And I rather fancy a lady accountant as an enigmatic, provocative, *femme fatale*: cold and severe at first sight, but with hidden fires: 'Were I but free! But disclosure of my father's take-over plans would rock Lombard Street to its foundations.' Behind each story might follow the whole pageant of England's history, with its directors, employees, speculators, barons, prentice boys, cardinals, free-traders, moneylenders, kings, . . . and accountants.

Ambitious, may be; would need a deal of shaping and reshaping. But there's a wealth of incident and exploit untapped; and unless we reveal our own story, unless we fight for our own corner, no one else will do it for us.

Finance and Commerce

Montague Burton

THIS week's reprint presents the accounts of Montague Burton Ltd, the tailors, showing the results of the sixtieth year of trading. Probably few of the group's customers realize what a tremendous organization they are dealing with: over 16,000 employees; more than 700 manufacturing and retail properties; a made-to-measure output of the order of 50,000 suits a week, in addition to the 'ready-to-wear' trade. The group now is composed of the merger, in 1953, with Jackson the Tailor; of Peter Robinson, with stores in Oxford Circus and the Strand, London, and nine in the provinces; and Brown's of Chester, an old-established comprehensive store.

The merger with Jackson followed the Burton crisis in 1952 when events combined to wreck a position that had appeared unassailable. There was a phenomenal drop in the price of Australian wool; Burton, caught with heavy stocks of material, lost about £1 million and owed more than £5 million to the bank. As if that was not enough for the share market to swallow, Sir Montague Burton died and to current fears was added the anticipation that large blocks of stock might have to be sold to meet death duties.

Jackson the Tailor came in to give Mr Lionel Jacobson, the son of its founder, to the new combination as chairman.

New Valuation

The highlight in these accounts is the new valuation for the properties. 'Next' accounts would be more accurate because the valuation by Messrs Healey & Baker is dated September 1st. Freeholds and leaseholds now appearing in the group accounts at £14,320,267 after depreciation are now valued at

	£22,368,069				£23,999,066

£42,073,450 excluding the value of leaseholds where the lease expires within seventy-five years. There is, therefore, a surplus of assets over book values of £32,753,183, which will be added to the capital reserve standing in the accounts now presented at £4,928,025.

The reserve is being drawn on to support a capitalization in the form of three 'A' non-voting Ordinary shares of 10s each for each 10s Ordinary or 'A' Ordinary held on December 29th. Issued Ordinary capital is thus raised to £17,833,304. And there is the warning that this is no indication of larger dividends in future.

From what one hears of Mr Jacobson and the Press conference at which the company's preliminary figures were handed out, the chairman is not over-enthusiastic with a £32¾ million property revaluation surplus – just a matter of a bit more in the balance sheet. His business mind works for the results that can be obtained through the use of the properties and that, basically, is undoubtedly the right attitude. Since 1953, says Mr Jacobson in his statement with the accounts, 'the market value of group shares improved approximately fifteen times'.

In Ireland

THERE is a familiar tone in the statement by Mr Declan Dwyer, chairman of Seafield Fabrics Ltd, of Youghal, County Cork. Naturally, Mr Dwyer presents Irish affairs from an Irish angle, but his criticisms echo what has been said in the United Kingdom under similar circumstances.

In the field of depreciation alone, he says, it was not until 1958, thirteen years after the war, that any effort was made to deal even partially with the question of replacement allowances for plant and machinery and these never measured up to what obtained in other countries. Industrialists are being urged, says Mr Dwyer, to get plant and equipment to that state of efficiency required to deal with Common Market competition, but the Government should realize that this is impossible unless Irish

---

MONTAGUE BURTON LIMITED AND SUBSIDIARIES

NOTES TO ACCOUNTS

1. Group trading profit is stated after charging:

	1961	1960
	£	£
Provision for depreciation (see below)	616,008	524,648
Fees of trustees for debenture stockholders	2,063	2,062
Auditors' remuneration (including subsidiaries) of which £1,100 relates to the previous year	12,919	9,510

The provision for depreciation shown above is in respect of properties, plant, fixtures, etc., excluding freehold shop properties and leasehold shop properties having a life greater than 50 years.
The net amount to which the structural alterations and shop fronts have been written down for balance sheet purposes is £775,021 (*1960 £693,006*).
Capital allowances for taxation purposes are not available in respect of this balance and future depreciation charges aggregating this amount will, therefore, have to be made without relief from taxation. The amount of such depreciation for the year 1961, £154,367 (*1960 £132,681*), exceeded the expenditure during the year on renewals of shop fronts, capitalised in the accounts but allowable for taxation purposes, by £50,634 (*1960 £92,084*).
The emoluments of the directors of Montague Burton Limited in accordance with section 196 (1) of the Companies Act, 1948, were:

	1961	1960
	£	£
Fees	3,750	4,000
Other emoluments	84,202	82,248
Pensions of past directors	2,391	3,000

The financial year of one subsidiary ending 31st March has not been altered to 31st August as the directors consider the latter date inappropriate to its operations.

4. The 3½% first mortgage debenture stock of Montague Burton Limited is redeemable:
(1) By 1986 at or under 101% by the application of an annual sinking fund of £41,000, together with a sum equivalent to gross interest on stock previously so redeemed commencing 31st December, 1947;
or (2) On three months' notice being given by the company
(*a*) Before 1st July, 1966 at 102%, or
(*b*) On or after 1st July, 1966 at 101%.
In each case together with interest accrued thereon to date.
Any stock not previously redeemed will be paid off at 101% on 31st December, 1986.

5. The 4% first mortgage debenture stock of a subsidiary is redeemable:
(1) On or before 1st January, 1984, at or under 102% by application of an annual sinking fund of £5,250, together with a sum equivalent to gross interest on stock previously so redeemed;
or (2) At any time on three months' notice being given by the company, at 105% together with interest accrued thereon to date.
Any stock not previously redeemed will be paid off at 102% on 1st January, 1984.

6. The amounts included for stocks have been determined on bases and by methods of computation considered appropriate in the circumstances of the businesses of the company and its subsidiaries and those bases and methods have been applied consistently.

7. The considerations not provided for on contracts uncompleted were:

	Company		Group	
	1961	1960	1961	1960
	£	£	£	£
(*a*) In respect of capital expenditure on extensions, rebuilding and additions to plant	600,000	335,000	789,700	659,700
(*b*) In respect of purchases of properties	265,500	6,750	472,400	71,350
(*c*) In respect of sales of properties	33,000	—	33,000	—

8. The Company has:
(*a*) Guaranteed the deposits and interests of employees with Montague Burton Savings Bank Limited.
(*b*) Undertaken under certain conditions to subscribe at par for 33,000 ordinary shares of £1 each in Montague Burton Estates Limited.

9. 85,675 5% Redeemable cumulative preference shares of £1 each of a subsidiary held by outside shareholders are redeemable at any time upon three months' notice at 23/– per share.

industry is given the same encouragement as is given by the Governments of the Common Market countries. It is time the Irish Government changed the direction of its financial policy towards industry, he says.

That point about the need for equality of Government encouragement is one that may well loom large in Britain as the prospect of Common Market participation comes closer.

Anti-dumping

MR FRANK A. HURST, chairman of Samuel Osborn & Co Ltd, the Sheffield steel company, expresses surprise on the Common Market proposals, 'at the ready way many have expressed themselves as being positively for or against, because none of us really has grounds on which we can decide'. He can only hope that 'our negotiators will competently be able to appraise the advantages and disadvantages'. Some of the Commonwealth countries, he says, should not regard the Commonwealth as a 'one-way street'. If they want Imperial Preference terms, they should not impose 'harsh restrictions' on our exports to them.

Mr Hurst advocates 'quick measures for the implementation of the provisions of the Customs Duties (Dumping and Subsidies) Act, 1957, when the necessity arises. And one way to speed up procedure would be to require invoices for goods imported here to bear a declaration of 'current domestic value'. This information would be required in an application for imposition of a dumping duty and would take a long time, he says, to establish. He would be satisfied if this were required only in the case of those countries which demand it from us. Other Governments, he says, are apparently more ready to aid their manufacturers.

One begins to wonder whether there is any Government in this world that earns the approbation of the industrial and business community.

CITY NOTES

STOCK-MARKETS still find it difficult to summon up any real enthusiam. Special shares enjoy bursts of activity on company news or on take-over rumours, but by and large there is not a lot to attract buyers.

In the past week the City has been awaiting the Chancellor's latest proposals in regard to the 'pay pause', and there is little doubt that the domestic situation is still the predominating factor for investors. Although political and economic influences from overseas have their reflection, and indeed the Common Market is still an important factor, the immediate concern is with home economy.

Every chairman's speech, however optimistic it may be, contains a proviso in regard to economic prospects. That is likely to remain so until the outlook is clearer – and could well mean until after the Budget.

Some sections of the market have special problems. Iron and steel, for instance, find scant encouragement in chairman's comments. Under-capacity production and rising costs not recovered by selling prices, are big problems. Textiles, too, look ahead with caution, and here the result of the latest Courtaulds–I.C.I. talks is awaited with keen interest – but with little effect on share prices.

It is noticeable, too, that overseas interest in the London market has been much less a factor than in the recent past, but support for gilt-edged stocks did come in on news of the plan to enlarge the International Monetary Fund. This, it is thought, could be particularly helpful to sterling and so assist the movement towards a lower Bank rate. Foreign institutions were buyers of Funds during the week and such support gave that market a more cheerful appearance, but home industrials seem a trifle suspect with overseas buyers.

Electronics in the Office

Decimalization Change-over

FOLLOWING the Government's decision in principle in favour of a change-over to decimal coinage, International Computers & Tabulators announce that plans have already been made for the conversion of data-processing machines in customers' premises, and for the supply of technical aid to assist in the change-over. These plans have taken into account the experience the company has gained in India and South Africa.

An I.C.T. computer will be used to establish a conversion programme, so that the change from sterling to decimal notation can be effected in a short time, with minimum dislocation of established mechanized accounting routines.

Computer for 'B.O.L.S.A.'

THE first overseas bank in the United Kingdom to use an electronic computer for its foreign operations is to be installed at the London branch of the Bank of London and South America. The computer – an English Electric KDP 10 data processing system valued at about £200,000 – will be used initially in the handling of current accounts and statements as well as all dealings of the bank's foreign exchange department.

A computer team selected from the bank's London staff is already receiving tuition in the programming and operation of the system at the English Electric Computer Training School.

KDP 10 is extremely versatile and is designed to provide at minimum cost complete data processing services for medium-sized commercial and public undertakings, and to expand with the needs of growing concerns. The system handles information in alphabetical or numerical form received from magnetic tape, paper tape, or punched cards. Normal output is by high-speed line printer. For maximum reliability in operation, solid-state devices and printed circuits are used throughout.

Computer Bibliography

NOW in its eighth year of publication, the quarterly bibliography, '*Titel von Veroffentlichungen uber Analog- und Ziffernrechner und Ihre Anwendungen*' (Titles of publications on analogue and digital computers and their applications), has proved particularly useful for institutions and firms concerned with the construction and application of digital or analogue computers or electronic data processing equipment.

Jointly edited by the *Deutsche Forschungsgemeinschaft* (DFG) at Bad Godesberg and the Provisional International Computation Centre (PICC) in Rome, the bibliography has been internationalized by giving an English translation of the German text. In this way, it is hoped that a still larger public will be able to profit from the bibliography, in spite of the fact that it does not contain reviews; it does, however, indicate the subject-matter of papers.

In the entire field of analogue and digital computers and their applications, about 150 specialized periodicals as well as newly published books and conference reports are continually collected and evaluated. The material includes a collection of industrial publications research reports from university institutes and other development centres. Marginal fields, e.g. cybernetics mechanical language translation, automatic documentation, and numerical control of machine tools are also included.

Further information relating to the service is obtainable from the publisher, Franz Steiner Verlag GmbH Bahnhofstraße 39, Wiesbaden, Germany.

Royal Navy Installs new Stock Control System

UP-TO-DATE stock records of 90,000 different types of naval stores for H.M. ships, held at the Royal Navy Stores Depot at Copenacre, Wiltshire will soon be maintained by an EMIDEC 1100 computer which was recently delivered to the Depot by EMI Electronics Ltd.

The computer, which will include several magnetic tape units, will also maintain lists of components for each of some 1,500 different types of electronic equipment and will work out complete lists of components needed – which may run to several hundred items for a single set – look up the stock record and confirm availability, debit the stock record and prepare printed invoices for the items to be dispatched to the ships.

Other tasks which the computer will perform include the calculation of future requirements of stores to be ordered from manufacturers, and the recording of subsequent contracts placed and deliveries received. After commissioning and final acceptance tests, it is expected that the computer will gradually start taking over the above work in the course of the summer of 1962.

New Computer Bureau for Birmingham

A COMPREHENSIVE computer service bureau is shortly to be established in Birmingham by Computer Services (Birmingham) Ltd, who have ordered for the purpose a UNIVAC Solid State 80 high speed, general purpose computer system at a cost of approximately £100,000.

The machine at the new bureau will include a central processor with 30,000 digits of storage; high speed 80-column card reader capable of handling 600 cards per minute; high-speed line printer (600 lines per minute) and a 80-column card read-punch unit (150 cards per minute.) It is anticipated that the computer will ultimately be operated twenty-four hours a day, seven days a week. Computer Services estimate that they can produce in one hour of computer running either a payroll for 5,000 employees, or 2,000 sales invoices, or a stock control run for 5,000 stock items, or statistical analyses of 25,000 items.

The hire charge for the use of the computer bureau is £20 per hour. The cost of a payslip, for example will be between 4½*d* and 9*d*. A service for system analysis and programming is also available. Punched card (80-column) will be accepted for processing by the bureau, and punched paper tape input is being considered. The punched cards may be prepared either by the user or by Computer Services who have extensive facilities for this purpose; at present 30 staff are employed on a wide range of punched card and paper tape equipment.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, January 3rd, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President, in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. F. Allan, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, W. G. Densem, S. Dixon, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, J. S. Heaton, J. A. Jackson, W. H. Lawson, C.B.E., H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, C. U. Peat, M.C., L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, D. Steele, J. E. Talbot, V. Walton, E. F. G. Whinney, J. C. Montgomery Williams, R. P. Winter, C.B.E., M.C., E. K. Wright, Sir Richard Yeabsley, C.B.E.

Committee on Relations with the Universities

At its meeting on October 4th, 1961, the Council decided to endeavour to obtain closer collaboration with the universities and for this purpose appointed a committee with the following terms of reference:

'To consider methods by which closer collaboration with the universities might be achieved.'

The committee has now been constituted and its members are:

Mr P. F. Carpenter, Sir William Carrington, Messrs E. Hay Davison, J. A. Jackson, Bertram Nelson, E. K. Wright.

Terminology in Published Accounts

On the recommendation of the Parliamentary and Law Committee, following consideration of a draft submitted by the Taxation and Research Committee, the Council has approved notes on *Terms used in Published Accounts of Limited Companies* for issue to members for insertion in the *Members' Handbook*. The distribution will be made in February 1962. Thereafter the notes will also be available for purchase in booklet form on application to the offices of the Institute, price 5*s* per copy, post free. (*Remittances must accompany orders.*)

Admissions to Membership

The following were admitted to membership of the Institute:

Brandwood, John Noel, M.A., A.C.A., *a*1962; 112 Eaton Road, West Derby, Liverpool 12.

Bright, Christopher John, B.A., A.C.A., *a*1962; 65A Fitzgeorge Avenue, London W14.

Brown, Bryan William, A.C.A., *a*1962; 1D Sisters Avenue, London SW11.

Downey, William James, B.A., A.C.A., *a*1962; Yew Tree Cottage, Clive Road, Esher, Surrey.

Fernando, Chrisanta Francis, A.C.A., *a*1962; 32/1 Barnes Place, Colombo 7, Ceylon.

Harley, Keith, A.C.A., *a*1962; 4 Temple Park Gardens, Halton, Leeds 15.

Howell, Owain Morgan Rhys, B.A., A.C.A., *a*1962; 'Marland', Narbeth, Pembrokeshire.

§Parker, Brian Courtenay, A.S.A.A., *a*1962; with Clothier, Poole & Dreyer, 1014 Mutual Buildings, Harrison Street, Johannesburg.

Reid, Graham Alexander, A.C.A., *a*1962; 1 Lancaster Drive, Swiss Cottage, London NW3.

Stevenson, Barry Barr, A.C.A., *a*1962; 'Thornhayes', Wilton Road, Beaconsfield, Bucks.

§Stirling, Patrick Charles Ternent, A.S.A.A., *a*1962; 22 St Andrews Road, Parktown, Johannesburg.

§Sumner, Michael Lloyd, A.S.A.A., *a*1962; with Emanuel Jacobson, Manion & Alleson, Suite 12, Harfield House, Field Street, Durban, South Africa.

Thornton, Thomas Coulton St Leger, A.C.A., *a*1962; 'The Grange', Oldcotes, Worksop, Notts.

Wade, Martin Harold, A.C.A., *a*1962; 174 Hill Lane, Southampton.

Registration of Articles

The Secretary reported the registration of 253 articles of clerkship during the last month, the total number since January 1st, 1961, being 3,240.

Articles and Examinations

The following applications under various bye-laws relating to articles and examinations have been granted or refused during the six months ended December 31st, 1961:

	Granted	*Refused*
Bye-law 57: Permission to follow another business or occupation while under articles to the limited extent specified in the application	12	—
Bye-law 58 (c): Permission to spend up to six months in an industrial, commercial or other suitable organization during articled service	13	—
Bye-law 61: Reduction in service under articles	13	4
Bye-law 63 (c): Reduction in service under articles for former regular officers	3	—

a Indicates the year of admission to the Institute.

aS Indicates the year of admission to The Society of Incorporated Accountants.

§ Means 'incorporated accountant member'.

Firms not marked † or * are composed wholly of members of the Institute.

† Against the name of a firm indicates that the firm though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

* Against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

†† Against the name of a firm indicates that the firm includes an incorporated accountant member of the Institute and is composed wholly of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

	Granted	Refused
Bye-law 79: Exemption from the Preliminary examination by virtue of age and experience in a member's office	8	—
Bye-law 81: Permission to sit the Intermediate examination earlier than normally eligible	1	4
Bye-law 85 (b): Exemption from the Intermediate examination ..	10	3
Bye-law 86 (a): Permission to sit the Final examination, after completion of articled service, earlier than normally eligible	5	3

Fellowship

The Council acceded to applications from 14 associates to become fellows under clause 6 of the supplemental Royal Charter.

1,148 associates became fellows on January 1st, 1962, in accordance with clause 6 of the supplemental Royal Charter.

Incorporated Accountant Member becoming an Associate

The Council acceded to an application from the following incorporated accountant member for election as associate under clause 6 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter:

Porter, William Thomas, F.S.A.A., *aS*1923; with H. W. Pople, F.C.A., 11 Rumford Street, Liverpool 2.

F.S.A.A.

The Council acceded to one application from an incorporated accountant member A.S.A.A. to use the letters F.S.A.A. under clause 4 (*b*) of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

66 incorporated accountant members A.S.A.A. became F.S.A.A. on January 1st, 1962, in accordance with clause 7 of the supplemental Royal Charter.

Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Bentley, John David Greer, A.C.A., *a*1959; †Booth, Anderson & Co, 9 West Mills, Newbury, Berks, and at Compton, Berks.

Bew, Philip David, A.C.A., *a*1960; 11 Iron Gate, Derby.

Braham, Michael Alan, A.C.A., *a*1961; Wallace Cash & Co, Hillgate House, Old Bailey, London EC4.

Carter, Henry Philip, B.A., F.C.A., *a*1950; Gimson & Co, Pensioners' Court, Charterhouse, London EC1.

Coleman, Malcolm Jerry, A.C.A., *a*1961; Coleman & Co, 7 Westchester House, Seymour Street, London W2.

Davis, John Brian, A.C.A., *aS*1955; 36 Hillswood Drive, Endon, Stoke-on-Trent.

Evans, William Humphrey, F.C.A., *aS*1949; Cook & Co, 87 Lord Street, Liverpool 2, and at Manchester.

Harper, Thomas John, A.C.A., *a*1958; 'The Limes', Cowbridge, Glam.

Hills, Anthony John, A.C.A., *a*1961; Blackham & Hills, Ruskin Chambers, 191 Corporation Street, Birmingham 4

Hutchings, John Attwood, M.A., A.C.A., *a*1956; †Chalmers, Wade, Impey, Cudworth & Co, St Alphage House, Fore Street, London Wall, London EC2; for other towns see †Chalmers, Wade, Impey, Cudworth & Co.

Jones, Graham Radclift, A.C.A., *aS*1955; *Henson, Jones & Co, 38A High Street, Newport, Mon, and at Portypool.

Keighley, Laurence, A.C.A., *a*1959; Charles E. Dolby & Son, 11 Dale Street, Liverpool 2.

Lewis, Norman Cyril, A.C.A., *a*1959; Norman Lewis & Co, 54C Ilford Lane, Ilford, Essex, and at London.

Mayho, Thomas Clifford, B.SC.(ECON.), F.C.A., *a*1943; Boyce, Welch & Co, Netherwood Chambers, 1A Manor Row, Bradford 1, and at London.

§Monk, Alan A.S.A.A., *a*1961; ††H. B. Britcliffe & Co, 15 Avenue Parade, Accrington, Lancs.

Mooney, Brendan Ignatius, A.C.A., *a*1961; George C. Wilkinson & Co, South House, 136 Borough Road, Middlesbrough, and at Redcar, Yorks.

Pentin, David John, A.C.A., *a*1959; *Pentin, Neame & Co, 17/19 St George's Street, Canterbury, Kent, and at Hythe, Kent.

Posner, Jack Louis, A.C.A., *a*1954; Garner & Co, 19 Windmill Hill, Enfield, Middlesex.

Rata, Derek Hugh Kinnaird, A.C.A., *a*1961; Martin, Rata & Partners, 86A Regent Street, Cambridge, and at London.

Saltmarsh, Richard Malcolm, A.C.A., *a*1960; 34 Woodstock Road North, St Albans, Herts.

San, Jimmy Mun Foo, A.C.A., *a*1958; San & Co, 72 Hanbury Road, Dorridge, Solihull, Warwicks.

Snow, Geoffrey Bernard, A.C.A., *a*1961; A. B. Snow, Wood & Co, 10 Pall Mall, Hanley, Stoke-on-Trent.

Stirling, Alfred Patrick, A.C.A., *a*1961; 35 Kelsey Way, Beckenham, Kent.

Tarn, Stephen Ian, A.C.A., *a*1958; *Chambers, Tarn & Co, 60 Borough Road, Middlesbrough.

Tidbury, Oliver Clifford, F.C.A., *a*1940; George Gradon & Co, Finsbury House, Blomfield Street, London EC2.

Trotter, Neville Guthrie, B.COM., A.C.A., *a*1955; Bolton, Wawn & Co, Alliance House, Hood Street, Newcastle upon Tyne 1, and at Sunderland.

Admission to Membership under the Scheme of Integration

The Council acceded to one application for admission to membership of the Institute under clause 4 and one application under clause 5 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Readmission to Membership

Subject to payment of the amount required by the Council, one former member of the Institute was readmitted to membership under clause 23 of the supplemental Royal Charter. One application under clause 23 was refused.

Resignations

The Council accepted the resignations from membership of the Institute of:

Hemsley, Cyril Montague, F.C.A., 3 Highdown Avenue, Worthing, Sussex.

Hulme, Leslie James, F.C.A., Highlands Farm, Cox Park, Gunnislake, Cornwall.

Thomas, Herbert Gordon, O.B.E., B.A., F.C.A., Creeks B, Six Turnings, Mylor Bridge, Falmouth.

Watson, John, F.S.A.A., 'The Counts', Carlisle.

Deaths of Members

The Council received with regret the Secretary's report of the deaths of the following members:

Mr Eric Harold Ascher, F.C.A., London.
,, Charles Oldfield Bartley, F.C.A., Twickenham.
,, Wilfrid Bentley, F.S.A.A., Newton Abbot.
,, William Ernest Blinkhorn, F.C.A., Bolton.
,, Bernard Harry Brigham, F.C.A., Harpenden.
,, Robert James Chapman, F.C.A., Chester.

Mr Douglas Trevor Davies, F.C.A., Warrington.
„ Vivian Edwards, F.C.A., Florida.
„ Robert Henry Farrar, A.C.A., London.
„ Kenneth Revell Gray, F.C.A., London.
„ Ernest Raymond Gregory, F.C.A., Bridgwater.
„ Arthur Morris Hobbs, F.C.A., London.
„ Reginald Horsefield, F.C.A., Manchester.
„ Gordon Scott Kerr, F.C.A., London.
Mr Robert Joseph Knight, F.C.A., St Albans.
„ Geoffrey Wilfred Martin, F.C.A., Westbury, Wilts.
„ Thomas Preece Nicholls, F.C.A., Clevedon.
„ Ronald Simpson, F.C.A., Leeds.

FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on December 6th, 1961.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Alexander Edward Lawson, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of Clause 21 of the supplemental Royal Charter in that he failed within a reasonable time or at all to carry out his agreement given to the General Commissioners of Income Tax and Land Tax to produce certain accounts of a client to an Inspector of Taxes and/or to the Commissioners, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Alexander Edward Lawson, F.C.A., had been proved and the Committee ordered that Alexander Edward Lawson, F.C.A., of 127 Edridge Road, Croydon, Surrey, be reprimanded.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that David Shields, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of Clause 21, sub-clause (3) of the supplemental Royal Charter in that (*a*) he failed within a reasonable time or at all to deal with or answer repeated requests made to him by the accountant or accountants acting for a former client in relation to the affairs of that client for whom he previously acted as accountant; (*b*) he failed within a reasonable time or at all to deal with requests made to him by or to co-operate with the accountant and/or solicitors of another client in relation to the affairs of that client for whom he previously acted as accountant, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against David Shields, F.C.A., had been proved under both headings and the Committee ordered that David Shields, F.C.A., of 32 Brazennose Street, Manchester 2, be reprimanded.

MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Accounting Trends and Techniques. (American Institute of Certified Public Accountants.) Fifteenth edition. New York. 1961. (A.I.C.P.A., $18.)

The Audit and the Punched Card: an introduction; by A. W. Corcoran and D. F. Istvan. Columbus, Ohio. 1961. (Bureau of Business Research, Ohio University, 16*s*.)

Automatic Data Processing; by D. W. Morley. 1961. (D.S.I.R., 6*s*.)

Bankers' Attitudes toward the C.P.A. (American Institute of Certified Public Accountants.) New York. 1959. (A.I.C.P.A., presented.)

Chitty on Contracts; by J. Chitty: twenty-second edition, edited by J. Morris. Vol. 1: general principles. Vol. 2: specific contracts. 1961. (Sweet & Maxwell, 252*s*.)

The Concept of Management Services by C.P.S.s; by J. L. Carey. (American Institute of Certified Public Accountants.) New York. 1959. (A.I.C.P.A., presented.)

Nationalization in Britain; by R. Kelf-Cohen: second edition. 1961. (MacMillan, 35*s*.)

Price, Cost and Output; by P. J. D. Wiles. 196 . (Basil Blackwell, 35*s*.)

Profit Management and Control; by F. V. Gardner. New York. 1955. (McGraw-Hill, 50*s* 6*d*.)

Programming Computers for Business Applications; by N. Chapin. New York. 1961. (McGraw-Hill, 58*s*.)

Radical Reaction: essays in competition and affluence; by A. P. Herbert, G. Hutton, B. S. Yamey and others: edited by R. Harris. 1961. (Hutchinson, 25*s*.)

A Report on Marginal Costing. (Institute of Cost and Works Accountants.) 1961. (I.C.W.A., 10*s*.)

Retail Merchandise Accounting; by H. F. Bell and L. C. Moscarello: third edition. New York. 1961. (Ronald Press Co, 100*s*.)

The Structure of Industry in Great Britain; by G. C. Allen. 1961. (Longmans, 12*s* 6*d*.)

Survey of Accounting Office Expenses. (American Institute of Certified Public Accountants.) New York. 1959. (A.I.C.P.A., presented.)

Taxation Systems Applicable to Investments: fiscal encouragement. (Organization for European Economic Co-operation.) Vol. 2. Paris. 1961. (O.E.E.C., 10*s* 6*d*.)

Who Owns Whom: continental edition (France, Italy and Western Germany). (O. W. Roskill & Co.) 1961. (O. W. Roskill & Co, 84*s*.)

Work Study in the Office; by H. P. Cemach, F.C.A.: second edition. 1961. (Current Affairs, 30*s*.)

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment in the 'Annotated Tax Cases'.

Lions Ltd *v.*
Gosford Furnishing Co Ltd and C.I.E.

In the Court of Session – December 7th, 1961

(Before THE LORD PRESIDENT (Lord CLYDE) Lord CARMONT and Lord SORN)

Income tax – Discontinuance – Trading stock valuation – Hire-purchase debts – Whether amount includable in value of trading stock – Income Tax Act, 1952, section 143.

The appellant carried on business as a house furnisher and as a dealer in television sets and ladies' furs, and it had a large number of hire-purchase agreements with its customers. The company sold its business to the first respondent, and discontinued its trade. Among the items included in the sale was the trading stock (at £30,187) and 'the whole of the hire-purchase debts due to the company as at June 27th, 1953', subject to certain debts which were in arrear. The cumulo value of these hire-purchase debts was £225,717.

There was evidence that when hire-purchase agreements are bought and sold between traders the amount paid therefor varies from 50 per cent or less of the total amount of the outstanding instalments to 100 per cent thereof. A low percentage is paid if the expense of collecting the outstanding instalments is expected to be considerable, and the higher percentages are obtained in the case of a going concern having an existing organization for collection and having an expectation of future sales to the same customers. The first respondent possessed such an organization, and the amount paid for the hire-purchase agreements in question was twenty shillings in the pound.

The appellant contended that the £225,717 included not only the value of the goods dealt with under the hire-purchase agreement, but also the value of the right to receive the future payments from the hirers. The first respondent contended that it paid the £225,717 for the totality of the interests in the goods covered by the hire-purchase agreements and that the whole of that sum represented trading stock of the appellant at June 27th, 1953. The Special Commissioners considered that it was unreasonable to attempt to separate these two values, and they decided that the whole of the £225,717 was the value of trading stock within the meaning of section 143 of the Income Tax Act, 1952.

Held (Lord Carmont dissenting): a part of the £225,717 did not represent trading stock, but represented the value of the right to receive the outstanding instalments from the hirers.

SCHEDULE A AND YOU

A small booklet entitled *Schedule A and You* has been prepared by Barclays Bank Ltd. Extending to some twenty pages, the booklet briefly surveys property taxation for the benefit of the layman. Copies are available from all branches of the bank.

ECONOMIC CONDITIONS OVERSEAS

Two surveys in the series dealing with economic conditions in member and associated countries of the Organization for Economic Co-operation and Development have recently been issued. The booklets, each priced 3*s* and obtainable from H.M. Stationery Office, give comprehensive analyses of economic conditions in Iceland and the United States.

LOCAL AUTHORITY SERVICES

Rising costs are shown in two statistical returns giving details of local government services in respect of police services and fire services for 1960–61 which have been issued jointly by The Institute of Municipal Treasurers and Accountants and The Society of County Treasurers[1].

The return on police force statistics gives the general and financial statistics relating to all police forces in England and Wales, with the exception of the Metropolitan and City of London Forces. In the year under review the strength of all county and borough forces at March 31st, was 55,156 compared with 54,616 in the previous year. The expense met from rates and grants totalled £82,571,418, against £73,234,691 in the preceeding year, the rate equivalent being 18·41*d* and 20·07*d* respectively.

Statistics for all borough and county fire services in England and Wales shows that total expenditure during the year amounted to £27,425,021, equivalent to a rate of 9·52*d*. This compared with £25,459,181 for the year 1959–60, the rate equivalent then being 9·09*d*.

[1]*Return of Police Force Statistics, 1960–61* and *Return of Fire Service Statistics, 1960–61*. Price 5*s* each post free. The Institute of Municipal Treasurers and Accountants, 1 Buckingham Place, London SW1.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

Dinner at the House of Commons

The President of The Institute of Cost and Works Accountants, Mr F. M. W. Hird, F.C.A., F.C.W.A., gave a dinner party in the Members' Room at the House of Commons last Wednesday. The company totalled about one hundred, and among those present were:

Alderman F. W. Allum (*Mayor of Harrogate*); Messrs F. St Kevin Anderson (*Master, The Worshipful Company of Vintners*); Paul Bareau (*Editor, 'The Statist'*); G. L. Barker (*President, The Association of Certified and Corporate Accountants*); Hugh P. Barker (*Chairman, British Institute of Management*); Stanley J. D. Berger, O.B.E., M.C.; W. Bishop (*a Vice-President of the Institute*); J. Borsay (*a Past President of the Institute*); Sir Eric Bowyer, K.C.B., K.B.E. (*Permanent Secretary, Ministry of Pensions and National Insurance*); Mr W. K. Brasher, C.B.E. (*Secretary, The Institution of Electrical Engineers*); The Rev. J. S. Brewis (*Rector of St James's, Piccadilly*); Messrs H. Burke (*President, The Institution of Production Engineers*); E. C. L. Butler (*Secretary, The Building Societies Institute*).

Professor A. K. Cairncross, C.M.G.; Mr L. F. Cheyney, O.B.E. (*Secretary, The Institute of Municipal Treasurers and Accountants*); The Hon. G. C. H. Chubb; Messrs W. L. J. Clarke; W. M. Clarke (*City Editor, 'The Times'*); E. C. Clear Hill; J. F. Coales, O.B.E.; H. A. L. Cockerell (*Secretary, The Chartered Insurance Institute*); J. M. Coltart; A. E. Dawson (*President, The Institute of Chartered Accountants in Ireland*); Lord Douglas of Kirtleside, G.C.B., M.C., D.F.C. (*Chairman, British European Airways*); Messrs A. J. Driver, J.P. (*President, The Law Society*); Derek du Pré (*Secretary of the Institute*).

(*Secretary, The Chartered Institute of Secretaries*); C. E. Power (*a Vice-President of the Institute*); Harry Priestley; W. S. Risk (*Immediate Past President of the Institute*); L. W. Robson (*a Past President of the Institute*); F. W. H. Saunders (*a Past President of the Institute*); J. B. Smith (*Assistant Secretary, Insurance and Companies Department, Board of Trade*); Peter A. Smith; C. R. Sopwith (*The Public Trustee*); R. J. W. Stacy, C.B. (*Under-Secretary, Insurance and Companies Department, Board of Trade*); Geoffrey Stevens, M.P.; G. C. Stone (*a Past President of the Institute*); J. W. Symonds (*President, The Institute of Arbitrators*).

Messrs Godfrey Talbot, O.B.E.; A. J. Tuck; Graham A. Usher, M.B.E., T.D. (*President, The Institute of Chartered Accountants of Scotland*); S. Watney (*Master, The Worshipful Company of Brewers*); Francis Whitmore (*City Editor, 'The Daily Telegraph'*); H. Willis (*Master, The Worshipful Company of Musicians*); W. F. S. Woodford (*Secretary, The Institution of Production Engineers*).

There were no formal speeches. Mr Hird welcomed the guests and Lord Mills briefly responded.

MANCHESTER SOCIETY OF CHARTERED ACCOUNTANTS

Discussion Group

A meeting of the Manchester Society of Chartered Accountants will be held at 5.45 for 6 p.m. on Tuesday, January 23rd, in the Chartered Accountants' Hall, 46 Fountain Street, Manchester 2. The subject for discussion will be 'Installation of a process costing system', lead by Mr W. Russell Jones, A.C.A.

The remainder of the spring programme is as follows:

February 21st, 'The Institute's recommendations on auditing', lead by Mr G. J. Netherclift, F.C.A.
March 21st, 'Some thoughts on possible recruitment to the profession', lead by Miss M. A. T. Hodge, F.C.A.
April 24th, 'The place of an internal auditor in industry', lead by Mr A. G. Wood, A.C.A.

Inquiries regarding the activities of the group may be obtained from the hon. secretary, Mr M. J. Croll, A.C.A., at the above address.

CORRECTION

The reference to section 173 of the Local Government Act, 1939, in the Weekly Note headed 'L.C.C. *v.* F.C.A.' in our issue of December 23rd should, of course, have read London Government Act, 1939.

SEVENTY-FIVE YEARS AGO

FROM **The Accountant** OF JANUARY 1ST, 1887

From a Leading Article

TRADERS RECOMMENDED TO EMPLOY ACCOUNTANTS

Three years' experience of the Bankruptcy Act of 1883 has, amongst other things, conclusively shown that financial confusion and bankruptcy is very frequently the direct result of bad book-keeping, and aversion by traders to a proper periodical audit by qualified accountants. These matters of bad book-keeping, and the want of an efficient audit have been mentioned so often in our columns, that it almost seemed desirable to give the subject a rest. Now and then, however, the Bankruptcy Officials, and the Courts, have given expression to opinions which sound almost like an echo of our own. The most pointed remarks of this kind, and the most complete justification of our own oft-reiterated opinions, that we have recently read, were made by the Official Receiver for Manchester, and the Judge of the Manchester County Court, recently in connection with an application made by two bankrupts for their discharge. The Official Receiver reported that the bankrupts had omitted to keep proper books of account, and at the hearing, went on to speak on this point in language important enough to be reproduced. He said, "If men, like the bankrupts, whom he "believed to have been hard-working struggling "men, had only employed some accountant to "audit their books occasionally, and keep them "in proper order, the debtors would not, he "thought, be in the position they now are. He "would like to remark—and, if possible, induce "the Court to strengthen the observation—how "desirable it was that men who were not good "book-keepers, should employ some person "occasionally to look over their books. He was "perfectly satisfied that if this were done, there "would be far fewer bankruptcies and in many "cases where bankruptcy took place there would "be better dividends for the creditors. The "employment of an accountant would in many "instances be a saving to the bankrupts themselves; at the same time it was certain to be an "advantage to creditors." With the suggestions made by the Official Receiver His Honour Judge Russell entirely agreed saying they were very well worth the consideration of persons engaged in trade. "By going to a small expense, "they could have their affairs looked over now "and again by a competent person, their financial "position would be more likely to be ascertained. "If this were generally done, he believed fewer "bankruptcies would take place, for where men "were working in the dark in regard to their "financial position, they were sure to get into a "scrape." No words of ours could add to the force of these remarks. It is to be hoped that they will be read and inwardly digested by those for whose benefit they were uttered.

THE LEICESTERSHIRE AND NORTHAMPTONSHIRE SOCIETY OF CHARTERED ACCOUNTANTS

The Trustee Investment Act and unit trusts' will be the subject of an address to be given by Dr Charles Walker, director, Municipal and General Securities Co Ltd, at a luncheon meeting of The Leicestershire and Northamptonshire Society of Chartered Accountants to be held in the Grand Hotel, Leicester, on January 18th.

The hon. secretary of the Society is Mr J. H. Golcher, F.C.A., 32 De Montfort Street, Leicester

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

'Christians talking' is the title for a meeting which will be held at 6 p.m. on Wednesday, January 17th, at the Institute, Moorgate Place, London EC2. There will be short informal discussions on such subjects as: (1) Budgeting beyond life. (2) What is my textbook? (3) Why pray? (4) Christianity –? all overtime.

All who are interested, either as listeners or speakers, will be welcome.

LONDON CERTIFIED ACCOUNTANT STUDENTS' SOCIETY

The next meeting of the London Certified Accountant Students' Society will be held on Tuesday, January 16th, at 6.15 p.m., in the Chartered Auctioneers' Hall, Lincoln's Inn Fields, London WC2, when Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., Assistant Editor of *Taxation*, will supervise a mock income tax appeal.

Members of other Association students' societies will be welcome.

UNION OF CHARTERED ACCOUNTANT STUDENTS' SOCIETIES

Members of chartered accountant students' societies are reminded that all such societies welcome to their meetings members of other societies who are temporarily in their area.

There is also an arrangement for transfer of membership without additional fee for members who permanently change their district. The interchange should be carried out through the secretaries of the societies concerned.

Students' societies hold meetings in the following towns:

Ashford (Kent), Bedford, Birmingham, Blackpool, Bournemouth, Bradford, Brighton, Bristol, Cambridge, Canterbury, Cardiff, Carlisle, Chelmsford, Chester, Colchester, Coventry, Darlington, Derby, Doncaster, Dorking, Dorchester, Eastbourne, Epsom, Exeter, Faversham, Grimsby, Guildford, Halifax, Hastings, Hereford, Huddersfield, Hull, Ilford, Ipswich, Kettering, Leeds, Leicester, Lincoln, Liverpool, London, Luton, Maidstone, Manchester, Middlesbrough, Newcastle upon Tyne, Newport (I.W.), Northampton, Norwich, Nottingham, Oxford Peterborough, Plymouth, Portsmouth, Preston, Reading, Redhill, Salisbury, Scunthorpe, Sheffield, Shrewsbury, Southampton, Southend, Stockton-on-Tees, Stoke-on-Trent, Sunderland, Swansea, Taunton, Torquay, Truro, West Hartlepool, Wolverhampton, Worcester, York.

THE INSTITUTE OF INTERNAL AUDITORS

Yorkshire Chapter

The next meeting of the Yorkshire Chapter of The Institute of Internal Auditors will be held at the Guildford Hotel, The Headrow, Leeds 1, on January 30th, at 7 p.m., when the speaker will be Mr F. A. Adams, finance officer, Leeds (A) Group Hospital Management Committee, who will be speaking on 'Financial control in the hospital service'.

Non-members will be welcome and inquiries regarding the Chapter's activities should be addressed to the secretary, Mr A. E Gardner, divisional internal auditor, National Coal Board, Ellers Road, Bessacarr, Doncaster.

MANAGEMENT ACCOUNTING COURSES

Two one-day courses dealing with stock control and reduction, and capital budgeting and assessment are to be held at the Midland Hotel, Manchester, on January 30th and 31st respectively The courses will be presented by Dr J. M. S. Risk, B.COM., PH.D., F.C.I.S., F.B.I.M.

A three-day course on budgetary control and standard costs will be held at the Mostyn Hotel, London, from February 6th – 8th, and will comprise budgets and standard cost rates, forecasts and output levels, and procedure for installing budgetary control and standard costs. This course will be repeated at the Midland Hotel, Manchester from February 13th – 15th.

Week-end Seminar

A week-end residential seminar commencing on the afternoon of Friday, February 16th, until the afternoon of Sunday, February 18th is to be held at Blossoms Hotel, Chester. It provides an unusual opportunity in a decision-making exercise. Members will be divided into teams which compete against one another and the results of their decisions will be evaluated at frequent intervals by an electronic computer The exercises are designed for executives who wish to gain a grasp of the operation of a company as a whole.

Further particulars regarding the seminar and the above courses may be obtained from Management Courses Ltd, 8 St George's Terrace, London NW1.

LOCAL GOVERNMENT FINANCE STATISTICS

The cost of running local authority rate fund services in England and Wales, other than trading services, in the financial year 1959–60 was £1,660½ million – an increase of £120¼ million compared with the previous year. These figures are among details, published last week[1] of the income and expenditure of English and Welsh local authorities for the financial year 1959–60 by the Minister of Housing and Local Government.

Other changes noted in the statistics include an increase of £25 million in payments made by council tenants and those making use of other rate fund services. The income from rates rose by £96 million to £650 million. Government grants, apart from capital grants, were £46½ million higher at £704¾ million and expenditure of the trading services again increased, to £222½ million compared with £213¾ million in 1958–59.

Capital expenditure, at £531½ million, was higher than in 1958–59 by nearly £51 million. This expenditure includes nearly £58¼ million for advances on mortgage to private individuals for house purchase. Debt, after deducting sinking funds and sums repayable for nationalized services, amounted at the end of the year to over £5,628 million – an increase in the year of some £363 million. The remuneration of local government officers and employees cost nearly £899 million – an increase of over £72 million.

New Legislation

All new Acts are noted in this column, together with those Statutory Instruments which are of interest to the profession. The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective. Copies of either may be obtained through Gee & Co (Publishers) Limited, 151 Strand, London WC2.

STATUTES

(9 & 10 Eliz. 2)

Chapter 65: Housing Act, 1961

An Act to make further arrangements for the giving of financial assistance for the provision of housing accommodation, to confer further powers on local authorities as regards houses let in lodgings or occupied by more than one family, and houses or other buildings affected by clearance orders and demolition orders, to amend section five of the Rent Act, 1957, by allowing a greater increase in the permitted rent for improvements, to alter the circumstances in which improvement grants and standard grants may be made under Part II of the Housing (Financial Provisions) Act, 1958, and the Housing and House Purchase Act, 1959, to amend the law with respect to repairing obligations in short tenancies of dwelling-houses, and to amend the Town Development Act, 1952, as regards development carried out wholly or partly in a county borough and as regards the assistance which may be given by a county council for town development; and for purposes connected with any of those matters.

Uncertain Prospect

IT would be a mistake to believe that the extensive publicity accorded MR SELWYN LLOYD's latest statement to the T.U.C. reflected the extent of its contribution to a solution of the present impasse over the 'pay pause' in particular and national economic planning in general. What that publicity does in fact indicate is the continuing and growing concern among responsible opinion in the country over the present situation. It can hardly be asserted that the CHANCELLOR's latest letter helps very much, except possibly in one respect. This is the assurance that the 'pause' will not – as a considerable proportion of organized labour clearly believes to be the case – be directed solely at wages. If, stated the CHANCELLOR's letter, 'it was established that aggregate profits were increasing disproportionately as compared with wages and salaries, the Government would not hesitate to take corrective action in the fiscal or other fields'.

Yet can it be denied, that this assurance should have been stressed from the outset even though, as the CHANCELLOR's letter goes on to recognize, the implementation of this policy of keeping incomes within every sector of the economy in line for any long period is hardly a practical proposition. In any case, nobody who has studied the United Kingdom industrial production figures for the past two years or more has any hopes that profits and dividends are likely to leap ahead of wages during the next twelve months. Nevertheless, the current obsession within the community with the thought that those working in one sector of the economy may get more than those in another, is likely to stultify Britain's economic growth. In any economy, unless it is completely regimented, prices of goods and the rewards to the factors of production must move relatively to one another, if only to bring about the redistribution of labour and other economic resources needed by the changing demand from within both the public and private sectors.

The most pressing need is for a wages policy which will enable the needs of individual industries for additional labour to be met and their capacity to pay reflected in the wages structure. The real weakness of the 'pay pause' is that it ignores this need for a flexible structure of wages and salaries, which takes into account not only the differing circumstances of various industries, but the variations between different areas of the country in their local supplies of labour. Why should the level of wages in many industries throughout the country be dictated by the abnormal demand for labour in London and the south? By differentiating these wage rates, some movement of labour might be achieved.

The main result of the present policy of fixing wage rates on a national basis is cost inflation.

The 'pay pause' is merely the reverse side of the coin, represented on the other side by the trades unions' insistence that if the labour force in one industry gets a 5 per cent increase, then so should the members of every other union, regardless of the needs of the economy or the ability of other industries to pay such rates. It also means that industries which could pay an increase of more than 5 per cent cannot do so, for fear of distorting the wage structure elsewhere. The result is that in these industries in the economy where expansion is possible, it is held up for lack of labour, while elsewhere employers hoard redundant labour. If MR LLOYD's planning council can bring some sane thinking to bear on this issue, which unfortunately is so bound up with sectional self-interest coupled with ignorance and prejudice, our prospects of avoiding a further bout of 'cost inflation' would be infinitely brighter.

As we pointed out in a leading article on January 6th, public concern with the 'pay pause' and its immediate consequences is diverting attention from the consideration of what Britain's long-term policy should be within the economy as a whole. In his valedictory address to the stockholders of Barclay's Bank, MR ANTHONY TUKE reflected on the policies of the past decade and sought therein suggestions for the present. His reference to 'the dubious expedient of a 7 per cent Bank rate' found an echo in SIR HAROLD BIBBY's comment to the members of Martins Bank, deploring the 'disturbing effects on the economy brought about by frequent alterations in the Bank rate'. Both chairmen were concerned that the full force of implementing the 'credit squeeze' fell upon the banks, just as they both commented on the effects of Bank rate in bringing about an undesirable inflow of hot money which merely added to Britain's balance of payments problem.

Referring to the extensive tariff protection still afforded many British industries, SIR HAROLD BIBBY concluded that 'this generally easy life in the home market is doubtless one of the reasons why our productivity has not been forced to rise by economic compulsion'. Unilateral reduction of tariffs is hardly practicable; it must wait upon the outcome of the present negotiations with the European Economic Community. The wider negotiations under the General Agreement on Tariffs and Trade (GATT) should also bring some benefits in their train, always assuming PRESIDENT KENNEDY can divert Congress from its current protectionist inclinations. The exhortation to export will, as the Government by now must surely have learned, achieve little, so the creation of a competitive domestic economy is only a first step – but an important one. With the possibility of intensive competition in the domestic market, however, the need for long-term measures to deal with redundancy is evident. Without such policies, labour co-operation in policies aimed at raising efficiency will hardly be forthcoming.

There is little doubt that a significant change has taken place within the ranks of industrial management over the role of Government planning. SIR HAROLD BIBBY implicitly recognizes that overall planning is needed, if only because 'in our present position a strict sense of priorities must be observed'. MR TUKE, while recognizing the public's distaste for central planning and controls, acknowledged that 'some sort of central organization of our economy may have to be accepted, if it can be conducted on the basis of voluntary co-operation between employers and employed'. Like this journal, however, he views with concern the absence from the CHANCELLOR's planning council of any independent members, noting that 'perhaps independence, if that implies impartiality, is hardly conceivable in regard to this highly contentious question', i.e. of economic planning.

The recent publication of the results of the inquiry into industrial capacity by the National Institute of Economic Research makes it abundantly clear that the major bottleneck within the economy is labour. In these circumstances, a continuing failure to achieve a settlement on current wage claims as well as an agreed 'wages policy' for the future, could prove disastrous to Britain's hopes of increasing exports. A renewal of the wage-cost type of inflation could rapidly wipe out all the advantages conferred upon British manufacturers by the revaluation of the Deutschmark and the revival of the United States economy. In putting forward his alternative courses for the evolving of a wage policy, the CHANCELLOR's letter has at least put first things first.

The Education and Training of Accountants

Some Comments on the Parker Report

by W. T. BAXTER, B.Com., C.A.
Professor of Accounting, University of London

THE report of the Committee on Education and Training (the Parker Committee) has not prompted much public discussion. This is a pity, as it deals with matters that are of wide interest and seem likely to be of critical importance for The Institute of Chartered Accountants in England and Wales. Because of the report's wide implications – for the whole profession and, indeed, the community at large – perhaps some comment by an outside observer may be forgiven.

Accounting education is a field in which it is much easier to attack the schemes of others than to put forward acceptable schemes oneself. So I must start by hoping that my views will not seem captious or unduly negative. The Parker Committee was admittedly faced with problems of much difficulty; any conceivable report was bound to strike some of its readers as unsound.

It is important to understand the difficulties. They fall under three heads: (1) the lack of a common goal; (2) the big part now played by Government in training young people for most other professions; and (3) the new skills that accountants now need.

The Difficulties

(1) The lack of a common goal

All accountants would agree that a sound training is desirable. But a training for what? Different jobs demand different types of experience. Many men go into industry after qualifying; they would obviously like the training to stress matters such as costing and management accounting rather than executorship. Even if a man 'stays in the profession', he is faced with a choice between, say, general country practice or work in a City firm – possibly with specialized departments for auditing, tax and management services. And (if one may touch on a delicate point) this differentiation is not just a matter of special subjects – the *quality of the man* is variable, and the training most suitable for the profession's future leaders may be too exacting for the normal recruit.

Even if we all agreed on what constitutes the best training, we should start to disagree when we came to count the cost. A good training scheme must involve both articled clerks and employers in some financial sacrifice and inconvenience. For instance, if sixth-formers are to be attracted in large numbers, they probably must be given better terms than the lad who leaves school at 16; the Parker Committee recommends – wisely, I think – a reduction of one year in their articles, and they will doubtless be more insistent than boys of 16 on receiving adequate pay, experience and supervision. Again, if articled clerks are to attend day-time courses, this time will be lost to their employers.

The higher the future standards of the profession, the greater the price that it must pay now; education is a long-term investment – and the man who puts up the capital does not always get the dividend. Even the most ardent of reformers would therefore agree that we must strike a balance between present and future welfare. But where? The Parker Report may perhaps not unfairly be summarized as recommending a low price now for a low future return.

(2) Government help in training

When the Institute came into being, professional life was reserved for the sons of parents who could and would make a big sacrifice. The Welfare State has completely changed the picture. Now Government gives generous help to schools, colleges and universities; and any boy or girl with a good brain is paid to be a student. The country's growing prosperity reinforces the Welfare State: more and more youngsters are able to go through the sixth-form; thereafter, if they want to enter business, they are eagerly sought out by employers, and in many careers start to train on terms that cause wry smiles among us older

people who can remember starting work in the 'Great Depression'. The experience of the Dominions and the United States reinforces the view that affluence and demand for university education grow hand-in-hand. If Britain's economy has reasonable luck, probably most bright children will in a few years choose as a matter of course to go to a university.

Thus the Institute is now trying to swim against a very strong tide. Private training has become an anachronism. 'If the other chaps all go into the sixth form and then take degrees', the intelligent boy will ask himself, 'why should I serve five years in articles? If my friends get paid to study and enjoy university life, why should I have to take a correspondence course – and pay for it myself?'

Any profession that fails to answer such questions satisfactorily must fall in public esteem and lose much of its appeal to good recruits. True, the results may not at first be obvious; for instance, failure to attract graduates will not have disastrous results at once, because 'the bulge' and the consequent shortage of university places will no doubt for some years compel many lads of reasonable ability to go straight from school to the profession. However, as soon as Britain can afford to set up enough institutions of university rank, this stream is likely to fall away.

(3) The new skills needed by accountants

Most accountants would agree that the profession's work has become more exacting over the years. This holds both for the traditional tasks – accounting, tax and auditing – and for the new ones that are now provided by industry's needs and advances in technology. Business firms increasingly ask for figures that will be useful for control and decisions. Book-keeping is being taken over by machines, and simple machines are being superseded by electronic marvels; in the mid-sixties, computers will probably be used by some 1,500 British firms. Mathematics and statistics are providing unexpected aid in many sectors of business (including auditing); to quote a report of the Ford Foundation:

> 'Such analytical techniques as scientific programming, statistical decision theory, and computer simulation of complex systems have come into use only in the last decade. Although there is the expected time lag between theoretical advances and applications, many business firms are already committed to the use of recently developed mathematical and statistical techniques as part of the decision-making process. . . .'

This formidable list of new subjects is by no means complete; and doubtless the list will grow with the years. Many of the subjects are part of, or close to, the profession's ordinary work; before long, any young accountant who fails to understand them will not be properly trained. Other subjects stand further afield, and can perhaps in the main be taken on trust; but, even if we agree that an accountant should on occasion use formulae or a 'black box' without first mastering their underlying mathematics, he needs some study of theory if he is to know their possibilities and pitfalls. One of the developing subjects – capital budgets for long-term plans (e.g. problems of make-or-buy, plant replacement, profitability of new ventures) – lies so close to the accountant's work that he can hardly ignore it without great loss of face; yet he cannot solve these problems correctly unless he is at home with annuities and economics.

If we accept that these new subjects – or some of them – are essential to accountants who hope to succeed against well-educated competitors from other professions, then we must ask where the necessary training is to come from. Much of it must take the form of detailed instruction in somewhat abstract subjects; access to extremely expensive computers may also prove important. Few firms of accountants (certainly few small firms) can hope to give such training unaided. So, if young accountants are to be well-equipped for the brave new world, their articles must be combined with substantial doses of formal teaching (and I do not believe that correspondence courses, efficient though they are for some tasks, could possibly give what is wanted). Such formal teaching can be supplied only by colleges with an ample staff of specialists.

Small accounting firms in particular should press for the setting up of courses for training in theory. Hitherto these firms have been able to claim, not without reason, that their type of practice gives a good basic training to the clerk. In future, they are likely to lose ground to the big firm, unless they can supplement their resources from outside.

Relevant Recommendations by the Committee

The Parker Committee touches on most of these problems (though it fails, in my view, to bring out their gravity). How does it propose to deal with them? So far as the sixth form is concerned, its recommendation – reduction of a year in the period of articles to candidates 'with advanced

level qualifications' – seems bold and perhaps adequate. But it has little more to suggest. It does not recommend that boys who leave school at 16 – likely in future to be rather poor material – should no longer be accepted. It does not put forward effective plans for linking practical training with worth-while spells of formal study in state-sponsored (or private) colleges with adequate staffs. And it does not suggest any new means for attracting graduates.

Two points in the Committee's argument seem to call for discussion – its dislike of class-room teaching, and its scheme for holding three-week courses.

Class-room teaching

The Committee's unwillingness to recommend full-blooded courses seems to stem in part from a distaste for ordinary teaching arrangements. 'We do not envisage "class-room" teaching (accompanied by a modest amount of "home-work") as a suitable medium except within the narrowest limits' (paragraph 158).

It is hard to understand this attitude Class teaching is almost universally accepted as the best available form of instruction (save where the student/teacher ratio is so enviably low as to turn the teacher into a personal tutor). Presumably the Committee thinks classes involve spoon-feeding. But why should they? And why should the volume of homework be modest? A competent teacher pitches instruction at as high a level as his class can stand.

The Committee extols 'solid private reading' with 'proper tutorial guidance'. The case for such study is overwhelming – if the student is mature, has plenty of time and energy, is near a large library, and works under a tutor. The average articled clerk is young, studies when tired by office work, lacks a library, and has only a correspondence course to serve as tutor. In such circumstances, private study by itself must be far inferior to study linked with classes.

Three-week courses

The Committee's most positive suggestion is that the articled clerk should attend an introductory course soon after he enters an office and again before each part of the Final examination – such courses to last 'at the most for three weeks'.

This scheme is at least a token beginning and so is welcome. But, unless the details are well planned, it may prove a disappointment and, indeed, do more harm than good. Presumably most of the courses will be sponsored by district societies, and will be given at technical colleges (though it is hard to see why the taxpayer should subsidize courses that are reserved exclusively for the Institute, as the Committee wants). The Committee envisages (paragraph 172) that most districts will need three courses per term, each for a group of, say, thirteen or fourteen clerks. Under such a plan, the teachers will tend to be full-time employees of the colleges. If their instruction is to be worth while, plainly their qualifications must be high. But what sort of hack would be content to give three-week introductory courses in an endless chain? Few teachers of the necessary calibre could stomach such a task. So the courses are likely to be stale and dull, and calculated to make the clerk dislike all lectures.

With safeguards, a three-week course can be valuable. I have been to such a course in America. It is given each summer by one of the big auditing firms for some 250 of its new clerks. These young men attend lectures after breakfast, and then labour till late at night on a model audit; and – according to one of the partners – they mature in those three weeks as much as they would in nine months of practical work. The course is residential; every detail is planned with care; partners or seniors take the lectures and small classes; and the clerks are graduates.

Alternative Plans for Theoretical Training

Such conditions are not likely to obtain in England for a long time. What sort of second-best is feasible?

If courses must indeed be restricted to three weeks, then they should probably be held less often – say, once or twice a year – and should cater for several hundred clerks at a time. The teachers would not find such a course unduly repetitive; professional instructors of quality (or maybe senior practising members of the Institute) might well agree to give the instruction.

However, three 'block release' courses, each of up to three weeks in length, is woefully little. (This is particularly true where clerks leave school early.) Experience in Scotland and the Dominions shows that much more is desirable. The report seems to agree; 'the Association of University Teachers of Accounting estimates, and we do not dissent, that to give suitable instruction for the Institute's examinations in a series of "block release" courses a total period of eighteen months (excluding "homework" between the courses) would not be too long for non-graduates or twelve months for graduates'

(paragraph 147). The Law Society plans to make non-graduate recruits attend a preliminary course (at the Society's own school) spread over a year; non-graduates and graduates will both be allowed further time off during their last six months of articles. Why should English accountants be less well-trained than solicitors?

If adequate 'block release' courses are ruled out, 'day attendance' is a possible substitute. There is a lot to be said for imbibing knowledge in a series of sips rather than a single gulp; the student learns better, and he has ample time to work out exercises between classes. Attendance for, say, one day a week at a good technical college would thus be suitable for clerks (though it would interfere with their office duties more persistently than block releases). Attendance for part of a day, and in the evenings, would be better than nothing. I understand that the Bristol District Society has started courses of this type, and that their results – as reflected in examination performance – seem full of promise.

The Universities

I have so far said little about the role of the universities – for the simple reason that unfortunately the great majority of new entrants are not likely to be graduates. At present, only some 10 per cent of articled clerks are graduates (as compared with the solicitors' rate of over 40 per cent); the percentage is perhaps growing, but bold measures will be needed if it is to rise to the level found in law, let alone medicine.

The main concession with which the Institute attracts graduates is the two-year reduction in articles. This appears to be too weak an attraction now; and its pulling power may be further weakened if a one-year reduction is given to A-level entrants.

I venture to suggest two changes. The first would call for only a trivial concession. A student who does not enter articles immediately after his university Final (e.g. the man who travels abroad till the autumn) may well register with the Institute too late to be allowed to sit his professional Final in May of his last year. Some relaxation here would be helpful.

My second proposal is more important. The period of articles should be cut down slightly, at least for graduates who already know something about accounting. Once again, the Law Society has taken the lead. It proposes to reduce the articles of graduates in law to two and a half years (provided these graduates have already passed examinations in prescribed legal subjects).

I do not propose to say much about the 'special degree' in accounting, economics and law. I think that such a degree is an excellent beginning for an accountant. Considering how small the normal honours schools are at most universities, a scheme that provides the Institute with some 140 graduates a year is not doing too badly. Graduates are now taken eagerly by suitable firms, at salaries far higher than those of two or three years ago. If the universities keep standards at a good honours level, and widen the curriculum to include some of the new subjects mentioned earlier in this article, the success of the degree seems assured.

It is scarcely necessary to stress the Institute's quite extraordinary position in the matter of higher education. The accounting bodies of almost every other advanced country look largely to the universities for the formal training of their recruits; most of the other professions in England do the same; the Institute alone clings to Victorian standards of education. One must admit to a certain admiration for the independent spirit of the only member of the regiment who is in step. However, even the most conservative must eventually adapt themselves if they are not to stagnate – or worse. And the Institute must now move far and fast if it is to catch up with other professional bodies.

Supply of Teachers

One other point is immensely important. Any scheme of education stands or falls by the quality of its teachers. Whatever the system adopted by the Institute – correspondence courses, block release, university degrees, or anything else – the most essential first step in the plan is to ensure the supply of good teachers. And, in accounting, such men are rare.

What are the specifications of the teacher who will instruct clerks studying for their Finals? He must have the right personality. He should be a qualified accountant with sound experience. And his knowledge of theory should far exceed that of his class – which means that he must have studied accounting and allied subjects in depth; so he should at least have a good honours degree, and will be all the better for graduate training too (e.g. a Master's degree).

The special degree can play a useful part in training some of these specialists. But it needs to be supplemented, especially at graduate level.

The Institute could best help by providing scholarships. These might, for instance, be offered to clerks who obtain distinction in pro-

fessional examinations. Two levels of award are needed:

(i) *Undergraduate scholarships* (for three years), to enable accountants without university experience to take Bachelors' degrees; and

(ii) *Graduate scholarships* (for one or two years), to enable accountants already holding Bachelors' degrees to take Masters' degrees.

The Parker Committee (paragraph 175) feels that the best opportunities of strengthening the links between the profession and the universities lie 'in the field of post-graduate and post-qualification activities'. Scholarships seem the obvious means for implementing its sentiment.

Conclusion

The chief aim of this article is to stress the urgency of the case for vigorous reform. Social and economic circumstances are changing wholesale, but the Institute's training stands still. Unless its methods are improved there is risk of serious loss to the Institute, the profession, and the British economy. The Parker Committee notes the need, and makes some minor suggestions. And it certainly describes the many difficulties attached to worth-while reform. These are real enough; but the Institute commands wealth and power, and can probably get most of what it wants if it sets about the task with energy. The important thing is to aim high.

Mr Bertram Nelson's reservations (page 85 of the report) give a suitable last warning: 'I doubt whether the profession can prosper unless its educational attainments are kept in line with the educational attainments of its clients.'

The danger is real.

Overseas Trade - 1938 and Now

CONTRIBUTED

THE leading article in *The Accountant* of November 18th last, discussing the decline in Britain's invisible earnings compared with pre-war days, has prompted the author of this article to undertake a comparative study of the United Kingdom's overseas trade in 1938 and now. Nearly a quarter of a century has elapsed since the last full pre-war year and the changes in foreign trade which have taken place have been substantial. They have occurred within a framework of expanding world trade.

In the 1930s and during the war, future prospects appeared to be disappointing; traditional world trade, especially in cotton textiles, was disappearing as domestic industries were being established and extended in many of the newer countries. The opportunities for increased trade between the advanced industrial communities seemed likely to become fewer as the character of their industrial development became more and more similar. But, in fact, world trade in manufactures has risen more rapidly than world industrial production since the end of the war. In particular, the rise in inter-European trade in manufactured goods has been quite remarkable. There has been a corresponding relative fall in world trade in primary products, particularly if oil is excluded. One reason advanced for this relative fall is the preoccupation of a number of semi-industrialized countries with their industrial development to the neglect of their export trade in primary materials, and this has had to be countered, to some extent, by the use of synthetic products and by economy in the use of raw materials on the part of highly industrialized countries.

Import and Export Levels Compared

In money terms, Britain's imports in 1938 amounted to £920 million, in 1960 they had reached the record figure of £4,556 million, i.e. about five times as great. Exports and re-exports in the two years were £533 million and £3,678 million, respectively. Thus the 1960 level was some 6¾ times that of 1938. Within this growth, re-exports increased from £62 million to £142 million – very much less than the rate of increase in exports. Expressed as a percentage of gross national product, imports have risen from 18·1 per cent in 1938 to 20·4 per cent in 1960, whilst exports rose from 10·5 to 16·5 per cent. Thus overseas trade looms larger in the national economy than in pre-war days; export effort is relatively much more important. Exports in 1961 are likely to be about 3½ per cent greater than in 1960 and imports 3½ per cent lower.

In spite of the increased importance of exports, Britain's share in world trade in manufactures was lower in 1960 than in 1938. In that year, Britain provided 22 per cent of this trade, against 16 per cent in 1960. Japan held about 7 per cent in both years, West Germany's share had risen

from 15 to 19 per cent, that of the United States from 20 to 22 per cent and 'other European' from 24 to 31 per cent. During 1961, Britain's share fell still further, but not to any alarming extent. The reasons put forward for this substantial fall compared with pre-war days are many and various. No doubt Britain's exports are not so competitive on price grounds as they used to be, but speed of delivery may also be a significant factor. Britain's traditional markets have not expanded so much as those of her competitors. Other factors which have been mentioned are inadequate attention to design, marketing and salesmanship, and poor repair facilities and after-sales service.

In pre-war days, 40 per cent of Britain's imports came from Commonwealth countries and the Irish Republic whilst 50 per cent of her exports went there. The percentage of imports from these countries in 1960 was also 40 but the proportion of exports to them had fallen to 44 per cent. In 1938, a further 28 per cent of Britain's imports came from Europe and 30 per cent of her exports were taken by European countries. Current proportions are 31 per cent for imports and 32 per cent for exports but the latter has been steadily rising in recent years. These trends are interesting in relation to Britain's application to join the European Common Market and the reactions of Commonwealth countries to this application. Significant changes have also occurred in the proportion of trade with the United States. In 1938, 12½ per cent of import trade and 5·3 per cent of export trade was with the United States; in 1960, imports were still about one-eighth of the total, but exports had risen to 9·3 per cent.

Changed Nature of Foreign Trade

Food, drink and tobacco made up 47 per cent of United Kingdom imports in 1938, raw materials accounted for 28 per cent and articles wholly or mainly manufactured, 25 per cent. Today, the proportion taken up by food, drink and tobacco has fallen to one-third, basic materials make up 23 per cent, petrol and petroleum products a further 11 per cent, whilst manufactured goods have risen to 32 per cent. This latter percentage has steadily grown in recent years, it reflects the effect of liberalization measures and the growing trade with Europe.

In 1938, coal exports were 8 per cent of the total, today the proportion is under 1 per cent but petroleum products account for 3 per cent of total exports compared with a negligible proportion in pre-war days. The proportion of textiles and clothing exported has fallen heavily – from 22 per cent of all exports to less than 8 per cent, but engineering products which accounted for 28 per cent in 1938 now make up slightly more than half. Chemicals have also increased their share of our export trade – from 6 to 9 per cent. Manufactured goods of all kinds made up 78 per cent of exports in 1938, they now constitute 85 per cent. Even so, the export of ships and railway rolling stock has declined in relative importance since 1938 but engineering and chemical exports now contain many products which were unknown in 1938 or hardly figured in exports. Thus, aircraft and aero-engines now account for 4½ per cent of exports, electronic equipment nearly 2 per cent and agricultural tractors 2½ per cent compared with 1 per cent, a half of 1 per cent and less than one-half of 1 per cent respectively, in 1938. The export of cars and commercial vehicles is now relatively much more important than in pre-war days.

Import and Export Prices and Terms of Trade

By linking together index numbers of import and export prices based on a number of earlier years to the current indices which are based on 1954, it is possible to get an indication of price changes between 1938 and now. These indices allow for the changes in the pattern of imports and exports already discussed in previous paragraphs. This linking process suggests that the price index for imports in 1960 was of the order of 375 and that for exports 350, both based on 1938=100. Since then there has been a slight fall in import prices and a rise in export prices and by the third quarter of 1961 the two indices were quite close to one another in the 352–362 range. From these figures it appears that the terms of trade in 1960 were about 8 per cent higher than 1938 and currently they are but 3 per cent higher – a situation vastly different from that obtaining in the early fifties.

These price indices may also be used to convert imports and exports expressed at current prices to their equivalent at constant prices. Applying these figures it would seem that 1960 exports in real terms were about double those of 1938, whilst imports had risen by just under one-third. In spite of the rather depressing fall in Britain's share in world trade, it can at least be mentioned that it is something of an achievement to have doubled 1938 exports having regard to the fact that export trade was practically non-existent at the end of the war.

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

EAST AFRICA

Income Tax Report

THE East African Income Tax Department says its recently published report for the year ended June 30th, 1961, has been responsible for the assessment and collection of income tax in Kenya, Tanganyika, Uganda and Zanzibar, of Asian and European hospital tax in Kenya, and of education tax in Zanzibar. The total number of taxpayers at the end of the year was 123,797 – an increase of slightly more than 2,000. In 1951 there were less than 43,000.

Over £18 million in tax was paid over during the year to the various governments. Kenya with nearly £10 million took the lion's share; Zanzibar took £187,463; while Uganda and Tanganyika took between £3 and £4 million each. There are the usual voluminous statistics about incomes, assessments and so on, for the four territories separately. A good deal of tax, notably from pensioners and from English companies trading in the territories, is assessed and collected in London.

The Commissioner, in his report, pays tribute both to his staff and to the 'local committee' which correspond to our local General Commissioners. One of the Department's problems is to discover a satisfactory source of staff for the professional grades of assessor and above. The Commissioner also hopes for the simplification of the taxes themselves, and therefore of the Department's work, so that future recruits in all grades may have a reasonable chance of providing an efficient service. Local recruitment is being pursued but a disappointing feature has been the large number of African recruits who have resigned after a few months' service in order to take up scholarships or better paid jobs in other Government departments or in commerce. Thirty per cent of African recruits left the Department after an average of three and a half months' service. Twenty-four tax officers at present on temporary transfer from the Board of Inland Revenue in England will revert to that service during 1962 and 1963. As in Britain a good deal of the report is taken up with back duty and evasion, problems which seem to rear their ugly heads wherever there is direct taxation.

AUSTRALIA

Second Chartered Accountants' Congress

THE Institute of Chartered Accountants in Australia, which is organizing its second all-Australia congress (see *The Accountant*, November 4th, 1961) to be held in Sydney from May 7th–10th, has now issued details of the technical sessions which will be held at the Chevron-Hilton Hotel – the Congress headquarters. An outline of the programme is as follows:

First session: May 8th. Subject: 'Our formal opinion as auditors'.

'How we should arrive at our opinion', by Mr E. L. Flook, F.C.A.

'What should our opinion mean to the shareholders?', by Mr R. M. Wylie, F.C.A.

Second session: Subject: 'Our opinion as investigator or valuer of business undertakings'.

'Current concepts of the conduct of investigations', by Mr A. S. McLaughlin, F.C.A.

'The Chartered Accountant as valuer of business undertakings', by Mr R. E. Tonkin, F.C.A.

Third session: May 9th, Subject: 'Our advice as consultants'.

'Various types of consultants and their qualifications', by Mr R. G. W. Wood, F.C.A.

'The financial consultant', by Mr N. F. Stevens, F.C.A.

'The consultant on organization, systems and management', by Mr E. S. Owens, F.C.A.

Fourth session: May 10th. Subject: 'Professional independence and integrity'.

One paper only to be presented by Mr B. R. Macklin, F.C.A.

UNITED STATES

Opposition to Tax Proposals

THE Committee on Federal taxation of the American Institute of Certified Public Accountants is strongly opposed to the majority of the tax proposals of the Kennedy Administration. In a thirty-two-page statement sent to the chairman of the House Ways and Means Committee, which is shortly to consider a draft of the new legislation, the Committee declared many of the proposals unnecessary and unworkable.

The Committee level special criticism at provisions for taxing entertainment and travel expenses and withholding tax on interest and dividends. Tax credit for purchase of plant and equipment was approved, but not as a substitute for depreciation reform.

They believe the present law is clear as to what is properly allowable as business entertainment and travel expenses. 'The problem is one for administrative emphasis rather than a change in law'.

'We certainly do not condone abuses', the Committee continue. 'On the other hand we do not agree with any implication that the present rules regarding entertainment and travel expenses are improper or immoral.'

The Committee also deemed unnecessary the

withholding of tax on interest and dividends, in view of the establishment of the taxpayer identification numbering system and automatic data processing by the Internal Revenue Service.

'It is obvious', the Committee state, 'that the Commissioner of Internal Revenue feels that the mere authority granted by Congress to establish a numbering system to ferret out omissions of taxable income in the dividend and interest area, particularly, will go a long way to reducing or substantially eliminating the reporting gap.'

The Management Accountant's Opportunity

THE management accountant's first duty, says Mr W. H. Franklin, Vice-President of Caterpillar Tractor Co, in the *N.A.A. Bulletin* for October, is to realize, and make companies realize, that all the barnacles must go, costs must be reduced to a greater degree than perhaps is thought possible. He must understand the choice before America today – whether to restrict competition from abroad by tariffs, quotas, boycotts, or to work to increase exports and compete, the only proper choice. He must help management to understand that the easy solution of Government protection is wrong. Finally he must make sure that the general public – labour management, politicians, everyone – understands.

While the public has not yet made up its mind, Mr Franklin warns that there is not much time. America is at the cross-roads of isolationism and less trade, with fear, distrust, envy and perhaps war or trade with brotherhood, trust, respect and peace.

A Unified Cost Concept?

IN a discussion on management accounting techniques in the same issue of the *Bulletin*, Mr Eric L. Kohler, C.P.A., considers the possibility of a trend towards a unified cost concept. He thinks, with some hesitation, that such a trend exists. LIFO inventory valuation, fixed asset revaluations, accelerated depreciation and the present recording of future obligations, these seem at first to be evidences of movement away from unity. But the advocacy and practice of LIFO is beginning to be recognized, he says, as a major divergence from the orderly application of accounting concepts. LIFO found its way into a limited number of books of account because Congress was unwilling to permit LIFO for taxation without its expression in external reports. Not only has the meaning of financial statements been thus impaired but a serious blow has been dealt to the orderly development of management accounting.

On the subject of valuation of inventories of manufactured products at the standard cost of direct materials and direct labour, Mr Kohler states that this has not yet received the blessing of the American Institute, the Securities and Exchange Commission and the Internal Revenue Service but, if acceptance by accountants increases, approvals are certain to follow as a logical outgrowth of what appears today to be the best in management accounting.

Status of the Accounting Profession

IN a leading article in the October issue of the *Journal of Accountancy* devoted to a consideration of the public image of the certified public accountant, Senator William Praxmire is said to have held up for several days Senate confirmation of a C.P.A. as a member of the Federal Power Commission, saying: 'This specialized and particularized kind of expertness represented by an accountant . . . can be represented very well at the staff level. At the Commissioner level the viewpoint should be of broad-gauge concern with the public interest.' As to the accountant: 'The expertise is narrow. He is not a lawyer. He does not have the generalized viewpoint that perhaps an engineer might have. He is an accountant . . . .'

The article comments that it is apparently not generally known that Chrysler, Crucible Steel, Ford and others of the largest companies have, in recent years, chosen as president or chairman of the board men who started their careers as accountants, many as C.P.As. The significance of accounting in analysis of business problems and decision making is not widely understood.

A survey among students at Michigan State University is said to have shown the accountant at the bottom of the list of professions as viewed by students. They see him as a conformist whose job provides the least personal satisfaction and little in the way of success, pay or status. The article concludes that, if the real significance of professional accounting is to become better known it must be members of the profession who do the job, they must 'toot' their horns a bit louder.

NETHERLANDS

The Netherlands Institute

AT the recent annual general meeting of the Nederlands Instituut van Accountants, Mr H. C. Treffers, was re-elected President and Mr F. van Amerongen was elected Vice-President.

The resigning members of the Council, Messrs Diephuis, De Korte and Wisse, have been succeeded by Messrs A. C. Bakker, Jr., B. A. E. van Doorne, and W. Schmidt. Mr H. Gerritsen, has been appointed honorary secretary.

SOUTH AFRICA

P.A.Y.E.

DR DONGES, the Minister of Finance, has confirmed that a draft bill providing for the introduction of a P.A.Y.E. system of income tax is to be submitted to a select committee in the next Parliamentary session.

It is expected that the P.A.Y.E. system will be brought into effect during the next tax year which begins in 1962.

Weekly Notes

DECIMAL CURRENCY COMMITTEE OMISSION

THE names of the members of the Exchequer Committee of Inquiry into decimal currency were announced by the Treasury last week. They are – Professor R. G. D. Allen, Professor of Statistics, London University; Mr Vernon Ely, of Elys (Wimbledon) Ltd; Miss Anne Godwin, Chairman of the T.U.C.; Mr J. M. A. Smith, F.C.A., part-time member of the National Coal Board and formerly assistant managing director, Ford Motor Co Ltd; and Mr R. G. Thornton, director, Barclays Bank Ltd.

It is more than surprising that no one from the practising side of the accountancy profession has been chosen. Mr J. M. A. Smith is a member of The Institute of Chartered Accountants in England and Wales but he, presumably, has been selected for his knowledge and experience of large-scale industry, his professional qualification, in this case, being incidental. The list includes, as well as another industrialist, a statistician, a banker and a political representative. As one of the tasks of the committee is to assess the cost of the changeover to decimal coinage, it is but logical to suppose that the services of a practising accountant would have been indispensable even although the committee will have the help of three assessors from the Bank of England, the Royal Mint and the Treasury. When Parliament reassembles, it is to be hoped that some accountant member of the House will draw the attention of the Chancellor to this glaring omission for while there is no doubt that the persons selected will tackle their brief efficiently and expeditiously, they would have been even better equipped to do so had an accountant in practice been one of their number.

BUDGET SUGGESTIONS

TWO recent pre-Budget letters addressed to the Chancellor of the Exchequer bear remarkable similarities. One letter comes from the President of the Association of British Chambers of Commerce, Sir James R. H. Hutchinson, Bt, the other from Mr Geoffrey Stevens, F.C.A., M.P., in his capacity as chairman of the Executive Council of the Income Tax Payers' Society.

Both letters suggest a greater emphasis on indirect taxation, to the relief of taxes on income and profits, even mentioning a possible extension of indirect taxes to non-essentials not already taxed. The Income Tax Payers' Society boldly asks for a reduction in the income tax standard rate, whereas the Association thinks that any such reduction as was possible would be too small to make an impression, and therefore asks rather for an increase in personal allowances. Both letters mention the need to encourage of exports, while recognizing the difficulty of discriminatory taxation for such a purpose. The Association attacks the industrial oil tax and the tax on commercial stationery, as well as stamp duties on stock exchange transactions. It considers that the latter should be dropped if a capital gains tax is introduced. The Association also makes representations on minor income tax matters: a liberalization of Schedule E expenses allowances, the allowance of the cost of tax appeals (with safeguards against abuse), the inclusion of foreign registered companies as overseas trade corporations, a liberalization of double tax relief, and a longer period for partnerships to elect for 'continuing basis'.

The Society points out that it is now three years since the income tax exemption limit for old persons was last increased. It presses for the deduction of subscriptions to educational establishments in favour of professional persons as well as traders. Finally, the Society thinks that seven-year covenanted payments to charities should qualify for relief from surtax, as well as income tax.

MANUFACTURERS AND THE BUDGET

THE views of the National Association of British Manufacturers on what the Chancellor should do in his Budget in April were made known last Monday. The Association put forward a seven-point proposal as a pre-requisite of the achievement of an expansion in exports. The memorandum contains a vigorous protest against the increase last year in the rate of profits tax and argues that not only should this be withdrawn but that in fact the tax should be further reduced. New plant and machinery should be capable of being written-off in three years, and the rate of depreciation on old plant accelerated.

The Association is no more in favour of the economic regulators introduced in 1961 than it is in favour of the impost on heavy oil, imposed at the same time. It argues that the 10 per cent surcharge on purchase tax is a burden on industry and has not been effective in reducing unnecessary consumption. It does not agree that a tax incentive to exporters is impracticable, but is prepared to accept equivalent encouragement in another form. For the long term, the Association suggests that profits tax and income tax be amalgamated to form one tax on corporate bodies. Equally, for individuals the income tax should be amalgamated with surtax.

Estate duty rates, says the Association, should be reduced in order to lessen the burden on small manufacturing businesses, and it suggests that it should be possible to take out a life insurance policy in favour of the Estate Duty Office which would not be aggregable with the deceased's other estate; thus

estate duty could be provided for without too much detriment to the business. Finally, it is urged that the system of indirect taxation should be rationalized and simplified.

GIFT NOT DISCLOSED TO ESTATE DUTY OFFICE

ON Monday the Birmingham Quarter Sessions imposed a fine of £2,000 on John Ralph Aspey, a sub-postmaster, aged 53, of Chesterwood Road, King's Heath, Birmingham; with nine months' imprisonment in default of payment. He was ordered to pay costs up to £150. As reported in *The Times* of January 16th, Aspey had pleaded guilty to delivering to the Estate Duty Office an affidavit in which he swore that his mother had made no gifts within five years of her death, whereas she had given him sums totalling £15,000 during that period. The prosecution accepted his plea of not guilty to a second charge that he made a return to the Estate Duty Office in which he falsely declared that the amount given him by his mother in December 1957 was £4,500 whereas it was £5,000, and failed to disclose a £10,000 gift in November 1955.

The Recorder said that Aspey's previous good character, the state of his health, and the fact that he disclosed the gifts to another branch of the Inland Revenue in his tax returns, had saved him from the punishment proper to the offence. Defendant was said by his counsel to be suffering from a spinal condition which had created great weakness and debility, physical and mental.

REPORT ON RESTRICTIVE PRACTICES

THE Stationery Office have published the report for the period January 1st, 1960, to June 30th, 1961, of the Registrar of Restrictive Trading Agreements (Cmnd. 1603, H.M.S.O., 2*s* 6*d* net). In this period the number of agreements on the register increased from 2,240 to 2,350, although of course it must be borne in mind that agreements which have been determined remain on the register in the normal way. The fifty or so new agreements made and registered during the period mostly bore some relation to previously registered agreements and were either sequels or rearrangements.

The Registrar makes some interesting observations. There has naturally been an increase of cases where, without any agreement, information about prices charged are circulated in a particular trade, with the natural result that prices tend to become standardized in an informal way. The Restrictive Practices Court has never yet been satisfied that the ending of a price agreement would lead to any substantial debasement or deterioration of quality. It is often impracticable for a manufacturer to make both normal and debased qualities, let alone to ensure that the better quality reaches the larger purchasers. Nor has the Court been satisfied that price competition would lead to a curtailment of research or development which would deprive the public, as customers, of a benefit. Technological progress is more than ever necessary in competitive conditions. In Yarn Spinners the Court found that the price scheme had seriously retarded the contraction of capacity to match reduced demand, thus causing a waste of national resources.

The report contains notes on decisions reached by the Court in the period under review. On the Motor Vehicle Distribution Scheme Agreement the Court found that the restrictions were contrary to the public interest. One item was the allowance of a special discount to fleet users, which was defended primarily on the ground that, since the discount depended on the size of the fleet and not on the size of orders at one time, the fleet user was spared the temptation to buy unsuitable vehicles. The Court did not accept that, even if fleet users were exposed to such temptation, the public would be in danger to life and limb from the unsuitable and ill-repaired vehicles which fleet users would put on the roads. The Court also found that the signatories to the agreement had been guilty of unreasonable conduct in relation to the discovery of documents both before and during the hearing. This had increased costs, prolonged the hearing, and put some witnesses in a very embarrassing position. The Court ordered the signatories to pay 3,000 guineas costs to the Registrar.

TRADE POSITION – LITTLE CHANGE

IF allowance is made for seasonal adjustments the latest trade returns for the United Kingdom show little change in the overseas trading position since December. Exports were £8 million down at £297 million and imports were up by £9 million to £350 million while re-exports were unchanged at £14 million. Thus allowing for seasonal adjustments the trade gap was £2 million lower at £39 million.

Taking the fourth quarter of the year by itself, exports were 1½ per cent lower and imports 1½ per cent higher than in the third quarter. The balance of visible trade was thus little changed and where there was a slight shift, it was hardly for the better. Imports were still significantly buoyant despite the de-stocking policy of British industry over the last six months. On the export side the picture is somewhat disappointing but allowance has to be made for the fact that the trend of world trade in the second half of 1961 was less expansionary than in the previous period. It has also to be borne in mind that although a dearer money policy can be quickly instituted once the decision has been taken to do so, some time must elapse before the export trade can re-act to it.

The indications remain, however, that 1962 will be a good year for exports. The success of the six member-countries of the European Common Market in agreeing their agricultural policy must give an impetus to a continuing high rate of progress in the economic development of the E.C.M. This being so the future of the western European market is good

and it is towards this market, rather than to the Commonwealth, that the Government is looking for an impressive recovery in the rate of growth in our exports. Such a growth, if it occurs in 1962, could coincide with boom conditions in North America, which would also help exports.

OUTLOOK FOR STEEL

THE year just ended was a disappointing one for the steel industry and because the use of the metal is so widespread, its lack of buoyancy was a fair indication of the general absence of robust confidence in the rest of the economy, especially as regards capital goods.

In the course of 1962, the industry's capital projects already in hand will come to fruition and some big expansions in capacity are in the offing. Aided by Richard Thomas & Baldwins' new plant in South Wales and the new strip mill in Scotland put up by Colvilles, the industry will soon be able to produce at the rate of twenty-nine million tons of steel a year. The Iron and Steel Federation [illegible]ts steel production to be at about the same level [illegible] year – which is expected to have closed with [illegible]at just over twenty-two million tons, a drop of [illegible]ent on 1960 which was a record year. There is [illegible] prospective gap of seven million tons between [illegible]y and output.

[illegible]e big question mark for 1962 is how far high [illegible]erest rates and a general climate of caution in industry will make steel users keep their stocks at a low level. The fall in output over the last year was due mainly to destocking by merchants and users. A general recovery in sentiment might encourage users to raise the level of their stocks but the known trend of capital investment suggests that there is likely to be little incentive to raise levels significantly before the second half of the year. In any case, a gradual recovery rather than a buying spree by steel consumers would suit the industry best.

CHURCH OF ENGLAND FACTS AND FIGURES

THE average parochial benefice income for 10,232 Church of England incumbents in 1960 was £790 according to the revised edition of *Facts and Figures about the Church of England*[1] published last week by the Church's Central Board of Finance Statistical Unit. In addition, 6,071 incumbents received a total of £493,376 from chaplaincies and other posts.

Financial tables showing average benefice incomes and income expenditure of parochial church councils are among informative statistics given in this enlarged edition, last published in 1959. A breakdown of benefice incomes in 1958 shows that incomes ranged from £625 a year for incumbents with livings of less than 500 people, to £929 a year for those with populations of over 20,000. Total income of the parochial church councils amounted to £18,592,144. Sources included collections taken in church (£3,684,677); planned giving, freewill offerings, Easter and Whitsun offerings and church box collections (£3,301,180); income from rents of church properties and trust funds amounted to £721,516, while special appeals and legacies realized £3,777,291.

In an introductory article the Bishop of Middleton, the Right Rev. E. R. Wickham, declares that 'sociological studies provide the Church with new tools, new measuring instruments of situations, trends, areas of strength and weakness, and a map and compass for charting her mission'. The figures and tables, he points out, need careful use and interpretation, but the material provided will allow planning and action to proceed on the basis of fact rather than 'hunch'.

Legacies and bequests received by the parochial church councils in 1958 totalled £757,721. The highest total was recorded by Exeter (£68,435), followed by London (£57,841) and York (£50,121).

An accompanying note points out that the average estate in 1958–59 was nearly £13,000, and as the average church benefaction was £253, each of the benefactors bequeathed not quite 2 per cent of his estate to his parish church.

TENANT IN LIQUIDATION TO FORFEIT LEASE

A LEASE to a company normally contains provision for forfeiture in the event of the tenant company going into liquidation. Section 146 of the Law of Property Act, 1925, provides some protection to a tenant where there is a forfeiture clause in his lease. Another common provision in a lease is that the tenant shall not assign without the landlord's consent, such consent not to be unreasonably withheld. These matters were the subject of litigation in *Geland Manufacturing Co Ltd v. The Levy Estates Co Ltd.*

The plaintiff had a lease from the defendant incorporating the provisions mentioned above. Owing to financial difficulties it was forced to go into a creditors' voluntary winding-up in January 1961. It was arranged that the liquidator should sell the company's assets to a subsidiary company which would resell them. The liquidator took steps to acquire a 'ready-made' company, Milldrin Ltd (which had no trading record) for this purpose and he wrote to the defendant for permission to assign the company's lease to Milldrin Ltd. Representatives of both sides met, after correspondence, with a view to a Mr Barr (or a private company controlled by him) becoming guarantor of Milldrin Ltd. On January 10th, 1961, the plaintiff agreed to sell its assets to Milldrin Ltd on terms, *inter alia*, that Milldrin Ltd would pay £9,524 in cash, but £9,400 was to be left outstanding as a loan repayable at

seven days' notice, since Milldrin Ltd did not have the money.

The landlord refused to allow assignment; he took steps to forfeit the lease. The plaintiff applied to the court for relief from forfeiture and a declaration that it was entitled to assign the lease to Milldrin Ltd. The landlord counterclaimed for possession. Rejecting the plaintiff's claim, and finding for the landlord, Mr Justice Wilberforce said the case was not based on any willingness or ability of the plaintiff to remedy the breach which it had committed by going into liquidation. The correspondence and other evidence showed that the plaintiff never put forward a definite proposition for assignment beyond the agreement for sale. Under that agreement the proposed assignee would be in debt to the extent of £9,400, which could not be acceptable to the landlord. Mr Barr had not committed himself to assuming liability under the lease. It would be improper to force on the landlord an assignment to a company in the position of Milldrin Ltd. The landlord was awarded possession within twenty-eight days, and costs.

This is My Life . . .

by An Industrious Accountant

CHAPTER 107

I WONDER why the man in the street knows so little of the accountant's functions; why the term 'auditor' makes such a vague impact on him? Probably, because we ourselves often tend to describe our work in technical terms, it fails to hold human interest for the outsider in quite the way that a barrister's or an architect's does.

I read a story about a professional auditor when I was young, and at the time it left me completely mystified as to what on earth he was doing; so I looked it up again recently. It was a Conan Doyle short story, *The Silver Mirror*, written about 1900, probably one of the earliest works of fiction which our profession has inspired; it was clear that Doyle himself was just as much in the dark about auditing as I was. He merely used the auditor as the peg on which to hang his story.

Yet Doyle usually revelled in detail. He was meticulous about Sherlock's clues, or Brigadier Gerard's campaigns, or even the arrows borne by the White Company as it marched to war behind Sir Nigel. Did his tale represent the standard of knowledge, or the lack of it, of the typical Victorian?

The story is simple enough. It is told, in the first person, by the junior partner auditing the accounts of White & Wotherspoon; it is his first big solo job and he is thrilled at getting such a chance. He has to analyse twenty huge ledgers to track down a suspected swindler, but overwork is bringing him to the verge of a nervous breakdown. It is a rush job; the deadline is almost upon him. Will he make it in time? It seems, however, that he can gauge his chances of success: when his head swims, the ancient mirror beside him clouds over; when his overtaxed brain is bursting, he sees in the swirling mist a woman's eyes, and menacing, evil movements around her.

We do not know the details of the swindle. The criminal is apparently a fat, red-faced alderman, but whether director or trustee or manager (inconceivably a chief accountant?) we never learn. The junior partner plods through the ledgers one by one, working from 10 a.m. to 5 p.m., and from 8 p.m. to 1 a.m. – a time-table which he finds almost intolerable. (I worked almost as long hours before my Final, so I know the symptoms, but nobody thought me overworked.) The woman's agonized face is clear now; the crouching man beside her is begging for his life.

The junior partner labours on; his doctor k[illed] him going with stimulants. In the very first l[edger] he found 'the first trace of defalcation'; by the [end] he is 'winding the net, coil after coil, ro[und] suspect's bulky body'. He doesn't specify w[hat] found; he only tells that his heart, his eyes, his [brain] all are behaving treacherously. It apparently [does] occur to him to co-opt a colleague, let alo[ne] articled clerk, to devil for him. He presses on rega[rd]less; the assassins close in sword in hand.

At the last ledger we approach the climax; surely Doyle must reveal some details of the fraud at last. He does, though his list shows signs of hasty patchwork. Here it is: 'False balance sheets, false trading accounts' (presumably the fiddling went on for years); 'dividends drawn from capital, losses written down as profits' (was Redface launching a crooked prospectus?); 'suppression of working expenses' (it sounds impressive, but how does one suppress them?); 'manipulation of petty cash' (rather a come-down, but it pads the list). By all accounts it was in fact high time that the junior partner had been called in for Redface was obviously no mean hand at faking the books.

But the poor junior partner had driven himself too hard; his nervous system finally gave way. Adding up the last column, throws down his pen, and looks up to see in the mirror the butchery starting and – collapses in a heap. Three weeks after, waking up in hospital, he finds that his figures have proved the case and his hunt is over. But he hardly notices – he is much more interested in the history of the queen of the mirror.

That's how auditing looked to the outsider about the turn of the century. True, Conan Doyle pays tribute: 'There's drama in an accountant's life . . . hard work but rare sport', but his portrayal still remains nebulous. It would be interesting to know of any other early fiction bringing in the profession.

Reviews

A Standard Account for Landed Property Investment

Research Study No. 1 of the Chartered Land Agents' Society. (Estates Gazette Ltd. 6*s* 6*d* net, postage 9*d*.)

Eighteen months ago the Chartered Land Agents' Society set up a study group to inquire into and report on the application of modern accountancy techniques to investment in agricultural estates. This is the first of the group's series of research studies to be issued. Its aim is to devise a standard form of account by means of which estate results can be measured, with particular reference to the value of agricultural property as an investment and so that a common form may be used to compile statistics of relative performance.

Essentially this standard form is a business balance sheet and revenue account, with certain interesting modifications. The balance sheet is designed to emphasize the cumulative effect of capital changes. It has three columns to each side, being the commencing figures, increase or decrease during the year, and closing figures; thus incorporating a statement of capital changes. A value is placed on the estate as at the commencement of the account and provision is made not only for realized capital profits but also for periodical revaluations. We have, therefore, orthodox accountancy meeting facts which have contributed to take-over techniques – a situation which should appeal to many present-day landowners.

It is too early, yet, to judge the ultimate value of this and future studies, but it cannot fail to advance and stimulate the knowledge of a subject which may hitherto have been too inclined to rely on traditional methods.

Silke on South African Income Tax

Second edition by A. S. SILKE, M.COM., PH.D.(CAPE TOWN), C.A.(S.A.). (Juta & Co Ltd, Cape Town.) (U.K. agents, Sweet & Maxwell Ltd, London.)

To accountants and tax practitioners in Britain, the name of Dr Silke is synonymous with South African income tax. His series of *Illustrations to Income Tax* was developed into a full textbook, rich in examples, which was first published in 1957. This second edition brings in the Income Tax Act, 1961, and intervening changes but it does much more than bring the first edition up to date. In particular there is a great improvement in the printing and binding so that the present volume is a really handsome one which bears comparison with the best of English textbooks. The book's subtitle is *An exposition of the law, practice and incidence of income tax in South Africa*. To recommend this book to all who are concerned with that subject is to stress the obvious, for we know of no better book for this purpose.

The author has agreed with the publishers to prepare and edit a continuous income tax service commencing this year, to be known as 'Juta's Practical Income Tax Service'. It is to include regular practical bulletins every six to eight weeks, commentaries on the annual tax legislation of the Republic of South Africa and of South-west Africa, the annual consolidated income tax Acts of these territories, an annual book of tax tables, free subscriptions to the *South African Tax Cases Reports*, and the opportunity to purchase at a discount new editions of *Silke on South African Income Tax*, which are expected to appear every two years. The annual subscription to the new service is £6 10*s* plus 8*s* postage.

United States Fiscal Policy, 1945-59

by A. E. Holmans. (Oxford University Press, London. 40*s* net. United Kingdom only.)

The sub-title of this doctoral thesis stresses the contribution of fiscal policy to economic stability and it is with this aspect of American taxation that the author is concerned. He has provided a serious and competent description of the manner in which the successive post-war administrations of the United States have employed fiscal policy to maintain economic stability.

While some part of the undoubted success which attended these efforts may be ascribed to good fortune, Dr Holmans stresses that good management also played its part. He provides an interesting account of how, after Korea, the United States Government turned from fiscal policy to monetary policy, just as did the British Government. Dr Holmans has sketched in the American political background where it helps to throw light on the problems confronting the administration. For the reader interested in the post-war American scene, this is an interesting and competent study.

Eurotariff Service

Published by Eurotariff N.V.
(World-wide distributors: Creative Journals Ltd, 85–87 Jermyn Street, London SW1. Subscription 75 gns a year.)

Whether this country goes into the European Common Market or not, trade and industry in Britain wants to know rapidly and accurately the tariff changes which are going on all the time within the E.C.M. The six member-countries are now in process of eliminating their tariffs against one another and erecting a common tariff against non-members. Following the effect of each tariff change through the maze of product definitions for each country would clearly be a difficult task. It is beyond the resources of most companies to do it either rapidly or accurately.

The Eurotariff Service offers a basic 800-page code tabulating all duties effective on January 1st, 1961,

and listing changes up to April 1st, 1961. Amendment sheets, clearly necessary if the work is to have current value, are issued for continuing tariff changes and are included in the subscription price. The classification of products has been made possible by using the new standardized Brussels Nomenclature and code numbers.

This service is not cheap at 75 guineas. It could hardly be so if it is to be accurate and up to date. It will, however, be exceedingly valuable for those who export a selection of products to the Common Market area.

For those companies or organizations not requiring the whole service, a sectionalized service in loose-leaf form has recently been introduced with an annual membership subscription of 15 gns. There is a fee of £5 for each section of five or less chapters, or a fee of £10 for each section of more than five chapters.

Official Year-Book of the Church of England, 1962

(The Church Information Office, Church House, Westminster, SW1, and the Society for Promoting Christian Knowledge, Holy Trinity Church, Marylebone Road, London NW1, 30*s* net, by post 31*s* 6*d*).

The 1962 edition of this useful work of reference – now in its seventy-ninth year – contains all the invaluable features which make it indispensable for clergy, parochial church councillors, ordinary churchgoers, and all who are in any way concerned with or interested in the administration of the Church of England.

A section of nearly one hundred pages comprises the names of the bishops, deans or provosts, other principal clergy, diocesan officers and members of the Church Assembly for each of the forty-three dioceses of England and Wales, and a following section deals with the other churches of the Anglican Communion. There is also a 'who's who' of members of the Church Assembly, and some of its boards and councils. An alphabetical summary of legal information, compiled under the authority of the Legal Board of the Church Assembly, deals with such matters as alms and collections, dilapidations, fees, patronage, vestries and Easter and Whitsun offerings.

The year-book also contains the text of several Church Assembly measures and regulations, and has a comprehensive index to facilitate easy reference.

Office Equipment News Standard Reference and Data Book: Buyer's Guide 1961-62

(Business Publications Ltd, London SE1. 42*s* including postage.)

The variety of today's machines, systems and devices for promoting efficiency in the office is such that no business man can possibly know of more than a small fraction of them. Yet it is vitally important that he should install the equipment designed specifically for the purpose he has in mind. This new guide to office equipment and appliances admirably meets this requirement, together with the needs of buyers of office equipment.

A useful work of reference, the book lists under some 300 classifications those office machines, systems, and devices, British and imported, now available in the United Kingdom. The uses and salient features of each machine are described, and there are listed the names, addresses and telephone numbers of more than 700 manufacturers. Also included, in a separate section, are the trade names of more than 3,000 items of office equipment. The book is copiously illustrated.

SHORTER NOTICES

COMPOUND INTEREST, by N. E. Sheppard and D. C. Baillie (University of Toronto Press, Oxford University Press, London. 48*s* net). This is a basic textbook on this branch of mathematics which will be useful to statisticians in stockbrokers' offices and to actuarial students. The accountant who likes playing with figures will find plenty to test his facility.

SAMPLING TABLES FOR ESTIMATING ERROR RATES OR OTHER PROPORTIONS, by R. Gene Brown and Lawrence L. Vance. (Institute of Business and Economic Research, University of California. No price stated). Although the practice of test checking entries in books of account and the partial vouching of documents is widespread in this country, the idea of using statistical sampling methods to determine the amount of test checking during an audit is somewhat novel, to say the least. It seems, however, as if the idea has caught on in the United States where two serious studies of this method have been published. The author of one of them has now produced, in collaboration with another accountant, this set of sampling tables to facilitate the determination of the size of the sample, given the required level of confidence. Two brief notes explain the use and applications of the tables.

Finance and Commerce

Villiers

THE reprint this week is taken from the accounts of The Villiers Engineering Co Ltd, which produces the many forms of Villiers engine and through J. A. Prestwich Industries, the no less famous J.A.P. engines. It is rather extraordinary to notice that the group also includes Pencils Ltd which in fact makes – pencils.

The year's result is a loss of £452,929 (after depreciation and debenture interest) against the previous profit of £516,781. For this, Mr Leslie Farrer, the chairman and joint managing director, gives two main causes: 'The freeing of import restrictions in November 1959, which resulted in a flood of low-priced foreign industrial engines – mainly from the United States – into the United Kingdom' and the 'imposition of credit restrictions in April 1960, the first effect of which was the almost complete collapse of our sales of motor cycle, scooter and moped engines'.

Mr Farrer points to the 'almost 3½ to 1' proportion of the United States and United Kingdom populations and the higher American standard of living which gives a very large market for small internal combustion engines, which he estimates to be at least fifteen times the United Kingdom market potential. United States manufacturers in consequence can achieve very low production costs enabling them to sell at 'extremely competitive prices', even in the United Kingdom.

Factory organization and regular and economic production, Mr Farrer goes on, require long-term planning and 'the stronger and more stable our home market can be maintained by the Government's economic policy, the better able we are to do this, and thereby reduce our production costs and generally operate more efficiently'.

Costly Development

Mr Farrer admits that industrialists have said this over and over again but it doesn't appear to be fully comprehended by those who shape economic policy'. The company's products, he continues, do not enjoy the relatively high import tariff protection extended to the automobile and 'certain other favoured industries', and some foreign engines can be sold in the United Kingdom cheaper than the basic cost at which they can be produced in Britain.

Furthermore, he adds, an equipment manufacturer in Britain who buys a foreign engine at a price including import duty can, if this cost is less than a specified percentage of total cost of the product which he subsequently exports, not only reclaim the import duty but also claim the product as being wholly made in the United Kingdom and thereby obtain the benefits of imperial preference within the Commonwealth.

Mr Farrer emphasizes that it was imperative to continue the company's development programme. He reminds shareholders that it has always been the practice to write off design and development expenditure in the year incurred and that has been followed. He outlines the work on the prototype engines and says the greater proportion of the costs fall under the general heading of overheads and 'it is extremely difficult to form any accurate estimate of them'.

From Two to Four

In one direction the British small-engine industry has closed its ranks. After a lapse of four years, the company's association with Associated Motor Cycles (the Norton, A.J.S., James, Francis-Barnett group) has recently been renewed. A.M.C., in its boom days, put up its own engine factory but now – if one may hazard a guess – regrets it. And to start the renewed link-up, Villiers is supplying its 250 c.c. twin engine to go in the Francis-Barnett and James motor cycles.

When all is said and done, however, there is still the big query as to the future of the motor cycle as a general means of transport, when four wheels seem to be so well within the range of today's incomes. At the same time, scooter demand still seems to be satisfied with machines of foreign origin or design.

THE ACCOUNTANT

ANNUAL AWARDS for 1962

CLOSING DATE OF ENTRY

Selection of this year's winners of *The Accountant* Annual Awards for company reports and accounts has been started by the Panel of Judges, under the chairmanship of Mr K. W. Mackinnon, M.B.E., T.D., Q.C., but companies still have until *January 31st* to submit their reports and accounts presented at annual meetings held in 1961.

Entries should be addressed to The Secretary, *The Accountant* Annual Awards, 151 Strand, London WC2. The only condition of entry is quotation on a recognized United Kingdom stock exchange.

The Awards will be presented by the Lord Mayor of London, Alderman Sir Frederick Hoare, at the Mansion House on May 29th.

5. £598,650 6% Convertible Debenture Stock 1972/77

The Stock is secured by a first legal mortgage on all the present freehold properties of the Parent Company and the fixed plant, fixed machinery and fixtures thereon and a floating charge upon the remainder of its undertaking, property and assets (present and future), including any uncalled capital.

The Stock is convertible at the option of the holders in amounts and multiples of £50 on 1st December, 1960, 1st December, 1961, 1st December, 1962, 1st December, 1963 and 1st December, 1964, into Ordinary Shares of 5/– each of the Company upon terms set out in the Trust Deed constituting and securing the Stock. The Stock is redeemable at the option of the Company, in whole or in part, on or after 1st August, 1972, and on or before 30th July, 1977. The Stock in so far as it has not been converted or redeemed as aforesaid is repayable on 31st July, 1977, at par.

£1,350 Stock was converted into Ordinary Shares in December, 1960.

7. Bills receivable include £13,756 on blocked accounts in Turkey.

8. The Share Capital of John Roper & Son Limited was purchased with effect from 1st October, 1960, the first day of the Company's usual accounting year. In order to make this Company's year end coincide with all members of the Group only ten months' trading is included in the Consolidated Profit and Loss Account.

9. Australian Currency has been converted at a rate of exchange of £A.125½ to £100.

10. The 1960 comparative figures do not include John Roper & Son Ltd. for the year to 30th September, 1960, as they are considered to be insignificant.

11. Commitments for Capital Expenditure amounted to £183,562 all of which is the liability of the Parent Company (1960 Group £543,645, Parent £430,662).

CITY NOTES

THERE is still a noticeable inclination on the part of the public to ignore 'bear' factors in the stock-markets. Time and again the daily stock-market reports refer to the manner in which the market has 'shrugged off' news of discouraging trade figures, poor industrial results or some other supposedly bearish factor.

The early part of any new year invariably finds the stock-market in a mood of almost obstinate optimism. The search for new year investment probably seems to have gone on longer this year than usual, mainly because the market has moved against the supposed trend.

It should not be overlooked, at the same time, that in the early part of last year the equity market indulged in a price rise which subsequent events proved to have been most ill-based.

So far this year the rise in prices has been concerned more with special situation shares than with the rank and file of leading industrial equities. The equity markets have been given a veneer of strength the depth of which has yet to be tested.

Income Taxes in the Commonwealth

SIR, – I have recently received your issue dated November 25th, 1961, containing the comparative study of 'Income taxes in the Commonwealth'.

May I refer to page 691, under Chart 2 where your contributor in the last paragraph gives data in regard to Singapore. He writes that Singapore has recently introduced a registration tax on business and professions.

Actually what happened was that the Finance Minister, in his Budget speech on the estimates for the fiscal year 1961, did mention these proposed taxes, but they were *not* brought into force, and in his Budget speech for the fiscal year 1962, he openly said he was not going to enact that such taxes should be charged on professional people.

Yours truly,

Singapore. W. M. EDWARDS.

Decimal Currency

SIR, – The Government has instituted an inquiry into the possibility of converting to decimal currency.

Many systems have been mooted all of which we have studied very carefully. In our opinion they are all compromises and have many bad faults.

A new idea came to us at this office which is so simple and so obvious that we feel it might be the true answer. Our suggestion is outlined below.

Yours faithfully,

A. SAXON,
Director,

London W1. SAXON FINANCE AGENCY.

Much controversy exists today between the supporters in favour of the '£-mille' and the '10*s*-cent' systems of decimal currency.

Neither system tackles the problem on a proper basis and there are too many objections and difficulties to either. For instance, the £-mille system requires three places of decimals, which is bad for calculating machines etc., the 10*s*-cent system gives a 'cent' which is too high in value.

It must be realized that if the 'cent' is too high in value all cheap items of today will become expensive.

Ideally, a new system of currency should use as many of the *present coins as possible*, not only because of minting but also because the population is used to them. New coins should correspond in *value* to the coinage they replace and be usable in all slot-machines without having these altered too much, if at all.

The lowest usable coin today is the ½*d* and a 'cent' should correspond to this in value as near as possible.

Take the present silver 5*s* piece as a basic unit of new money (at present worth 120 halfpennies) and call it the 'crown', which is its correct name anyway. This 'crown' would divide into one hundred cents each of 1⅕ halfpennies in value. Now note the developments of this coinage.

Name of new currency coin	Which present coin to use	Value in new pence (or cents)	Number to the 'Crown'
Crown	5*s* piece (or issue a new Bank note) ..	100	1
Half-crown ..	2*s* 6*d* piece ..	50	2
Two-shillings .. (or Florin)	2*s* piece ..	40	2½
Shilling ..	1*s* piece ..	20	5
Ten-pence .. (or Dime)	6*d* piece ..	10	10
Five-pence .. (or Nickel)	3*d* bit	5	20
Penny .. .. (or Cent)	½*d* (though present penny coin is ideal for slot-machines) ..	1	100

Of the seven coins above four will be exactly the same as in use at present, and the remaining three (penny, fivepence, tenpence) will only require the *name* to be altered in future mintings.

Except for the old halfpenny all coins will be correct in old and new value right up to the crown, i.e.

1 new penny or cent $= \frac{120}{100}$ halfpennies or 1⅕ halfpennies.

1 five-pence or nickel $= 1\frac{1}{5} \times 5 = 6$ halfpennies or 3*d* bit it replaces.

1 ten-pence or dime $= 1\frac{1}{5} \times 10 = 12$ halfpennies or 6*d* piece it replaces.

etc. etc. etc. etc.

The present £1 note could still be retained as worth four crowns if thought advisable, but the present 10*s* note should be withdrawn. As four crowns equals the present £ sterling exactly all old accounts, prices, etc. could easily be converted to the new currency.

Stock Records: Builders' Supplies

SIR, – The following is a brief description of a method which I have seen operated in practice and which may meet the immediate need of 'Stock-Piler' (November 25th issue):

(1) Determine for each stock item: (*a*) re-order level quantity; (*b*) minimum stock level quantity.

(2) Draft form layouts, addressed to buying department, giving Part number and other required information.

(3) Make up packages, for each stock item, containing the quantities decided on in (1) above. The packages are sealed using adhesive tape of

different colours to indicate re-order level or minimum stock.

(4) These packages are placed in the bin behind the other stock items which will be used first. When re-order level is reached future issues will be made from the re-order package. The appropriate form being extracted and sent to buying department when the package is opened.

(5) If the stock is not replenished before the re-order package is empty the remaining package is opened and the form sent to buying department as a notification that the minimum level has been reached.

(6) As stocks are replenished the reserve packages will be re-made and remain intact until the other items are used.

If it is arranged that all forms are made out by office staff no clerical work need be required of the warehousing staff. The only additional work for them, under this system, being the preparation and maintenance of the reserve packages.

Yours faithfully,

Maidenhead, Berks. J. GIBSON, A.C.W.A.

Post-discontinuance Receipts

SIR, – Whether it is due to the 'pay pause', the Post Office go-slow or the festive season I don't know, but I am disappointed that there have as yet been no replies to my letter published in your issue of December 16th, 1961.

Are there no tax experts willing to express an opinion?

Yours faithfully,

Glasgow S4 R. FORGHAM.

Current Law

Rating of Art Gallery

LAND was given to the Kingston upon Hull Corporation upon trust to erect thereon out of funds provided by the donor an art gallery 'Upon trust to permit the same to be used and enjoyed by the citizens of the said city and county of Kingston upon Hull and the public generally as an art gallery for the exhibition of works of art in perpetuity'. There were no bye-laws or written regulations in respect of the galleries which were duly built, but the attendants employed there were orally instructed to take care of the works of art and to ensure due decorum on the part of the public.

In *Kingston upon Hull Corporation v. Clayton* ([1961] 3 All E.R. 118) the House of Lords held that the hereditament should not be entered in the rating valuation list as 'exempt'. The corporation was not bound to allow the public free and unrestricted access to the galleries. They could make a charge for admission, they could and did shut the galleries for certain hours, and it was open to them (without being in breach of the trust deed) to let or lend them to other persons for the display of works of art provided that the public were admitted. The trust deed did not confer such rights of user on the public as to exhaust all possibility of value to the corporation, and whether a profit could be made from the use of the galleries was beside the point.

Two observations may be made about this case. First, it appears that the trust deed might have been drawn in such a way as to constitute the corporation a bare trustee only, in which case it might have been possible to support the contention that there was no beneficial occupation and that the hereditament was exempt from rates. Secondly, under the Rating and Valuation Act, 1961 (which had not been passed at the date of the decision), the hereditament is presumably capable of qualifying for reduction or remission of rates under section 11 (4) (*b*) as one occupied for the purposes of an institution not established or conducted for profit and being concerned with the fine arts.

English Settlement Converted into Canadian

IN *Re Seale's Marriage Settlement* ([1961] 3 All E.R. 136) section 1 of the Variation of Trusts Act, 1958, was invoked to convert a marriage settlement governed by English law into one governed by the law of the Province of Quebec, whither the husband and wife had emigrated and where they had become domiciled. The object of the conversion was to save income tax and estate duty, as well as to replace the English trustee by a Canadian, whose greater accessibility would be convenient to the beneficiaries.

The scheme was to appoint a Canadian trust corporation as trustee of the English settlement in place of the existing trustee and to authorize the trust property's transfer to the trustee of a Canadian settlement (which would in fact have the same trustee). The new settlement, while conforming to the law of Quebec, was intended to bear in its terms the closest possible similarity to the English settlement. The trust property on being transferred would be freed and discharged from the trusts of the English settlement.

Buckley, J., decided that he had jurisdiction to approve such a scheme, which was sensible and advantageous for all concerned; the *ratio* of his lordship's decision was that the Court could approve an arrangement which revoked all the trusts of a settlement, so that it must have jurisdiction to approve an arrangement which in effect revoked the trusts of the English settlement in the event of the trust property becoming subject to the trusts of a settlement which would be recognized and enforced in another jurisdiction.

Contract

ice ([1961] 3 All
ny, which was a
enders' Act, 1900,
tes signed by the
l on subsection (2)
rs' Act, 1927. That

payment by a borrower
a moneylender . . or for
rest on money so lent . . .
s a note or memorandum
act be made and signed
rrower, and unless a copy
or sent to the borrower within
aking of the contract. . . .
or memorandum aforesaid shall
rms of the contract. . . .'

contract, and in particular the terms
use, were clearly set out in the three
tes, but in the corresponding memo-
ovisions as to default were in each case
in terms which were unintelligible.
(as he then was), held that the defendant
ed to succeed, as the memorandum referred
ction 6 (2) must itself contain all the terms of
ntract, and it was not permissible to look at the
nissory note to ascertain its terms unless a copy
f it had been left with the borrower, which was not
the case. The purpose of the section would be defeated
unless the document in the borrower's possession
contained all the terms of the contract.

Effect of Option for Renewal of Lease

BY an agreement, not under seal, dated July 26th, 1938, the plaintiff company in *Weg Motors Ltd v. Hales and Others* ([1961] 3 All E.R. 181) was given an option of 'taking a further lease' of premises 'at any time before December 25th, 1959' (that is, more than twenty-one years from the date of the agreement). The option was expressed to be given in consideration of the company 'taking a lease of even date with but executed after these presents'. The Court of Appeal held that the company was entitled to specific performance of the option agreement. In the first place, the agreement was not, when entered into, a contract to create a term of years and therefore rendered void by section 149 (3) of the Law of Property Act, 1925, which provides that:

> 'A term, at a rent or granted in consideration of a fine, limited after the commencement of this Act to take effect more than twenty-one years from the date of the instrument purporting to create it, shall be void, and any contract made after such commencement to create such a term shall likewise be void. . . .'

It was not until the option was exercised (in 1959) that the agreement could be said to create a term of years. Secondly, the execution of the agreement and of the lease formed a single transaction; in view of the fact that the taking of the lease was the expressed consideration for the grant of the option, the agreement was no more than an offer having no binding effect until the lease was executed; it followed that the right and obligation of the option agreement were properly incidents of the lease, were for its renewal, and were, as such, not affected by the rule against perpetuities.

Their lordships also held that the obligation of the option agreement ran with the reversion under section 142 (1) of the Law of Property Act, and the fact that, at the time when the option agreement was entered into, the freehold stood charged by way of legal mortgage did not prevent the lessor from satisfying the requirement of section 142 (1) that he should have 'power to bind the reversionary estate immediately expectant on the term granted by the lease'; this was a point which could be relied on only by the mortgagee.

'Male Descendants' does not Exclude Females

THE provisions of the settlement considered by Pennycuick, J., in *Re Du Cros' Settlement, Du Cros Family Trustee Co Ltd v. Du Cros and Others* ([1961] 3 All E.R. 193) directed (*inter alia*) that part of the income of the trust fund be held upon trust for 'such of the brothers of the settlor of the first part as shall for the time being be living and the male issue for the time being living of such of the said brothers of the settlor of the first part as shall be dead' and part for 'such of the male descendants of [H.] as shall for the time being be responsible for the active management of the business of' a named family company.

'Issue male', as his lordship pointed out, has a recognized meaning as a term of art and means descendents through the exclusively male line; he held that 'male issue' in the settlement had the same meaning, there being nothing in the context of the settlement to suggest that any other meaning was intended.

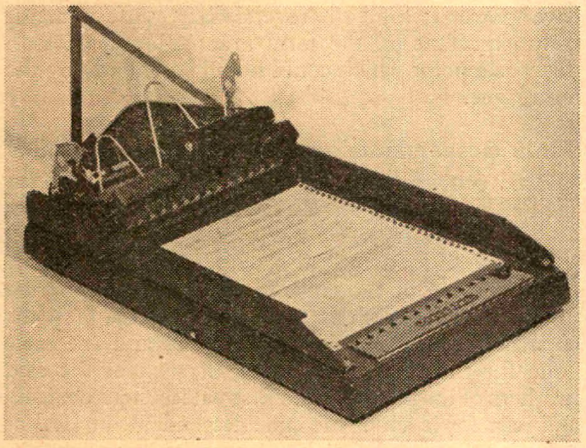
In *Allen v. Crane* ([1953] 89 C.L.R. 152) Dixon, C.J., in the High Court of Australia, held that 'male descendants', while prima facie bearing the same meaning as 'male issue', might readily yield to a context, and Pennycuick, J., applying that case, held that in the case before him, 'male descendants' included males descended from the individual *propositus* whether through males or females. The fact that in the same paragraph of the settlement the expressions 'male issue' and 'male descendants' had both been used made it preferable, in accordance with ordinary principles of construction, to give the latter expression a meaning different from that of the former if the latter was capable of more than one meaning.

His lordship also remarked on the fact that there seemed no reason why, in a gift to the persons responsible for the management of a family company, preference should be given to male descendants of the founder descended through males, over male descendants descended through females.

A monthly feature designed to keep readers – whether in practice or in commerce – abreast of the latest developments in the field of office equipment.

Low-cost 'Systems' Duplicator

AN interesting new design feature of *Model A*, latest spirit duplicator in the *Rena* series, makes this small flat-bed machine suitable for business systems work on a modest scale. The makers are to be congratulated on the ingenious yet simple design which allows almost infinite rearrangement of details on copies in a low-cost machine which can also, of course, be used for ordinary duplicating.



Rena Model A Spirit Duplicator

The machine which makes copies up to foolscap size, is equipped with thirty-five retractable studs on each side of its flat bed. Holes to correspond with these are pre-punched in the master paper. Thus, duplicating can be carried out in three ways: with the master in one piece (in which case it is clamped to the machine with the studs retracted); with the master cut into strips, which are rearranged *ad infinitum*; or with parts of two or more masters combined to compile a fresh document.

Up to 300 copies can be made from each master, the distributors say; and part-used masters, being pre-punched, can be filed in a ring binder pending future use. This system can provide an indexed store of data which can be combined in any way and can thus obviously eliminate much re-typing of standard details in applications ranging from price lists and schedules of all kinds to menus.

Spirit used in the duplicating process is stored in and ejected from a transparent polythene bottle fitted to the machine's damper assembly. This arrangement promotes regular, even moistening and therefore production of standard quality copies throughout the run. Like other spirit machines, *Rena Model A* can reproduce two or more colours in the same run.

Free servicing is provided throughout the machine's life, provided the distributors' supplies and accessories are used. It is sold complete with dust cover and full operating instructions.

Price: £75.

E. G. Solomon, 44 Worship Street, London EC2.

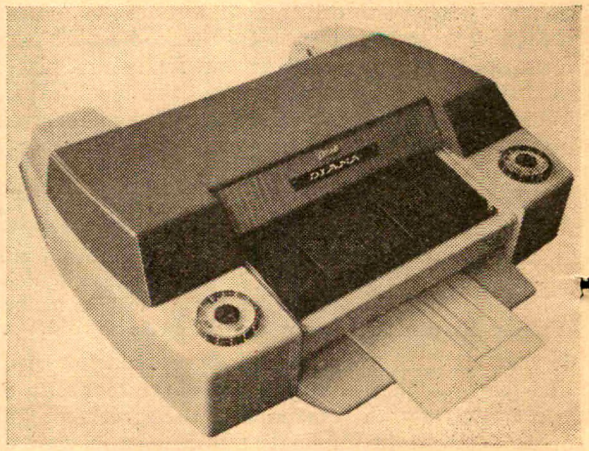
Small Dyeline Photocopier

DYELINE photocopying is one of the cheapest, cleanest and most efficient methods for reproduction of office documents. Originals written or typed on one side of translucent paper can be reproduced direct at a cost of about a penny per foolscap-size copy; documents on opaque paper, after first being photo copied on to transparent film, can be reproduced in the same way. For many applications where, say, from two to twenty copies are required, dyeline copying is more economical than any kind of duplicating or even the use of standard carbon paper.

Diana, a new combined dyeline exposure and



Anson Diana Dyeline Copying Machine

Equipment

development unit for office use, is unusually compact. The machine's base measures 27 by 24 inches and it stands only 10 inches high, yet can accept originals up to 13 inches wide and of any length.

The makers claim that *Diana* can make up to 500 copies per hour – an unusually high speed for such a small unit. It should, perhaps, be pointed out that an actual *output* of this order is hardly likely to be achieved, since feeding and separation are manual. Nevertheless, this high speed is certainly beneficial in that it allows continuous feeding and cuts waiting time to a minimum when single copies are made. Finished copies, which emerge dry, are stacked in sequence at the rear of the machine.

No special ventilation is needed for *Diana* and, like other photocopiers of this type it can be used in standard lighting.

An unusual and useful feature is an additional lamp which can be switched on at any time for exposure of non-dyeline photocopying materials (including transparent films).

With the addition, therefore, of a developer unit for these materials *Diana* would form a complete and compact photocopying installation for almost any office purpose.

Price: 13 inch feed £295; 18 inch feed £315.

George Anson & Co Ltd, Solway House, Southwark Street, London SE1.

Plastic Offset-litho Masters

A NEW offset-litho plate which is cheaper than metal and more dependable than paper masters has been introduced by Remington Rand. Made of plastic, it is known as the *Direct Image Plastiplate* and can be used on all popular makes of offset-litho duplicator. The makers say that up to 20,000 copies can be produced from one plate.

The hard-working surface makes it easier to erase and correct. Also, the plates can be handled and stored more easily because finger-marks and scratches are not reproduced on the copies.

Plastiplates are self-cleaning on the machine and do not stretch – an important factor in close-register work. They are made in four grades (the choice depending on the length of run required) and packed in boxes of one hundred. The range of accessories includes carbon paper or fabric-ribbons, a lithographic ball-point pen, a special fluid which restores the surface of the plate after correction, and various etching and preserving solutions.

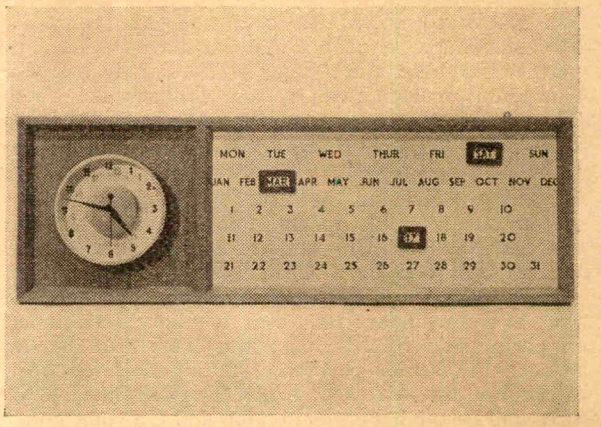
Price: From 56*s* 7*d* per hundred to 78*s* 9*d* per hundred, according to length of run and quality required.

Remington Rand Ltd, Remington House, 61–65 Holborn Viaduct, London EC1.

Clock-cum-calendar

DESIGNED for wall hanging and available in oak or mahogany, a single neat frame contains a *Westclox* clock and a large, clear calendar face marked with magnetic frames for month, day and date.

Overall size is 52 in. by 18¼ in. An alternative version, without the clock, measures 36 in. by 18¼ in. New to Britain and manufactured here, the calendar-clock is made to a design which has become popular in the United States.



Clock-cum-calendar

Prices: Combined unit, £23 11*s*. Calendar only, £14 11*s*.

D. Matthews & Son Ltd, 61–63 Dale Street, Liverpool 2.

Do-it-yourself Lettering

PROFESSIONAL-LOOKING lettering can be done by beginners with an ingenious new instant system, *Letraset*. This works on a transfer principle, though no moisture or separate adhesives are used, and is suitable for 'typesetting' on paper or other surfaces. A considerable variety of type faces, in sizes from eight to seventy-two point, and a wide choice of colours is available.

Letraset characters are mounted on the underside of translucent plastic sheets and come in sets like a type font (i.e. there are more of the frequently-used letters like *e* than of *z*'s, for instance). Having drawn a guidline on the paper, the user selects the first letter, positions it correctly, then rubs the *Letraset* surface gently with a smooth rounded object such as the blunt end of a penholder. This action transfers the letter to the paper. The procedure is repeated for each subsequent character.

The personal experience of the writer (a complete beginner) has yielded results which completely support the manufacturer's claims. The method is learned easily and a reasonable speed is soon achieved. The work has a gratifyingly professional appearance.

Applications include preparation of layouts for catalogues, house magazines, etc., for subsequent reproduction by offset litho, making up name-plates, notice-boards, and so forth.

Prices: 7*s* 6*d* per sheet for small and medium-sized types. 10*s* per sheet for large display types.

Letraset Ltd, Artist House, Plough Place, Holborn, London EC4.

Notes and Notices

PROFESSIONAL NOTICES

MR REGINALD F. MAIN, C.A., and Mr JOHN C. BANFIELD, A.C.A., announce that they have entered into partnership under the style of MAIN, BANFIELD & Co, Chartered Accountants, as from January 1st, 1962. The practice will continue to be carried on from Lloyds Bank Chambers, The Borough, Yeovil, and also at Gillingham, Dorset.

MESSRS MORRISH, WALTERS & Co, Chartered Accountants, of Provincial House, 98–106 Cannon Street, London EC4, announce that their senior partner, Mr JOHN BERNARD PITTMAN, F.C.A., retired on December 31st, 1961, after forty years as a partner, and that, as from January 1st, 1962, they have been joined in partnership by Mr HEDFORD CROSFIELD HARRIS, M.A., F.C.A., senior partner of their associated firm, A. H. KNIGHT, MORRISH & Co. The combined practices will be carried on in London and Croydon under the name of MORRISH, WALTERS & Co.

MR C. P. PERRIAM, A.C.A., announces that following the dissolution of his partnership with Mr P. J. N. BIGGS, F.C.A., he is now practising as C. P. PERRIAM & Co, Chartered Accountants, at 6 Castle Street, Barnstaple.

MESSRS RUSSELL & Co, Chartered Accountants, and MESSRS ARTHUR YOUNG & Co (Middle East firm) announce the retirement of Mr H. P. DEVEREUX, F.C.A. They also announce that they have assumed Mr PETER CALVERT, F.C.A., who has been made a partner in their Sudan practices, as a general partner from January 1st, 1962. They further announce that their address in Athens is now 7 Stadium Street where the practices will be under the management of Mr ST V. E. B. POLLARD, C.A.

MESSRS TANSLEY WITT & Co, Chartered Accountants, of 22/24 Ely Place, London EC1 announce that as from January 1st, 1962, they have taken into partnership Mr H. E. M. BARNES, A.C.A.

Appointments

Mr D. B. Dalby, F.C.A., has been appointed administration manager of Keith Shipton & Co Ltd, insurance brokers.

Mr P. W. Mitchell, F.C.A., has been appointed a director of Mansill Booth & Co Ltd.

Mr C. W. Tyrrell, F.C.A., a director of Booker Brothers, McConnell & Co Ltd and chairman of Bookers Engineering Holdings, has become chairman of Sigmund Pulsometer Pumps Ltd.

OBITUARY

H. W. A. Waring, C.M.G., F.C.A.

The British steel industry has suffered a grievous loss through the untimely death last week in an air accident of Mr H. W. A. Waring, C.M.G., F.C.A., deputy chairman of the G.K.N. Steel Co Ltd. He was 55.

Educated at Christ's Hospital, Mr Waring was articled to the late Sir Arthur Roberts, K.B.E., being admitted an associate of The Institute of Chartered Accountants in England and Wales in 1929 and elected to fellowship in 1960. From 1929–39 he practised with Whinney, Murray, Baguley & Co, in Berlin, and in Hamburg from 1929–34 and in Oslo from 1934–39.

From 1939–40 he was attached to the British Consulate in Oslo, and served as assistant to the commercial counsellor in Stockholm from 1940–42 and as Ministry of Supply representative in Stockholm from 1942–45. He was chief British representative in the Anglo-American negotiations with Sweden in 1944 to stop the ball-bearing traffic to Germany. He was made a C.M.G. in 1945 in recognition of his wartime service. From 1945 to 1947 he served on the Control Commission for Germany where he was successively in charge of iron and steel, basic industries and deputy chief of the industry division.

Mr Waring joined Guest Keen Baldwins Iron and Steel Co Ltd, Cardiff, in 1947, but resigned in 1951 on joining the United Nations Commission for Europe, becoming head of its industry division.

He left the United Nations in 1956 to return to industry and from 1956–60 was managing director of Brymbo Steel Works and a director of other Guest Keen and Nettlefolds' subsidiary companies. In 1959 he was elected first British chairman of the Steel Committee of the Economic Commission for Europe and was re-elected to that office in 1960–61. He joined the board of Guest Keen and Nettlefolds in 1960 and became deputy chairman and general managing director of G.K.N. Steel Co Ltd at the beginning of last year.

A member of the Iron and Steel Institute since 1948, Mr Waring was elected to the Council in 1960, and in July of last year he was elected hon. treasurer in succession to Sir Julian Pode, F.C.A.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Small Practitioner Inquiry

During recent weeks the district societies of The Institute of Chartered Accountants in England and Wales have been actively engaged, following the lead given to them by the President, in obtaining information on the problems – and their possible remedies – which confront the smaller public practice, and in particular the sole practitioner (see *The Accountant*, October 21st, 1961). Questionnaires have been distributed to a large number of practising members throughout the country, and in addition meetings have been arranged by district societies and by their branches and groups.

The task of correlating the replies is one of some magnitude and we have been asked by the Secretary of the Institute to remind members who have received copies of the questionnaire and who have yet to reply, that the forms should be returned to the Secretary of their respective district society by January 31st. We have no doubt that members will assist by responding to this appeal.

DOUBLE TAXATION: REPUBLIC OF SOUTH AFRICA

Representatives of the United Kingdom Board of Inland Revenue arrived in Cape Town on January 4th to discuss with officials of the South African Department of Inland Revenue the question of revising the double income tax agreement between the Republic and the United Kingdom.

NEW FAMILY ALLOWANCES AND NATIONAL INSURANCE ACT

Commencement Order

The Minister of Pensions and National Insurance has made a Commencement Order[1] containing the starting dates of a number of provisions in the Family Allowances and National Insurance Act, 1961. A number of changes in the Act came into operation immediately the Bill received Royal Assent, some of which were given in our issue of January 6th, page 26. Changes affected by the Order include:

Workmen's Compensation

The supplements paid under the Workmen's Compensation and Benefit (Supplementation) Act, 1956 to certain *totally disabled* people who, because their accidents occurred or their diseases were contracted before 1948, cannot qualify for benefit under the Industrial Injuries Act, was increased by 15*s* a week from January 17th.

[1] The Family Allowances and National Insurance Act, 1961 (Commencement No. 2) Order, 1962, S.I. 1962 No. 7 (C.1) obtainable from H.M.S.O., price 3*d* net.

Partially Disabled

Persons on maximum compensation will receive increases of existing allowances under the Workmen's Compensation (Supplementation) Act of 1951, or in some cases a new allowance, of up to 10*s* a week, subject to the appropriate workmen's compensation loss of earnings rules. There will also be an increase of 7*s* 6*d* a week in allowances payable under the Industrial Diseases (Benefit) Acts 1951 and 1954 for partially disabled men suffering from pneumoconiosis and byssinosis due to pre-1948 employment who did not qualify for workmen's compensation. These allowances are to be payable as from February 28th.

Liability to Pay Contributions

From January 15th self-employed and non-employed people with incomes of less than £208 a year may apply to be exempted from liability for national insurance contributions. The limit is at present £156.

Contributions for Low Wage Earners

The weekly rate of earnings, below which the employer has to bear a larger proportion of the contribution than otherwise, was raised from 60*s* to 80*s* from January 15th.

Apprentices

From April 3rd an apprentice will only be treated as a child for the purposes of family allowances and national insurance benefits if his earnings from the apprenticeship, after deduction of expenses, do not exceed 40*s* a week. There are, however, certain transitional provisions applying to those who, on April 3rd, are receiving national insurance benefits for an apprentice treated as a child under the old rules.

Overpayments

At present anyone who, because of a revised decision is not entitled to some benefit which he has already received, is required to repay it unless he satisfies the independent authorities that he received the benefit in good faith. In cases decided after February 25th, repayment will not be required where the person concerned can show that he has used 'due care and diligence' to avoid overpayment.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

At a recent meeting of the Executive Committee the chair was taken by Sir William Carrington, F.C.A., the President of the Association, and ten members were present.

Applications for Assistance

Five new applications for assistance were considered; in three cases a grant was made; in one case a donation was given and in one case it was decided to make no grant.

One of the new cases followed the death a few years ago of a member in practice at the age of 48 leaving a widow and two children then aged 5 and 2; he had been a polio victim since his youth. Until now the widow had managed on her small income but she had found it increasingly difficult as the children grew older. A grant was made.

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

Applications for Further Assistance

Twenty-three cases for further assistance were considered. In fifteen cases the grant was renewed; in four cases the grant was increased; in four cases the grant was reduced.

Matters Reported

The deaths of two beneficiaries were reported. In four cases grants were adjusted or donations made in view of changed circumstances; in four cases the Hon. Secretary was pleased to report that circumstances had so improved that assistance was no longer necessary. It was further reported that a beneficiary had recently taken up residence at Ridgemead House, one of the homes of Crossways Trust, and settled down there very happily.

Christmas Gifts

It was decided to send small Christmas donations to beneficiaries who are resident in Homes and food hampers to others.

NORTHERN SOCIETY OF CHARTERED ACCOUNTANTS

A luncheon meeting of the Northern Society of Chartered Accountants is to be held at the County Hotel, Newcastle upon Tyne, at 12.30 for 1 p.m. on Friday, January 26th, after which there will be a discussion on the problems of the small practitioner in the district.

MANCHESTER CHARTERED ACCOUNTANTS' STUDENTS' SOCIETY

At a recent meeting of the Manchester Chartered Accountants' Students' Society, the following officers were elected:

Hon. Secretary: Mr F. A. Watson, B.A.(COM.), 46 Fountain Street, Manchester 2.
Hon. Treasurer: Mr E. K. Richardson, B.SC.(ECON.).

THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LEEDS

A wide variety of meetings has been arranged for the spring session of The Chartered Accountant Students' Society of Leeds. The programme is as follows:

January 23rd, 4.30 p.m., 'Auditing problems';
6 p.m., 'Recent examination questions in auditing', by Mr V. S. Hockley, B.COM., C.A., A.A.C.C.A.
February 16th, 9.30 a.m., Whole-day course; 'The audit and accounts of a small limited company', by Mr D. Rich, A.C.A.
February 21st, 4.30 p.m., 'Computers', by Mr A. W. Howitt, M.A., F.C.A., F.C.W.A.
6 p.m., 'Current financial topics', by Mr A. J. Ward, B.SC.(ECON.).
February 26th, Visit to Vickers-Armstrongs (Shipbuilding) Ltd.
February 28th, 6 p.m., Talk and film: 'The work of the Bank of England', by Mr R. C. Balfour.
March 7th, 4.30 p.m., 'Estate duty';
6 p.m., 'Problems in executorship accounts', by Mr L. J. Northcott, F.C.A., H. Foulks Lynch & Co Ltd.
March 14th, 4.30 p.m., 'Schedule D computations',
6 p.m., 'Standard costing', by Mr V. R. Anderson, A.C.A.
March 21st, 6 p.m., Two films: 'C.P.A.', and 'The C.A. in Canada'.
March 28th, 5 p.m., Annual general meeting.
6 p.m., 'Freedom under the law of contract', by Mr T. Jackson, LL.B., A.C.C.S.
April 5th, 5.30 p.m., 'General principles of auditing: the Council's recommendations', by Mr Victor Walton, F.C.A., Member of the Council of the Institute.
6.30 p.m., Pot-pie Supper (first-year students).

All lectures will be held at the Leeds and County Conservative Club, South Parade, Leeds 1. Further information regarding the activities of the Society may be obtained from the hon. secretary, Mr W. H. J. Mordy, c/o Peat, Marwick, Mitchell & Co, 2 Park Place, Leeds 1.

Candidates for Truth

ACCOUNTANTS, in so far as they are constantly striving to associate themselves with the correct presentation of fact, might be called, in EMERSON's phrase, candidates for truth. Their aspirations, however, may be complicated by two considerations – that truth itself is of at least two kinds, the universal and the particular; and that the conflict between individual opinions tends to obscure its reality. In the main, accountants are concerned with particular truths which define practical situations and, strange as it may seem, these are often equally as difficult to establish as the abstract universal truths which are more the preoccupation of philosophers.

An obvious everyday example of this dilemma is the valuation of stock and work in progress where the appropriate basis to be adopted depends on the circumstances of each business. With so many variants (of both bases and businesses), the scope for expert argument is extensive. On one point, however, the authorities do agree and that is that the chosen basis and methods of computation should be applied consistently and that the effects of any deviation therefrom, if material, should be disclosed.

It must come as a surprise, therefore, to many accountants to learn that a distinguished company director has been tilting his lance even at this one slender tenet. At a recent luncheon meeting of the London and District Society of Chartered Accountants – reported on another page – MR HAROLD DRAYTON suggested, in effect, that if a managing director thought it advisable to write stock either up or down to suit the occasion, this remarkably elastic basis of valuation – under, at or above cost, whichever was the most convenient – could reasonably be accepted by the auditor. Whether the auditor would do so through complacent acquiescence or through ignorance is not made clear, but on both counts let us gently disabuse MR DRAYTON of this somewhat naïve notion – but one of a number contained in his remarks at the luncheon.

The auditor who knows his job invariably blends theory with common sense in applying the fundamental principles of accounting to any particular set of circumstances, but however liberal his interpretation may appear, it is certain that he accepts nothing which offends his conscience, that indispensable third quality which, in addition to skill and judgment, every professional man possesses. In short, the words 'true and fair', to whatever they are applied, have a significance far beyond any combination of dictionary meanings. Each time they are used they reflect a professional opinion which is highly valued and, in consequence, never lightly expressed.

Investment or Trading Stock?

EVER since the House of Lords held (in *Jones v. Leeming* (9 A.T.C. 134; 15 T.C. 333)) that surplus proceeds on a resale were not taxable unless the seller was trading, there has been a tendency to widen the meaning of 'trade'. This process has revealed that where the taxpayer is a company with trading objects, it begins a dispute of this kind with the dice heavily loaded against it. The decision of MR JUSTICE CROSS in *Lucy & Sunderland Ltd v. Hunt* ([1961] T.R. 305) has imposed a salutary check on this process, the effect of which may well survive the new impositions threatened by THE CHANCELLOR OF THE EXCHEQUER.

The appellant company, which we will call Lucy, was an old-established timber merchant whose memorandum of association was so drawn as to give it power to trade as a builder and property dealer. To anyone in the least familiar with documents of that kind, it would not be surprising if Lucy had power to do practically everything under the sun. Among its several investments, Lucy owned the controlling shareholding in a building company (Hawthorn) whose trade had been in suspense since 1940, and whose activities were confined to receiving rents on the houses transferred from trading stock to fixed assets. MR ANDERTON, the managing director and only other shareholder in Hawthorn, wanted to start up building in 1945, but Lucy did not want Hawthorn to be used for this. At first it agreed to buy MR ANDERTON's minority shareholding, so that he could set up on his own account with the proceeds. However, he did not have the necessary building licence; Hawthorn did. Therefore Lucy sold to MR ANDERTON its shareholding in Hawthorn, and Hawthorn sold its houses to Lucy, thus giving Hawthorn the funds to build.

After this transaction Lucy received the rents of the houses. In 1948 Lucy began to accept offers to purchase its houses and the proceeds exceeded the price it had paid to Hawthorn. There followed, perhaps almost inevitably, income tax assessments on these surpluses, on the ground that Lucy was carrying on the trade of a dealer in houses. The Inland Revenue made much play of the fact that Lucy included such a trade in its objects. Of course, where a company with purely investment objects resells at a profit, the official argument is usually that the objects clause of its memorandum of association is not really important. The General Commissioners confirmed the assessments.

The Inland Revenue had contended that Lucy did not buy the houses as an investment but for the purpose of disposing of them at a profit as opportunity arose, and presumably the General Commissioners accepted this contention.

Having won on Schedule D, the Inland Revenue also assessed these alleged profits to profits tax. Nothing daunted, Lucy appealed again, this time to the Special Commissioners. A decision by Commissioners is not binding for another tax, any more than it is binding for another year. This time Lucy was successful. In the meantime it had expressed dissatisfaction with the decision of the Manchester Commissioners and had demanded a stated case. The Inland Revenue demanded a stated case on profits tax but later abandoned the profits tax point.

Before CROSS, J., the Inland Revenue argued that the case was purely a question of fact; that although Lucy's motive in buying the houses was to help MR ANDERTON, nevertheless there was at least some evidence on which the Manchester Commissioners could find that Lucy was trading in the houses. The Revenue also stressed that in the hands of Hawthorn the houses were trading stock, and cited *Rellim Ltd v. Vise* (30 A.T.C. 105; 32 T.C. 254) where MR JUSTICE WYNN-PARRY upheld a similar finding, while indicating that on the facts he would have come to an opposite conclusion, and the Court of Appeal upheld his view.

Lucy pointed out that in *Rellim Ltd v. Vise* there was more evidence of trading than in its own case. The learned judge said that although he put out of his mind his own views as far as he could, he could find no evidence at all on which the Manchester Commissioners could infer that Lucy was trading in the houses. Accordingly, he allowed Lucy's appeal. If this judgment remains unassailed it will put new heart into taxpayers, particularly companies, who resell an investment.

Estate Duty Aspect of Investment

by H. FERGUSON, A.C.I.S.

THE purpose of this article is to stimulate thought in relation to investment policy *vis-à-vis* means of legally minimizing, or avoiding entirely if possible, punitive taxation and estate duty. In this regard, accountants are in the privileged position of knowing the financial worth – at least, so far as taxation returns reveal – of each of their clients and are in a position to help particularly their middle-aged and elderly clients.

About a hundred years ago John Stuart Mill said 'men desired to be rich, not for riches themselves, but to be richer than their friends'. Doubtless that was generally true at that time, when the standard rate of income tax was only pence in the £. Estate duty in its present form was introduced with a maximum rate of 8 per cent in 1894 as compared with a top rate of 80 per cent today. Supertax was introduced in 1909.

From an investment angle, therefore, apart from senseless vanity, the estate duty interest which the Government has in one's capital is a factor to be considered in every scheme of investment. Plain sense dictates that provision for one's dependants or intended beneficiaries be made in one's lifetime in order that they may benefit from 'saving' in estate duty and taxation. For example, assuming expiry of the entirely duty-free period of five years, a reduction in the value of one's worth from £50,000 to £30,000 would result in paying £10,100 less in duty. In other words, this means that the Government is, in effect, a partner with a 50½ per cent interest in that slice of £20,000.

A recent case involved an estate valued at over £500,000. There were three beneficiaries or residuary legatees, each of whom received only around £5,000 as a result of estate duty exaction and the fall in stock-market prices between date of death and date of realization. The lesson from this case is clear – an item, 'Estimated estate duty

1	2		3		4		5
Estates not exceeding	Rate of duty	Amount of duty payable	Amount or slice of estate responsible for increase in duty as in column 4		Amount of duty on each slice of estate and as percentage of related slice as in column 3		Value of estate (net of duty)

1,000,000	75	750,000	250,000	1/4th	225,000	90	250,000
Over 1,000,000	80						

liability', should be incorporated in one's personal balance sheet. This ought to result in the desired reduction.

So as to facilitate action along the lines suggested the accompanying table has been prepared to assist in planning accordingly. Columns 1, 2 and 5 are self-explanatory. Column 3 shows, step by step, each increase or slice in the value of an estate (column 1) corresponding to each change in the rate of duty. The fractions shown in column 3 correspond to the amounts by which the total value of an estate would require to be reduced in order to limit payment at the next lower rate of duty and thus 'save' the sum shown alongside in column 4.

For example, an estate of £45,000 would bear 28 per cent duty amounting to £12,600 (column 2). The next lower rate of duty is 24 per cent on £40,000. Therefore on £40,000, duty would be £9,600, or £3,000 (column 4) less than the duty on £45,000. In other words, the Government takes 60 per cent of that slice (£45,000 less £40,000), as compared with the over-all 28 per cent rate of duty.

When is 'Fair' not Fair?

THE AUDITOR'S REPORT CRITICIZED

'TRUE and fair view' – the familiar phrase of the auditor's report – was strongly criticized at a recent luncheon meeting of the London and District Society of Chartered Accountants. The speaker was Mr Harold Drayton, financier, company chairman, Institute of Directors' Council member, founder and governor of the City of London Society. 'A balance sheet', said Mr Drayton, 'may show many things, but it cannot show a "fair view".' The word 'fair' was capable of many interpretations. It was an ambiguous word; and ambiguity did not, or should not, go with facts and figures.

Mr Drayton said that he had built up his business career not on cleverness – for he did not pretend to be clever – but on trying to be practical and, perhaps, pragmatic; if there was a problem, by doing one's best to solve it – not always confining one's self to the immediate problem, but trying sometimes to look at things from the 'other fellow's point of view'. He therefore proposed to comment on two matters relating to accountants – the auditor's report (or 'certificate', as he called it), and the relationship between the auditor and the director in regard to a company's balance sheet.

Prestige

Accountants, said Mr Drayton, did not perhaps realize how important a part they played in the prestige of the United Kingdom in the eyes of the world at large. He often said to his friends abroad, 'Why do you have an English firm of accountants to audit your company's accounts?' and their answer was always the same – 'We can trust them and they don't talk.' Anything, therefore, which detracted from their integrity as accountants, reflected not only upon themselves but upon the standing of this country. Accordingly, they had need fully to justify their 'certificate' and he did not feel the use of the term 'fair view' could be justified. A balance sheet showed a lot of things but, he said, it could not show a 'fair view'.

For instance, in regard to stock valuation, a managing director, if he were a conservative man, would try to state that figure as low as possible in order to safeguard himself for the following year and the auditor might as reasonably accept it. On the other hand, if he were to put it up – and there might be several reasons for so doing – it might offer a 'fairer' view of the position to shareholders than writing it down. He may know that he can sell, or has sold, or is in process of selling at an increased price and therefore, to justify the statement of a 'fair view', the valuation might well be entered at more than cost.

Again, said Mr Drayton, a large number of balance sheets showed only historical values, and in the case of land, auditors often sign their 'certificates' recording a 'fair view' when the

land could be worth a great deal more than its historical value.

Definitions

Mr Drayton said that when the definitions of the word 'fair' were considered, it became obvious that there was a great variety of meanings; first, there was the term applied to a place where people met to buy and sell and where there might be roundabouts and swings (and he amused his hearers by commenting that he thought a pretty good sermon might be preached about 'accountancy and roundabouts and swings'). Then there was the definition 'beautiful to the eye; of pleasing form or appearance; fair to see'. He thought they might not all agree with that in relation to some balance sheets; but then there was 'of external manifestations, words, promises, attractive or pleasing at first sight'. That was not bad but it was rather spoilt by what followed – 'specious, plausible, flattering'.

Another example gave: 'fair – of conduct, actions, arguments, methods; free from bias, fraud, injustice; equitable; not taking undue advantage'. That, he thought, began to describe what they perhaps wish to imply by 'fair' in their reports. Finally, there was the adverb definition: 'equitably, honestly, impartially, justly according to rule'. That might sound very well but they had to consider to whom does this accord – the auditors or the directors?

Ambiguity

'Fair,' he therefore regarded as an ambiguous word and ambiguity did not go well with facts and figures and in its use they laid themselves open to criticism. Fraud, for instance, applied to acts of both omission and commission, it might be equally as fraudulent to value stocks or property unduly conservatively, as to over-value them; and he thought that accountants did not take that to heart too readily.

Of course, it was easy to criticize; and it was difficult to suggest better alternatives – perhaps 'an equitable view' would be an improvement. There was, however, a lot to be said for 'certificates' having some degree of flexibility – that they should vary according to the circumstances of a company.

Prior to 1948, when the new company legislation was being considered, Mr Drayton recalled that Sir Russell Kettle spoke to him on the subject, and even then he strenuously objected to the use of the words a 'fair view of the company's affairs'. He honestly thought that 'fair' in this context was a dangerous word. It had an aspect which was of wider implication than to the profession alone; it was something in which the public was interested. Accountants were able to influence trading business, finance business, and also investment business, in this country and abroad. Why, then, if there was a risk in using the word 'fair' – as he believed there was – should they take that risk when so much was at stake?

On the topic of the relationship between the auditor and the directors of a company in regard to the balance sheet, Mr Drayton said that it should be remembered that the balance sheet was that of the directors who could put in it what they pleased. The 'certificate,' on the other hand, was that of the auditor who was, of course, at liberty to qualify or alter it at will, or even to withhold it. Auditors did not themselves, however, have power to determine what went into the balance sheet.

Presentation

Nor did he agree with what he described as 'the Institute's method of presenting the balance sheet'. He might be 'old-fashioned' but he preferred the balance sheet where on the left-hand side appeared the capital – ordinary and preferential – debentures, reserves, 'and then what you owe'. But some years ago, he said, 'you decided that you should first of all have your ordinary and preferential, then your reserves – capital reserves, carry forward, and revenue reserves – because that shows the shareholder what interest he had in the company'. But it showed the shareholder nothing of the sort. The shareholder knew what he had got in the company when he looked on the other side of the balance sheet and saw the assets, cash and investments, then he looked below and said, 'Do I owe anything?' In former days, immediately under the ordinary and preferential, he could see that he owed, say, a debenture of a million pounds, and said, 'I can deduct that; now I know where I am'. Now the shareholder has to look right down the balance sheet to discover the debenture 'hidden away' just above the other creditors. In Mr Drayton's view, the placing of capital and revenue reserves immediately under the capital was misleading to the ordinary shareholder.

He hoped the comments of an 'outsider' on the use of the word 'fair' in auditors' reports would be accepted as sincerely as they were intended; and that they would bear in mind and train their younger colleagues to appreciate that while their 'certificates' were their own affair, balance sheets were the prerogative of the directors.

Stock Valuation — a Practitioner's View

by GEOFFREY H. VIELER, F.C.A.

The valuation of stock-in-trade and work in progress is a topic of continuing interest and concern to accountants and business men. We publish below the first of several papers which approach this subject from different angles. The present contribution gives the view of a practising accountant, another to be published shortly will give the Inland Revenue's view, and in a third an American contributor will criticize, and comment upon, the Institute's Recommendation No. 22 on the subject.

THE post-war generation of tax practitioners may not appreciate that one of the most marked changes that has taken place during the past fifteen years in this particular field has been the ever-increasing attention which has been paid by the Inland Revenue to the question of the basis of valuation of stock and work in progress.

Many of you can, no doubt, cast your minds back to those nostalgic days before the last war when a stock valuation that was correct by established commercial standards was, generally speaking, equally acceptable to the Inland Revenue and the occasional inquiry on the subject almost invariably took the form of a request for the completion of a Form 81 and that was the last you heard of it. I cannot recollect ever having to deal with a case in those halcyon days involving an adjustment to the taxation computations in respect of the valuation of stock or work in progress.

Mr Geoffrey H. Vieler

You will look in vain for any guidance in the Taxing Acts on the subject of stock valuations except that section 143 of the Income Tax Act, 1952, makes provision on the discontinuance of a trade for the closing stock in certain limited circumstances to be valued at the amount for which it could have been sold in the open market. It is not always realized that section 143 also applies if a trade is treated as a continuing trade under section 17 of the Finance Act, 1954 (see paragraph 6 of the Third Schedule to that Act).

Your only sign posts were the dicta of the Courts and one of the first directions was Lord Halsbury in *Gresham Life Assurance Society v. Styles*, who as long go as 1892 held that 'Profits or gains must be ascertained on ordinary principles of commercial trading'.

Paper presented at the Eleventh National Taxation Conference at Bournemouth last October.

In the very much later case of *Whimster & Co v. C.I.R.* in 1925, the Lord President had ruled that:

> 'They [the company] said, accordingly, quite truly, that in the case of trading stocks, stock-in-trade, it was proper in making up your profit and loss account to value the trading stock-in-hand at the beginning, and to value it at the end of the year, both cases having regard to the fact that you must value at market value, or at cost, whichever is the lower.'

In the same case Lord Sands said:

> 'Under this law the profits are the profits realized in the course of the year. What seems an exception is recognized where a trader purchased and still holds goods or stocks which have fallen in value. No loss has been realized. Loss may not occur. Nevertheless, at the close of the year he is permitted to treat these goods or stocks as of their market value.'

Market value was not, however, defined.

At that time ordinary principles of commercial accounting were quite clearly the order of the day for tax purposes and in the 1928 case of *C.I.R. v. Matthew Marshall*, the Lord President ruled:

> 'It is not for this Court to fix principles of valuation, for a principle of valuation is not a part of the law universal at all, but of course it is necessary sometimes to ask this Court whether a particular principle of valuation if adopted would or would not accord with the prescription of the Income Tax Acts which requires the balance of profits and gains to be duly ascertained.'

There can be little doubt that the imposition during the war of excess profits tax and, in particular the penal rate of 100 per cent, led many taxpayers to consider how they could – in the words of our north

country friends – 'Tuck away a bit of brass', and the temptation to do so must have been very strong, particularly in the face of possibly difficult post-war trading conditions. Stock under-valuations were a particularly suitable media for this purpose.

Needless to say the Inland Revenue were not unaware of the position and, in many cases, they set the ball rolling by making detailed inquiries into the stock valuations in accounts which either ended at December 31st, 1946 (when excess profits tax terminated), or covered a period including that date.

It is, of course, quite clear that where short-term taxes such as excess profits tax and excess profits levy are involved, there can be material differences in the amount of taxation payable if, on the cessation of such an impost, the stock is under-valued. Somewhat similar situations exist in the case of the first accounts of a business, the profits of which often form the basis of the Schedule D assessments for more than one year and it must not be forgotten that on cessation, the profit of one year falls out of assessment. On the other hand, in the case of the normal preceding year basis of assessment, where only income tax and profits tax are involved, any over- or under-valuation of stock will be taken into account in computing the profits of a subsequent year and subject, of course, to changes in rates of tax and the interest factor, the result – in the long run – at any rate in theory, is precisely the same. I must concede that no business man who is pressed for working capital will agree with that view.

Effect of Under-valuation

There is little doubt, however, that once a policy of conservative stock valuation has been adopted, it is almost certain to be followed in succeeding years and until the particular business is discontinued; there is, therefore, a permanent loss of tax. Moreover, both under-valuations and the tax loss thereon have, of course, been greatly increased by the continuous inflation which has taken place since the end of the war.

It may not be realized how vast is the size of industry's stocks and work in progress. According to figures published in the *Board of Trade Journal* in March 1961, it was estimated that the book value of industry's stocks at December 31st, 1960, covering manufacturers, wholesalers and retailers was no less than £7,500 million. This includes both stock and work in progress.

Let us suppose – and here I am taking a completely hypothetical percentage – that there is an average under-valuation by Inland Revenue standards of 10 per cent; this would amount to £833 million. Income tax and profits tax on this sum would total about £450 million which is enough to gladden the heart of any Chancellor of the Exchequer!

In the face of figures of this magnitude it is, perhaps, not very surprising that the Inland Revenue thought it necessary to launch a drive on the subject of the valuation of stock and work in progress and indeed sought very hard to impose upon an unwilling body of taxpayers and their professional advisers, the Revenue's own ideas as to how these items should be valued for the purpose of arriving at tax assessments. There is no need for me to tell you how much work (a good deal of it quite fruitless) this has caused us all.

Since they started their campaign, Somerset House have been riding a number of hobby-horses on this subject and one of long standing was the first to reach the Courts – that of *C.I.R. v. Cock Russell & Co Ltd* in 1949. When it came to interpreting the long-established formula of the lower of cost or market value, the Revenue wanted to use the 'global' basis of valuing stock, i.e. taking the lower either of everything at cost or of everything at market value.

In this particular instance the professional evidence was unanimously in favour of the 'pick and choose' method adopted by the company, nor could it be disputed that this particular system had been accepted in the past by the Commissioners of Inland Revenue. Perhaps it was not therefore surprising that Mr Justice Croom-Johnson found in favour of the taxpayer and, furthermore, the case did not go beyond the High Court.

Varying Methods of Valuing Stock

I think that, at this stage, we ought to spend a little time in considering the terms 'cost' and 'market value' because not only have they different meanings to different people but the 'cost for tax purposes' was really the point in dispute in several cases to which I shall refer later in this paper. Dealing firstly with cost in businesses which buy goods ready for sale without carrying out any process work thereon, we have:

(*a*) *Unit Cost*, which entails appropriating to each article in stock its actual cost; in theory, this should give you a valuation at true cost but obviously this system could only be applied in its purest form where the stock consisted of a relatively small number of identifiable items, e.g. valuable jewellery or pictures.

(*b*) *FIFO* or 'first in, first out': for this one assumes that the stock is sold in the same order of priority as the order of the dates at which it was acquired. If running stock records are not kept in some detail there are necessarily a number of refinements and variants in order to arrive at what is to be regarded as cost because of the practical difficulties of matching quantities on hand with the most recent purchase invoices.

(*c*) *LIFO* or 'last in, first out': this system has received statutory recognition in the United States of America and is said to be in very limited use in this country. Its theoretical object is to charge current costs against current sales; thus sales are deemed to be made from the most recent purchases and the original purchases, valued at their original prices, are deemed to remain in the business.

(*d*) *Base stock*: this is really a variant of LIFO but, in this case, it is only the basic minimum holdings of stock which are valued at their original cost. It

is a method which is still in occasional use in this country, for example in the cotton-spinning and paint manufacturing industries.

(*e*) *Average cost:* here the opening stock is averaged with the cost of goods added during each succeeding period, after deducting consumption at the average price; the period being determined in accordance with the nature of the business.

(*f*) *Standard cost:* with this we come into the field of the specialists although it is a system, particularly with manufacturing concerns, which has made very rapid strides and more and more businesses are changing over to it. As you know, this is a highly technical branch of our profession and I will say no more than that, broadly speaking, the stock is valued at a predetermined or budgeted cost plus or minus the variances which have arisen during the year or at any rate the latter part thereof.

(*g*) *Adjusted selling price:* this method is widely used in retail businesses and involves deducting from the value of stock calculated at selling prices the normal margin of gross profit on such stocks. There is, however, one particular point of difficulty in this method and that is in connection with items which have been 'marked down'. The general commercial view is that, for stocktaking purposes, you deduct the normal margin of gross profit from the marked down selling price but in general the Inland Revenue do not approve of this procedure – they contend that if the marked down selling price is above cost then the article should be valued at cost in order to comply with the formula of the lower of cost or market value. In practice, however, at any rate so far as departmental stores and multiple shops are concerned, the Inland Revenue are prepared to accept the deduction of the normal margin of gross profit from marked down selling prices providing such prices are actually in operation in the shops.

By and large all these methods can be used equally well in manufacturing businesses which buy raw materials and turn them into manufactured articles. Here, however, you have the added complication of deciding what charges should be included in cost and, in particular, when you come to overheads there are almost infinite variants. I shall return to this problem later on.

Defining 'Market Value'

Turning to what is meant by 'market value', we come to a most contentious question and one where it seems the general opinion of the accountancy profession as to the correct definition of this term, is not regarded as wholly acceptable by Somerset House.

Market value can mean:

(*a*) the net realizable value on sale in the ordinary course of business;

(*b*) the net realizable value on sale in the ordinary course of business but after deducting selling expenses;

(*c*) the current replacement value.

Depending on the market, (*a*) and (*c*) could well be the same figure.

In Appendix II of their final report, the Royal Commission on the Taxation of Profits and Income gave as a definition of market value:

> 'Either the price at which the stock could be replaced by purchase or the realizable value of the stock on a going concern basis, namely, after deducting from current selling prices the estimated further expenditure to be incurred in bringing the stock into the state in which it would be sold and the costs of sale, including delivery.'

Then we have the recently issued Recommendation No. 22 of The Institute of Chartered Accountants in England and Wales which deals with the 'Treatment of stock-in-trade and work in progress in financial accounts'. Much more support is now given to the use, in appropriate circumstances, of replacement price, i.e. the price at which stock can be replaced if such price is less than cost. Net realizable value is also defined in the recommendation as being the amount which it is estimated, as on the balance sheet date, will be realized from disposal of the stock in the ordinary course of business, either in its existing condition or as incorporated in the product normally sold, after allowing for all expenditure to be incurred on or before disposal.

Finally, on this particular aspect we have the official observations of the Board of Inland Revenue on the Institute's recommendation. They state that their objection to replacement price is that it may be less than actual cost where no loss is expected but only a smaller profit, and, for that reason, they do not consider that it is generally acceptable for tax purposes as an alternative to actual cost or net realizable value.

So far as net realizable value is concerned, the Revenue do not demur in general from what is said in the Institute's recommendation, but they have a reservation relating to the deduction which is recommended therein for 'all expenditure to be incurred on or before disposal'. As a matter of principle, the Revenue do not agree that general selling costs to be incurred in the future should be allowed for. This, however, does not mean that they would not be prepared in practice, where the circumstances warrant it, to accept a deduction for specific identifiable items of expenditure directly connected with the stock in question, including provision for commission and brokerage which have to be incurred on sale.

It should be noted that the Inland Revenue are not prepared to accept a valuation of other than cost to the extent that stocks are covered by forward sales at prices above cost.

Special Bases of Valuation

For the sake of completeness, I must mention two special bases of valuation which are used in some businesses. The first applies to such trades as the production of tea and rubber and some mining concerns, where it is the recognized practice to bring stocks of products into the accounts at the prices realized subsequent to the balance sheet date, less

only selling costs. The object is, of course, to show in one account the whole of the profit on the crop reaped or on the minerals won during the period.

The other special basis is used by businesses which engage in long-term contract work, where it is often appropriate to spread over the period of the contract, on a properly determined basis, the profit which is earned when the contract is completed. So far as profits tax is concerned a statutory formula is provided by paragraph 14 of the Fourth Schedule to the Finance Act, 1937.

I have not mentioned the problems of the farming community and in particular the herd basis, because this is a somewhat specialized aspect outside the scope of a general paper.

It might be thought that one or other of these various methods of arriving at cost or market value would meet the needs of every business but unfortunately this is not so, as every now and again you come up against a problem which simply does not fit into the general pattern of valuation.

I will quote a few examples I have met in practice and which I think might be interesting to you

(*a*) A refinery is erected for the purpose of producing a certain chemical from crude oil. The refining process yields secondary products at each stage. In course of time, the back-room boys in the laboratories evolve different uses for some or all of those secondary products and invent methods by which they are converted into saleable stocks of varying value. How do you compute the value of those secondary products both in their unprocessed state and as saleable stocks?

(*b*) Cinematograph films are another difficult problem partly because a good film has such a long life; to complicate matters you now have comparatively large sums being paid to prevent films from being shown on television. If a film costs say £100,000 and because it is a winner, receipts exceed that sum in the first year-end after general release, is it correct to write off the whole cost straight away, even though the film may eventually gross very much more, say £250,000? Conversely, if you have spent £500,000 in making a 'stinker' which is unlikely to gross more than £200,000, at what stage should you write off the expected loss of £300,000?

(*c*) There is occasionally the odd business where there is simply no precedent and here I have in mind one which deals in second-hand jewellery, much of it antique, i.e. over one hundred years old. For any expensive item, the only customers are connoisseurs or dealers so there cannot be said to be a market price. Many items remain in stock for five to ten years and even longer, waiting for the right purchaser to come along – is it really correct to value such pieces at cost and if not, what price would you place on them?

(*d*) The company deals in a seasonal product which comes from overseas and for which there is a recognized market both in the country of origin and in London. The year-end of the company is July 31st but at that date there are no current market prices because sales of the new season's produce do not commence until September. The Inland Revenue have with considerable reluctance been persuaded to accept the opening prices of the September market as being the basis applicable to a market valuation at the previous July 31st.

Defeat of Base Stock Method

We now come to the 1953 case of *Patrick v. Broadstone Mills Ltd*, which fired a successful broadside into the use of the base stock method for taxation purposes. The company carried on the business of cotton-spinners which involves many stages of manufacture and at each stage quantities of cotton (known as 'fixed process stock') were on the machines and other quantities (known as 'spare process stock') were waiting by the machines ready to replace the cotton actually on the machines.

The fixed process stock was regarded as a base stock and had been consistently valued at a figure which had not changed for over thirty years. The spare process stock had been valued at a somewhat arbitrary figure which had gradually been increased over the years.

It is interesting to note that the fixed process stock was actually included in the company's balance sheet under the heading 'Land, building, boilers . . . and fixed stock'.

The Special Commissioners gave their decision in favour of the company but both Mr Justice Vaisey in the High Court and a unanimous Court of Appeal rejected the method and the Inland Revenue won the day. Very briefly, the reasons for the decision may be summarized as under:

(*a*) The fixed and spare process stocks were both part of the stock-in-trade of the mill no matter what the company liked to call them.

(*b*) That being so, it was proper to apply the normal basis of the lower of cost or market price.

(*c*) To accept the base stock method would not matter if quantities and prices remained stable, but if either or both these conditions were missing, you would get a distorted profit for the year.

(*d*) In years of rising prices which were, of course, the case at the time, the base stock method would lead to an under-statement of profits and however sound this might be from the commercial point of view it was not acceptable for tax purposes since section 127 of the Income Tax Act, 1952, requires that the income 'shall be charged . . . on the full amount of the profits or gains of the year preceding the year of assessment'.

In the Court of Appeal, Lord Justice Singleton said:

> 'The one [method] which shows most accurately the position between the Revenue on the one hand and the taxpayer on the other hand, is the one which ought to be adopted. In other words, it is not sufficient to say that a particular system of accounting is a well-recognized system of accounting and all right during normal times, if the contention

on the other side is that the system does not give a true result for the particular year, the accounting year.'

and Lord Justice Birkett quoted with approval the dictum of Lord Porter in *Ryan v. Asia Mill Ltd* (1951):

'Moreover what may be prudent accountancy for a company is not necessarily the correct method of ascertaining the proper assessment for income tax.'

LIFO – the *Anaconda* Case

We must now travel two years in time and several thousand miles in space to have a look at the case of *Minister of National Revenue v. Anaconda American Brass Ltd* (1955) which settled that the LIFO method was not acceptable for Canadian tax purposes.

This involved a Canadian company and was argued under Canadian law before the Judicial Committee of the Privy Council; nevertheless, there is so little difference between the Canadian and United Kingdom tax law in relation to the valuation of stock-in-trade that it is considered the decision in the *Anaconda* case is equally applicable to the United Kingdom.

In his judgment Lord Simonds commented that an expert witness called for the company had observed that he did not imagine any of the company's witnesses would claim for a minute that there was a quantity of metal then on hand acquired in 1936 equal to the quantity which was valued at 1936 cost. Yet there was no less than six and a half million pounds of copper in the 1947 closing stock inventory valued at 1936 prices. The witness might have added that, year by year, the same thing would happen, so long as the existing business continued and existing stocks were not seriously diminished; then in 1997 as in 1947 the closing stock inventory would still carry stock at 1936 prices. This illustrates clearly the LIFO method, and shows how far it has travelled from the conception which has prevailed in the assessment of income for tax purposes.

Later in his judgment Lord Simonds, having referred to the evidence of expert witnesses that the LIFO method is generally acceptable and was in this case the most appropriate method of accountancy, then commented:

'The question remains whether it conforms to the prescription of the Income Tax Act . . . in their lordships' opinion it does not.'

In bare essentials, the judgment of Lord Simonds may be said to amount to the following propositions:

(*a*) That the true income is to be ascertained as nearly as it can be done.

(*b*) That the true income is that calculated by ordinary principles of commercial accounting so far as these are not modified by express provisions in the taxing Acts.

(*c*) That ordinary principles of commercial accounting require that stock should be valued at the beginning and end of the accounting period at the lower of cost or market price.

(*d*) That having regard to all this, the LIFO method does not produce a true figure of income and, consequently, is inadmissible for tax purposes.

Direct Cost *versus* Oncost

It is probable that most of you will not have been much, indeed if at all, affected by any of the cases which I have so far dealt with in some detail but now we come to one which I am sure must be in all your minds – I refer, of course, to the recent House of Lords decision in the case of *Ostime v. Duple Motor Bodies Ltd.*

I must confess that when I first heard that this case was coming before the High Court, I was in some trepidation because we were involved in numerous cases concerning the same point and I feared that we might well get a decision in favour of the Revenue which would bind us once and for all, irrespective of the merits of our own particular arguments. The Special Commissioners had found that on the evidence, the accountancy profession as a whole is satisfied that either the direct cost method or the oncost method (in valuing work in progress) will produce a true figure of profit for income tax purposes and that it is very much a matter of policy for the decision of the directors of a company which method should be used. They then indicated a preference for the oncost method, and found that a number of items, called 'factory overheads', should be added to the direct costs, and they stated the questions of law for the opinion of the Court on that basis.

In the event my fears were proved to be groundless because the taxpayer won the day from the High Court onwards, with unanimous judgments in both the Court of Appeal and the House of Lords.

For me, however, there remains one question which I find very puzzling and to which I do not expect to receive an answer, that is: Why did the Inland Revenue choose this particular taxpayer to test the point at issue? On such evidence as is available from the published documents, they selected a case where the facts – at any rate on common-sense grounds – were all in favour of the company. There must be many manufacturing businesses where the omission of overheads from the valuation of work in progress completely distorts the amount of the profits for a particular year, yet following the *Duple* case, they can continue to omit such overheads if they so desire.

The decision in the House of Lords is only six months old and is, therefore, the latest word on the title of my paper; it is a finding which is likely to affect most of us for many years to come.

As I have already indicated, the point at issue was quite a simple one – in ascertaining the value of work in progress for tax purposes, should you take the cost of direct materials and direct labour only or should you add to such direct cost a proportion of the overheads? It was common ground that both

methods were recognized as correct accountancy and in their stated case the Special Commissioners had said:

> 'Professional accountancy opinion is rarely static on questions of this kind; we find that up to fairly recently the weight of accountancy opinion was in favour of the oncost method, but that now the trend in the profession is slightly away from this method.
>
> 'On the evidence adduced before us we find – and this naturally has caused us difficulty – that the accountancy profession as a whole is satisfied that either method will produce a true figure of profit for income tax purposes.'

Here you had a business which built, to order, bodies for different types of road vehicles, mostly motor coaches, with very few finished bodies on hand at the end of the accounting period. The turnover exceeded £1 million per annum in the years concerned and it would seem that substantial profits were being earned as the assessment for 1951–52 was in the sum of £250,000.

Viscount Simonds said that in order to answer the question at issue, it was necessary to be told precisely of what the oncost method consisted and he doubted whether at the end of two days' discussion, it was possible to form any clearer idea of it than that it is at least something different from the direct cost method about which there is no less difficulty of definition. Apparently learned counsel, after arguing strenuously in favour of the oncost method on behalf of the Inland Revenue, had invited their lordships to assist the Crown by saying in what that method consisted.

Valuation Prerequisites

His lordship stressed that, in ascertaining the value of work in progress, two considerations must be borne in mind: firstly, that ordinary principles of commercial accounting must be observed as far as practicable and, secondly, that the law relating to income tax must not be violated; that is to say, by one means or another the full amount of the profits or gains of the trade must be determined. He conceded, however, that a first principle of tax law is that the taxpayer, in ascertaining his profit, is entitled to debit his expenditure in the year of assessment (unless excluded by section 137 of the Income Tax Act, 1952) and this is so although the whole of that expenditure may not bear fruit in that year (*Vellambrosa Rubber Co Ltd v. Farmer* (1910)).

His judgment revealed some interesting figures: under the direct cost method, the value of work in progress at the end of the relevant year was £2,000 less than at the beginning, whereas under the oncost method (presumably including fixed as well as variable overheads, although this is not clear) it would have been not £2,000 less but £14,000 more; this arose because there had been a considerable reduction in trade during the year and the overheads were spread over a smaller number of units.

I have heard it argued that work in progress – particularly in the early stages of manufacture – has no value other than as scrap so that even the direct cost method brings about an over-valuation. This school of thought will have received some comfort from Viscount Simonds' closing words:

> 'It may be equally open to the taxpayer in special circumstances to show that something less than the cost of material and wages should be taken as the value of work in progress or stock-in-trade.'

It seems from Lord Reid's judgment that at one time it was common to take no account of the value of either stock or work in progress for income tax purposes – an interesting thought, but one on which there can have been no doubt since the case of *Whimster & Co v. C.I.R.* to which I have already referred.

Lord Guest commented that, for a period of about fifty years, the Crown had accepted the direct cost method and as this was the first case in which they had sought to bring in the oncost method, the burden upon them was a heavy one. He took the view that the oncost method offended against the rules contained in section 137 of the Income Tax Act, 1952, whereby the deductible expenses include all expenses wholly or exclusively laid out for the purposes of the trade. It followed that the adoption of the oncost method involves the carrying forward of expenditure otherwise deductible under section 137.

I expect that, like myself, many of you will have had a number of cases involving the same point which were held over pending the *Duple* decision. Somerset House has now issued instructions to all districts – but not, unfortunately, to taxpayers or their professional advisers – of the basis on which such outstanding cases can be settled.

So far my experience has been that if the direct cost basis or a limited oncost system (which the Revenue had been arguing was inadequate) has been adopted throughout, then that basis will be accepted for tax purposes. Similarly, if under Revenue pressure, the basis was altered on to full oncost but at the same time you lodged a protective caveat pending the result of the *Duple* case, then there will be no objection to you reverting to the previous basis.

For those already on the full oncost basis, I am afraid I cannot hold out much hope that they will be permitted to change to the direct cost basis for tax purposes, unless there has been some exceptional change of circumstances.

If, by any chance, you should be faced with making adjustments for an altered basis of valuation, I would remind you that, for tax purposes, the opening and closing valuation must be on the same basis – see *Bombay Commissioners of Income Tax v. Ahmedabad New Cotton Mills Co Ltd* (1929) and *Steel Barrel Co Ltd v. Osborne (No. 2)* (1948). You may also find that the Revenue will want to go back six years.

The Royal Commission suggested in their final report that, in certain circumstances, a taxpayer should be permitted to alter his basis of valuation on

condition that the effect of such change should be included as a taxable profit or as an allowable loss, as the case may be.

Value of 'Own Consumption'

Before I leave case law, I will refer briefly to *Sharkey v. Wernher* (1955) where the House of Lords decided that where there is a trade and a transfer of stock is made from the business to the owner for his private use, then the transfer must be made not at cost, but at current realizable value. This seems to infer that a person can now be regarded as making a taxable profit by trading with himself. However, this may well have been a somewhat Pyrrhic victory for the Inland Revenue particularly with market gardens run at a loss, although, of course, section 20 of the Finance Act, 1960, has now taken care of that position.

I gather that, in the case of small traders, local Inspectors of Taxes are not being unreasonable in applying this decision to what is termed 'own consumption' but I would remind you that it does *not* apply to:

(*a*) goods which never formed part of the *trading* stock,
(*b*) services, and
(*c*) expenditure on the construction of a fixed asset for the trade itself.

It must also be remembered that if the business is, for example, a one-man company, then section 161 of the Income Tax Act, 1952, applies and this calls for an adjustment of the 'expense incurred by the body corporate' which can only be cost.

I have already mentioned the final report of the Royal Commission on the Taxation of Profits and Income. They spent some time in considering the determination of true profit at a time of rising prices and I will adapt one example which is thought-provoking. A trader buys 1,000 articles for £1,000 and sells them for £1,200 during the course of the year; if, by the end of the year, it costs him £1,200 to buy 1,000 exactly similar articles has he, in fact, made a true profit or increased his real wealth?

Royal Commission's Views

The Royal Commission came to the conclusion that it would not be advantageous for the tax system to contain a requirement that all businesses must use a single prescribed method in valuing their stock-in-trade for the purpose of computing taxable profits and they did not think that any method should be accepted for tax purposes unless it:

(*a*) is designed to secure that the cost assigned to any item of stock represents a real figure for the cost of that item and is not arrived at by an arbitrary or fictitious process, and
(*b*) is calculated, if used consistently over a period of years, to give a fair reflection of the profits of each year.

They did, however, approve several bases – actual cost of identifiable parcels, FIFO, the moving average, standard cost, selling price less normal profit and disposal expenses, market value on defined lines and, finally, a combination of the lower of any of the cost bases which I have mentioned and market value.

Recommendation No. 22

I have also referred previously to the revised Recommendation on Accounting Principles – No. 22, on the 'Treatment of stock-in-trade and work in progress in financial accounts', which was issued by the Council of The Institute of Chartered Accountants in England and Wales in November 1960. This replaced an earlier recommendation made in 1945. It consists of no less than eleven pages and is worthy of close study. There are various sections dealing with:

(*a*) Cost, including its elements, the treatment of overhead expenditure and methods of computation of cost.
(*b*) Reduction to net realizable value.
(*c*) Reduction to replacement price.
(*d*) Special bases used in some businesses.
(*e* Description in the annual accounts, and finally
(*f*) Recommendations.

What is regarded as the normal basis is defined as follows:

> 'The basis normally used for the determination of the amount to be carried forward for stock and work in progress is its cost less any part thereof which properly needs to be written off at the balance sheet date.'

It is stressed that accounts must give a true and fair view of the trading results and the financial position and that this is not possible unless the basis adopted and the methods of computation are used consistently from period to period. It is recommended that in accounts the use of the term 'market value' should be discontinued.

The taxation aspects of this recommendation has been discussed with the Board of Inland Revenue who welcomed the guidance given therein and found it largely acceptable for tax purposes.

I have already dealt with the Revenue's reservations on net realizable value and replacement price; they also have some comments to make on the question of overheads in which they concede that there are circumstances in which the proportion of fixed overheads to be included may need to be adjusted by reference to the normal level of activity.

Concluding Comment

So far, my paper has consisted in the main of a review of the law as it stands today and of extracts from documents issued by various authorities in connection with the subject. I will conclude with some thoughts of my own.

In the great majority of businesses in this country,

whether large, medium or small, the stock valuation is the one figure that affects the trading result of the period more than any other. Far too frequently stock adjustments are utilized as a convenient means of reducing profits and creating a hidden reserve for use as occasion demands.

Although – as is the case in both the U.S.A. and Canada – the auditor in the United Kingdom is not required by law to attend physically at stocktaking, it cannot be denied that the verification of the stock valuation is more often than not an extremely tedious task. Generally speaking, you will find the work has been delegated to the most junior members of the audit team and I know from personal experience that there is nothing more soul-destroying than to be faced in the early days of one's articled service, with hundreds – if not thousands – of well-thumbed stock sheets.

While I think that the Inland Revenue have, in many instances, been using a far too theoretical approach to the subject of stock valuations, I would not for one moment suggest that their post-war interest therein has been without justification. Too often one comes across cases where stock has been under-valued with no other purpose than to reduce the taxation charge and quite irrespective of whether, as a result, the accounts did or did not show a true and fair view of the year's trading.

Stock under-valuations sometimes have a most unexpected and indeed unpleasant boomerang effect. As an example, where the shares of a family business are offered for sale (so that the vendors can retire after a lifetime of work) I have known instances where the prospective purchasers have broken off negotiations because the stock under-valuations were of such a nature as to constitute a real threat of a back-duty investigation by the Inland Revenue with all its unpleasant repercussions.

The auditor's duty should surely start with giving assistance in drawing up the stock-taking programme and even the one-man retail shop would be helped by skilled and experienced advice on the best way of tackling the job.

The verification of the stock figures should then be given their proper measure of attention during the audit and all the usual tests applied thereto by competent personnel.

Verifying the stock figure of a major industrial company is, of course, a mammoth task but, in all probability, it will be greatly assisted by the existence of stock records, standard costing, internal stock-taking and the like. Equally, it is a problem to the small practitioner whose work is handicapped not only by lack of staff but probably by a fee which is by no means commensurate with the services necessary for an adequate audit.

The first quotation in my paper was that of Lord Halsbury who, nearly seventy years ago, said 'Profits or gains must be ascertained on ordinary principles of commercial trading' and time and again in the judgments in subsequent cases you will find this phrase repeated with only slight variations in the wording.

Where the Revenue has had any success in upsetting methods of stock valuation, it has been because this rule has been offended against with the result that the accounts did not show a true and fair view of the year's trading as required by the Companies Act and the full amount of the profits or gains of the year as required by section 127 of the Income Tax Act, 1952.

I am convinced in my own mind that all of us have got to pay a great deal more attention to the correctness of stock valuations and that by so doing we can establish a fortress of good commercial practice which will be unassailable by the Inland Revenue.

Weekly Notes

DECIMAL CURRENCY INQUIRY

THE committee to inquire into the method and cost of introducing decimal currency, recently appointed by the Chancellor of the Exchequer under the chairmanship of Lord Halsbury (announced in our last issue), held its first meeting on Friday of last week.

The committee discussed the lines on which its inquiry should be conducted and the procedure with regard to the taking of evidence. It was decided that the public should be invited to submit evidence. The sittings of the committee for the purpose of hearing evidence will be held in private, but it is the intention of the committee that a summary of the evidence taken should be included in its report.

Persons or organizations wishing to submit evidence to the committee should write to the Secretary, Mr N. E. A. Moore, Treasury Chambers, Great George Street, London SW1, until February 28th, and at State House, 62–71 High Holborn, London WC1, thereafter. It would be convenient if such persons would let the secretary know as soon as possible the date by which their written evidence can be expected and their particular fields of interest. Statements should, in any event, be in the hands of the secretary not later than April 30th next. The committee will, if it so desires, invite persons tendering written statements to supplement them orally.

The committee states that it would be of assistance if fifteen copies of any written memorandum could be supplied.

MUNICIPAL TREASURERS' EXAMINATIONS

A TOTAL of 706 candidates sat for the examinations of The Institute of Municipal Treasurers and Accountants held last November. The results now announced show that 238 candidates sat for Part A of the Final, of whom 98 (41 per cent) were successful; in Part B of the Final, 199 candidates sat and 93 (47 per cent) passed.

Places and prizes have been awarded on the combined results of the May 1961 and November 1961 examinations and in the Final examination the First Place, Arthur Collins Memorial Gold Medal and the Institute Prize of ten guineas, were awarded to Mr Dennis Geoffrey Ball, of the Comptrollers' Department, London County Council.

There were 269 candidates for the Intermediate examination of whom 98 (36 per cent) passed, and the First Place and Prize of six guineas were awarded to Mr Brian Collinge, of the City Treasurer's Department, Manchester.

The names of the successful candidates in Parts A and B of the Final, together with a summary of the complete results, appear elsewhere in this issue.

BANK CHAIRMEN'S REVIEWS

THERE is a touch of asperity in the reviews of the chairmen of the large joint-stock banks this year. Sir Eric A. Carpenter, of Williams Deacon's Bank, thinks the outlook for the economy in 1962 is obscure and fraught with difficulty, especially for bankers. He considers that there is a good case for returning to the banks a substantial proportion of the special deposits.

Lieut-Col T. Marshall Brooks, of the District Bank, wishes to see the abolition of stamp duty on cheques. He is joined by Lord Monckton of the Midland Bank in thinking its revenue small in relation to its cost and inconvenience. Col Brooks favours entry by this country into the European Common Market and is moderately optimistic about the immediate prospects for the economy.

Mr D. A. Stirling, of the Westminster Bank (he succeeded Lord Aldenham on January 1st), thinks that when financial restrictions are put upon the banks at recurring economic crises, like restraints should apply to other deposit-takers and credit-givers. He also looks askance at some customers being allowed to borrow abroad at short-term to finance home trade that the banks have been asked to discourage.

Like other chairmen, Lord Monckton of the Midland Bank, does not see the 'pay pause' and Government action alone curing the country's economic ills. Welcoming the proposed National Economic Development Council, he suggests two prerequisites for success. First, confidence should be established in all sections of the community. Secondly, it must be recognized that commitments cannot exceed resources.

INLAND REVENUE REPORT

THE 104th report of the Board of Inland Revenue, published last Wednesday, shows record total receipts – income tax, surtax and estate duties all being higher than ever before. Another record is in the number of successful prosecutions for income tax offences.

The report shows the first full year's figure for interest payable with repayments of post-war credits; it was £401,000. One interesting feature is the classification of stamp duty receipts over ten years and given in more detail than in previous reports.

There are some alterations to the published extra-statutory concessions; details of these changes will be given in next week's issue when we shall review the report at greater length.

CREDIT FOR EXPORTS

A JOINT scheme by which the London and Scottish clearing banks and sixty insurance companies will provide exporters of capital goods with finance at constant rates of interest, was announced on Tuesday.

The banks have agreed to provide money at 5½ per cent (irrespective of Bank rate changes) for the first five years for which finance is required, while the insurance companies will lend a total of £100 million at a constant 6½ per cent for periods over five years.

The scheme will be allied to the credit insurance provided by the Export Credits Guarantee Department, and exports for which the foreign buyer needs over five years to pay will be covered by E.C.G.D. bank or financial guarantees.

SIMPLIFYING SHARE TRANSFER

CRITICISM of the excess of paper-work in the present system of transferring ownership of securities led to the formation in November 1959 of a City committee under the chairmanship of Lord Ritchie of Dundee, Chairman of the London Stock Exchange, and its first report was published in December 1960 (see *The Accountant* of December 10th, 1960). It was then recommended that transfer by stock transfer form offered an acceptable solution.

Last week the committee's second report appeared in which it states that it requested its advisory committee to study the practical application of the proposed new system of transfer with representatives of the Association of Investment Trusts, the British Insurance Association, The Institute of Chartered Accountants in England and Wales, The Institute of Chartered Accountants of Scotland, the nominee companies of the London clearing banks and with stockbrokers, jobbers and a number of registrars of United Kingdom and overseas securities. As a result of these discussions the committee states that it is satisfied that the new system is acceptable.

The committee also sought and obtained the views of the Councils of The Law Society and The Law Society of Scotland on the proposed new transfer system. Further, the opinion of counsel on certain legal aspects of the proposals and on the legislation which they consider necessary has been obtained. As a result, the committee considers that there are no serious obstacles to the introduction of the necessary legislation.

Consultations with interested bodies are continuing and the advisory committee is preparing a comprehensive guide to the new system of transfer, the final form of which must, of course, depend on the wording of the legislation. It is proposed to publish this guide after legislation has been enacted.

Transfer by stock transfer form provides that whatever the number of buyers, a seller would sign only one document (a 'parent' transfer); witnessing would be abolished and the selling broker would get the signature as soon as possible before settlement date. If there was more than one buyer, the broker would set out details on an 'offspring' transfer. The buyer of fully-paid shares would not have to sign any transfer. His broker would, however, have to complete the transfer form sent to him by the selling broker. It is claimed that this method would save brokers several consequential operations and greatly reduce delays.

This is My Life . . .

by An Industrious Accountant

CHAPTER 108

IN our cheque payments section we have Frank, a young chartered accountant who joined us shortly after qualifying. He came to see me with a problem recently. He's a quiet, rather shy young fellow of naturally studious bent, living at home. He'd like to put his spare time to beneficial use, he said; would I recommend him to study for a further qualification or degree? And if so, what?

This is not infrequently a problem for these young qualified men. It's perhaps a pity we don't organize a good distinction to cater for such bookworm types who are only too eager to prepare a thesis for such a laudable object. However, there are some excellent alternatives, such as the specialized courses of the I.C.W.A. and the C.I.S., and we discussed their possibilities. Frank didn't like the thought of more Intermediate-level examinations, but I explained the exemption concessions.

However, we found a solution. Frank had got his B.Com. before qualifying; he has an uncle on the professional staff of the university of a nearby city; an M.Com. degree was possible. The requirements for attendances at lectures were nominal and easily arranged; the preparation of a thesis by his own fireside was all that was necessary. He fell to eagerly.

I have always had mental reservations about the effect of night study on hard-working accountants, but the result on Frank seemed to be all to the good. His thesis dealt with export trade. He became our local authority on the subject; his new self-confidence was impressive. Frank put us right in our discussions on more than one occasion; he explained that a university graduate had a tremendous advantage in the field of economics. A graduate, he said, obtained a detached, impartial outlook; a graduate was objective; a graduate's executive potential had extended its horizon. (He seemed to like this phrase; he used it often.)

He was telling us about some take-over bid one day. 'That's a good firm,' he said. 'It employs a lot of graduates. It has a policy of graduate development management-wise.' He was particularly interested because he planned to take his Ph.D. degree by 1965. 'My uncle says we stand or fall, world-market-wise, according to our level of graduate production annually.' There was a sort of narrowing of eyes, a setting of lips, among his hearers. 'My uncle was telling me that the empirical contribution to world neo-political arch-economic ideology, by the average graduate, is almost chrosomatic. . . .'

Came the day when we were planning an internal lecture course on basic accounting practice, for our non-accounting staff. Frank was on the organizing committee. 'The talk on the national level of output?' he queried. 'Surely that should be delivered by nobody lower than a graduate?' An aura of benevolent but aristocratic intellect seemed to play around his head; a master-mind was among us.

The momentary pause was broken sharply by our young cost accountant, whose fiery reactions will one day make or break him. 'We don't *have* anything lower than a graduate here,' he said, 'In fact, there isn't anything lower', and indignant voices swelled to a roar around the table.

When order was restored, Frank made honourable and prompt amends. 'O lor', did I sound as appalling as all that?' he queried disarmingly, and peace was established.

Though Frank doesn't mention graduates any more (at least, hardly ever), I hear he has submitted a mammoth thesis to the university, and our cost accountant has asked for a syllabus of its courses. Their colleagues, too, are showing quickening interest; performance is improving all round. *O si sic omnes.*

CORRECTION: Our 'Industrious Accountant's' reference to Sandford and Merton in the issue of December 16th, was, we regret, misprinted 'Sandford and Morton'.

Finance and Commerce

Bank Accounting

BANK accounting, internally, is right up to the mark; it has to be. For stockholders and the banking public, too, it is hardly more than a matter of days. Barclays, whose consolidation provides this week's reprint, announced its final dividend for the year to December 31st, 1961, on January 4th, and published its accounts on January 11th, with the annual meeting being called for February 8th.

It is rather interesting to see in Barclays 'parent' accounts the continued inclusion of the shillings and pence which, in general, have practically disappeared. Cash in hand and with the Bank of England – it is noted – £154,263,863 6*s* 4*d*. This is passing strange, especially as the consolidated figures are approximated to pounds. Still more so when it is remembered that the banks are legally permitted to maintain secret reserves.

Mr Anthony Tuke, in his final address as chairman, says: 'The whole question of our inner reserves is again under investigation, and in certain quarters there is pressure for their disclosure.' He refers to the 'cold winds of misfortune' that the banks have at times to face, and claims: 'We are entitled to provide ourselves with a good wardrobe of warm underclothes to wear when bad weather is threatened.' On the other hand, he adds, 'it is not necessarily in anyone's interest that we should be subjected to the public gaze when we are in the act of putting them on and off'.

If the banks should ever be required to publish their inner reserves, it will indeed be a 'red letter day' – although perhaps 'red' in this connection is hardly the colour.

Export Finance

Mr Tuke deals with a matter which has had some publicity in these columns – finance for exports. Exports must be encouraged but as a question for the Government, the subject is made more difficult by the existence of an international agreement that exports shall not be subsidized, although interpretation of the agreement 'seems to give rise to considerable misunderstandings in practice'. Mr Tuke suggests that a possible method of approach to this difficult question might be by way of an exemption from profits tax liability related to the proportion which export turnover bears to a company's total turnover.

9TH JANUARY 1962 C. FITZHERBERT T. M. BLAND L. E. D. BEVAN *Vice-Chairmen* F. G. BACON *Chief Accountant* R. J. H. GILLMAN *Secretary*

For the actual financing of exports, he says: 'I believe that in the national interest the resources of institutional long-term investors should be harnessed to provide the longer-term finance.' Longer term, that is, as against the five years the banks are prepared to finance. These investors, he suggests, 'might be invited to set aside a proportion of their accruing funds over the next few years to subscribe for twenty- to twenty-five-year bonds carrying directly or indirectly the guarantee of the Government through the exports guarantee scheme and enjoying, if possible, the advantages of marketability'.

But he rather negatives his suggestion by admitting that as cost is important, the money should be raised on 'reasonably favourable terms which would not be available in the open market in present conditions'.

Sections 132 and 210

A SITUATION that is probably unique in company administration has developed in the affairs of the Gloucester Railway Carriage & Wagon Co Ltd and, being exceptional, is well worth looking at. The unusual gives interest to the normal straightforward processes of company law. What is involved is the position of shareholders under sections 132 and 210 of the 1948 Act.

Under these sections, shareholders are given the right to requisition an extraordinary meeting. The requisition must be supported by holders of at least one-tenth of the capital carrying voting rights at general meetings, who must state what they want the meeting for; the directors have twenty-one days from the deposit of the requisition with the company to convene the meeting. Should the directors fail to comply with the requisition, shareholders may take the matter into their own hands, convene the meeting and recoup from the company the expenses incurred. It is an important section and one that has been made use of on many occasions in recent years, in so far as directors have complied

in convening required meetings.

In the case of the Gloucester Railway Carriage & Wagon Co, however, the directors thought fit not to comply with the requisition notice, the position being complicated by the fact that the majority of the shareholders had accepted an offer for their shares.

Offer Accepted

The circumstances of the offer go back to about October 1960. It seems that there was no future for Gloucester in building railway rolling stock, and as Winget, the concrete-mixing machinery manufacturers, wanted more production space, Gloucester's surplus capacity was made available to them for a minimum of seven years and £300,000 was invested by Gloucester in Winget's 6 per cent Convertible Loan Stock 1967–74. The stock was convertible into Winget Ordinary on the basis of 50*s* for £1 Ordinary between 1961 and 1964 and at 55*s* between 1965 and 1967. Then, in November 1961, came the Winget take-over offer: two 5*s* Ordinary plus £4 19*s* of Winget Convertible Unsecured Loan Stock for every nine Gloucester 10*s* units.

There was opposition to the terms on the ground that Gloucester shares were worth more than Winget offered. Balance sheet asset values were questioned and the purpose of the requisitioned meeting was the consideration of a resolution concerning a revaluation of the assets.

While all this was going on, however, Gloucester shareholders were accepting the offer to such extent that it was declared unconditional, the acceptors including the leading opponents of the bid. But acceptance, obviously, would not entail immediate shift of name from Gloucester to Winget register.

How the matter will eventually end is not clear at the moment of writing. There are reports that the requisitionists have lodged a complaint with the Board of Trade and the Institute of Directors against the failure by the directors to call the meeting.

BARCLAYS BANK LIMITED

PROFIT & LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER 1961

1960 £			£ s. d.
5,452,143	Net Profit after providing for taxation and after deducting transfers to inner reserves, out of which reserves provision has been made for diminution in value of assets..		6,073,565 4 0

	Deduct:		
2,000,000	Transfer to Reserve Fund	£2,000,000 0 0	
	Dividends, less income tax:		
1,521,727	Interim dividends paid 8th August 1961 ..	1,644,366 17 0	
1,767,007	Proposed final dividends	1,843,657 3 11	
			5,488,024 0 11
£1,220,289	Balance carried forward		£1,805,830 9 3

NOTES ON THE ACCOUNTS

1. The balance sheets of all the Subsidiaries are made up as at 30th September or 3rd October 1961, except those of two small companies, one of which is made up as at 31st December 1961, and the other, Crédit Congolais, as at 31st December 1960. The Directors consider that to make the accounting dates of all the Subsidiaries coincide with that of the Parent Company would cause undue delay in the preparation of the accounts. Full provision has been made against the Group's investment in Crédit Congolais.

2. Provision has been made in the accounts for United Kingdom income tax on all profits earned to the dates of the respective balance sheets.

3. Foreign currencies have been expressed in sterling at the rates ruling on the dates of the respective balance sheets.

4. Contracts for capital expenditure not provided for in these accounts amount approximately to £1,308,000, all in Subsidiaries. The corresponding amount for the Group at 31st December 1960, was £1,344,000.

5. The aggregate emoluments of the Directors of Barclays Bank Limited amounted to £211,222 (*1960: £209,004*) consisting of fees £64,482 (*1960: £66,021*) and other emoluments £146,740 (*1960: £142,983*). In addition, pensions of £81,127 (*1960: £44,596*) were paid in respect of management services.

   The amount paid by Barclays Bank Limited was £229,132 (*1960: £191,505*).

AUDITORS' REPORT TO THE MEMBERS OF BARCLAYS BANK LIMITED

In our opinion the foregoing accounts and notes give in the prescribed manner the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, give a true and fair view of the state of affairs as at 31st December 1961, and of the profit ascertained as indicated in the accounts, for the year ended on that date of the Bank and of the Group so far as concerns members of the Bank and so far as is practicable in view of the fact that, with one minor exception, the accounts of the Subsidiaries are made up to dates other than 31st December 1961.

We have obtained all the information and explanations which we considered necessary. In our opinion the Bank has kept proper books and obtained proper branch returns and the accounts of the Bank are in agreement with them and with the said information and explanations.

CITY NOTES

NEW year investment moves now seem to be a spent force in the stock-markets. Political and economic uncertainties have taken over again as the principal market influences, with the Minister of Transport's moves in the railway wage negotiations a disturbing feature.

There are signs of 're-thinking' on the growth prospect in industrial equities. Typical of this trend were the remarks of Mr P. L. Fleming, chairman of Government & General Investment Co, one of the investment trusts in the powerful Drayton group.

During the past year or two this particular trust has put more money into fixed interest securities. Mr Fleming suggested that some of the trust's low yielding equities might be sold on the view that 'even if they are growth stocks, they are going to be an unconscionably long time in growing'.

This may seem akin to investment sacrilege to the new race of investors brought up on the apparently automatic equity growth of the past five years or so. Basically, however, growth stems from higher dividends coupled with an investment frame of mind which justifies low yields by optimistic appraisal of prospects.

Research Activities under the Microscope

SIR, – In the second leading article in your issue dated January 13th, 1962, you make the plea that

> '. . . it would obviously be helpful to accountants in industry and to the profitable utilization of research and development effort in the country if one of the professional bodies could contrive the wider dissemination of information on methods of control currently in use'.

The Institute of Cost and Works Accountants whole-heartedly supports your plea and is actively interested in the wider dissemination of information on methods of control.

At the Institute's Twelfth Summer School, held in September 1961, a paper was presented on 'The management accountant's influence on research and development', by Mr H. P. Southall, F.C.A., F.C.W.A. In October, the Institute's North Regional Cost Conference considered a further paper on this subject entitled 'Research, development and other pre-production costs', by Mr L. N. Norton, F.C.W.A., which will be reproduced in the March issue of the Institute's journal.

These two papers make an important contribution to the knowledge on this subject and we feel sure you will agree that they go at least some way to meet the need to which you so rightly call attention.

Yours faithfully,
DEREK DU PRÉ, *Secretary*,
THE INSTITUTE OF COST AND WORKS ACCOUNTANTS.

London W1.

[We welcome the opportunity of bringing to the attention of our readers the two papers mentioned by Mr du Pré which provide a valuable contribution to the discussion of research and development costs. We consider it would be helpful, however, if a factual survey were available of the extent to which various methods of control are currently in use, with particular reference to their acceptability to management as instruments in guiding policy decisions. – Editor.]

Education and Training of Accountants

SIR, – Professor W. T. Baxter's article 'The education and training of accountants', in your issue of January 20th, sets out fairly and accurately the case for a fundamental change in the attitude of The Institute of Chartered Accountants in England and Wales to education for the profession. I thoroughly endorse his argument, and particularly the urgency of the case for vigorous reform which he has advocated.

I think that the results of our apathy are already obvious. Those of us who work with accountants on the Continent know that they no longer look to Britain for inspiration or leadership, but to the U.S.A. European stock exchanges are pressing for legislation to improve the standard of published accounts, and basing their recommendations on the practices of the United States Securities Exchange Commission. When a writer in one of the French or German accountancy periodicals quotes a foreign author, it is invariably an American. The Turkish Government recently appointed someone to advise on the development of the accountancy profession in Turkey – an American accountant. Returning home, a large part of the accounting machines and systems business in this country stems from the initiative of American companies, led by accountants. And when I devised a course to explain accountancy to managers, I was unable to find a satisfactory textbook written by a British accountant and therefore had to use books written by American accounting teachers.

Finally, although I am fully conscious of the value of the 'special degree', I think that there is a strong argument for a full three-year university course in accounting. This would require some economics, law, and mathematics but only to the extent that they were necessary, i.e. in relation to the application of accounting techniques to economics and law, and of mathematical techniques to accounting data.

Yours faithfully,
KENNETH S. MOST, LL.B., F.C.A.

London SW7.

Calling Liberal Accountants

SIR, – The recent growth of interest in the Liberal Party as a new force on the left has resulted in the development of Liberal professional associations.

The Association of Liberal Lawyers has been in existence for some time and Liberals in the teaching profession held their first conference earlier this month.

It is time that Liberal chartered accountants had some form of association. Such a group could do invaluable work in producing and scrutinizing (along liberal and radical lines) policy statements on company law, taxation, industry, etc.

A number of accountants have already been in touch with me in connection with the formation of such a group. It is possible that other readers may wish to be associated with our scheme and I would be glad if they would write to me.

Yours faithfully,
MICHAEL MINTER.

42 Kevington Drive, Chislehurst, Kent.

FOR STUDENTS

SHARE CERTIFICATES - I

SECTION 81 of the Companies Act, 1948, provides that a certificate under the common seal of the company, specifying any shares held by any member, shall prima facie be evidence of the title of the member to the shares. By section 155, the expression 'share' includes 'stock', except where a distinction between stocks and shares is expressed or implied.

Section 80 requires that every company shall, within two months after the allotment of any of its shares, debentures or debenture stock, and within two months after the date on which a transfer of any such shares, debentures or debenture stock is lodged with the company, complete and have ready for delivery the certificates of all such shares, the debentures, and the certificates of all debenture stock allotted or transferred, unless the conditions of issue otherwise provide. The expression 'transfer' for this purpose means a transfer duly stamped and otherwise valid, and does not include such a transfer as the company is entitled to refuse to register and does not register.

If a company is served with notice requiring it to make good any default in carrying out these provisions, and the company fail to do so within ten days after service of the notice, the Court may, on the application of the person entitled to have the certificates or debentures delivered to him, make an order directing the company and any officer of the company to make good the default within such time as may be specified in the order. The order may provide that all costs of, and incidental to, the application shall be borne by the company or by any officer of the company responsible for the default.

Where a company issues shares requiring payment in full by instalment over a short period of time, but one exceeding two months, and wishes to delay issue of the certificates until the shares are paid in full, the terms of issue should authorize the delay in the issue of the certificates beyond the statutory period.

Although share certificates are invariably issued under the common seal of the company, section 81 does not expressly require this, but simply states that if certificates are so issued they shall be prima facie evidence. If the shares are to be officially quoted on the stock exchange, however, certificates must be under the common seal of the company and must be issued within *one* month of the lodgement of a transfer or expiration of any period of renunciation.

Article 8 of Table A provides that every person entered as a member in the register of members shall be entitled without payment to require within two months after allotment or lodgement of transfer (or within such other period as the terms of issue may provide) one certificate of all his shares or several certificates each for one or more of his shares upon payment of *2s 6d* for every certificate after the first, or such less sum as the directors may from time to time determine. Every certificate shall be under the company's seal and shall specify the shares to which it relates and the amount paid up thereon. Provided that in respect of a share or shares held jointly by several persons the company shall not be bound to issue more than one certificate, and delivery of a certificate for a share to one of several joint holders shall be sufficient delivery to all such holders.

Under such a provision as article 8 of Table A, a shareholder is entitled, on surrendering his original certificate for a number of shares and on paying the necessary fee, to require the company to issue him a number of certificates each for one or more shares, together making up the total shares represented by his surrendered certificate (*Sharpe v. Tophams Ltd* ([1939] Ch. 373)).

ORDINARY SHARES

THE BLANK CO LTD

Incorporated under the Companies Act, 1948

Capital £400,000

Divided into

400,000 Ordinary Shares of One Pound each numbered 1 to 400,000.

This is to certify that.....

of .....

is the Registered Proprietor of..... Ordinary shares of One Pound each fully paid, numbered as stated on the back hereof, in The Blank Co Ltd, subject to the memorandum and articles of the said company.

Given under the Common Seal of the said company this..... day of.....19.....

.....Director

.....Secretary

This certificate must be surrendered before any transfer of all or any of the above shares can be registered.

Registered Office .....

Form of Certificate

A form of certificate for a company having only one class of shares is illustrated on page 105.

The printing on the share certificate of the address of the registered office may be of assistance to shareholders should they at any time wish to write to the company, but as the certificates get older it may be necessary to check the address thereon in case the registered office has been changed.

Reference in the share certificate to the distinctive numbers of the shares will be omitted, of course, where these have been dispensed with in the manner and circumstances authorized by section 74 of the Companies Act, 1948.

Where necessary the back of the share certificate is ruled to record particulars of the distinctive numbers of the shares originally comprised in the certificate and of those shares which have been transferred. (See illustration below.)

The form and layout of certificates vary as between different companies. Certificates for different classes of shares should be distinctive in design and/or colour.

All joint holders are named in the certificate but mostly only the address of the senior holder is stated. The certificate will normally be sent to the senior holder and articles, as in Table A, usually provide that delivery to one of several joint holders shall be sufficient.

It is a common practice to issue the certificates with a perforated form of receipt attached which can be signed by the recipient and returned to the company. Where counterfoils recording particulars of the certificate are retained in the share certificate book, the form of receipt when received by the company can be attached thereto.

Where share certificates are not printed in book form, the problem of preparing and filing counterfoils is not quite so easy and are in many cases dispensed with. The number of the share certificate may be entered on the back of the originating transfer and also in the register of members; by way of cross-reference, the number of the transfer can be endorsed on the share certificate. In the case of new issues, certificate numbers can be recorded on the application forms or on the allotment sheets. Where several certificates in the name of the holder are consolidated into one certificate, the numbers can be recorded in the share register.

Stock Exchange Requirements

The following stock exchange requirements apply where an official quotation for the shares is desired. The share certificate must:

(1) State the authority under which the company is constituted.

(2) If registered, bear a footnote stating that no transfer can be registered without production of the certificate. (This is a precautionary statement only and does not prohibit the company in proper circumstances, e.g. where the certificate has been lost, from registering a transfer without production of the certificate.)

(3) If there is more than one class of share in issue, bear, preferably on the face, a statement of the conditions conferred thereon as to capital and dividends.

(4) If an application is to be made to deal in units of stock, state on the top right-hand corner the amount of the stock and the number and denomination of units represented by the certificate.

(5) When applicable, state the minimum amount and multiple thereof in which the stock is transferable.

As regards 'autographic' signatures, stock exchange requirements are that a share certificate shall bear the signatures of one or more directors and the secretary; the signatures may be either autographic or, if the articles so permit, may be mechanically applied. If they are mechanically applied, the method of their application must be controlled by the auditors, transfer auditors, or bankers of the company.

The following are (1) a specimen article and (2) a specimen board resolution:

Specimen article

(1) Every certificate shall be issued under the seal of the company and shall bear the signatures of at least one director and the secretary, and every such signature shall be autographic unless there shall be for the time being in force a resolution adopting some method of mechanical signature which is controlled by the auditors, transfer auditors or bankers of the company, in which event the signatures of a director and of the secretary (if authorized by such resolution) may be effected by the method so adopted.

Specimen board resolution

(2) That the affixing of the common seal of the company to the ordinary share certificates to be issued in consequence of..... be attested by the mechanical signatures of director A.B. and of the secretary.

(To be concluded.)

Shares represented by certificate			Transfers					
Number of shares	Distinctive numbers		Date	Transfer number	Number of shares	Distinctive numbers		Transferee
	From	To				From	To	

Reverse side of share certificate

STUDENTS' DINNER IN LEEDS

The annual dinner of the Chartered Accountant Students' Society of Leeds was held at the Griffin Hotel, Leeds, on January 19th. The President, Mr T. L. Waring, B.A., F.C.A., was in the chair.

The toast of 'The Chartered Accountant Students' Society of Leeds' was proposed by Mr J. Dundas Hamilton, a member of the London Stock Exchange. In a witty speech he said he was very honoured and flattered to have been asked to come and propose the toast. In the correspondence with the secretary, he had received a copy of the profit and loss account of last year's dinner. This had showed the expenditure on the guests. 'I immediately accepted the invitation,' he declared, amid laughter.

Mr Hamilton went over the qualities required of a chartered accountant, and told the students they were very wise in their choice of profession. This was an age when qualifications mattered. Once qualified, there opened to them a wide field.

'When you survive those years of qualification you really have something rightly to be proud of' he added.

He urged those students going into industry to take the great opportunity of spreading sensible methods. 'From an investment point of view, you are the sole arbiters of facts and figures on which we base our judgments,' he declared. 'Boards of companies believe their accounts should give away as little as possible.'

Over the next decade, he hoped there would be seen a breakdown of this practice so that all relevant figures should be disclosed. 'In this way, we can see what part of the company is prospering and where 'the meat' lies.'

The Parker Report

The response was made by the President, Mr T. L. Waring, who said that during the past year the publication of the Parker Report was an event of supreme importance to chartered accountant students.

'Whether you agree with any or all of the report, it must be apparent to every student that you and your problems are very much in the minds of the Council of the Institute,' he said.

Mr Waring paid tribute to the Students' Committee and, in particular, to a special committee for the immense amount of time spent upon the report since its issue.

The Parker Committee's work had already been commented upon in the correspondence columns of *The Accountant*, and the views of the Council of the Institute would be known at a later date.

Mr Waring expressed regret, 'on a purely domestic matter', about the fact that social functions were invariably well attended, but such was not the case at lectures and meetings.

A reason advanced quite strongly was a certain diffidence amongst students to ask for time off to attend lectures, since they felt this put them under an obligation as though they were asking a favour.

He was amazed at this, and said there were no grounds for such an attitude of mind so long as the request was made within a reasonable time before the lecture. He added:

'We have, however, achieved our share of successes in the Institute examinations, and I would, in particular, like to congratulate the following members. In the Intermediate examination in November 1960: Mr H. Fox (seventh certificate of merit), Mr John Mordy, our secretary (seventeenth certificate of merit), and Mr E. Birdsall (twenty-first certificate of merit).'

The toast of 'The Guests' was proposed by Mr W. H. J. Mordy, honorary secretary of the Society.

Discussing the aims of a students' society, Mr Mordy said that lectures, visits and social activities helped to broaden the outlook of the potential accountant.

Breadth of Vision

It was this breadth of vision, the ability to understand the other man's point of view, that was becoming more and more important in commercial life. He went on:

'I appeal to those principals present not to allow their articled clerks to become so concerned with the passing of their examinations, important as this is, that they lose interest in all outside activities.

'A students' society exists to help solve this problem; to enable students to meet one another away from the atmosphere of the office; and to learn to deal not only with problems, but people.'

Mr Mordy looked forward ten to fifteen years when he hoped to see the introduction of a completely new system of training chartered accountants.

'I hope advantage will be taken of the increasing facilities for full-time education, to enable the student to spend two years learning the theoretical side of his profession before spending three years in his professional office,' he said.

As techniques advanced, there was becoming less and less work which a sixteen-year-old, straight from school, could understand.

Responding, the Lord Mayor of Leeds, Alderman P. A. Woodward, spoke of the vital part played in the economic structure of the country by the accountant.

A response to the toast was also made by Mr Geoffrey Hirst, T.D., M.P. for Shipley, who said that the Government should have pursued their pay pause policy with both greater courage and conviction and a greater measure of fairness.

The pause should have been 'right across the board,' he said. That was, not only in wages and salaries for all, but in dividends and rents also.

This should have been effected by legislation limited to a specific period, and would have given a widely acceptable degree of fairness as well. Mr Hirst added:

'By such means, we would now have gained some real benefit, whereas the Government's policy seems to me to have angered as many people as it could – to achieve as little as possible.

'Some pretty clever work will now be required through the economic development council, or otherwise, if the economic front is to be held against fresh inflationary pressures.'

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

In re Roberts' Settlement Trusts

In the High Court of Justice (Chancery Division)
February 26th, 1959 [not previously reported]
(Before MR JUSTICE VAISEY)

Income tax – Settlement – Discretionary trust – Settlor or wife a possible beneficiary – Variation to avoid income tax – Finance Act, 1958, section 22 – Variation of Trusts Act, 1958, section 1.

This was an application for the approval of the Court of an arrangement under section 1 of the Variation of Trusts Act, 1958, for the variation of a charitable trust under a settlement, by the addition of a clause excluding the settlor or his wife from taking any benefit under the settlement, so as to avoid the trust income being treated as the income of the settlor under section 22 of the Finance Act, 1958.

The charitable trust was made under a settlement, dated January 28th, 1958, and known as the 'Roberts Foundation', for the benefit of employees of the settlor or of four specified companies. The value of the trust fund was £20,000, and the gross annual income was £860.

The Court was asked to approve an arrangement whereby the settlor and his wife were to be excluded from the class of persons who might take any benefit under the settlement. The settlor and his wife were married in 1903, and were each now 75. For a short period of time the settlor had been under a service agreement with one of the companies, but he was no longer an employee of the company.

The reason for the application was that if the settlor or his wife (who might become an employee of one of the companies) could receive any benefit out of the trust fund, the income of the trust had, under section 22 of the Finance Act, 1958, to be treated as the income of the settlor for tax purposes. He could be recouped by the trustees of the charity, but that was not for the benefit of the charity. The settlor was prepared to give an undertaking as part of the arrangement that any future wife that he might take should be paid £100 a year.

The arrangement was supported by the trustees of the settlement. Any future wife of the settlor had to be looked after, but the trustees considered that the provision was in her interest, because she would get £100 a year certain for her life in lieu of a possible benefit.

The Attorney-General supported the arrangement on behalf of the charity, although, since charities were not within the class of persons to whom the Act applied, the Court was not asked to approve it on behalf of the charity.

Mr Justice Vaisey said that he approved the arrangement proposed, and agreed to by the trustees, subject to the undertaking on behalf of any future wife of the settlor.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS CLUNIE & SCOTT, Chartered Accountants, of 7 Melville Crescent, Edinburgh 3, announce that as from January 1st, 1962, they have assumed as partners Mr R. F. HAIG, C.A., and Mr G. C. ELLIS, C.A., who have both been members of their staff for some years. The name of the firm will remain unchanged.

MESSRS COOPER BROTHERS & Co and COOPERS & LYBRAND announce that they have opened an office at 18 Jonker Street, Malacca, Malaya.

MESSRS W. ELLES-HILL & Co, Chartered Accountants, of 50 Gresham Street, London EC2, announce with deep regret the death, on January 14th, 1962, of Mr WILLIAM DAVID SCOTT, M.A., F.C.A., who had been a partner in the firm for many years.

MESSRS FINNIE, ROSS, WELCH & Co, Chartered Accountants, of Bow Bells House, Bread Street, London EC4, announce with great regret that Mr FRANK CHARLES SQUIRE PARKINSON, C.A., one of the partners in the firm, died suddenly on January 12th, 1962.

MESSRS GOLDWYN BROS & Co, Chartered Accountants, of 88/90 Temple Chambers, Temple Avenue, London EC4, announce that Mr JOHN HARRY BERMON, A.C.A., has been admitted to the firm as a partner.

MESSRS HAMILTON, PRINGLE, FARRANT & Co, Chartered Accountants (South Africa), Southern Life Building, 90 Main Street, Johannesburg, announce that Mr STANLEY GRAHAM CHILVERS, C.A.(S.A.), who has been with the firm for several years, has been admitted as a partner from January 1st, 1962. The name and style of the firm remain unchanged.

MR W. J. KENNY, F.C.A., announces that he is now practising at Dashwood House, Old Broad Street, London EC2, in association with Messrs R. S. WALDRON, F.C.A., and R. G. CHANDLER, D.F.C., F.C.A., partners in GREENSLADE & Co, Chartered Accountants, who have acted as his consultants for some years.

MESSRS NEWTON & Co, Chartered Accountants, of 63 Temple Row, Birmingham 2, announce with deep regret the sudden death of one of their senior partners, Mr M. B. HANCOCK, F.C.A., who had been associated with the firm for over twenty years. The practice will be carried on by the remaining partners.

The partners of the London and Iberian firms of TURQUAND, YOUNGS & Co announce that Mr F. G. CLINTON, B.A., A.C.A., has been admitted to the partnership in Gibraltar. Mr CLINTON served his articles with the firm in London and has been manager in Gibraltar since 1957.

Appointments

Mr H. E. Hill, F.C.A., has been appointed chairman of Darnall Industries Ltd.

Mr F. E. Hay, D.F.C., F.C.A., has been appointed a director of Consolidated Main Reef Mines Estate Ltd and City Deep Ltd, and has become chairman of the former company.

Mr D. Horn, F.C.A., has been appointed a director of Argus Press Ltd.

Mr H. M. Jones, O.B.E., F.C.A., has been appointed a director of Clayton Dewandre Holdings Ltd.

Mr E. H. Walker, F.C.A., A.A.C.C.A., A.C.W.A. has been appointed group chief accountant of B.S.A. Tools Group Ltd.

Mr F. J. Hussey, M.A., B.COM., A.C.A., has been appointed secretary of Pharaoh Gane & Co Ltd and its United Kingdom subsidiaries.

Mr T. C. Kirk, A.C.A. and Mr H. F. Judd, A.A.C.C.A., have been appointed to the board of Semtex Ltd.

Mr Dennis W. Stone, A.C.A., has been appointed secretary of Wolsey Ltd.

OBITUARY

Richard Turner Golding

We have learned with regret of the death on January 12th in his ninetieth year of Mr Richard Turner Golding, who was a member of The Institute of Chartered Accountants in England and Wales for sixty-four years until his resignation in 1958.

Mr Golding was born in Litherland, Liverpool, on July 22nd, 1872, and served his articles with the firm of Banner Spencer & Co, at 4 Cook Street, Liverpool. He passed his Final examination in January 1894 and was admitted an associate of the Institute on February 7th, 1894, being elected to fellowship in 1920. In 1899 he commenced in practice at 41 North John Street, Liverpool, where he remained until his retirement at the end of 1955 when his practice was incorporated with that of Stead, Taylor & Stead.

P. D. LEAKE RESEARCH FELLOWSHIP

The P. D. Leake Trust, founded under the will of the late P. D. Leake, F.C.A., invites applicants for a P. D. Leake Research Fellowship. An announcement appears in the classified advertisement section on page VI of this issue.

The fellowship is for one year beginning in October 1962, and it may be held in one of the three universities – Birmingham, London or Oxford. Accountants who are members of United Kingdom accountancy bodies recognized for the purposes of United Kingdom company law are eligible.

The object of the fellowship is to provide university facilities for research in subjects with which the accountancy profession is directly concerned, within the charitable object of the Trust, namely, 'to benefit and advance the sciences of accounting and of political economy, including the subject of public finance and taxation'.

The emoluments are £2,000. The fellow will be required to do full-time research; opportunities will be afforded to him to take a part in teaching or seminar work.

Further particulars may be obtained from the Assistant Registrar (Commerce and Social Science), The University, Birmingham 15, to whom applications should be sent by April 30th, 1962.

COMPANY INVESTIGATION

Chartered Accountant Appointed Inspector

Mr E. R. Nicholson, F.C.A., partner in the firm of Peat, Marwick, Mitchell & Co, is one of two inspectors appointed by the Board of Trade under section 165 (*b*) of the Companies Act, to investigate the affairs of Johore Para Rubber Co Ltd and F.M.S. Rubber Planters Ltd. Quotations for the two companies were suspended by the Stock Exchange in 1959.

CALCULATION OF APPRENTICES' EARNINGS

Regulations published by the Minister of Pensions and National Insurance last week[1] prescribe the rules by which the earnings of apprentices (which term includes articled clerks) are to be calculated for family allowances purposes when the provisions of the Family Allowances and National Insurance Act as to apprentices qualifying for family allowances come into effect on April 3rd. The regulations provide that a number of expenses may then be deducted from gross earnings for the purpose of the earnings test for eligibility for family allowances. They include the cost of travelling to and from work, the employee's share of the national insurance contribution, the cost of books, instruments, tools and equipment, protective clothing and trade union subscriptions or other dues, which the apprentice incurs for the purpose of his full-time training.

Where the apprentice has to live away from home, the extra cost of his board and lodging, and reasonable travelling expenses for visits home will also be taken into consideration.

Other regulations[2] will safeguard the position of claimants entitled to national insurance benefit for an apprentice when the new family allowance provision comes into force, and whose national insurance benefit would otherwise be affected by the change in the rules. These transitional provisions secure that the benefit of such claimants will not be reduced on account of the change in the apprenticeship rules so long as their existing title otherwise continues.

BUILDING COST INFORMATION SERVICE

The Cost Research Panel of The Royal Institution of Chartered Surveyors is to establish a building cost information service. A pilot scheme has been launched and is confined at this stage to chartered quantity surveyors who are principals in private practice or the public service. The Cost Research Panel considers that there are special problems in the collection of information on building costs as distinct from the supply of other professional data.

The service is a two-way exchange of information on building costs between chartered quantity surveyors: it is intended that members should provide data from their own resources and in return receive the information made available by all. It is proposed that there will be a regular distribution of information to subscribing members, thus enabling them to build up a manual of cost data. The annual subscription will be ten guineas, to cover the operating costs of the service.

The terms of reference of the pilot scheme are:

(i) to facilitate the exchange of cost information between members;
(ii) to issue cost data to meet immediate needs;
(iii) to investigate the problems of presenting cost information to meet the long-term requirements of members;
(iv) to initiate and continue discussion with bodies affected by the release of cost data; and
(v) to report on the problem of co-ordinating and disseminating cost information.

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Conference on Information for Management

A residential conference on 'Information for management' and a 'management decisions game' is to be held from April 12th–14th, at New College, Oxford, by the London and District Society of Chartered Accountants. The three-day conference will be under the chairmanship of Mr Brian A. Maynard, M.A., F.C.A., A.C.W.A., and will be opened by the Vice-President of the Institute, Mr P. F. Carpenter, F.C.A.

Two papers will be presented, the subjects and speakers being: 'Improving management accounting in the small business', by Mr N. R. Bellwood, F.C.A., British Transport Commission, and 'Long-term planning', by Professor A. Goudeket, chief internal auditor, Philips Group, Holland. Group discussions will follow each paper, while on Friday afternoon, April 13th, a plenary session in two parts will be held covering both papers.

A particularly interesting feature of the course will be the management decisions game which will make use of an electronic computer. Friday evening will be devoted to a briefing session and the first round of decisions for the game. The whole of Saturday will be spent continuing the game with the use of IBM 7090 and 1401 computer systems at the IBM Data Centre, Newman Street, London. Coaches will take members from New College to Newman Street.

We are asked by the Secretary of the Society, Mr J. W. G. Cocke, T.D., M.A., F.C.A., of 2 Norfolk Street, London WC2, to say that any interested member who has not yet applied to attend the course, should do so without delay.

REVENUE PAPER

Hilary Sittings, 1962

In addition to those noted in our issue of January 20th, the following case has been set down for hearing in the House of Lords:

C.I.R. *v.* Littlewoods Mail Order Stores Ltd.

SEVENTY-FIVE YEARS AGO

FROM The Accountant OF JANUARY 22ND, 1887

A Weekly Note

THE Syllabus of the Manchester Accountants' Students' Society for the coming session, a copy of which appeared in our last issue, contains a fixture indicating a slight departure from the range of matters which have usually formed the subject of papers and discussions of that and similar bodies. On the 7th prox. Mr. C. R. Trevor is to give "Some Notes on Commercial Statistics, with special reference to the Cotton Trade." It appears to us, and we have in the past freely and frequently expressed the opinion, that the examination and study of statistics is a branch of knowledge which the daily work of accountants should eminently fit them to pursue with usefulness and success. It is, for instance, probable that any useful and practical amendment of the Companies' Acts would be immensely facilitated were it possible to arrive more closely than has yet been found practicable at statistical *data* of a kind which on a recent occasion was fully discussed in these columns. Proper statistics would throw light on many things which are now debated as matters of opinion, which, unfortunately, it seems, will never become other than matters of opinion, but which it should be possible to decide almost as matters of fact. In Manchester, as in London, there are numbers of accountants who are members of the Statistical Society. We trust that by their presence, and the expression of their views, they will help to make this meeting a profitable one. The ordinary members of the Society, it is hoped, will also endeavour to attend a lecture which, it may be safely predicted, will not fail to be useful and interesting, and to a report of which we shall ourselves look forward with interest.

THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

Results of Examinations held in November 1961

The places and prizes in the Final examination have been awarded on the combined results of both parts where the concluding part has been passed in either May 1961 or November 1961.

FINAL EXAMINATION

First Place, 'Arthur Collins Memorial' Gold Medal and the Institute Prize of £10 10s
Ball, Dennis Geoffrey, Comptroller's Department, London C.C.
(Passed Part B in May 1961 and Part A at a previous examination)

Second Place and Prize of £5 5s (bracketed equal)
Fielding, Frank, Borough Treasurer's Department, Accrington (now Borough Treasurer's Department, Macclesfield)
(Passed Part B in May 1961 and Part A at a previous examination)
Pearson, Derek, District Audit Department, Ministry of Housing and Local Government
(Passed Part B in May 1961 and Part A at a previous examination)

Fourth Place and Prize of £2 2s
Radley, James, Borough Treasurer's Department, Rotherham
(Passed Part B in November 1961 and Part A at a previous examination)

Awarded the 'Electricity' Prize of £6 6s for the highest marks of candidates from the Electricity Supply Industry
Barnes, Frank Whitaker, Chief Accountant's Department, South Eastern Electricity Board
(Passed Part B in May 1961 and Part A at a previous examination)

PART A

Awarded the 'John Elliott Memorial' Prize of £10 10s for Advanced Accountancy
Noble, Michael James, Treasurer's Department, Bedworth U.D.C.

Awarded the 'Philip Howes Memorial' Prize of Books to the value of £10 10s for Local Government Finance
Latter, Leslie William, Comptroller's Department, London C.C.
(Passed Part A in May 1961)

Awarded the 'H. R. Ralph' Prize of £10 10s for Auditing
Rippington, Trevor, Deputy Finance Officer, Swindon and District H.M.C.
(Passed Part A in May 1961)

Inland Revenue Report

DISCUSSING the report of the Radcliffe Committee in a leading article in our issue of August 29th, 1959, we said that the very strong plea for more information and statistics made by that report was to be welcomed and might well be the major positive contribution that the Radcliffe Committee had made. One body which has responded to that plea is the Board of Inland Revenue whose 104th annual report was published last week (Cmnd.1598, H.M.S.O., price 10*s*). Table 126 in Appendix V to the report is a completely new departure. It sets out the estimated wealth of individuals in Great Britain in 1960, and covers over eleven million males and over eight million females. One of the remarkable facts which this table shows is that a greater value of British quoted Ordinary shares are owned by women than by men: 627,000 men owned £3,780 million worth; 617,000 women owned £3,812 million worth. The grand total of net wealth, however, shows a somewhat different picture: the eleven million men owned assets worth £29,979 million, while the eight million women owned assets worth £21,636 million.

The Board is very modest about this table, pointing out that it is subject to wide margins of error. It is arrived at by sampling from the estates on which a first payment of estate duty was made during 1960, and figures for the living are arrived at by using the mortality rates of the time. The figures begin with some 275,000 deaths out of 600,000, the omissions being those where no property was left or no grant of representation was necessary. The report points out that errors can arise from using deaths as the basis of sampling the population. The dying, for instance, are less likely to have need for cash than others. Moreover, the marked seasonal pattern of deaths gives undue weight to the prices of stock exchange securities ruling in the winter months.

Some assets are omitted altogether because they are exempt from estate duty: these include immovable property abroad, settled property on the death of a surviving spouse, purchased annuities ceasing on the death, and the like. On the other hand, life policies on the deceased are, of course, taken at their full value on his death, although as long as the policy has not matured its market value is much less. This table represents a welcome departure by the Inland Revenue and will certainly be of value in many fields.

When reviewing the Inland Revenue's 103rd report on February 4th, 1961, we criticized the retention of £2,000 as the normal exemption limit in respect of surtax, in the face of the progressive deterioration in the value of money. We pointed out that, by

March 31st, 1960, assessments had been made for 1958–59 on no less than 346,642 surtax payers. The new report shows that by June 30th, 1961, this figure had increased to 373,799. By that date 378,669 surtax assessments had already been made for 1959–60. Of this number, 155,407 taxpayers had an income of £3,000 or less, which considering the present purchasing power of the pound sterling, is hardly riches. The decision made last April in effect to raise the exemption limit where there is earned income was therefore very timely. Of course, the surtax revenue can be expected to go on increasing until the collection of the 1961–62 surtax begins. At that point, particularly in view of the fact that earned income assessed to surtax greatly exceeds investment income, one can look to a sharp decline in surtax collection, unless there is further inflation or an industrial boom.

Not less interesting than the statistics of wealth given above are the statistics as to high incomes. Among the surtax assessments made for the year 1959–60 (up to June 30th, 1961), there were sixty on persons whose assessed income exceeded £100,000. Another fifty-seven individuals had incomes between £75,000 and £100,000. For the tax year 1958–59 the corresponding figures were sixty-six and thirty-four. The reduction in the standard rate of tax from 8*s* 6*d* to 7*s* 9*d* in the year 1959–60 without any corresponding increase in surtax rates, lowered the top rate from 18*s* 6*d* to 17*s* 9*d* and must therefore have produced a very substantial increase in net incomes for persons in these very high ranges. On the other hand, persons having incomes of this order can command so much in the way of avoidance schemes, if only by changing their country of residence, that to some extent the income tax and surtax become voluntary taxes. Nevertheless, the fact remains that from the sixty people in the 'over £100,000' group, no less than £5·2 million was collected in surtax.

The income tax statistics show that for 1960–61 the number of persons actually charged to income tax increased to 19,200,000 from 18,500,000 in the previous year. This follows an increase of half a million in each of the two previous years and we feel that the time has come to raise the exemption limits still further, so that small amounts of tax do not have to be computed and collected from a very large number of people. The Inland Revenue have already been criticized for unremunerative administration, particularly in the field of Schedule A. From the small amounts of tax which have to be assessed and collected from large numbers, one must deduct the time and trouble caused in the issue and completion of income tax return forms. It would be far better, if it is necessary, to make up the modest amount of revenue lost, by some slight increases in indirect taxation.

Although the increase in the number of successful criminal prosecutions for taxation offences has been the subject of comment, the total figures are still extremely low. The prosecutions for false accounts and returns of income actually fell in 1960–61 from twenty-one to fourteen. Only fourteen prosecutions as against the vast number of returns and accounts which are submitted to tax offices indicate a very satisfactory state of affairs. However, the fact that all the prosecutions for these offences succeeded, indicates that criminal proceedings are not taken unless they are practically certain to succeed. The doubling of the prosecutions for false claims for personal allowances (sixty against thirty-one in the previous year) is perhaps purely fortuitous. The fact that sixty is the high record over the last ten years, may have some connection with the fact that personal allowances now obtain for surtax as well as income tax.

As last year, the report contains a ten-year table of income from abroad, accompanied by notes of explanation. As the report says, in view of the interest in the country's balance of payments problems, income from abroad is of particular significance. The figures for distributions by overseas trade corporations show a very marked increase – from £22·5 million to £54·3 million.

The amount of post-war credits still outstanding fell in the year from £367 million to £343 million. The total number of persons who shared the £24 million payment was 460,178.

The rise in the number of companies paying profits tax was resumed in the case of accounting periods ended in the year 1959–60, the total being 68,500. The total chargeable profit assessed for those accounting periods was £2,940 million, as against £2,715 million in the previous year. The net tax collected, after double tax relief, was £267 million. In the previous year, when the old two-

tier system was still in operation, the net tax was £239 million. The Budget estimate for 1961–62 is no less than £325 million, thanks to the two large increases in the flat rate in 1960 and 1961.

In the estate duty statistics included in the report, a number of changes designed to give more information about the composition of estates of deceased persons have been made. Information is now given about estates of net capital value of £3,000 and below, on which, of course, no duty is normally payable. The analysis of property has been made more detailed, and a new table extends the analysis by showing its distribution between males and females and within age groups. Duty was paid in the year on two estates of over £2 million each, while another seven estates exceeded £1 million; one of them being in Scotland. Needless to say, these nine estates represented a very small proportion indeed of the total number of estates of persons who died during the years – no more than ·01 per cent. Of the 281,300 estates, 205,381 were under £3,000; another 52,755 were under £10,000, which is not a very large sum, considering the fall in the purchasing power of the £ sterling.

Stamp duties on share transfers showed a marked decline in 1960–61; from £55·9 million to £45·7 million. The only other striking change was an increase from £13·1 million to £16 million in the stamp duties on conveyances of land; this may reflect the rapid rise in house property values. The yield of the duties on non-life insurance policies declined further this year, mainly owing to the changes in rates.

There have been some changes in the published extra-statutory concessions of the Inland Revenue details of which are given on another page.

Hospital Consultants' Tax Assessments

LAST July the House of Lords decided in *Mitchell v. Ross* (40 A.T.C. 199; *The Accountant*, July 15th, 1961, page 65) that part-time consultants in hospitals were assessable under Schedule E on their emoluments, and that expenses attributable to such an appointment were deductible for tax purposes only if they complied with Schedule E rules. This decision was given on certain test cases and followed a long period of dispute and litigation, during which there has been some accumulation of loose ends. An agreed statement has now been published in the *British Medical Journal Supplement* dated January 27th, following discussions between the British Medical Association and the Inland Revenue.

The decision does not cover fees for lecturing (other than lecturing in teaching hospitals under the ordinary terms of the appointment) or fees for outside domiciliary consultations undertaken for a hospital board by which the doctor is not employed. These fees will continue to be assessable along with the doctor's other earnings under Schedule D.

Subject to certain special arrangements, the Inland Revenue have agreed not to apply the decision retrospectively where the hospital emoluments have hitherto been included only in Schedule D assessments; the change to Schedule E will be made for the tax year 1962–63, and P.A.Y.E. deductions will start in April 1962 accordingly. The Schedule D assessments for 1962–63 et seq. will be exclusive of the fees assessed under Schedule E. Equally the decision as to the deductibility of expenses will be applied as from 1962–63.

The special arrangements referred to above are made necessary to ensure uniform tax treatment of arrears of pay resulting from the recommendations of the Pilkington Commission. If a part-time hospital doctor has been taxed under Schedule D on a cash basis and does not elect to spread back the arrears, then separate Schedule E assessments will be made on those arrears for the years to which they relate. If these arrears have already been included in the 1961–62 Schedule D assessment, this assessment will be adjusted in order to avoid taxing the same income twice. This will presumably be done notwithstanding the embargo imposed (under £50 penalty) by section 50 of the Income Tax Act, 1952, on altering assessments otherwise than on appeal. The Inspector of Taxes will send a written explanation to each person affected in this way.

On Compiling Company Reports

ONE of the requirements of attractive financial accounts is that they should be at the same time comprehensive and concise. However complex the company, the year's transactions have to be neatly classified in a series of near-standardized statements occupying only a few pages. These simplified annals must give the large institutional investor all the information he requires in a language readily understandable by the small private investor. It is a difficult task and recourse is often made to diagrams and illustrations in which rows of little men, bags of cash and coins and segmented circles serve to bring home the message to the uninitiated with no esoteric knowledge of high finance. The chairman's statement, too, has become increasingly a medium for giving supplementary facts and forecasts which cannot suitably be incorporated within the framework of the accounts themselves.

The technique of presentation of reports and accounts has developed in recent years to the point where there is much competition between companies to serve up information in a manner new and arresting but without loss of dignity. We like to think that the annual awards initiated by this journal have contributed towards this healthy trend as have, also, enlightened legislation and the activities of professional and kindred bodies. A comparative new-comer to the ranks of the latter is The Society of Investment Analysts, formed in 1955 to provide coherence to the individual efforts being made to raise the standard of investment analysis in the United Kingdom. To coincide with the first European Congress of Financial Analysts, held in France last month, this body produced a booklet on the subject of company reports and their contents.[1]

The Society strongly advocates that greater use should be made of the chairman's address as an explanatory guide to 'results, policy and prospects' and suggests that it should be given pride of place in circulated reports and accounts. Arguments against prior circulation of the chairman's comments are that quick changes in the political or economic climate may render them out of date before the general meeting takes place and that, if shareholders already know in advance what the chairman is going to say, the meeting becomes more than ever a formality. The Society counters these objections by pointing out that the chairman may modify or supplement his printed address at the meeting.

Dealing with the presentation of the accounts themselves, the Society would like to see included (*a*) the trading account, so that the company's position might be more accurately appraised; (*b*) the profit and loss account of a holding company which trades itself; and (*c*) summarized accounts of any important company a substantial proportion of whose shares are held as a trade investment. A number of companies do give some or all of this information although there is at present no statutory compulsion to do so.

As regards the profit and loss account, the Society echoes the Cohen Committee's view that this section of a company's accounts is at least as important as the balance sheet since the trend of profits best indicates its prosperity and the value of the assets depends largely on its continuance as a going concern. Among the recommendations it makes are that full depreciation on a replacement basis should be charged against profits (the 'historical' proportion and any appropriate 'extra' provision being itemized separately) and that details of the composition of the tax charge should be given, the material effect of the postponement of liability due to initial allowances being adequately reflected therein.

The Society's comments on the balance sheet are designed to bring into sharper relief the liquid position of the company and the shareholders' equity. It plumps boldly for the inclusion of what is commonly known as 'future income tax liability' in the 'capital of the business', a policy which is by no means unanimously adopted in practice and one which companies with two-sided balance sheets often avoid by describing the item as a deferred liability and placing it between the capital and reserves (not totalled) and the current liabilities.

Validation of an Imperfect Trust

by SPENCER G. MAURICE

A trust deed or other instrument may declare the objects for which the property is to be held or applied in such terms that it is open to the trustees to use the property either exclusively for charitable purposes, or otherwise. In such a case the trusts will normally fail altogether if they suffer from some mischief, such as uncertainty or perpetuity, fatal to non-charitable (though not to charitable) trusts. The object of the Charitable Trusts (Validation) Act, 1954, is to validate certain instruments of this kind taking effect before December 16th, 1952, and the effect of the validating provisions is to strike out of an instrument within the Act the non-charitable purposes which are declared thereby. The administration of the Act has proved difficult and the cases show that the judges tend to place a fairly wide interpretation on its provisions. Sometimes, as in the case of Re Mead's Trust Deed, discussed below, the result is a radical change in the effect of the provisions in the trust instrument. The result may be significant from the point of view of rating relief, when, as in that case, the trust property comprises land.

AN interesting sequel to the case of *Isaacs and Others v. Market Bosworth Rural District Council* ([1960] 1 All E.R. 433) is *Re Mead's Trust Deed, Briginshaw and Others v. National Society of Operative Printers and Assistants and Another* ([1961] 2 All E.R. 836). The earlier case was a successful appeal by the rating authority from a decision by the justices that an organization conducted for the benefit of the members of a trade union was entitled to rating relief under section 8 (1) (*a*) of the Rating and Valuation (Miscellaneous Provisions) Act, 1955. Section 29 (2) and Part I of the Fifth Schedule of the Rating and Valuation Act, 1961, repeal section 8 of the 1955 Act as from the coming into force of the first valuation lists issued under the 1961 Act, and sections 11 and 12 of that Act substitute for the relief given by section 8 new provisions for the reduction and remission of rates payable by charitable and certain other organizations. The new system of relief is founded largely on the recommendations contained in the report of the Committee on the Rating of Charities and Kindred Bodies (the Pritchard Committee) (Cmnd. 831).

Purposes of the Trust

The trust deed, dated September 27th, 1920, which gave rise to both cases by clause 1 declared that the trustees were to stand possessed of certain land which had been conveyed to them as a site for a memorial home to perpetuate the memory of those members of the National Society of Operative Printers and Assistants who had lost their lives in the First World War, and clause 2 elaborated on the purposes of the trust by expressing the intention that the home should ultimately be (i) a sanatorium for consumptive patients who were members of the society, (ii) a convalescent home for members of the society recovering from illness of any kind, and (iii) a home for aged members of the society who were no longer able to support themselves by working at their trade and for the wives of such members. The main objects of the society were those concerned with conditions of employment and industrial disputes, but other objects included the provision of superannuation for old members and the provision and maintenance of a convalescent home. The trusteeship provisions of the 1920 deed were altered by a supplemental deed dated December 6th, 1948, and in the result the management of the trust property by the trustees was under, and subject to, the direction and control of the executive council of the society.

The trustees consisted of four officers of the society, the president, the general secretary, a trustee chosen by the members of the society by ballot, and a trustee being a member of the society appointed by resolution of the executive council of the society. Taking into account the provisions of the two trust deeds, the constitution of the trustees, the rules of the society and evidence of financial support by the society of the homes which had been established – a convalescent home and a home for aged retired members of the society and their wives – the Divisional Court of the Queen's Bench Division found that the trust property was occupied for the purposes of the society, and accordingly that a case for rating relief had not been established.

Nature of the Trusts

As the Divisional Court took the view that the land was occupied for the purposes of the society, and it could not be suggested that the objects of the society were charitable or otherwise concerned with the advancement of social welfare, the claim for relief failed *in limine*, and the Court was not called upon to decide whether, if the land could have been said to be occupied for the purposes of the trust, as distinct from the purposes of the society, those purposes would have qualified for relief. In *Re Mead's Trust Deed*, however, the trustees of the trust deed by originating summons applied to the Court for the determination of the question whether or not the trusts were charitable.

Cross, J., said that a sanatorium for consumptive patients, a convalescent home and a home for aged persons who were unable to support themselves were clearly charitable objects. On the other hand, the fact that purposes are basically charitable is not necessarily enough; thus it is well settled that a trust for the benefit of persons employed by a particular company is not (save in the exceptional case of a trust for the relief of poverty) charitable: see, for example, *Oppenheim v. Tobacco Securities Trust Co Ltd* ([1951] 1 All E.R. 31), a decision of the House of Lords. What is necessary to satisfy the requisite of public benefit which (save in the poverty cases) is the essential of a charitable trust, is that the beneficiaries should constitute a section of the public. Cross, J., said that he always found very difficult the question whether or not the common characteristic which was shared by a number of persons was or was not such as to make them a section of the public, and not a fluctuating body of private individuals, adding that there appeared to be no principle by reference to which it could be answered.

It is the case that a trust for the benefit of all the persons employed in a certain industry in a certain place is good if its objects are charitable, although a trust for the benefit of the employees of a named company engaging in the industry in question and being the only employer so engaged in that place is not; in spite of the fact that in such a case the membership of each class of beneficiaries is in fact precisely the same. The presence or absence of charitable status may thus turn entirely on the way in which a deed is drawn. On this basis, a trust for the members of the printing industry may be charitable, but his lordship pointed out that a man may be engaged in the printing industry without being a member of the society which constituted the *nexus* of employment in the case before him, and in this respect membership of the society resembled employment by some large company which employed most but not all of the persons engaged in the industry in question. His lordship found that the considerations which led Lord Simonds in the *Oppenheim* case to hold that the employees of a company, however numerous, could never form a section of the public for the purpose of the law of charity applied equally to a trade union. The learned judge said that he would have been of the same opinion even if all the funds had been provided by non-members; e.g. by employers in the industry. In fact, however, a large part of the funds came from the society and its members: the element of self-help loomed large, and this, as Lord Greene, M.R., had pointed out in *Re Hobourn Aero Components Ltd's Air Raid Distress Fund, Ryan and Others v. Forrest and Others* ([1946] 1 All E.R. 501), was a factor to be borne in mind in cases of this kind.

The Poverty Element

Of the three objects to which the trust deed referred, one, the home for aged members of the society who were no longer able to support themselves by working at their trade and for the wives of such members, had this characteristic, not shared by the sanatorium and the convalescent home, that it contained an element of poverty. In this connection it is to be observed that in the law of charity the meaning of 'poor' is more or less relative, and that 'poverty' does not necessarily mean destitution: see, for example, *In re Clarke, Bracey v. Royal National Lifeboat Institution* ([1923] 2 Ch. 407). References to old age and widowhood are commonly taken to import poverty in the legal sense and, at all events, Cross, J., was satisfied that persons who were admitted to the home for aged members of the society must necessarily be poor.

Trusts for the relief of poverty have long occupied a peculiar place in the law of charity, since they alone can qualify as charitable without the need for public benefit in the ordinary sense of that term. Thus trusts for the benefit of poor relations of the settlor have for more than two centuries at least enjoyed the privilege of charitable status. By analogy the principle of the poor relations cases has been extended to include trusts for necessitous employees of a company and their dependants, the earliest reported case apparently being *Gibson and Another v. South American Stores Ltd (Gath and Chaves)* ([1949]

2 All E.R. 18; [1949] 2 All E.R. 985 (C.A.)). Harman, J. (as he then was), at first instance expressed the view that a public element was always necessary to make a trust legally charitable, and that the explanation of the poverty cases was that a much narrower object might in them be considered to work a public benefit than in the other categories of charitable trusts. In the Court of Appeal, however, Sir Raymond Evershed (as he then was), M.R., said that he was not to be taken as adopting the learned judge's view of the explanation of the poverty cases, saying that it might be that such cases must simply be regarded as a well established anomaly.

Process of Validation

Having found that the members of a trade union were not a section of the public so as to satisfy the normal requirement of public benefit in a charitable trust, Cross, J., in *Re Mead's Trust Deed*, went on to consider whether, as one of the purposes of the trust before him was the relief of poverty, and so not dependent on the presence of public benefit, at least in the ordinary sense, the trust was validated by the Charitable Trusts (Validation) Act, 1954. That Act, which saves for charity certain trusts contained in instruments taking effect before December 16th, 1952, provides that any 'imperfect trust provision', that is, any provision declaring the objects for which property is to be held or applied and so describing them that, consistently with the terms of the provision, the property could be used exclusively for charitable purposes, but could nevertheless be used for purposes which are not charitable (section 1 (1)), contained in any such instrument shall (subject as in the Act provided)

> 'have, and be deemed to have had, effect in relation to any disposition or covenant [within section 2] –
>
> (*a*) as respects the period before the commencement of this Act, as if the whole of the declared objects were charitable, and
>
> (*b*) as respects the period after that commencement as if the provision had required the property to be held or applied for the declared objects in so far only as they authorize use for charitable purposes' (section 1 (2)).

A disposition or covenant to make a disposition is within the Act if, apart from the Act, it is invalid, but would be valid if the objects were exclusively charitable (section 2 (1)); but the Act does not apply if, prior to December 16th, 1952, property which was to be held or applied for objects declared by an imperfect trust provision, has, by reason of the invalidity of its disposition for those objects, been paid or conveyed to, or applied for the benefit of, the persons entitled to it by reason of the invalidity (section 2 (2)).

A Curious Result

While the general purpose of the Act is clear, the difficulty of interpreting and administering it is witnessed by the cases on it which have been before the Court. These cases indicate a tendency on the part of the judges to place a fairly wide interpretation on the Act's provisions. Thus in another recent case, *Re Wykes' Will Trusts, Riddington v. Spencer* ([1961] 1 All E.R. 470) (*The Accountant*, August 12th, 1961, page 212) Buckley, J., treated as an 'imperfect trust provision' within section 1 (1), and therefore validated by section 1 (2), a bequest to the directors of a company of a fund 'to be used at their discretion as a benevolent or welfare fund or for welfare purposes for the sole benefit of the past, present and future employees of the company'. His lordship's *ratio decidendi* was that the relief of poverty – the only application of the fund which would be legally charitable, as the *nexus* of benefit was employment by a company – came within the term 'welfare purposes', and he rejected the view that an 'imperfect trust provision' must declare the objects of the trust in such a form as to include by express reference some legally charitable purpose as well as other non-charitable purposes.

In *Re Mead's Trust Deed*, Cross, J., considered *Re Wykes' Will Trusts*, on which counsel for the Attorney-General, seeking to show that there was a charitable trust, relied, and observed that he was being asked to perform in regard to the trust deed before him an operation far more drastic than that performed by Buckley, J., in the earlier case. 'A benevolent or welfare fund', said Cross, J. ([1961] 2 All E.R. 842),

> 'is closely akin to a trust for the relief of poverty. If Mr Wykes had been told that the form of words which he had chosen was open to objection and had been advised expressly to confine the potential beneficiaries to poor persons, he would very likely have agreed without hesitation. In the same way the difference between a trust for charitable purposes and a trust for charitable or benevolent purposes, though very great in law, is very small from the point of view of the intentions of the settlor or testator. But to confine the potential beneficiaries of this trust to poor members of this society would almost certainly be contrary to the intentions of those who provided most of the money to build the convalescent home and have provided

and are providing most of the money for its maintenance. There are probably not many printers who are 'poor persons' within the meaning of the law of charity, and the result of the change would be drastically to cut down the number of members of the society who could qualify for "convalescent benefit".'

His lordship was, however, satisfied that the validating provisions of the Act applied, curious though the result was. He rejected an argument put forward by counsel for the society (which wanted to recover the trust property and start again) that the definition of an 'imperfect trust provision' as a provision declaring the objects for which property was to be held or applied, and so describing them that, 'consistently with the terms of the provision', it could be used exclusively for charitable purposes, was an obstacle in the way of the Attorney-General, though if the words in question had been 'consistently with the spirit of the provisions' his lordship would have agreed. He also rejected an alternative argument, adopting the approach taken by the Divisional Court, that the trustees were under an obligation to carry out the orders of the executive council and that there was really no trust for any purpose other than the purposes of the society. His lordship pointed out that the executive council was intended to act in a fiduciary capacity so far as the trust property was concerned, and, had the trust been valid apart from the Act, would not have been competent to direct the trustees to hand the trust property over to the society. 'The truth is', said his lordship (ibid.),

'that the society, in order, I suspect, to obtain fiscal advantages, sought to dress up what was, from the common-sense point of view, part of its own property as an independent charitable trust. The so-called trust as declared was invalid, but the society can hardly complain if Parliament steps in and validates the trust by twisting its provisions into something which is contrary to the society's wishes. The society is clearly hoist with its own petard.'

He accordingly declared that the trust had been validated by the Act, and that, as from July 30th, 1954, when the Act came into force, the trust property had been held by the trustees for the benefit of those members of the society only who were from time to time poor persons and, in the case of the home for the aged, retired members and their wives.

The Accounting World

NEW ZEALAND

Accountant's New Government Appointment

MR D. C. SNEATH, M.P., F.P.A.N.Z., F.I.A.N.Z., A.A.C.C.A., has been appointed Minister without portfolio in the New Zealand Government's recent Cabinet re-shuffle. Formerly Under-Secretary for Finance, Mr Sneath studied at Edinburgh University and has been a member of The Association of Certified and Corporate Accountants since 1937.

Senior partner in the firm of Sneath & Aston, Registered Accountants, of Taumarunui, he was first elected to Parliament in 1954 and successfully contested the Waitomo seat in the 1957 and 1960 general elections, having in the last a majority of 3,951 votes. In his new appointment, Mr Sneath will retain responsibility for the Inland Revenue Department.

NETHERLANDS

Death of Veteran Accountant

THE Dutch nation, as well as the accountancy profession in the Netherlands, has lost an outstanding personality in the recent death of Prof. Dr. Th. Limperg, Jr., at the age of 81.

Professor Limperg was one of the profession's pioneers. He had been a member of the Nederlands Instituut van Accountants since 1904 (an honorary member since 1922), and for many years he was chairman of its board of examiners. It was under his direction and through his influence that the Institute's rules on professional activities were first drawn up in 1909; and the revision and extension of these rules, as well as the new code of ethics, introduced in 1946 under the presidency of Mr J. Kraayenhof, were the work of a committee presided over by Professor Limperg. He was a firm supporter of the establishment of regulatory legislation for the profession in the Netherlands and he was a leading member of the committee appointed by the Institute to study such legislation.

The Faculty of Economics at the University of Amsterdam was established largely on Professor Limperg's initiative and it was during the period from 1922 to 1950, when he held the position of professor of business economics in the Faculty, that his influence and talent in this field became known and recognized internationally. The theory of replacement value especially was studied and developed by him, and the fruits of his genius have had a stimulating effect on the economy of the Netherlands and more and more are receiving well deserved attention in other countries.

Professor Limperg's outstanding qualities led him

to membership of various committees instituted by the Netherlands Government and in the business world where his memory will long be held in high esteem. In 1950 he received the (American) Wallace Clarke Award in his capacity of Honorary President of the Comité International de l'Organisation Scientifique (C.I.O.S.).

UNITED STATES

'Cash Flow' Analysis

'CASH flow' – net income after adding back expense items, such as depreciation, which do not use funds – is the subject of the second study under the American Institute's new accounting research programme, and Dr Perry Mason, C.P.A., associate director of the research programme, summarizes the conclusions and recommendations in the December 1961 issue of the *Journal of Accountancy*.

The inclusion of a well designed comparative funds statement in the annual report is recommended as a practice to be generally accepted. It should be regarded as a major financial statement and covered by the auditor's short-form report. The breadth of scope and concept of funds should make it a report of all financial management operations, not merely a reconciliation of cash or working capital. The aim should be to disclose and emphasize the more important financial events, with interpretative comments.

Great care should be taken to avoid the impression that depreciation and other such adjustments are sources of funds. It is suggested that the best way is to begin with adjusted net income under the heading 'Funds provided from operations', showing the details in a footnote.

In a consolidated funds statement the aim should be to present the combined financial operations as if a single unit were involved. Hence the significant net income figure is the consolidated net income before deducting any minority interest. Dividends to minority shareholders should be combined with dividends to parent company shareholders.

Growth of the American Institute

MR LOUIS H. PENNEY, C.P.A., in the same issue, tells the story of the American Institute of Certified Public Accountants in this, its Jubilee year. Today all the States, the District of Columbia, the Commonwealth of Puerto Rico and the Virgin Islands have the same C.P.A. examination on the same day, and all but one use the uniform grading service of the Institute. Such an achievement on a voluntary basis is, he suggests, without parallel.

Looking into the future, Mr Penney foresees the development of sections within the Institute each to provide some segment of the membership with specialized services or information. The sections would provide additional research and literature, to be paid for by the section members interested in the subjects rather than from the general funds of the Institute. An ever increasing portion of the C.P.A.'s work is now in areas separate and distinct from the professional audit. His integrity and competence will be recognized more and more in all these fields.

CANADA

International Responsibilities of Accountants

IN his address to the annual meeting of the Canadian Institute, Mr J. A. Wilson, C.A., the retiring President, said that Canada has a responsibility for encouraging the development of professional accounting organizations in other countries, with a willingness to share experiences and technical developments. He pointed out Canada's favoured position for participation in these developments as the melting pot of British and American accounting thought. He thought the Institute might give serious study to ways and means of permitting students of other countries to train in Canada or how to provide them with training material.

Mr Wilson urged that it was the duty of the profession to inform the Government as to the damage to international trade through one-sided legislation under a Combines Act not in line with the requirements of Canada for growth and development. There must be a distinction between being independent and being negative. Other countries are sending people to Canada to develop subsidiaries and it is the duty of the accounting profession to help them to success.

BELGIUM

Tax Reform Bill

A BILL to reform the tax system has been published in Belgium. It provides for a single income tax in substitution for various taxes on different types of income at varying stages which now obtain. At the same time the scope would be widened to include certain occasional earnings which hitherto have escaped tax.

For individuals the proposed rates are 17½ per cent on the first Frs 160,000, rising to a maximum of 55 per cent on the slice above Frs 5 million, with an overriding maximum of 50 per cent of total income. There would be an exemption limit of Frs300,000 for a taxpayer with eight or more dependants, with a sliding scale for fewer dependants. Also proposed is a joint assessment of husband and wife, with a 40 per cent deduction of the wife's contribution. The allowance of a deduction of the previous year's tax will be discontinued, and the automatic expense allowance without proof, hitherto given to salaried taxpayers, is to be reduced if the Bill is adopted.

Companies would pay 30 per cent on their profits, plus 5 per cent of undistributed profits exceeding Frs 5 million. Where profits are distributed, part of the tax on them would be credited to the shareholders, but there will be a deduction of tax from part of the dividend.

Financial Control of Fixed Assets

by R. W. F. RICE, F.C.A.

THE financial control of fixed assets is undoubtedly a subject which is not receiving the attention it merits. Since the Second World War accountants have given their main attention to the creation of standards and budgets to be used as yardsticks in the control of revenue and expenditure. The expression of a company's policies and plans in the form of standards and budgets has become more and more exact and more scientific over the years. The principles of accounting by responsibility have similarly been developed at a fast pace by means of proper charting or coding of accounts. Financial results are now being presented to boards of directors and to all levels of management in such a manner that each executive is receiving only those figures for which he is directly responsible. At the same time each set of figures is part of a comprehensive and integrated whole. Management accounts, as these have come to be known, build up the operating performances of a company in such a form that the overall health of the company's operation and the detailed strengths and weaknesses of the various individual departments can be gauged at all times.

Similarly, cost accountants have worked closer and closer with financial accountants until the time has been reached when financial and cost accounts are thoroughly integrated. Integration, in this sense, does not mean that cost accounts and financial accounts are reconciled nor that the differences between the two can be explained; on the contrary, it means that both the financial accounts and the cost accounts are being built up from precisely the same set of original data and that any costs – for instance of a process or a product – can be identified within the overall financial structure of the company.

In the whole field of a company's selling, manufacturing and distribution operations there is now a close financial control which, by comparing results with the company's original plan, and explaining the reasons for the variances that arise, has enabled not only financial and cost accountants but also managers to understand when, why and to what extent their plans have not been realized. This in its turn enables remedial action to be taken or if this is impossible then the company's plans can be readjusted to meet the changed situation.

An Unpalatable Truth

Yet another field in which financial accountants, or as they have now come to be known financial controllers, have directed their attention is that of return on capital employed. The unpalatable truth, brought home so rudely by take-over bids, that a company may be steadily progressing both in terms of sales and in terms of increasing net profit and yet may still not be producing a proper financial return on the assets which it is using has caused financial controllers to re-examine their overall profits in the light of the assets they are employing from time to time. Whenever any new investment is contemplated the profit which it is anticipated it will produce is calculated to show if possible a reasonable and adequate return on capital.

With this introduction it may be wondered, perhaps, what is left for controllers and auditors to have a look at; but I would now like to make my main point and that is, that with most leading companies in the country having reached the position already outlined, it is no longer sufficient for a company to look at its overall return on capital employed but it must begin to look at each of its various processes and products to see whether each in itself is contributing a fully adequate return on the capital employed by the company in that part of the business.

Precise Identification

In order to carry out this object, a closer and more detailed financial control of fixed assets than is generally found, becomes necessary. As a first step a precise physical identification of assets must be available. It is no longer sufficient to have schedules of the numbers of each type of asset held; on the contrary, it must be possible to identify each and every asset held by a company. Each piece of plant and equipment and each building, and sometimes parts of buildings must be identifiable with the asset records kept by the company. In order to carry out this identification satisfactorily, the company's assets must be subdivided into suitable general classifications, and individual types of equipment must be given standard names or definitions. Each general classification and each individual definition should be coded, thereby avoiding lengthy descriptions, reducing the chance of error and assisting analysis. Within each classification each individual asset must be numbered numerically and the whole code number must appear both on the asset itself and in the records.

At this stage, then, the company knows precisely what classifications and types of assets it holds and can physically identify each individual asset within each of the classifications. With this situation in being the internal audit department is in a position to carry out a checking operation between the assets which the company has acquired as shown by its records,

Paper presented to the London Chapter of the Institute of Internal Auditors.

and those which physically exist in its possession. By this check the management know the extent to which its assets are being misappropriated, abandoned or lost.

This, however, is still not sufficient for our purposes because it is important that management should know not only that its assets exist but also their location. The records must show the area or point at which each asset is located and therefore the manager who is responsible for its maintenance and upkeep.

Lastly, it is necessary to know to what use the particular asset is being put at any moment in time. The uses to which a company puts its assets can probably be sufficiently identified by indicating in the records the cost centre which each asset is servicing.

So far, it may be thought that all I have said is very elementary and hardly worthy of expression, but I think many will be surprised if they re-examine the administrative controls and physical identification of their company's assets to find how often even these most simple requirements are not being properly fulfilled. It is definitely not easy to start a system for proper control of assets in the way I have described, although once the usual objections against change have been overcome the operation of the routine procedures need not be difficult. Basically it is necessary that each new acquisition of an asset is identified and codified in the way described, and similarly disposals or sales (and this includes scrap or loss of assets) must be duly authorized and recorded. The control procedures must also cover any movement in the location of an asset, and the manager responsible for accepting the individual asset from another location must be fully aware that he now becomes responsible for that particular item. Similarly if there is a change in user, the records must be suitably amended to show that the item is no longer being used in the original way but has been transferred to another use. If, once the proper controls are functioning, any asset should be either lost or misused, this should be regarded as a most serious state of affairs and the manager responsible will have clearly to understand that a dereliction of duty has taken place.

Asset Values

Having completed the work of codification and the introduction of control procedures the company should know that all its assets are still in existence, where those assets are located, which managers are responsible for them and to what uses they are being put.

The next step is to incorporate in the records the value of each individual asset, but I do not wish in the course of this short paper to enter upon the thorny problem of what constitutes the value of an asset. I would only like to make the comment that there may not be any one value which satisfies all the requirements of management. I would like to suggest, therefore, that a company should at least have permanently recorded the original cost value of each asset and that serious consideration should also be given to recording the current replacement value.

Careful thought will also have to be given to the subject of depreciating the company's assets and charging such depreciation as an item of cost. My own view on depreciation is that the necessity for it is caused solely by the fact that most fixed assets have a longer useful life than the conventional accounting period of one year. The expenditure incurred on an asset cannot be fully written off in the year of acquisition and therefore an attempt has to be made to spread the cost over the anticipated lifetime of the asset.

Depreciation

There are, of course, many different ways of calculating depreciation but except where there are other good causes I am personally in favour of taking the most simple solution of spreading the total cost of the asset concerned in even amounts over the anticipated number of years life of the asset. This method, of course, assumes that the company is obtaining equal value from the work done by the asset throughout the whole of its life; but if, on the other hand, the useful work to be done by the item concerned is anticipated to diminish over the years, then it might reasonably be argued that the earlier years should bear a higher proportion of the cost of depreciation. I also feel strongly that the number of years' anticipated life for each asset should be based on the normal natural life of the asset concerned and not any other criteria, such as a management decision to use the asset for a shorter length of time. By this I mean, for example, that if the natural life of an asset is estimated to be five years but that it is management's intention to replace that asset with a more up-to-date model after only three years, my own view is that the depreciation should still be based on a five-year life and that management in taking the decision to dispose of the asset after three years must realize that in doing so they are scrapping or selling off an asset which still has a life and a value equal to 40 per cent of the original total, and this fact should be appreciated when considering such a change.

From the financial point of view, the natural life of an asset should in fact be estimated to terminate at the moment when the operational cost of running a new asset of the same type and capital cost would be less than the present operational cost including all relevant factors such as interest on capital, depreciation, routine maintenance, repairs, cost of spare parts, breakdown costs, lost production time, product losses, loss of quality, etc. If this point is passed and the company does not replace the asset concerned, then it should be clearly understood by management that in fact it is no longer running at the most economical level. I should like to make one last point on the subject of depreciation and that is that the life of many assets calculated in this manner will be much shorter than is generally realized.

It will be apparent, then, that control of a company's fixed assets requires care and thought in the correct recording of information. The best system is a ques-

tion for each company to decide for itself, but I would like to make the point that whatever system is chosen it should be unitary. By this I mean that a separate card should be maintained for each individual asset. These records can be either in the form of cards prepared manually or by typewriter, or alternatively in the more sophisticated form of punched cards. Records kept on punched cards have the advantage that tabulations which can be used for checking purposes or for any review of a company's asset position by its management can be prepared with very little trouble on a tabulator. Whatever form of record is used, however, should maintain the principle of flexibility and it should then be a simple task to make the necessary entries correctly and with the minimum of work.

Adequacy of Spare Part Stocks

At this point I would like to deviate a little and say a few words on the subject of engineers' spares. As depreciation and the running costs of plant and equipment become higher and higher in proportion to a company's total operating expense, so the importance of ensuring that plant does not break down and fail to give the required production, is becoming a subject to which management is giving more and more attention. One of the resultant steps that has been taken by many companies is to set up a quite large and fully stocked store of spare parts and even spare equipment and motors, so that in the event of a breakdown or failure of a part, that part can be replaced immediately without having to wait for outside suppliers to deliver.

In some ways, the methods of controlling the contents of an engineers' store are the same as those for any other store; but there are, however, certain additional important matters that require attention. First of all, there must be the usual form of stock record showing, for each part held, the balance of stock in hand, the parts received, the parts issued and the parts on order from outside suppliers awaiting delivery. The manager in charge of the engineers' store must also be constantly studying the pattern of usage and weighing the cost of holding stock against the cost of being unable to replace a faulty part immediately. Having established the number of weeks or months usage required to be held in stock for each part, the manager in charge must constantly be reviewing these levels to see that the numbers held in stock are neither excessive nor too few for the company's purposes.

Another factor which is sometimes forgotten is that the parts themselves should be strictly related to the machines on which they are used; the effect of this simple statement is quite obvious, namely, that if a particular machine or type of machine is withdrawn from use permanently then all the spare parts related to that machine are no longer required and are surplus. The company's system of recording must therefore incorporate within it the automatic notification to the manager in charge of the spare parts store of any withdrawal of a machine from use, the introduction of any new type of machine (together with specifications of the spare parts required) and thirdly, any change of specification within a machine which is still in use. If each of these control factors is not properly incorporated within the company's records then the situation arises where spare parts are concontinuing to be held which might possibly never be needed again, and indeed it is even possible for further parts to be ordered after the requirements for that particular part have ceased altogether. The opposite can also happen, namely, that despite management's best inentions to have a supply of spare parts always available to meet breakdowns and faults, nevertheless if the control procedures are not properly introduced it may still be possible that when the breakdown occurs the required part, or parts, may not be available.

I have sometimes been asked whether a company should incorporate within its costs, allowance for depreciation of engineers' spare parts. On the whole, I am inclined not to allow depreciation of this type, mainly for the reason that a spare part not in use is unlikely to be depreciating due to normal wear and tear. However, if this is not the case and the spares for any reason are subject to depreciation then this factor should be allowed for within the company's costs. It is, however, important that the manager concerned should be aware of the interest on the capital tied up in the spare parts, and also – and this can be a most important factor – the cost being incurred by the company due to having to sell or scrap spare parts no longer required. Especially where a company is in an active phase of development and constantly renewing and modernizing its equipment, this aspect of the cost of spare parts surplus to requirements can be very large. The position is made worse by the fact that it is most difficult to sell off surplus spare parts. Sometimes special arrangements can be made with the supplier of the parts concerned, and the buying department when placing orders for further supplies should consider at that time the possibility that the company at a later date may wish to dispose of, or sell back, to the supplier some proportion of the parts purchased. If a suitable arrangement can be made with a supplier it may in fact help to minimize future losses.

Profitability

I should now like to return to my main theme of keeping a financial control on fixed assets. I am, of course, referring to the return or profit on the capital employed, not only by the company as a whole, but within its separate main constituents. We now have the means available to express the profit made by each of the company's main products or processes in the form of a percentage return on the capital employed in that section of the business.

There is little doubt that the first time this exercise is done the results will be most surprising. It will almost certainly be found, for instance, that the

differences in profitability between the various sites, locations and processes in which the company is concerned will be very considerable. Having obtained the return on capital from the various constituent sections of the business, it is then most important that appropriate action should be taken to review prices, costs, methods of production and distribution, marketing techniques and all the other aspects of running a business to bring into line those parts of the business that are not producing a proper return. Similarly, if the return on capital for any part of the business is found to be exceptionally high, careful review of the reasons for this situation should be made in order to make sure that a dangerous situation is not building up for the future whereby a competitor will be able to seriously undercut the company's products.

At this stage it will be found that there are certain assets in use on which there are apparently no direct profits. I am, of course, referring to such assets as a head office administrative block, research laboratories, car parks, bicycle sheds and many of the other necessary assets that have to be held by the company in order that it can function in modern society. There are two ways of dealing with such assets and the methods are exactly the same as those used for indirect costs, namely, firstly those unremunerative company assets can be apportioned to the profit-making assets before the return on capital is calculated. Or secondly, they can, metaphorically speaking, be set on one side and not be included in the calculations, in which case it must be realized that the return on capital that is required from the remaining productive assets must, of course, be higher to compensate for the fact that some assets have not been included in the calculation.

Conclusion

This then, briefly, completes my main thesis which can be stated very simply, namely, that most companies should be devoting more of their attention to the proper physical and administrative control of their assets so that at all times they know what assets they possess, what they cost, what their present value is and where, and for what purposes they are being used. Please do not think from what I have said that I regard the points I have covered as including the last word on the subject of financial control of fixed assets. On the contrary, the whole subject is a comparatively young one and much research and development remains to be done. In particular, none of what I have said should be construed as preventing the need for special studies on the desirability of modernizing equipment, thereby obtaining faster production or better quality goods, or lower costs. Nor should anything I have said be construed as preventing the need for constantly watching the course which the company is taking and whether any changes in course are necessary. The need to be watching and comparing the results achieved in the use of the company's assets against the plans which were set, and taking such actions as may be necessary should form one of managements chief functions.

For their part, accountants and auditors must always be watching, from the information available, for the possible ineffective use of the company's capital or resources. To give one simple example, I would like to quote to you the true story of finding, after the introduction of a simple form of financial control on fixed assets, that some plant which had been stored and set aside in a special building in case it might possibly be required again in the future was found to have an annual cost in the form of rent, upkeep and interest on capital which was equal to three times the actual value of the plant. Needless to say, instructions were immediately given that the plant should be sold off, which simple step by itself produced a saving of several hundred pounds per annum.

To summarize the points I have made therefore:

(1) Classify all the company's assets into suitable types or groups.
(2) Codify these types.
(3) Physically identify each and every one of the company's assets.
(4) Ensure that the company's administrative records agree fully with the assets in fact held.
(5) Ensure that procedures are introduced which will ensure control on the acquisition, disposal, movement or change of user of each of the assets.
(6) Ensure that at all times a manager is responsible for every one of the company's individual assets.
(7) Ensure that the company's records of each asset include the value and depreciation charged against the asset, and also ensure that these records are kept simple and up to date at all times.
(8) Make sure that spare parts are properly stored and controlled and that the quantities of each spare part are being constantly reviewed so that there is neither too much money tied up in the stock of spare parts, nor that there are too few spare parts to adequately cover breakdowns.
(9) From the information available constantly watch the return on capital employed in the various sections of the business, and take such action as may be necessary to avoid the development of unfavourable trends.

Finally I would urge most strongly that what I have said should not be treated as an academic subject but that accountants should take a fresh look at the means of control of fixed assets in their own companies and when having this fresh look to attempt to approach the matter from the point of view of a financier, for it is by such an approach that so many forced take-over bids have been effective in recent years. I would submit, therefore, that every company should be constantly watching the proper financial use of all its assets in order that at all times it is making the best possible use of all its resources.

Weekly Notes

COMPANY DIRECTORS AND THE BUDGET

A LETTER from The Institute of Directors to the Chancellor of the Exchequer contains some plain speaking about the present tax system and its administration. It strongly urges the setting up of a departmental committee to make a complete investigation into estate duty.

As regards the coming Budget, the letter urges the grant of depreciation allowances for commercial buildings which do not qualify as industrial buildings. Special mention is made of the improvement schemes which the Offices Act, 1960, will make necessary and of the lack of provision for tax allowance. Not surprisingly, the Schedule E expenses rules come in for castigation. They are described as unrealistic in the light of the modern business world. All expenses reasonably incurred for the appropriate performance of the duties ought, in the Institute's view, to be allowed.

The letter makes the interesting point that the favourable treatment now accorded to earned income in relation to surtax will encourage directors of family companies to take out more in the way of remuneration and correspondingly less in dividends. Payments of remuneration do not rank as a distribution of profits in the eyes of the Special Commissioners when they are considering surtax directions. The Institute thinks that they should be instructed to take a more liberal attitude in this respect.

ASSENT TO WHAT?

THE news that the T.U.C. Council has accepted the Chancellor's invitation to join his proposed National Economic Development Council is to be welcomed, if only because it means that the impasse in the current negotiations between Mr Lloyd and the unions has been broken. Whether the T.U.C.s association with the N.E.D.C. betokens a new approach to the problems confronting the United Kingdom economy is another matter.

In its letter of acceptance, the T.U.C. stressed the difficulties of its own position, i.e. that it has no powers of control over member unions, and the weaknesses of the Chancellor's alternative proposals for dealing with the pay demands, and their implications. This was necessary, lest anyone should be so naïve as to imagine that the mere fact of the T.U.C.s participation in the N.E.D.C. will produce a workable solution. What is really disturbing to the outsider is not so much these difficulties, real though they are, but the obvious unreadiness and inability of union leadership to convince its membership that the present 'pay pause', for its all its weaknesses and injustices, is at least an attempt to provide a short-run palliative to inflation. Sooner or later the rank and file will have to be told that jobs are not held as of right, they have to be earned; just as the fact that the market is prepared to pay one group of workers 5 per cent more for staying in a particular job does not mean that it is prepared to pay the same increase to every other section of labour.

With the best will in the world, it is hard to believe that the Chancellor's new body will contribute greatly to the formulation of a realistic policy. Recent events make it evident that the absence of independent members is a fundamental mistake for which, in the long run, the consumer will pay; always assuming that the N.E.D.C. does not follow the earlier Committee on Prices, Productivity and Incomes into oblivion.

MANAGEMENT PLAY

AN interesting development in the use of drama in industry has recently taken place. This is the presentation of a play to 'put over' the advantages which may be derived from an O. and M. investigation. Called *The Rainbow Story*, the play tells of the reorganization of the office of Rainbow Paints Ltd, fictitious manufacturers and suppliers of paints. Faced with a situation where office records were behind schedule, overtime was the rule rather than the exception, deliveries were late, and customers' complaints about invoicing and delivery mistakes were numerous, the management decides to carry out an O. and M. investigation. In five short scenes the problem is analysed, and the solution is found and implemented.

The play was written by members of the staff of Associated Industrial Consultants Ltd, and it has been produced before management audiences in Edinburgh and Stirling. It has now attracted attention in the United States, and the Stanford Research Institute of the International Industrial Development Centre, California, has asked for a copy of the script. The play is to be produced before management groups in California and the script reproduced as an appendix to the Institute's forthcoming manual.

NEW EUROPEAN EQUIPMENT LEASING SERVICE

PLANS for extending the new service of equipment leasing into Europe were announced last week by Hambros Bank Ltd, Lease Plan International Corporation of New York and Cofinindus, S.A., of Brussels. They have jointly formed a new Belgian corporation called Locabel, S.A., to engage, initially, in the leasing of equipment and vehicles to commercial and industrial companies. Locabel will be a similar company to the Equipment Leasing Co Ltd

(Elco) formed last August (*The Accountant*, September 2nd), and it is expected that, like Elco, it will offer its facilities to selected manufacturing companies to complement their sales activities, as well as leasing plant and vehicles direct to industrial customers in the normal way.

Locabel management has been trained in American leasing methods by the staff of Lease Plan International Corporation, and Locabel's European backers will provide the company with a strong introduction to local manufacturing communities. It is anticipated that Locabel and Elco will be the first of many new leasing operations concentrated, initially, in the principal European and Common Market countries.

Since the formation of Elco, the company has already had an encouraging success. Within the few months since its formation, turnover is well in sight of the initial target of £2 million a year and it is expected that this rate will be exceeded within the near future.

HIRE-PURCHASE TERM UNENFORCEABLE

IN our issue of March 11th last we reported the Court of Appeal decision in *Campbell Discount Co Ltd v. Bridge* ([1961] 2 Q.B. 445). The defendant has now successfully appealed to the House of Lords.

Under a hire-purchase agreement made in 1959, the defendant agreed to take a second-hand car on hire-purchase for a total price of £482 10*s*, the cash price being stated at £405. Clause 6 gave the hirer an option to terminate the hiring at any time, whereupon clause 9 was to apply. Clause 9 provided, *inter alia*, that if the hiring be terminated for whatever reason the hirer should forthwith pay all arrears plus, 'by way of agreed compensation for depreciation', a further sum which would be sufficient to bring the hirer's total payments up to two-thirds of the hire-purchase price. After paying a deposit and one instalment the defendant wrote an apologetic letter to the hire-purchase company saying he was unable to continue the payments. The company sued him for £206 3*s* 4*d* under clause 9, as well as taking back the car. The Court of Appeal rejected his plea that the £206 was a penalty for breach of contract and therefore unenforceable, on the ground that he was not in breach but had simply exercised the clause 6 option.

The House of Lords has now held, according to *The Times* of January 26th, that the defendant's letter did not amount to the exercise of the clause 6 option but was merely an intimation of breach of contract. On that footing, the provision in clause 9 was clearly a penalty in that while it purported to be for 'depreciation', the amount payable under it actually grew less as the car grew older. The case was remitted to the County Court with a direction to assess what damages, *if any*, were payable by the hirer to the company on the basis that (1) the hirer had not exercised the clause 6 option; (2) the hirer was in breach of contract; and (3) the sum claimed under clause 9 was not payable. The hirer was also awarded his costs in the House of Lords and in the Court of Appeal as from the date of issue of a civil aid certificate on August 8th, 1960.

The opinion was expressed in the House of Lords that even if the hirer's letter had constituted an exercise of the clause 6 option, the sum payable under clause 9 would nevertheless have been unenforceable. The purported agreement to pay compensation was a mere sham, the reality was that the company was stipulating for the interest on its money even if the money was not outstanding.

It is clear that lawyers who draft the small print on hire-purchase contracts will have to tax their ingenuity still further if their clients are to avoid the stringent provisions of the law designed to protect the weaker parties to contracts.

IMPROVED OUTLOOK FOR EXPORTS

IMPROVED export markets for British goods were forecast by the President of the Board of Trade at the end of last week. His remarks more or less coincided with the announcement that the first stage of the 'pay pause' would end in March. It is apparent that the Government is somewhat more optimistic about the economic outlook than it has been since the early part of last year.

Mr Erroll looked forward to a slow improvement beginning soon. He was rather less optimistic about the market in countries producing primary products but he looked forward to an impetus for British exports from the continuing trade recovery in the United States. Presumably it is also thought that there will be a further significant expansion in the market in western Europe after the current slight pause. Certainly, it is the prospect of the share in this last market which this country could obtain on fair trade terms which is behind the haste to proceed with negotiations on the European Common Market.

The European Common Market talks are about to enter their second and crucial phase. Over last weekend the West German Minister for Economic Affairs, Dr Erhard, said that he thought this country could be inside the European Economic Community by the beginning of 1963 and a call to make this the target date has also been put out by a group of German industrialists. But for 1962, this country will have to try to expand its exports into the E.C.M. without any help from tariff disarmament.

UNEMPLOYMENT AT 2 PER CENT

It is almost two years, twenty-three months to be exact, since the level of unemployment in this country came within sight of 2 per cent. In each Ministry of Labour region there are more people looking for jobs than there are jobs requiring applicants. Unfilled vacancies in early January were at their lowest since May 1959. The gap between unemployed and unfilled vacancies has risen suddenly to over one-quarter of a million. Last year at this time unemployment was at 1·9 per cent.

Some of the increase in workless is due to the severe weather at the end of December and in early January. The building trades have been particularly affected. This would perhaps account for the fact that the largest increase in unemployment last month was in London and the south-east, an area which, along with the west Midlands, has for long been particularly immune from lack of work.

There have also been signs this winter that the lack of jobs has begun to affect the young age groups now coming on to the labour market for the first time. There was an increase of 12,000 in the number of unemployed school leavers in December and early January. The largest increases were in the Northern Region, North-western Region, Scotland and in London. Particularly in the south, however, it does not seem likely that this will be more than a passing phase.

USING MARKET RESEARCH

A SAMPLE survey made by the British Institute of Management recently, indicates that only half as much is spent in relation to turnover on market research by companies making industrial equipment as by those making consumer goods. These results, says the Institute, must be interpreted with caution because the sample making returns on the questionnaire were small.

Nevertheless, the difference of attitude on this subject between makers of industrial products and those making consumer goods is well known. Whereas few large manufacturers in the final consumer market now put out a new product without consumer research and pilot investigations, many makers of industrial equipment are prepared to 'make first and market second'. This has been particularly true of highly technical goods. Why this should be so is not easy to say. It goes back a long way to the days when there was a large craft element in manufacture and when a buyer was expected to know as much about a product as its seller. The idea has come down from those days that a good product sells itself, that the lily should not be gilded. This attitude was sound enough when this country made a large range of industrial goods without competition from other countries. Today it is less so.

Yet the 'producer mindedness' of British companies changes only slowly. It still makes sense to many concerns to risk a million pounds in a project rather than spend a thousand or two pounds finding out if a product has a market, who will buy it and at what price. Such surveys as this show clearly that this country still has a great deal to learn about knowing its market, especially abroad.

TELEVISION OF THE FUTURE?

FOR better or for worse, and opinions are clearly divided on the point, at least two and probably three bodies are destined to transmit to our television screens what to the 'culture vultures' is no more than the 'opium of the masses', or what to the liberty-loving individualist merely reflects majority preferences in the matter of programmes. It will be for the Pilkington Committee on broadcasting to decide – subject to Government approval – the organization of our future television industry, but the latest Hobart Paper from The Institute of Economic Affairs[1] leaves no doubt as to where its authors think the choice should lie. 'Somehow, the majority must continue to be allowed to watch what it likes . . . in conditions where increasing provision is made for more discriminating viewers', conclude the three authors; which is merely another way of saying that we should be preserved from another Reith who knows what is good for the public.

The authors make out a good case for their individual preferences and succeed at the same time in giving the lay reader quite a lot of useful background information about the economics and history of television. This is also its main weakness for the lay reader because, for all its occasional efforts at objectivity, there is never any doubt that the authors are making out a case. Among its thought-provoking suggestions is the proposal that the B.B.C. should take advertising to obtain the necessary finance for the improvement of its programmes, while the viewer should be allowed to apportion half of his £4 licence fee between the television companies according to his preferences.

Refreshing in these days of conformity as the proposals of the three authors undoubtedly are, at least one commentator feels that they have nowhere fully recognized the full implications of their policy. Television programmes are not, at least they should not, be aimed solely at selling soap powder. Nor is it enough to make 'some provision' for the minority. The real answer is to improve public taste. This could be done by a transformed television service.

INSPECTOR'S REPORT ON BUILDING SOCIETY

THE final report of the inspector appointed by the Chief Registrar of Friendly Societies on February 3rd, 1961, to examine the affairs of Lloyds Permanent Building Society was published by H.M.S.O. (price 3*s*) last Wednesday. This final report is intended to be read in conjunction with the inspector's interim report published on February 24th, 1961 (*The Accountant*, March 4th, 1961).

The inspector comments on the administration of the society following his interim report and discusses in further detail the transactions involving the former chairman and associated company. The final report includes an approximate statement of the assets and liabilities of the society at June 30th, 1961, which in

[1] *TV: From Monopoly to Competition*, by Wilfred Altman, Denis Thomas and David Sawers. Hobart Paper No 15. The Institute of Economic Affairs, 66A Eaton Square, London SW1. Price 7*s* 6*d*.

the opinion of the inspector represents a reasonably up-to-date and reliable assessment of the society's financial position and may be said to mark the first phase of the rescue operation that has been undertaken by the new board. This statement shows a balance surplus of over £75,000, but the inspector draws attention to problems involving the adequacy of the society's reserves. In reviewing the future prospects of the society he also draws attention to the position with regard to liquid funds. He points out that alternatives to the long-term establishment of the society as a going concern on a sound financial basis are (1) gradually to repay all the shareholders and depositors in instalments as liquid funds accrue from the repayments of mortgages or (2) to effect a transfer of engagements to another society; and he goes on to draw attention to the problems relating to each of the alternatives.

In conclusion, the inspector says that his further inquiries have added confirmation to the conclusion he reached in his interim report that this was a case of a society dominated by one man who regarded it virtually as his own private business and who was able, mainly because of the good repute of building societies in general and the offer of excessive rates of interest on shares, to obtain money from the public on an ever-increasing scale without regard to the essential interests of the investors.

This is My Life . . .

by An Industrious Accountant

CHAPTER 109

I'VE been worried recently about the behaviour of our austere and high-principled office manager, James. He's been touchy and difficult in dealing with his staff and is obviously worried. He has a sort of pent-up desperation in his look, and his hands seem shaky. So I called him in for a chat and put the question straight. What was wrong, and could I be of any help?

Strictly speaking, it was none of my business, of course; but he's on my staff, so I preferred to risk a rebuff rather than to pass by, Pharisee-like, on the other side. I was rather pompous, I'm afraid: still, accountants are traditionally as confidential as the confessional, so he could talk without reserve, if he wished.

He did, as it happened; he came clean. He stumbled a bit at first, looking anywhere but at me, then out it came. He was indeed perturbed, he said; he foresaw what was almost disaster, his life was practically in ruins; it was . . . a woman.

As president of the staff social club he has worked closely with the committee's secretary, a massive blonde comptometer operator, no longer young, known as the Hairpin. At evening meetings together they initiated several new projects, James innocently earnest, the Hairpin briskly co-operative. Now he couldn't get free of her. She visited his office regularly with club correspondence, she 'happened' to meet him on the way to lunch and joined his table; she asked him for lifts home. . . . His fingers twined convulsively as he told of the closing trap. He held nothing back; his spirit was almost broken.

I was really taken aback; this sort of problem was neither anticipated nor desired. It was typical of James's old-fashioned courtesy that he had found himself unable to be brusque or blunt; the situation would have presented no trouble to a tougher man. We eyed one another in some embarrassment; the decision must be his alone. It was difficult to advise him on his strategy . . . hearty tactlessness, broken appointments, brush-offs . . . but I did my best. A week's leave if necessary . . . cruel to be kind . . . he swallowed and nodded.

We left together for lunch and in the corridor we suddenly met the Hairpin herself, confident, possessive, in command. 'Ah, James', she beamed. 'Could you see me this evening about our Group Holidays Abroad scheme? We're offered a 10 per cent cut by the agents. You know, we'll really learn to relax and enjoy ourselves on this trip.' She pressed a sheaf of brochures into his hand; she seemed almost maternal.

For a moment a strong man's destiny wavered in the balance. Then James straightened himself stiffly and swung the axe. 'I've decided to cut that scheme altogether,' he said hoarsely. 'The orphanage (his pet social activity) has asked me to run their outdoor activities this summer. It'll take all my time . . . I'll pack up the club presidency, of course, I've wasted too much time with it.'

The victim went sickly white, but she took the blow without flinching. She even managed to stammer some banter about having a jolly time with the boys and girls, before she went on her way leaving James the victor – though he didn't look it. His face was puce, his forehead wet. I felt like a butcher myself as we parted; I thought of Wilde's line: 'so each man kills the thing he loves'. Somehow the scheme had backfired: I had the feeling that the Hairpin had been the hardest hit.

I was still feeling depressed next morning, when James came striding in with a new and masterful light in his eye. Though a trifle awkwardly, he said: 'I wonder if you'd agree to be my best man? I've changed my mind.'

So in spite of my blundering, it came right in the end. But I'll avoid well-meant psychiatry in future.

Finance and Commerce

Well Organized

HOW well the chairmen of the big steel companies organize their publicity! Or was it sheer chance that the accounts of The United Steel Companies Ltd (chairman: Sir Walter Benton Jones) were followed the next day by the accounts of the South Durham Steel & Iron Co Ltd (Mr B. Chetwynd Talbot) and by the accounts of Dorman Long & Co Ltd (Mr E. T. Judge) a day later?

Fundamentally, of course, it is to the shareholders in these companies that their chairmen report. Sir Walter, of United Steel, addresses himself specifically to the nearly 50,000 shareholders of the company. His statement, he says, is 'an endeavour to examine in every man's language the factors which may determine the prospects of steel-making in the next few years'.

Steel, of course, is one of the country's key industries; its activity has a direct bearing on the national economy; and while run by private enterprise, it is subject to control exercised by the Iron and Steel Board. So there is a very decided difference of opinion as to what, in the public and national interest, should be aired.

Under Capacity

Mr Talbot, whose South Durham accounts provide the subject of this week's reprint, shows how the industry gave its support to the creation of an Iron and Steel Board during the introduction of the 1953 Iron and Steel Act – which returned steel from public to private ownership. Up to the early months of 1959, he says, the Board and the industry worked in harmony to improve efficiency, to encourage development, and to ensure that reasonable margins were secured between production costs and selling prices for purposes of finance and avoidance of over-heavy borrowings for development purposes. But, it appears, this harmonious relationship has since 'greatly deteriorated'.

The Board, Mr Talbot says, insists that 90 per cent of potential capacity should be taken as the yardstick in assessing the prices of steel products whereas the industry is down to 75 per cent of capacity working – a position which may continue for an indefinite period.

At the end of 1960 and during 1961, the demand for steel weakened. From a record ingot production of 24,305,000 tons for 1960, the final estimate for 1961 production is 22 million tons and for 1962, it is reckoned, the figure is unlikely to exceed 21·5 million tons. The position for steel producers is worsened by the tendency of consumers to draw on stocks when demand declines. Steel stocks in this country held by consumers and merchants, points out Sir Walter, of United Steel, are equivalent to about thirteen weeks' production.

Rising Costs

While the Iron and Steel Board limits the credit side of the profit and loss account, the debit grows heavier. Mr Talbot reminds shareholders of his words twelve months ago to the effect that the Ministry of Power's 'policy of appeasement' in accepting the National Coal Board's demands for higher coking coal prices was not only of a discriminatory nature but was bound to have 'serious reflections on the earning capacity and the future competitive ability of the industry in export markets'. Then there was the fuel oil tax in the 1961 Budget (which Mr Judge, of Dorman Long, points out, put 8*s* a ton on the price of finished steel); these two 'misguided and ill-judged decisions', says Mr Talbot, put something

SOUTH DURHAM STEEL & IRON COMPANY LIMITED

Profit and Loss Account for the year ended 30th September, 1961

	1961	1960
	£	£
Trading Profit (gross)	7,063,154	8,066,717

THE NOTES ON PAGE [132] FORM PART OF THE ACCOUNTS

SOUTH DURHAM STEEL & IRON COMPANY LIMITED

NOTES

	1961	1960
	£	£
1. Emoluments of the Directors in respect of services as Executives	47,664	46,013

2. TAXATION—based on the profit for the year

Income Tax, after applying benefits from Investment and Initial Allowances	—	Cr. 205,097
Transferred to amounts set aside for equalisation of taxation	132,525	Dr. 516,237
		311,140
Net adjustment for previous years	67,475	Cr. 61,140
	200,000	250,000

3. DIVIDENDS PAID AND RECOMMENDED, less Income Tax:

Interim Dividend on 13,867,587 Ordinary Shares at the rate of 4 per cent. paid 30th June, 1961	339,756	336,969
Final Dividend on 13,867,587 Ordinary Shares at the rate of 6 per cent. (making a total distribution for the year of 10 per cent.)	509,634	673,939
	849,390	1,010,908

4. GENERAL CAPITAL RESERVE

The consolidation of the Capital Reserves and movements thereon may be seen from the following statement:—

At 1st October, 1960:			£
General Capital Reserve			256,802
Investment Allowances Reserve			4,830,000
Replacement of Fixed Assets Reserve			1,750,000
			6,836,802
Add:		£	
Surplus on purchase of 5¼ per cent. Debenture Stock		6,415	
Amount accruing from Investment Allowances in year to date		900,000	
			906,415
			7,743,217
Deduct:			
Stamp Duty and Quotation Expenses		23,021	
Plant and Machinery no longer operating, written off (net book value)		2,500,000	
			2,523,821
At 30th September, 1961			5,219,396

5. CONTINGENCIES

	£
Reserve at 1st October, 1960	403,990
Deduct:	
Costs incurred during the year in respect of starting up South Works	112,158
Amount set aside at 30th September, 1961	291,832

6. DEPRECIATION

In the year to 30th September, 1961, the Company has adopted a life of 25 years for computing depreciation on the principal items of productive Plant and Machinery. The application of this policy to assets previously depreciated on the basis of a 20 year life has reduced the depreciation charge for the year by £287,000.

7. CONVERSION RIGHTS

The holders of the 6 per cent. Convertible Second Debenture Stock who did not exercise their option to convert at 31st March, 1960 or 31st March, 1961, have an option to convert up to half their Stock into £1 Ordinary Shares at par on 31st March, in each of the years 1962 to 1964 inclusive.

8. LOANS

As security for the borrowings from F.C.I. and from Barclays Bank Limited, to a combined total of £36,000,000, the Company has issued to them debentures charging by way of floating charges the whole of the Company's undertaking, assets and property, such charges ranking in point of security after the charges securing the 5¼ per cent. Debenture Stock 1976–81 and the 6 per cent. Second Debenture Stock 1978–83.

9. SUBSIDIARY COMPANIES AND GROUP BALANCE SHEET

	1961	1960
	£	£
Investments in Subsidiary Companies comprise:		
(*a*) Shares as revalued at par value of Issued Share Capital	1,000,000	1,000,000
Deduct: Amount due by Parent Company	1,000,000	1,000,000
	—	—
(*b*) Shares, at cost	5,000	5,000
	5,000	5,000

A Group Balance Sheet has not been prepared as Subsidiary Company (*a*) has neither assets nor liabilities other than the amount due by the Parent Company, whilst the investment of £5,000 in Subsidiary Company (*b*) is represented at 30th September, 1961, by £1,824 cash at Bankers and £3,176 due by Parent Company. Neither of the Subsidiary Companies was trading during the year.

10. CAPITAL EXPENDITURE

The estimated amount of Capital Expenditure outstanding at 30th September, 1961, as authorised by the Directors, is £3,750,000.

11. CONTINGENT LIABILITIES

There are Contingent Liabilities in respect of amounts uncalled on Trade Investments principally in connection with British Ore Investment Corporation Limited, amounting to £1,023,887, and Sundry Guarantees.

like £20 million on iron and steel production costs and the additional consequential increases for electricity and other consumables added £7 million. Another £11½ million was added by the wage increase and working hours alterations negotiated twelve months ago. With other items, including the increased cost of State insurance, he puts the industry's extra burden at £40 million a year, representing a steel production cost increase in excess of 35*s* a ton.

Complexities

All three chairmen state firmly that the Iron and Steel Board is acting far too much in arrear. Mr Judge points out that the 1 per cent increase in steel prices allowed in June 1961 was far less than the higher charges for coal and labour which the industry had already been carrying for more than six months. In fact, says Mr Judge, the selling price of beams and heavy sections (Dorman Long is very much in the heavy side of the industry) is actually 12*s* a ton lower than at the end of 1959. He maintains that the Board, in restricting the June 1961 price increase, must have been influenced by the high level of trade in heavy steel earlier in the year. At the same time, the Board suggested that by speedier technological advance, the industry could reduce costs.

On that point, the Board touches the industry's price. Mr Judge maintains that the industry has consistently shown a high degree of responsibility in striving for improvement in efficiency and productivity. In the last fifteen years it has absorbed a large part of the increased cost of raw materials and higher wages.

One thing the three chairmen's statements undoubtedly do is to highlight the difficulties in overall economic planning. The Iron and Steel Board is a Government-sponsored body which has to live with State-owned enterprise such as, for example, the National Coal Board. And a coal industry credit is a steel debit.

How the price-fixing problems will be resolved, the steel chairmen would obviously like to know. What will happen if Britain enters the Common Market, which has its own coal and steel regulating authority, is an added complexity.

CITY NOTES

THIS year is already living up to the popular forecast of a year of big-scale merger and take-over operations. The Courtaulds–I.C.I., Charringtons–United Breweries, British Shoe Corporation–Saxone Lilley & Skinner, and Consolidated Zinc–Rio Tinto operations have all come about in the first month of the year.

Only the Courtaulds–I.C.I. affair has developed into a take-over 'battle' as distinct from an agreed merger. The operations have a common theme in the alleged need to establish larger units in competitive industries.

Despite the trend towards industrial regrouping in the past decade, there is, of course, room for further development on those lines and possibly at an accelerated pace. Just as increasing competition and narrowing profit margins makes any individual company look more closely at its costs, so the two factors also tend to underline an industrial view that there is probably greater safety in fewer numbers.

For the stock-markets, news of major mergers provides escape from markets which singularly fail to develop any trend for any length of time. A week of rising prices is followed by a week of falling values without, apparently, any alteration in factors underlying the market position as a whole.

Inland Revenue Extra-statutory Concessions

In Operation at December 31st, 1960

We reproduce, by permission of the Controller of H.M. Stationery Office, Appendix X to the 104th report of the Board of Inland Revenue for the year ended March 31st, 1961, showing changes in the extra-statutory concessions, the full list of which was published in the Board's 103rd report and reproduced in 'The Accountant' of February 4th, 1961. The concessions are of general application, but it must be borne in mind that in a particular case there may be special circumstances which will require to be taken into account in considering the application of the concession.

ADDITIONS TO THOSE PUBLISHED IN THE BOARD'S 103rd REPORT

INCOME TAX

35. Double Taxation Relief: Income consisting of royalties and 'know-how' payments

Payments made by a person resident in an overseas country to a person carrying on a trade in the United Kingdom as consideration for the use of, or for the privilege of using, in the overseas country, any copyright, patent, design, secret process or formula, trade-mark or other like property may in law be payments the source of which is in the United Kingdom, but are nevertheless treated for the purpose of credit (whether under Double Taxation Agreements or by way of unilateral relief) as income arising outside the United Kingdom except to the extent that they represent consideration for services (other than merely incidental services) rendered in this country by the recipient to the payer.

36. Annuities paid by approved superannuation funds

Where an annuity paid out of a superannuation fund approved under section 379 of the Income Tax Act, 1952, is, by virtue of a direction made under section 379 (2), assessable on the annuitant under Schedule E, relief for the standard rate tax which, but for the direction, would be deductible from the annuity is allowed against tax borne by the fund on its non-exempt income.

37. Capital allowances for agricultural buildings and works

For the purposes of the agricultural capital allowances under section 314, Income Tax Act, 1952, and of the agricultural investment allowance under section 16 (5), Finance Act, 1954, 'husbandry' is treated as including any method of intensive rearing of livestock on a commercial basis for the production of food for human consumption.

ALTERATIONS TO THOSE SHOWN IN THE BOARD'S 103rd REPORT

INCOME TAX

5. Maintenance of property

The part of the concession described in paragraph (*d*) was made statutory by section 72 of the Finance Act, 1960.

9. Management expenses

The part of the concession described in the first sentence of the second paragraph was made statutory by section 72 of the Finance Act, 1960. The concession should now read:

> 'Under sections 425 and 438 of the Income Tax Act, 1952, life assurance companies, etc., which are charged to tax on interest, etc., by deduction or otherwise, and not on profits under Case I of Schedule D, are entitled to claim repayment of tax on management expenses. The net annual value of premises owned and occupied for the purposes of such a business is also treated as a management expense.'

DELETIONS OF THOSE SHOWN IN THE BOARD'S 103rd REPORT

INCOME TAX

24. DOUBLE TAXATION RELIEF: DEDUCTION OF UNRELIEVED OVERSEAS TAX

This concession has lapsed as a result of the introduction by the Finance Act, 1958, of a uniform rate of profits tax which is not affected by the way the profits are applied.

STAMP DUTIES

6. CHEQUES

This concession was made statutory by section 74 of the Finance Act, 1960.

The Training of Accountants

SIR, – Professor Baxter's article in your issue of January 20th, seems to be the first public evidence of concern for the future quality of accountants, and it is a great pity that this approach has had to come from outside the Institute.

Apart from one or two relatively insignificant new departures, and about the same number of ventures by education authorities, the training of accountants seems to stand where it was about forty years ago, and to depend on correspondence courses and evening study.

I am not aware of any other profession or trade in which the training of the young articled clerks, or apprentices, is so casually regarded by its council, and one may have the uncomfortable feeling that too much of the explanation lies in Professor Baxter's words 'if articled clerks are to attend day-time courses, this time will be lost to their employers'. The combination of practical instruction and day-time tuition given to engineering apprentices contrasts sharply with the out-of-date state of things among articled clerks in accountancy, although the Council of the Institute may regard it as adequate for the production of qualified audit clerks.

It would be a pity if the solution has ultimately to be sought outside action by the Council, but even that would be preferable to waking up to find that the solution is being sought outside the Institute.

Yours faithfully,

Hatton, Warwicks. J. E. ROWE, F.C.A.

SIR, – Professor Baxter's article (January 20th issue), referring to the academic side of an accountant's training brings up the question of those who are to teach. He says about the teacher, 'He should be a qualified accountant with sound experience.' I quite agree and expect no contradiction when I say that only practising members of the profession and those employed by them, will be receiving current experience and should be the best teaching material.

I cannot, however, visualize many practising accountants setting out to become professional lecturers as part of their normal work, due to the unfortunate lack of financial inducements.

A full-time lecturer employed by a university or a technical college receives a salary rising to £1,950 per annum (about a 1,400-hour year) – more if he is a senior in his department – but the professional accountant who must pay his usual office overheads is offered a remuneration of about 31*s* 6*d* per lecturing hour and nothing at all for the hours of preparation and travelling, or for his direct expenses.

The district society of which I am a member has for many years organized lectures for articled clerks and has paid lecturers at a much higher rate per lecturing hour. Even so, the net reward is inadequate compared with that received by a full-time lecturer or members of other professions.

The small remuneration is, I think, due to the following causes:

(1) Students expect first-class tuition at a low fee and the organizing body cannot afford to pay a proper remuneration to lecturers.
(2) Newly-qualified accountants whose need for money is urgent are encouraged and pleased to lecture, but as their financial position improves give up because it becomes no longer worth while. Consequently there never are any professional accountants who are also professional lecturers.
(3) Low rewards appear to be the accepted thing where practising accountants are concerned.

My remedy would be to pay the good lecturers very well and encourage the development of a professional, rather than an amateur, class of lecturer. This would necessitate a considerable increase in the cost to students, but if the scheme is ever to succeed someone will have to pay and it cannot continue to be the practising accountant working for a meagre reward.

Yours faithfully,

EX-LECTURER (F.C.A.).

SIR, – In his plea for higher standards of academic training for chartered accountant students, Professor Baxter is absolutely right.

The prestige of our profession will surely suffer in the second half of this century unless a high proportion of our members are university graduates.

The skills called for in all professions are becoming greater every day and accountancy is no exception. Members of the Institute, in addition to their professional work, supply a high proportion of industrial and commercial management. This situation will not continue unless tomorrow's chartered accountant is academically on the same plane as the graduate engineer, the lawyer, the physicist, etc.

Furthermore, the practising chartered accountant will find it hard to command the same respect that he has been used to when he finds himself dealing with clients whose businesses are managed by graduates, as will surely be the case.

Yours faithfully,

Greenford, Middlesex. L. R. PRICE, F.C.A.

Decimal Currency

SIR, – May I congratulate, through your columns, the correspondent who wrote on the subject of decimal coinage advocating the 'crown' as a basic unit (January 20th issue). Apart from the advantages of the scheme itself, the term is far preferable to 'rand', 'weal', etc.; in fact it would be reintroducing a coin

and word once in common use. It would also bring the United Kingdom into line with the Scandinavian countries who also have the 'crown' as their main unit and like ourselves are still monarchies.

Yours sincerely,

Cardiff. E. F. CHUBB.

SIR, – I think Mr Saxon has some useful suggestions (your issue of January 20th) – although if there is printed money in the case of the 'crown', we shall have 'walletfuls' of it – but why, oh why, must he use the terms dime, nickel and cent? There are several Anglo-Saxon (!) alternatives.

Yours faithfully,

K. R. P.

Dickensian Accountants

SIR,–Your contributor, 'An Industrious Accountant', is less than fair to Charles Dickens in Chapter 105 of his amusing adventures.

In *Little Dorrit*, a certain Mr Meagles, described as 'a retired banker of benevolent disposition', most certainly assumes the role of an investigating accountant when his friends Doyce and Clenham are considering entering into partnership. Let Mr Meagles speak for himself when he says in Chapter 23:

'Well, Clenham, this business-like obstacle surmounted, he then stipulated that before resuming with you I should look over the books and form my own opinion. I looked over the books and formed my own opinion. "Is it, on the whole, for or against?" says he. "For," says I. "Then," says he, "you may now, my good friend, give Mr Clenham the means of forming his opinion. To enable him to do which, without bias and with perfect freedom, I shall go out of town for a week." And he's gone.'

Mr Doyce's book-keeping proved to be peculiar, but in 'a certain honest rugged order', with the result that 'three or four days' steady application rendered Clenham master of all the essential facts'. He and Mr Meagles then agreed on the sum it would be fair to offer for a half-share in the business, and as this proved to be slightly more than the proprietor's own valuation, matters were soon concluded to their mutual satisfaction.

It was Mr Meagles, too, who later in the book acted in the accountancy role of a 'business doctor' when he rescued the partnership from the unfortunate results of Clenham's speculation in the bogus Merdle group of companies, and succeeded in putting it back on its feet.

Yours faithfully,

Leicester. R. C. V. TACEY.

ELECTRONICS IN THE OFFICE

Bank Mechanization

REPRESENTATIVES from United Kingdom banks and computer manufacturers attended a two-day symposium in London from January 17th – 18th on 'Electronic Aids to Banking', held under the auspices of The Institute of Electrical Engineers in co-operation with the Electronics Subcommittee of the London Clearing Banks.

Over the past year or two banks have installed their first computers and electronic cheque sorters, but a number of operational problems remain to be solved. The symposium enabled a valuable interchange of knowledge between bankers and electronic engineers. It is interesting to note that among the United Kingdom banks, Westminster Bank have ordered a Ferranti Pegasus data-processing system, Barclays an EMIDEC 1100 computer, Lloyds a computing system based on three IBM 305 RAMAC computers and the Midland, an English Electric KDP10. Criticism has been levelled at the banks for slowness on their part in making use of electronic computers. This is rather unfair, however, considering the complexity of the branch system and the security considerations involved in their work.

Accounting Aspects

In a paper entitled 'Accounting aspects of computer operations in banks', Mr R. Hindle, of Martins Bank Ltd, pointed out that the basic need for electronic aids in banking is in connection with the operation of customers' current accounts, but the fact that there were many other purposes for which such equipment could be employed should not be overlooked. This was a matter of time-sharing rather than job-integration. The current-account operation was fundamentally a very simple accounting process, but complications arose owing to the need for careful control and the need for protection against errors either accidentally or deliberately and fraudulently produced.

There were technical problems of input which required attention. Banks required machines which were capable of interpreting accounting data into a language that the computer could accept. If these machines were to be installed in the computer centre it would be necessary either to move the vouchers themselves from the receiving branches to the centre or to provide some intermediate interpretation. The former practice, he said, was essential in the case of automatic reading devices and the latter was frowned upon because it would increase the potential for errors. 'There are strong objections', Mr Hindle declared, 'to the movement of vouchers away from the receiving office, and this also implies slower methods of communication, which could severely limit the area covered by a centralized scheme and so perhaps inhibit the use of larger and more economic computers'.

Mr Hindle stated that the engineer who provided the equipment for banks and maintained it in operation should understand the very different nature of commercial, and especially banking, needs as compared with scientific needs. He should not be misled into the belief that because the mathematical needs were simple the operation was simple. The complexity of input and output requirements and the number of variants needed in the internal processing would make the programming demands intricate and extensive.

The banks, he said, had exhibited their faith in the application of computers to their work and though in these early days there was some divergence of views as to the methods to be adopted, there was also a spirit of co-operation between the banks.

Links between Branches

Mr J. G. Sauvage, of Barclays Bank Ltd, commenced his paper on branch communications by stating that there were two main reasons for banks wishing to avail themselves of advanced techniques in communications. The volume of work in all banks was increasing: more people were opening banking accounts and those who already had accounts were using them more. If the payment of wages by cheque became an established practice the increase in business would be greatly accelerated. The second reason, he said, was the advent of very much faster methods of data processing, which required rather more work than was contained in a single branch to make for economic installation. The centralization of at least the ledger work appeared to be the only answer. Whilst centralization gave the banks the opportunity of employing large-scale electronic data-processing systems, it also presented them with a new problem – communication between branch and centre, getting information to the computer and maintaining an adequate flow of information back to the branches.

After a brief description of some installations of communication equipment in his own bank, Mr Sauvage dealt with the links between branches and a central book-keeping unit.

If ledger-posting information, he said, was punched on to cards at the branches it was possible either to send the cards to the centre, or to use telepunch equipment and duplicate the branch cards over a telegraph line to the centre. Similarly, if the ledger-posting details were punched on to paper tape, the tape could be transported to the centre or could be transmitted over line.

> 'We have been working on an information-transfer system of this kind for some years. First we were using tape-to-card and card-to-tape equipment associated with standard Creed equipment and developments led us to our present position, where we have a computer installation at the centre of a telegraph network.
>
> 'In our branches we are punching five-channel paper tape as a by-product of a journal operation. Into this tape the information necessary for ledger posting is punched. This entails a brief description of the item, a cheque serial number or a symbol to indicate a non-cheque item, the customer's account number and the sterling amount of the item together with an indication of whether it is a debit or a credit to the account. This tape is fed through a standard teleprinter circuit and a duplicate tape is re-perforated at the centre, to form the input to an electronic data-processing system.
>
> 'As output from the computer we are using a high-speed tape punch and transmitting the information over the lines again to operate character-at-a-time printers in the branches.'

Mr Sauvage said that, with present banking routines, the cheque itself is the authority to debit an account and there was not a great deal of advantage in sending information long distances without the authorization. The possibility of transferring funds about the country on a sort of telegraphic transfer basis should not be entirely ignored, however; there had been very considerable changes in the last few years in banking and there would doubtless be greater changes in the future.

Document Handling and Character Recognition

In a paper dealing with character recognition, Mr L. Temple, of Lloyds Bank Ltd, said that the popular concept for some years was that the cheque would one day carry some form of positional coding to indicate the branch on which it was drawn, and automatic equipment in the clearing departments would sort the cheques to code order prior to dispatch to branches. This requirement, he remarked, was coincident with the development of reading, on the basis of shape recognition by either optical or magnetic means, characters which may be described as 'exaggerated' arabic in style. The particular choice of style to be used as a standard had become known as the 'common language'.

After dealing with the decision of the London Clearing Banks to adopt the American Bankers' Association stylized characters, known as E-13B, with the characters to be printed on cheques in magnetizable ink. Mr Temple went on to say that the magnetic ink character-recognition programme represented a collective act of faith by the banks to the benefit of automatic document handling and ultimately book-keeping. He added:

> 'We may enjoy the benefits of magnetic-ink character-recognition to a far greater degree than the United States does because of our more highly integrated clearing system. We shall never reach the stage where every small branch imprints the magnetic amount on cheques it collects, but this could well be done in regional centres if not in the main clearing departments.'

Communications Aspects

Messrs A. C. Furneaux and P. R. Morrison, of Creed & Co Ltd, said in a paper on communication aspects, that when contemplating the problems of data

processing, one of the major aspects to be considered was that of communications.

Apart from the necessity to provide very high-speed transfer of data, it was important, the authors said, to consider ways and means of detecting and correcting errors that inevitably find their way into any system. There had been many successful methods developed to ensure that original information is transposed into a suitable error-free form for transmission to distant data-processing centres, where it may be fed directly into computers without further human reprocessing. This, they said, had involved the development of new electrical codes in which particular attention had been paid to more logical combinations that may be automatically checked at various points in the system, to ensure that no errors are fed into the data-processing equipment. Present trends in this field appeared to favour perforator paper tape as a medium for the production of data in a suitable form both for transmission and as input and output for the data-processing equipment. This was because paper tape is cheap, can record information in a visible form that operators could read, and also provided a permanent record that may be easily stored for long periods.

The authors concluded by saying that experience during the past few years had shown that standardization of equipment was not at present entirely practicable since every system had to be individually designed to suit each organization, and it was of major importance to plan a system on an overall basis rather than to build it around a computer.

Television Document Transmission

Messrs I. M. Waters and J. W. Gamble, of Pye T.V.T. Ltd, described how television is used in banking where a reasonably detailed picture is wanted immediately over a not excessive distance, for direct viewing rather than for producing a permanent record. The application of television in this field resolves into two parts: the provision of 'equivalent' that will convey the data in sufficient detail, and the transmission of the signals from point to point economically.

Examples in banking, they said, were the distribution of information from a central office to sub-branches, and the certification of the signatures of cheques presented at the sub-branches by comparison with specimen signatures at the central office.

A typical bank installation was in Manchester where three branches of a bank are connected to the central office by Post Office equalized coaxial tube. Customers wishing to study their statements do so on a fourteen inch picture monitor in a small private room.

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

The Institute is to hold a banquet in Guildhall (by permission of the Corporation of London) on the evening of May 3rd, the day of the Institute's annual meeting. Members of the Government and representatives of overseas accountancy bodies are being invited. As accommodation is limited, however, it will not be possible on this occasion for members to bring their ladies or other guests.

Notices regarding the banquet have been circulated to members with a reply card which is required to be returned by *February 28th*. There will be a ballot for places in the event of applications exceeding the seating capacity.

PROFESSIONAL NOTICES

MESSRS MIDGLEY, SNELLING & CO, Chartered Accountants, of London, and Messrs ALBERT HILL & CO, Chartered Accountants, of Douglas, Isle of Man, announce that they have entered into partnership and formed an Isle of Man firm which will practise at Kensington House, Rosemount, Douglas, Isle of Man, under the firm name of MIDGLEY, SNELLING, HILL & CO, Chartered Accountants.

MESSRS E. A. RADFORD, EDWARDS & CO, Chartered Accountants, of 52 Brown Street, Manchester 2, announce that on January 31st, 1962, Mr GERALD WHITTAKER, F.C.A., retired from the partnership after forty-five years' continuous full-time service with the firm. He will still be available for consultations with his old clients by appointment. Mr D. A. SUTHERLAND, A.C.A., a senior member of the staff, who served his articles with the firm, has been admitted as a partner as from February 1st, 1962. The practice will continue to be carried on under the same style.

MESSRS NORMAN F. KIRBY & CO, Chartered Accountants, of 3 Church Street, Colchester, announce that Mr WILLIAM MARSHALL, F.C.A., has been taken into partnership. At the same time Mr NORMAN F. KIRBY, F.C.A., retired as a partner, but has agreed to be available for consultation.

JOHN FOORD & COMPANY

REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

IRON AND STEEL BOARD CHANGE

Mr R. W. Foad, F.C.A., Director of Finance of the Iron and Steel Board, has been appointed Executive Member of the Board in succession to Sir Robert Shone, following Sir Robert's appointment as Director-General of the National Council for Economic Development.

ACCOUNTANT M.P. NOT TO SEEK RE-ELECTION

Mr Geoffrey Stevens, F.C.A., Conservative Member of Parliament for the Langstone Division of Portsmouth, has decided not to seek re-election owing to increasing deafness. Both his father and brother suffered from deafness from a comparatively early age, and Mr Stevens has advised the executive committee of the local Conservative Association that it is clear that he cannot continue his Parliamentary work.

A partner in the firm of Pannell, Crewdson & Hardy, Chartered Accountants, of London, Mr Stevens was first-elected in 1950 and increased his majority at each succeeding election. He is Chairman of the Income Tax Payers' Association.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

President's Luncheon Party

The President of the Association, Mr G. L. Barker, F.A.C.C.A., gave a luncheon at the House of Commons last Tuesday. Among the guests were:

The Rt Hon. Richard Wood, M.P. (*Minister of Power*); Mr Anthony Barber, M.P. (*Economic Secretary to the Treasury*); Mr P. E. O. Bryan, D.S.O., M.P. (*Parliamentary Private Secretary to the Minister of Defence*); Sir Donald Kaberry, M.P.; Mr Maurice MacMillan, M.P.; Mr J. E. Ramsden, M.P. (*Parliamentary Under-Secretary of State for War*); Mr W. J. Taylor, C.B.E., M.P. (*Parliamentary Under-Secretary of State for Air*).

The Rt Hon. R. H. Turton, P.C., M.P.; Mr Marcus Worsley, J.P., M.P. (*Parliamentary Private Secretary to the Minister of Health*); Messrs William Clark, M.P., F.A.C.C.A.; M. Coulson, M.P.; J. Hiley, M.P.; G. A. N. Hirst, M.P.; John Howard, M.P., F.C.A.; T. P. G. Kitson, M.P.

The Lord Latham, J.P., F.A.C.C.A.; Messrs C. B. Longbottom, M.P.; J. H. Osborn, M.P.; G. W. Proudfoot, M.P.; Colonel Sir L. Ropner, M.P.; Messrs M. N. Shaw, J.P., M.P., F.C.A.; Geoffrey Stevens, M.P., F.C.A.; Colonel Sir Malcolm Stoddart-Scott, M.P.; Mr A. Tiley, M.P.; Major P. H. B. Wall, M.P., and Mr J. Winning.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

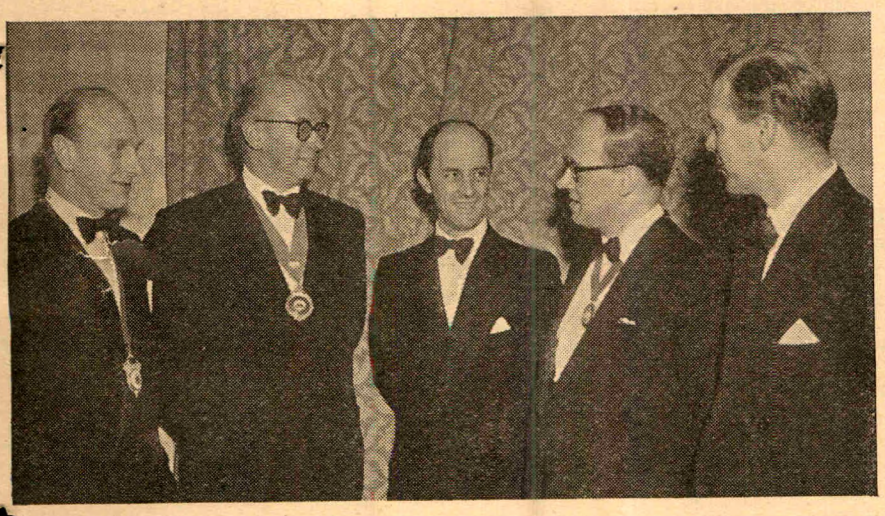
President's Luncheon

The President of The Institute of Cost and Works Accountants, Mr F. M. W. Hird, F.C.A., F.C.W.A., gave a luncheon party last Wednesday at the Royal Station Hotel, Newcastle upon Tyne. Those present were:

Colonel E. G. Angus, C.B.E., M.C., T.D., D.L., J.P. (*Chairman, George Angus & Co Ltd*); Mr R. Barras; Mr H. A. Butler; Colonel R. T. Edwards, A.F.C., T.D. (*Managing Director, Caterpillar Tractor Co Ltd*); Mr J. Gerrard (*President of the Tyneside Chamber of Commerce; Managing Director, Wright Anderson & Co Ltd*); Mr E. J. Hunter, C.B.E., J.P. (*Chairman, Swan Hunter & Wigham Richardson Ltd*); Mr E. Jarvis; Mr W. S. Paulin (*Managing Director, Donkin & Co Ltd*); Dr W. Reid (*Chairman, Durham Division, National Coal Board*); Mr J. Shields; Mr R. W. Wilkinson; Mr Derek du Pré (*Secretary of the Institute*).

HUDDERSFIELD ACCOUNTANTS' DINNER

The annual dinner of the Huddersfield Branch of The Leeds, Bradford and District Society of Chartered Accountants was held at Whiteley's, Westgate, Huddersfield, on January 24th, and was attended by over 160 members and guests. The toast of 'The Institute' was proposed by Mr L. J. Russell, President of the Huddersfield Incorporated Law Society, and was responded to by Mr J. S. Heaton, F.C.A., President of the Society.



Pictured at the dinner are (*left to right*): Mr L. J. Russell, President, Huddersfield Incorporated Law Society; Mr G. D. Warrington, F.C.A., Chairman of the Branch; Mr I. F. Halliday, A.C.A., Chairman of the Huddersfield Students' Society; Mr J. S. Heaton, F.C.A., President of The Leeds, Bradford and District Society of Chartered Accountants, and Mr R. E. Hinchliffe, A.C.A., Honorary Secretary of the Branch.

IN PARLIAMENT

South Africa: Double Taxation Agreement

Mr L. THOMAS asked the Chancellor of the Exchequer whether he will take steps to ensure that after May 30th, 1962, when the Republic of South Africa (Temporary Provisions) Act ceases to have effect, credit will be due to United Kingdom shareholders in a South African company for South African tax paid on the company's profits.

Mr BARBER: The draft of a revised double taxation agreement between South Africa and the United Kingdom was initialed in Cape Town by officials of both countries on January 15th, 1962 [*The Accountant*, January 20th, 1962, page 83]. The draft agreement contains a provision under which credit would be due to United Kingdom residents holding shares in a South African company not only for any South African tax deducted from dividends, but also for the appropriate part of the South African tax paid by the company on the profits out of which the dividends are paid. When this agreement has been signed it will be brought before the House of Commons for approval in the ordinary way.

Hansard, Jan. 23rd, 1962. Written Answers. Col. 14.

Income Tax: Excess Rents

Sir E. ERRINGTON asked the Secretary to the Treasury by what authority income tax inspectors apply for payments on account of tax due when assessments for excess rents have been appealed against and the amount due is not ascertainable until the end of the financial year.

Mr BARBER: Section 63 (2) of the Income Tax Act, 1952, empowers the General or Special Commissioners of Income Tax to make orders for payment on account of tax assessed under Schedule D notwithstanding that an appeal is pending. In practice agreement is normally reached with taxpayers for the payment of sums on account without application to the Commissioners for a formal order.

Hansard, Jan. 23rd, 1962. Written Answers. Col. 14.

TRUSTEE SAVINGS BANKS' CHEQUES SCHEME

The Trustee Savings Banks Association has put before the Government its latest proposals for a cheque scheme, in the light of discussions with the joint-stock banks.

The Economic Secretary has undertaken to consider the proposals and has agreed that the next step would be for the Government to discuss the matter with the joint-stock banks.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND

List of Members

The *List of Members* of The Institute of Chartered Accountants in Ireland, now published, shows that membership at August 31st, 1961, numbered 1,710. An analysis of the membership is given below:

	Members in Ireland	*Members not in Ireland*
Fellows in practice	265	15
Fellows not in practice ..	17	12
Associates in practice ..	199	16
Associates not in practice ..	886	300
Total membership	1,710	

The new book contains the usual alphabetical and topographical lists of members, together with names of members of the Council of the Institute.

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

The next meeting of the London and District Society of Chartered Accountants will be held in the Oak Hall of the Institute, Moorgate Place, London EC2, on Tuesday, February 13th, at 6 p.m., when Mr J. A. Buckley, a director of A. W. Bain & Sons Ltd, Insurance Brokers, will speak on 'Insurance – some topical problems'.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The Accountants' Christian Fellowship monthly meeting for Bible reading and prayer will be held at 1 p.m. on Monday next, February 5th, in the vestry of St Mary Woolnoth Church, King William Street, EC3. The Scripture for reading and thought will be Acts, Chapter 1, verses 4 and 5 and Chapter 2, verses 1–13. (The baptism of the Spirit).

CERTIFIED ACCOUNTANTS

London Students' Society

A successful mock tax appeal was held at the Chartered Auctioneers' Hall on Tuesday, January 16th, when Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., Assistant Editor, *Taxation*, presented the case for the Revenue and Mr M. T. S. Tuckwell, A.A.C.C.A., appeared as the accountant appellant in person. The roles of General Commissioners were played by Mr J. E. Harris, B.COM., F.A.C.C.A. (chairman), Mr E. H. Bridgwater, F.A.C.C.A., and Mr F. H. C. Betts, F.A.C.C.A. Students were presented with an excellent opportunity of witnessing an appeal based on the 'agency' cases.

The next meeting will be held on Tuesday, March 6th.

The Next Step

NOW that the T.U.C. has consented, albeit reluctantly and belatedly, to join the National Economic Development Council, the first task of that body must be to formulate an acceptable policy on wages and salaries. If there existed any doubt that this would be the case, not least in the light of the T.U.C.'s letter to THE CHANCELLOR, it has been dispelled by the White Paper published last week (Cmnd. 1626) entitled *Incomes Policy: The Next Step*. The primary objective, states that document, must be to keep the rate of increase of incomes within the long-term rate of growth of national production, which in recent years has risen by about 2 to 2½ per cent per annum. The country ought, it is stated, 'to be able to do better than this, but on present trends it [i.e. production] seems likely to increase at about this rate in 1962'.

The CHANCELLOR's recent statement that the 'pay pause' will end on March 31st is affirmed, and as from April 1st effect will be given to those increases for civil servants that have been held over since last July. At the same time the pay of other Government employees will be reviewed. In the course of such a review, the arguments that have been used in the past to support wage and salary claims, e.g. cost-of-living increases, comparability with other workers, the trend of profits or productivity in a particular industry, the White Paper states, 'cannot in present circumstances be regarded as providing of themselves a sound basis for an increase'. In their place, negotiators will be expected to take account of the trend of the national product and 'other factors affecting the national economic situation'.

The Government is to publish regularly in convenient form 'factual information on wage rates, earnings, hours of work and conditions of employment, man-power, production, profits and other relevant subjects so that due weight can be given by all concerned to the considerations set out in this Paper at all stages of negotiation'.

The Government recognizes that arbitration has been a peaceful means of settling disputes and it attaches great importance to the maintenance of existing arrangements. Furthermore, 'arbitration only operates effectively if arbitrators continue to exercise, and are seen to exercise, complete independence in making their awards'. As the Government will require arbitrators to take into account all the relevant considerations set out above, it is a fair bet that the unions will hold differing views from the Government as to what constitutes independence. Unless wise counsels prevail, the prospects for industrial peace cannot be regarded as bright.

Simplifying Income Tax

IN his Budget speech in 1961 THE CHANCELLOR OF THE EXCHEQUER referred to the need for simplifying taxation. Later he promised (or threatened) a tax on certain kinds of capital gains but he resisted arguments for introducing the necessary legislation before the following Budget; his expressed reason being that the drafting would take time. It is well known that an author or draftsman can simplify a draft by careful and lengthy drafting. However, it seems that mere simplicity is not the object here. On November 7th the House of Commons were warned:

> 'that they will find it an exceedingly complicated matter when they come to it, but the draftsmen are drafting as quickly as they can'.

The Institute of Taxation, in its recommendations to the CHANCELLOR published this week, has put its finger on this divergence between the lip service which Ministers pay to simplification of taxation and their actual practice. Often enough we are promised legislation which sounds simple, but which appears in a highly complex form. It is depressing to be told in advance that the Government are deliberately introducing complications. The Institute makes two very powerful suggestions: firstly, that the imposition of the new tax, and the exemptions from it, should be expressed in the most precise terms; secondly, that the structure or incidence of the tax should be such that anti-avoidance provisions are unnecessary. The Institute warns against anti-avoidance provisions which involve the Inland Revenue and the appeal tribunals in consideration of what was the 'main purpose' or the 'main benefit' of a particular transaction. It also warns against legislation of the type appearing in sections 21–26, inclusive, of the Finance Act, 1960. We would strongly support this advice, but would still more fervently support advice that legislation of the type contained in section 28 of the Finance Act, 1960, should be avoided. It is almost impossible to advise a taxpayer with any confidence as to the effect of that section. This lack of confidence also appears to affect the Inland Revenue because it seems almost impossible to obtain a 'clearance' from them under section 28 (10).

The same Act of 1960, by sections 44–60, was supposed to simplify the income tax code concerning what is compendiously known as 'back duty'. The provisions as to penalties have certainly been tidied up, but what of the new provisions as to time limits for making assessments? As the Institute of Taxation says, the position before 1960 was reasonably simple: the Revenue had to make their assessments within six years, or prove either fraud or wilful default, when they could go back to 1936–37. The Institute attacks section 51 which provides for a complicated system of leap-frogging and is the antithesis of simplicity, and makes the reasonable suggestion that in the case of neglect falling short of fraud or wilful default there should be a fixed period (twelve years is tentatively put forward), during which the Inland Revenue could make assessments.

Turning from difficulties caused by complicated legislation, the Institute's memorandum takes up a difficulty caused by the somewhat laconic reference in the Income Tax Acts to 'machinery or plant'. The House of Lords decision in *Hinton v. Maden & Ireland Ltd* (38 A.T.C. 231) that knives and lasts used for boot manufacture were machinery or plant, and in particular some dicta of LORD REID, has given rise to further difficulties of interpretation. According to the Institute, the Inland Revenue have issued an instruction to H.M. Inspectors of Taxes as to the correct treatment of a large number of items, following the *Hinton* decision. This instruction or memorandum is not available to the public or the professions, which leaves taxpayers and their advisers in doubt as to the correct tax treatment of many classes of implements used in industry. The Institute makes the reasonable suggestion that the memorandum be published.

The Institute repeats its earlier suggestions of a current-year basis of assessment and of the abolition of Schedules A and B. It argues that the provisions for error or mistake relief (as compared with the provisions for additional assessment) are unfair to the taxpayer. Finally a suggestion is made as to estate duty: stock exchange securities should be valued not as at the date of death but at the date of obtaining representation or two months after the death, whichever is earlier.

Profits Tax Avoidance

METHODS AND REVENUE COUNTER-MEASURES

by H. S. A. MACNAIR, F.C.A.

THE recent spate of anti-avoidance legislation in the income tax field has perhaps obscured the existence of rather more sweeping measures introduced ten years ago to deal with profits tax. At that time Parliament invested the Commissioners of Inland Revenue with discretionary powers to enable profits tax avoidance schemes to be nullified. Section 32 of the Finance Act, 1951, provided, in relation to transactions not completed before April 10th, 1951, that where the Commissioners are of opinion that the main purpose or one of the main purposes for which any transaction or transactions were effected was the avoidance or reduction of liability to profits tax, they may if they think fit direct that such adjustments shall be made as they consider appropriate so as to counteract the avoidance or reduction. In general, such adjustments concern the charging to profits tax of persons who, but for the adjustments, would be chargeable to a lesser extent or not at all.

Main Purpose of Transaction

Evidently the first point calling for clarification is the expression 'main purpose or one of the main purposes' for which any suspect transaction may have been effected. A recent case of interest in this connection is that of *Ackland & Pratten Ltd v. C.I.R.* (39 A.T.C. 180). In the High Court it was observed that the provisions in section 32 of the Finance Act, 1951, reproduce almost verbatim similar provisions in the excess profits tax legislation. In the interpretation of the latter guidance is available from the decision in *Crown Bedding Co Ltd v. C.I.R.* (25 A.T.C. 9; 34 T.C. 107) in which Lord Greene pointed out that the test to be applied is the objective test: would a reasonable man in fact expect that the main benefit which would accrue from these transactions would be the avoidance of tax?

In evaluating this test it may perhaps be helpful to recall the substance of the case as summarized in the findings by the Special Commissioners on appeal which read as follows:

> 'In May 1941 three directors of a controlling company sold to that company their shares in a subsidiary company and the question to which we have to find the answer is which benefit could at that time be reasonably regarded as the greater, the tax benefit or the commercial benefit. The special difficulty . . . is not the comparative greatness of the benefits which we must consider but their comparative smallness. We hold that this appeal fails because while we accept Mr Cooke's evidence that the prospect of a tax benefit was small the prospect of a commercial benefit was still smaller, so small indeed as to be practically negligible.'

Probable Benefit

The commercial benefit referred to was that to be expected from the elimination of the minority shareholding. Part of Lord Greene's judgment was taken up with the question as to whether a mere possible tax benefit latent in the unfolding of future events could be equated with a more probable immediate benefit such as might satisfy present expectation. Lord Greene observed:

> '. . . the question of probability or possibility is a matter really which can be considered as resembling a scale. At the top of the scale is certainty. At the bottom of the scale is improbability so extreme that no sensible person would ever take it into account. But, subject to that, the precise point on the scale at which you can say that a thing is probable rather than possible and the precise point at which you can say that a probability falls to the level of a mere possibility depends on the view taken by a hypothetical observer. It seems to me that it is quite impossible to put on the word "expected" the sense that a hypothetical observer must have had that degree of confidence in the future as to expect that the benefit would materialize.'

The case of *Ackland & Pratten Ltd* concerned a company which in the view of the Commissioners sought to take advantage of the decision in *C.I.R. v. Pollock & Peel Ltd* (36 A.T.C. 105; 37 T.C. 240). However, since the transactions in question concerned the problems of profits tax as constituted prior to March 31st, 1958, the detailed circumstances need not concern us. In the High Court the test enunciated by Lord Greene was applied, leading to an affirmative conclusion expressed in these terms:

> 'it was not a certainty but it was to my mind more than a possibility. It was indeed a probability'.

Deeming Provisions

In weighing the balance of probabilities the task of the Commissioners is facilitated by certain deeming provisions contained in section 32 of the Finance Act, 1951. These provide that the avoidance or reduction of liability to profits tax may be deemed to have been the main purpose or one of the main purposes of transactions involving the following types of operation:

(*a*) the transfer or acquisition of shares in or debentures of a company;
(*b*) a change or changes in the person or persons carrying on a trade or business;
(*c*) a change or changes in the directors of a director-controlled company.

For these provisions to apply in a particular case it is sufficient to show that, having regard to the state of the law at the time, the main benefit which might have been expected to accrue from the suspect transaction in the three years immediately following its completion was the avoidance or reduction of liability to profits tax. It may be mentioned here that there are three main classes of transactions which are not within the scope of the section. These are:

(1) the failure to pay dividends or the payment of inadequate dividends;
(2) the issue of debentures for full consideration paid in cash (this exemption does not extend to the case of a director-controlled company);
(3) a transaction requiring permission under section 468 of the Income Tax Act, 1952 (removal abroad), in respect of which Treasury consent has been obtained.

It is perhaps worth noting that the first two exemptions concern steps that might have been taken to reduce the incidence of profits tax under the two-tier system in force up to March 31st, 1958, while the third exemption is complementary to section 468 (originally section 36 of the Finance Act, 1951).

Direction by Commissioners

On making a direction, the Commissioners are required to specify the transactions giving rise to it and the adjustments which they consider appropriate. Their power to make necessary adjustments is unrestricted save by the taxpayer's right of appeal to the Special Commissioners and from them to the tribunal appointed under section 28 (7) of the Finance Act, 1960.

It will be recalled that in connection with surtax directions, taxpayers who apprehend that they may be within the scope of the legislation may apply for a clearance. A similar opportunity exists in the case of profits tax directions. The company concerned may supply the Commissioners with particulars of the transactions effected or to be effected whereupon the Commissioners, if satisfied that the transactions as described to them have been or will be entered into for bona fide commercial reasons and are such that no direction ought to be given by them, are required to notify the company accordingly. On the giving of such a notification their powers to make a direction cease, subject to the proviso that the particulars supplied are such as to make full and accurate disclosure of all facts and relevant considerations which are material. Moreover the Commissioners' power to give a direction is not restricted where the transactions in respect of which clearance has been obtained represent only part of a transaction or series of transactions.

Right of Appeal

The right to appeal against a direction is conferred by subsection 32 (7) and the procedure to be observed is governed by the regulations applicable to profits tax appeals generally. In this connection there is an important distinction between the procedure followed in connection with excess profits tax appeals. Under the legislation relating to the latter, the whole burden of justifying a direction rested with the Commissioners (*Dixon & Gaunt Ltd v. C.I.R.* (26 A.T.C. 106; 29 T.C. 289)). The profits tax appeal rules, however, follow those for income tax so that the appellant is under the obligation of opening the proceedings and putting forward the evidence on which he relies. In the face of the appellant's contentions the Commissioners must then justify their direction in the ordinary way.

It will be apparent from the foregoing that the introduction of the single rate of profits tax has modified the potential scope for avoidance. The possibilities which remain may be grouped under the headings: abatement and directors' remuneration. The following examples give some indication of the scale of savings possible where two companies are incorporated in place of one in a case where formation is carried out in order to take over an expanding business from a sole trader or partnership.

Example I – Business taken over from sole trader

The first table sets out the figures for the first

four years where a single company is incorporated with the trader as working director:

Profits before charging director's remuneration (1)	Director's remuneration: Actual (2)	Director's remuneration: Allowed (3)	Profits after charging director's remuneration (4)	Abatement (5)	Profits chargeable (6)
£	£	£	£	£	£
5,000	3,000	3,000	2,000	2,000	Nil
10,000	4,000	3,000	7,000	1,000	6,000
15,000	5,000	3,000	12,000	—	12,000
20,000	6,000	3,000	17,000	—	17,000
£50,000	£18,000	£12,000	£38,000	£3,000	£35,000

Assuming that the profits arise from two departments, Alpha and Beta, the profits from which increase at the rate of £2,000 and £3,000 per annum, respectively, the effect of incorporating two separate companies appears from the following table:

Alpha Ltd

Profits before charging director's remuneration (1)	Director's remuneration: Actual (2)	Director's remuneration: Allowed (3)	Profits after charging director's remuneration (4)	Abatement (5)	Profits chargeable (6)
£	£	£	£	£	£
2,000	1,000	1,000	1,000	1,000	Nil
4,000	1,000	1,000	3,000	1,800	1,200
6,000	2,000	2,000	4,000	1,600	2,400
8,000	3,000	3,000	5,000	1,400	3,600
£20,000	£7,000	£7,000	£13,000	£5,800	£7,200

Beta Ltd

Profits before charging director's remuneration (1)	Director's remuneration: Actual (2)	Director's remuneration: Allowed (3)	Profits after charging director's remuneration (4)	Abatement (5)	Profits chargeable (6)
£	£	£	£	£	£
3,000	2,000	2,000	1,000	1,000	Nil
6,000	3,000	3,000	3,000	1,800	1,200
9,000	3,000	3,000	6,000	1,200	4,800
12,000	3,000	3,000	9,000	600	8,400
£30,000	£11,000	£11,000	£19,000	£4,600	£14,400

It will be seen that the additional abatement of £7,400 obtained by the use of two companies compares favourably with the secondary advantage obtained by the use of two standards of director's remuneration which reduce the chargeable profits by £6,000. In this case, therefore, the additional expense of running two companies in place of one would be compensated for by a saving of profits tax on £13,400.

Example II – Business taken over from partnership

The first table below sets out the figures applicable where the four former partners each own 25 per cent of the shares of the company in which they are full-time working directors:

Profits before charging directors' remuneration (1)	Directors' remuneration: Paid in equal shares (2)	Directors' remuneration: Allowed (3)	Profits after charging directors' remuneration (4)	Abatement (5)	Profits chargeable (6)
£	£	£	£	£	£
15,000	12,000	9,000	6,000	1,200	4,800
20,000	16,000	9,000	11,000	200	10,800
25,000	20,000	9,000	16,000	—	16,000
30,000	24,000	9,000	21,000	—	21,000
£90,000	£72,000	£36,000	£54,000	£1,400	£52,600

If, however, the company had been incorporated so that the shares were held as to 5 per cent by each director and as to 20 per cent by their wives or other near relatives, the company would not have been director-controlled and the remuneration would have been allowed in full (assuming that it was commensurate with the services rendered and satisfied the income tax test that it should have been wholly and exclusively laid out for the purposes of the company's trade (*Copeman v. Wm Flood & Sons Ltd* (19 A.T.C. 521; 24 T.C. 53)). In such circumstances the computation would have been as follows:

Profits before charging directors' remuneration (1)	Directors' remuneration: Paid in equal shares (2)	Directors' remuneration: Allowed (3)	Profits after charging directors' remuneration (4)	Abatement (5)	Profits chargeable (6)
£	£	£	£	£	£
15,000	12,000	12,000	3,000	1,800	1,200
20,000	16,000	16,000	4,000	1,600	2,400
25,000	20,000	20,000	5,000	1,400	3,600
30,000	24,000	24,000	6,000	1,200	4,800
£90,000	£72,000	£72,000	£18,000	£6,000	£12,000

This shows a saving of profits tax on £40,600.

In conclusion, reference may be made to the dicta of Lord Simon in *Latilla v. C.I.R.* (22 A.T.C. 23; 25 T.C. 107) regarding tax avoidance schemes:

> 'Judicial dicta may be cited which point out that however elaborate and artificial such methods may be those who adopt them are "entitled" to do so. There is of course no doubt that they are within their legal rights but that is no reason why their efforts or those of the professional gentlemen who assist them in the matter should be regarded as a commendable exercise of ingenuity or as a discharge of the duties of good citizenship.'

It will be appreciated, therefore, that the foregoing instances have been elaborated not in order to encourage artificial devices but with a view to eliminating pitfalls for the unwary.

The Training of Accountants

Reproduced below is the article from* Technology *to which we refer under 'Weekly Notes' on another page. The article is, of course, a highly critical and provocative one with which members of the profession will agree or take exception to, according to their lights. At any rate we feel it should be brought to their attention, as many are unlikely to see the publication from which it has been taken.

OUTDATED ARTICLES

From Our Own Correspondent

CHARTERED accountancy and law are the last two bastions of articled pupilage. For both it is a compulsory requirement for full professional qualification; in both it has come in for heavy criticism by students, educationists and practitioners; both are worried about it, both are considering modifications to it – and both are convinced that the system is basically sound.

In other professions where it formerly prospered, articled pupilage is weak, dying, or dead. In architecture it was once the principal method of training; now it is almost non-existent. Less than 10 per cent of chartered surveyors now enter articles, and in land and estate agency it has very nearly disappeared. About 40 per cent of chartered auctioneers are still trained in this way. In all these professions, articled pupilage is a voluntary system, which the student is free to accept or reject.

The system is, in theory, an admirable one. The pupil learns his profession directly from a skilled and experienced master. Practical experience is combined with personal tuition on the basis of a one-to-one teacher-student ratio. Above all the 'atmosphere' of a profession and its standards of conduct are communicated to the pupil in a way said not to be possible under any other method of training.

But this system demands a more leisured profession than nowadays exists. Principals no longer have time to instruct their pupils in person, and pass them off to other members of the firm or leave them to 'learn from experience': that is, learn what they can, how and when they can – if they can.

Wages for articled pupils are generally low and are sometimes not paid at all (one-third of all solicitors' firms do not pay their articled clerks). A non-graduate articled accountant, for example, may earn between £4 and £12 a week in London (less in the provinces) over the five years of his articles, and a graduate from £8 to £12 a week. A graduate fresh to industry can, by contrast, expect £700 a year rising to £900 at the end of a two-year graduate apprenticeship.

The Law Society has recently brought in new arrangements designed to give more emphasis to full-time instruction and to make the profession more attractive to graduates (about 50 per cent of the profession are now university-trained). The Institute of Chartered Accountants, about 10 per cent of whose members are graduates and whose students receive virtually no full-time or even part-time instruction, appointed a committee (the Parker Committee) in August 1958, to consider education and training for the profession. That committee reported in April of last year.

The Parker Committee were faced with a rapidly increasing demand, both in quantity and quality, for chartered accountants. New skills were needed, especially in the field of management accounting, the use of mathematical techniques and in the use of computers. Higher education was becoming no longer the preserve of money and privilege, but the right of all those who could benefit from it, and State aid was available for those who wanted to stay on to the sixth form and go to university.

In the context of this development of the accounting profession and of the new ideas current in the world of education, the Parker Committee's recommendations were profoundly disappointing. To attract more sixth formers, they recommended the reduction of articles to four years for school-leavers with two 'A' levels. To supplement private study and postal tuition, they proposed a full-time course of three weeks before each part of the examinations. Study leave should be increased to a minimum of twenty-six weeks; the maximum should stay at one year.

That was all. Day release? Impractical. Block release? Would cut too deeply into practical work. Sandwich courses? Never heard of them. Universities? Down with 'classroom' teaching 'except within the narrowest limits'. Better pay for articled clerks? The public should simply be told what the 'usual financial terms' are.

One must not underestimate the difficulties which the committee faced. The innate conservatism of the profession, the (justified) feeling that the Institute and its members stood in very high repute and the (unjustified) feeling that therefore there could be nothing much wrong with its methods of training, the bias against 'class-room' teaching, against the supposed intellectualism of the universities, doubts about the respectability of 'techs' and the feeling that 'what was good enough for my generation should be good enough for this one'; all these

© The Times Publishing Co Ltd, 1962. All rights reserved. Reprinted by permission from the February issue of *Technology*.

emotions (they hardly amount to arguments) stacked up the odds against educational reform.

Yet the Committee's recommendations still seem feeble. They recall nothing so much as the politician in the Feiffer cartoon representing the 'radical middle'. 'Bold times', he proclaimed, 'call for bold answers, within reason, in a manner of speaking, more or less. On the other hand. . . .'

What is the case against the Parker report? That it does nothing about the scandalously poor pay of articled clerks. It does almost nothing about the educational horrors of correspondence courses. It does not recognize the right of articled clerks to free time, free from heavy studying obligations. It does nothing to encourage, even seems to show contempt for full-time university or technical college education.

School leavers of some ability are unlikely to be content with the poor wages of articled clerks when they can earn their living in industry, and will not be content with correspondence courses when they can go on to the sixth form and university or college. By keeping the minimum qualification for entry to articles at 'O' level, the profession is not only lagging behind the solicitors and the architects (who have both just raised entry qualifications to two 'A' levels) but will be drawing in an increasingly poorer academic standard of entrant as more and more boys and girls stay on to the sixth form.

The Council of the Institute is now meeting to consider the Parker report. There will no doubt be some members who think the report goes too far. There may be some who think it does not go nearly far enough. It is very likely that the majority will believe that it represents a 'pretty fair compromise' between progress and conservatism. What they will adopt is unknown; what they should adopt are the following principles:

(1) The Parker report should be welcomed as a worthy piece of work which points out the direction in which education for the profession must move. It should be made clear that the Council consider that its recommendations are inadequate to meet the urgent educational and recruitment needs of the profession.

(2) The Council should recommend a minimum rate of pay for articled clerks which is genuinely competitive with industry and commerce.

(3) The Institute should consult with the Association of University Teachers of Accounting and representatives of the technical colleges as to how more recruits to the profession may be drawn from the universities and colleges. Some of the measures that should be seriously considered are: reduction of articles for graduates to two and a half years (as has been done by the Law Society), provision of more places at universities for full-time degree courses in accounting, arrangement of block release and sandwich courses at universities and technical colleges.

(4) A clear statement should be made that correspondence training is at best a necessary evil and should as soon as possible be made an unnecessary evil.

(5) A clear statement should be made that the time will soon come when entrants to the profession must have not less than two subjects at 'A' level.

The answer to these suggestions will no doubt be that they are impractical and expensive. Is it impractical to pay articled clerks a proper wage? Is the profit margin of accountants so narrow? If it is, the relatively small extra cost could be passed on to the clients without undue hardship. At present chartered accountants' clients are being subsidized by the parents of articled clerks.

Should more accountants be trained at universities? Can they be? The solicitors seem to find university training of their recruits both desirable and practical. So do the architects. So do the chartered accountants in almost every advanced country in the Commonwealth (including Scotland) and in the United States, where all accountants have first degrees and many have advanced degrees in accountancy. Is chartered accountancy to be the only profession which does not recognize the value of a university education?

Are block release or sandwich courses out of the question? The Law Society has its eight months' full-time course. The Scottish accountants send their boys to university for one year. The Parker report said that eighteen months' release from five years of articles (the suggestion of the A.U.T.A.) was impractical. The argument is not convincing. Even if it were, a longer period of articles with block release would certainly be an improvement on the present system of three to five years of articles with postal tuition.

Finally, one is entitled to ask, can the Institute afford *not* to take these measures? Can they afford to risk a future when their recruits will be drawn exclusively or mainly from the poorer academic levels of school leavers? Can they afford to keep a system which is quite unattractive financially and educationally to graduates? Can they afford to remain so isolated from the universities, so that the teaching of accounting is divorced from its practice, and practice divorced from research and development of new techniques?

What of articled pupilage itself? Has it a future? A medieval system in origin, it served its purpose well enough through to the nineteenth century. In the twentieth, office training as the core of a professional education is an anachronism. Practical experience of course is essential, but a learned and liberal profession must now take in recruits with a liberal academic education. This cannot be given in an office whose objects are, and must be, service to clients and the making of money – not education.

St Luke (a professional man himself) quoted a warning to lawyers: 'Woe unto you, lawyers! For ye have taken away the key of knowledge: ye entered not in yourselves, and them that were entering in ye hindered.' The Law Society is beginning to take heed. The Institute of Chartered Accountants must not wait too long before following suit.

Taxes in the Common Market

AN EXERCISE IN CRYSTAL GAZING

by ALUN GRIER DAVIES
Taxation Controller, The Consolidated Zinc Corporation Limited
Chairman, United Kingdom Branch, International Fiscal Association

A JOURNALIST writing recently about the problem of prophesying the future of the Congo said that it was like trying to cut out a suit for someone you have never seen, who might be male or female, old or young, and who might require the suit for the Arctic Circle or for the tropics. Trying to prophesy the future shape of the fiscal policies within the Common Market is almost as difficult, but not quite.

Not quite, because in the last few years the Organization for European Economic Co-operation has really been operating as a sort of pilot plant for the European Economic Community. Most of the top Revenue officials of the European countries have been meeting regularly at Paris. Their visits to that delightful city have, it appears, enlarged their views on the facts of life.

The curious thing about the fiscal system of any given country is that its administrators always seem to think it is a wonderful structure. No matter how much a third party is inclined to denounce it as a Heath Robinson contraption which looks as if it was held together by faith and string, its inventors always defend it. They have built it up with loving care, and what may appear to its critics as basic flaws, are often defended as basic advantages.

Nevertheless, the work of the Fiscal Committee of the O.E.E.C. has brought together most of the European tax experts, and it must be confessed that the four reports of the committee have broken a vast amount of new ground over the last five years. The only comparable progress made was in the fiscal work done under the League of Nations which forms the basis of most of the huge network of double taxation relief treaties which now cover most of Western Europe in bilateral agreements.

The countries of the Common Market owe a great debt to the work of O.E.E.C., which has been the forcing house for the intensive work now going on in the E.E.C. to harmonize the complications of European taxation. It has been said of the work of the O.E.E.C. Fiscal Committee that its work

> 'particularly with regard to dividends, interest and royalties, has given member countries an opportunity to compare the effect of their legislation. Such a comparison could promote on certain special but essential points, a desirable harmonization of European legislation which will simplify the solution of double taxation problems and facilitate a complete elimination of double taxation'.

It should be noted that this value of comparison was stressed within the context of O.E.E.C., not the E.E.C. Who can doubt that the value within the narrower and more integrated field of E.E.C. will be considerably greater?

I have no doubt that the value of the preliminary work done by the Fiscal Committee of O.E.E.C. will have a greater impact on the harmonization of European taxation than any other factor. It represents perhaps the greatest achievement in the international fiscal field since Joseph sold his seven-year plan to Pharaoh. But while Joseph did it all by the interpretation of a dream, the O.E.E.C. had to achieve its results by fighting its way out of a nightmare.

And anyone contemplating the fiscal scene in Europe today must feel it has its nightmarish aspects. It might even be said that the task before the E.E.C. is to try and bring order into a fiscal madhouse. Taxes in Europe today operate under so many different rules. It reminds one of half-a-dozen games of chess going on together inside a lunatic asylum, with the players all busily engaged in improvising new rules as they go along. One is tempted to suggest that the best way to engineer a bit of progress would be to sweep off all the pieces and begin all over again. But that would be revolution, not harmonization.

Balance between Direct and Indirect Taxation

Let us pick at random just one of these different pieces which must somehow be brought together. The balance between direct and indirect taxation, for example; to begin with, there is the question of deciding the point at which the proper balance between these two forms of tax is reached. If social security contributions are ignored (and it is by no means unanimously agreed among the experts that they can be) then you get the following variations:

		Direct	*Indirect*
of total tax	United Kingdom	47	53
	Belgium ..	42	58
	Germany ..	39	61
	Italy ..	26	74

The United Kingdom lays emphasis on direct taxation, and there is one school of thought which attri-

A paper presented at a two-day conference on 'The effects on British industry of entry into the Common Market', held in London on January 30th and 31st under the auspices of the College of Production Technology.

butes our slower rate of economic growth, together with that of Canada, to this very factor.

Next, I wish to look at national tax collections, inclusive of social security charges. The following figures are the costs of social charges borne by companies as a percentage of the national tax collections, including social charges: France 23, Netherlands 19, Belgium 19, West Germany 14, United Kingdom 6, Ireland 3, Sweden 3, Denmark Nil.

It will be seen that the cost to United Kingdom companies percentage-wise of national tax charges is very low. As a comparison, the following figures show the percentage costs outside Europe – Australia nil, Canada 5, U.S.A. 8. The percentage cost is thus seen to be heavier in the U.S.A. than in the United Kingdom.

I am not sure that our own fiscal system is so wonderful. We have terrific excise and customs duties on tobacco and alcohol which reflect the basically puritanical attitude of our legislators. An indirect system of taxation in purchase tax which is purposely designed in the first place to distort the pattern of consumption following the Whitehall prescription of the moment. A standard rate of income tax which is anything but standard, what with all the allowances that go in, come off and are changed from year to year; and when you can deduct tax from a divicend out of profits on which tax has never been paid. And a profits tax which seems to go up every time a Conservative Chancellor feels he must play to the Socialist gallery; which is now 15 per cent and effectively 24 per cent, because it has to be paid from a fund on which income tax has already been paid.

Changes in the Wind?

What is likely to happen to all this if we enter the Common Market? Can we hope for some common sense in a Common Market, so that the common business man can see some sense in it?

In my view, big changes will be made, and I do not think they will be long in coming. In 1959 Herr Etzel, the then West German Finance Minister, expressed the belief that harmony of taxation systems would be achieved within the twelve to fifteen years allowed for the Common Market to take full effect. In October 1961, at the Conservative Party Conference the Prime Minister, talking generally about entry into the Common Market, if not specifically about tax, said:

> 'It is a bracing cold shower we shall enter, not a relaxing Turkish bath. But that must be our experience whether we join or not. In or out of the Common Market, Britain in this decade must be prepared to face changes – in her industrial life and organization, some of them novel, many of them painful, but all of them in the long run salutary.'

Let's look for a moment at what the Treaty of Rome – the Bible of the Common Market – has to say about all this. Article 99 says that:

> '. . . The Commission shall consider in what way the law of the various member States concerning turnover taxes, excise duties and other forms of taxation . . . can be harmonized in the interest of the Common Market. The Commission shall submit proposals to the Council, which shall act by means of an unanimous vote. . . . '

It has been argued by lawyers that 'harmonization' does not in fact imply any need for reform of any part of national codes. That all that is necessary is to dovetail them so that somehow they are an apt arrangement of parts. In fact, during the whole of the life of the Benelux arrangement no effective changes were ever made in the various tax systems of the three member States.

Whether or not this is the dictionary definition, this is not true of what the E.E.C. thinks of the definition of harmonization. A great deal of intensive work is going on both on the indirect and the direct tax systems of Europe to see how their component parts can be matched into a single design. The present stage is the planning and research stage, and working parties are seeking out the essential principles which should govern the future course of the national tax codes within the E.E.C. Within the next twelve months a great number of reports will doubtless pour forth on all the problems involved.

It is interesting to note that it is only on the indirect taxes that the Treaty of Rome insists on harmonization. There is no similar article dealing with the harmonization of direct taxation.

Indirect Taxation

On the question of indirect taxation, those of you who are historically minded will recall that part of the administrative framework which Napoleon imposed on Europe was a certain uniformity of law. In fact Hitler effected a somewhat similar result, though in a narrower field. The turnover taxes of Germany were imposed on Luxemburg, Holland and Austria, and copied by Italy. So that there are four countries within the Common Market which have already a basically similar indirect tax system.

Unfortunately, this means that four of the Common Market countries are at present committed to the German turnover tax – a cumulative, multi-stage tax which most academic and scientific analysts in Germany appear to condemn. There is a current of opinion in Germany in favour of introducing the French idea of an added-value tax, evenly distributed through all the processes of production. It is pointed out that one of the pioneers of the added-value tax was in fact a German, von Siemens. Although it is unlikely that the German Government would wish to dismantle the turnover tax, which has been in operation since 1934, it would seem from reports coming out unofficially from the E.E.C., that the tax experts of the Commission recommend that the French added-value tax be adopted by *all* members of the Community as the basic source of indirect taxation. The European Fiscal Confederation, whose advice was sought on this matter, have just reached the same conclusion. It seems likely therefore that the

added-value tax will be eventually adopted in the whole of the Community.

Those who feel that it would be an advantage to see what is really the position of indirect taxation in Europe, and what is likely to be the shape of things to come, would do well to have a look at a study by Campet, made again under the aegis of the O.E.E.C. (it is surprising how at almost every turn one finds that the O.E.E.C. has piloted the course for further examination and co-ordination of European tax systems). The study was made by an *ad hoc* group of experts on fiscal legislation. The report, written by Charles Campet, is entitled *The influence of sales taxes on productivity* and is a masterly analysis of the indirect tax system of nine countries in Europe, including the United Kingdom. It has an interesting analysis of the United Kingdom purchase tax, which as Mr Campet points out is really a sales tax. He refrains from ascribing this peculiar nomenclature to our natural genius for eccentricity.

The French Added-value Tax

If and when the United Kingdom joins the E.E.C. does this mean that the purchase would have to be folded up in favour of a general tax on production – like the French T.V.A.? Some of the thinkers in the E.E.C. certainly seem to think so. The purchase tax, of course, deliberately sets out to have a distorting effect on consumption and therefore on the producers of the consumer goods which are struck at. It certainly seems to me to be incompatible with a Common Market, though there are views to the contrary. The whole emphasis of the French T.V.A. is to weigh heavily on labour-intensive industries and to weigh relatively lightly on industries that are capital-intensive.

The French added-value tax is a single general tax levied by means of fractional payments at each stage in the chain followed by a single product. If there is more than one firm in the chain, the tax paid on goods purchased is deducted from the tax payable on sales. The tax follows the product right through all processes of production to the wholesale stage.

The basic feature of the added-value tax is that tax is only payable on *added* value. It is therefore *not* a cumulative tax, and is the antithesis of the German turnover tax.

The deductions allowable at each stage are both *physical* and *financial*, i.e. for those incorporated in the product or destroyed in the course of manufacture and for goods used in manufacture, which are liable to depreciation. All invoices from suppliers therefore show net prices and the amount paid by way of tax.

The added-value tax applies to industry and commerce, but not to agriculture. Craftsmen are exempt from the tax. There are special provisions in the legislation to deal with associated companies, groups and so on. The rate for the tax is in normal cases 19·5 per cent. The tax is designed to be neutral in its effects on the economy – it is general; and it is at an uniform rate. It gives no distorting advantage to big integrated groups, as does the German cumulative tax. But it does give a shelter to craft industries, by giving preferential treatment to them. It is not as flexible an instrument for controlling consumption as purchase tax is. But then, this cannot be said to be a defect because the added-value tax was not designed for this purpose.

The possibility that in the Common Market the fiscal authority of the Mother of Parliaments will be subject to the checks of the Treaty of Rome is, of course, one of the main objections by those who see in the Common Market a derogation from national sovereignty. The prerogative of taxation is one of the most tightly held of the elements of national sovereignty. The continuing disputes between the Dominion of Canada and the Canadian Provinces and between the Australian Commonwealth Government and the Australian States show this up. It is therefore heartening or depressing, depending on one's personal reaction, to think that henceforth the decisions at Brussels will be a formidable factor in deciding the future fiscal policy of this country and of any other member of the E.E.C.

In the interim period before the Utopia of full harmonization of indirect taxation is ushered in, the E.E.C. countries must refrain in principle from making adjustments in their arrangements which provide for reimbursements of indirect taxes in respect of exports or charges on imports. There is a very rapid on-the-spot review of any modifications of existing arrangements suggested by member States – and the Commission has already taken action on changes proposed by Belgium, the Netherlands and Italy. These *ad hoc* 'checks' only serve to underline the fact that eventual harmonization is the final answer and that the present arrangements are merely a form of standstill procedure.

Perhaps it is an indication of the impetus with which the Common Market is forcing its members into each others arms that although the Treaty of Rome *nowhere* mentions the harmonization of the direct taxes, a great deal of thinking and reporting is going on in the E.E.C. on this problem.

Direct Taxation

All that is said in the Treaty of Rome about direct taxation is a vague reference in Article 100 that:

> 'the Council acting by means of an unanimous vote on a proposal of the Commission, shall issue directives for the approximation of such legislative and administrative provisions of the member States as have a direct incidence on the establishment or functioning of the Common Market'.

It goes on to say that after the necessary consultations under Article 101 there is to be a vote if there is disagreement on the consultations between member States, and that this vote is to be firstly on an unanimous basis, then on a qualified majority basis, prior to the issue of a directive by the Council on the subject.

This is all very vague, but it is interesting to note that in the thinking at Brussels at present, there are

indications that these Articles 100 and 101 are considered as potential means of harmonizing direct taxation. Whether the harmonization of direct taxes takes place by talk or by vote, the preliminaries are already under way, and if we go into E.E.C. the sooner British views are heard on the working parties the better.

British economists would probably argue that direct taxes don't enter into the cost of production. The views of the Colwyn Committee of 1926 on this question of shifting of the direct tax burden from production to consumption still seem to hold the day. I am not sure whether the entrepreneur has ever really shared this view, and continental thinking certainly seems to consider that variations between direct taxes distort the pattern of a Common Market.

Starting from this assumption, the working parties of the E.E.C. are looking at the rates of taxes, the systems of tax (whether in schedules or unified), the calculation of depreciation, the size of the tax base, the problem of holding companies, and the restrictions on capital movement, with the object of making recommendations for an ideal tax code to which member States can progress stage by stage.

What Future Framework?

Out of the mass of investigation and research going on amongst the 'Eurocrats' at Brussels, is it possible to envisage some kind of framework into which the direct tax systems of the Common Market must be fitted, including our own?

In this connection it is interesting to note that the President's speech of the Belgian group – Compagnie d'Outremer pour l'Industrie et la Finance – on November 23rd, 1961, was devoted almost wholly to a detailed analysis of the fundamental changes that would have to be carried out in the Belgian tax system in the context of the Common Market. He began his analysis with the statement that in order to make economic union effective, member States must so far as possible speak the same fiscal language. Since then we have seen the announcement of the proposed changes in the Belgian tax system, designed to bring it more into line with that of other Common Market countries.

The main interest will, I feel, be concentrated on the following features:

1. Uniformity of rates of tax.
2. Weight of social charges on industry.
3. The size of the tax base.
4. Treatment of capital gains.
5. Position of the shareholder.
6. Depreciation policy.
7. Valuation of stocks.
8. Treatment of overseas income.
9. Elimination of double taxation.
10. Tax morality.

I do not propose to examine all these points in detail, but it may be valuable to make a few comments on each.

In a common market it must, I think, distort competition if companies in one country are taxed at notoriously heavier rates than companies in others. The average reaction in this country is to imagine as a matter of course that business here is more heavily taxed than business on the Continent. On this point the National Institute of Economic and Social Research said in March of last year:

> 'Taxation in this country does not appear to be exceptionally heavy. The total burden is quite near to the European average.'

Prima facie, this seems to be quite untrue from our own experience, however limited. It is necessary, however, to bear in mind that while nominal rates may be heavier in this country, continental companies pay a much heavier proportion of the social security bill than do companies in this country. It seems to me that the continental burden of social security on business profits more than offsets the apparently heavier direct tax burden borne here. Anyone who doubts this statement can check its accuracy by the comparative figures submitted in the March 1961 number of the Review issued by the National Institute for Social and Economic Research. It may well be that any reduction of direct taxation which British companies may expect in the Common Market, will be more than offset by additional social security contributions and fringe benefits paid for on behalf of employees.

Most people in this country think we are the quintessence of the Welfare State. The continental worker is much better protected in several respects. The German and French workers in particular are better protected in several ways, and the financing of this protection is borne to a material extent by industrial costs.

Taxation of Capital Gains?

It is also necessary to bear in mind that whatever Selwyn Lloyd may have in store for this country by way of taxation on capital gains, British companies are now almost alone in Europe in not paying tax on capital gains, short term or otherwise. This arises by reason of the difference between United Kingdom and continental thinking on the amount of the tax base, i.e. the income on which the normal tax is computed. In the United Kingdom we are assessed on the pure income basis, subject to a few adjustments, in other words the profit and loss balance. By and large, the Continent favours the net worth concept, i.e. the balance sheet basis, in which the taxable amount is the increase in net worth of a company from year to year, less capital introduced, plus capital withdrawn. The continental basis thus automatically includes capital gains. In the United Kingdom, only such capital gains as are specifically deemed to be income, e.g. capital profits on sales of patents, are taxed. It is difficult to avoid the conclusion that in working towards harmonization with E.E.C. countries we shall have to submit to the inclusion of capital gains in the calculation of amounts to be taxed. It will

be recalled that the Royal Commission on the Taxation of Profits and Incomes which finally reported in 1954 recommended in a limited way that realized surpluses on sales of business assets should be treated as ordinary income and taxed accordingly.

We also tend to overlook, in Britain, that the shareholder's dividends are treated very tenderly as compared with the treatment of continental shareholders. Within several countries of the E.E.C., even dividends passing between companies are taxed over again, and while it is likely that inter-company dividends will become tax-free in the Common Market, continentals have long been used to the idea that a dividend emerging from a company constitutes another taxable source in the hands of the individual.

In the United Kingdom, of course, a dividend from a United Kingdom company to an individual is treated as franked, except for surtax. Quite apart from what the Common Market harmonized view on this may be, Selwyn Lloyd is known to favour a separate company tax. This would in any case probably involve the abolition of *income tax* on companies as such, with some corresponding upward adjustment in the profits tax, coupled with a withholding tax on dividends to individuals – which tax would be handed over to the Inland Revenue by the company collecting it.

I would not be surprised to find ourselves in this country faced with a company income tax of 25 per cent or 5*s* in the £1, coupled with a withholding tax on dividends of an equal amount, which companies would collect on behalf of the Inland Revenue and hand over. The present position of companies in this country is quite Gilbertian, because under the present system it is possible for a company to pay no tax at all because of, say, investment allowances, then pay a dividend out of profits, and deduct tax from it (which is not accounted for to the Revenue). Individuals can then if they have the necessary reliefs, and charities in any case, claim repayment of tax which has never been suffered. I hardly imagine that even the Revenue, which is naturally conservative and averse to change, would like to retain such a system indefinitely. A reform of the type I have indicated would also draw most of the teeth of the dividend-stripper, who basically works on the fact that tax is reclaimable from dividends.

It is only fair to say that there are currents of thought on the Continent which look very favourably at the treatment of dividends under the United Kingdom fiscal system, and especially the easy way in which it is possible to liquidate companies in this country without adverse tax consequences. I have heard one continental lawyer compare the continental experience on this matter to the apocryphal notice which appeared outside a certain continental circus: 'No charge for admission, but two marks payable when you leave'.

On the question of depreciation, we have got ourselves in this country into quite a mess. We have investment allowances that come and go; we have initial allowances that change regularly, and we have annual allowances that have to be adjusted by 25 per cent on the normal rate. The variations on the Continent are equally complicated, in the following ways:

(*a*) the base on which depreciation is given is different in several countries. Revaluation of assets is still allowed in France and Belgium. It has been allowed in the past in Germany and Italy;

(*b*) the method of write-off varies – some E.E.C. countries have the straight-line write-off method, while we favour the declining balance method. There seems to be a very widespread belief on the Continent that declining-balance depreciation as practised by the United Kingdom is superior to the straight-line basis. The ideal basis favoured on the Continent at present is the United Kingdom basis plus accelerated amortization;

(*c*) the type of asset on which depreciation is granted may vary. Here we restrict the assets on which allowance is given. No allowance is given on commercial buildings, for instance, while on the Continent the general rule is that any asset which diminishes in value is available for depreciation.

One must hope that harmonization of depreciation practice must emerge out of the studies currently being made by working parties in the E.E.C. Revalorization must disappear, as it was really a corollary of the serious inflation that took place on the Continent. We shall probably see that investment allowances will be given on the Continent as they are here, and that more accelerated depreciation is advocated throughout all countries in the Common Market. So far as this country is concerned, we shall have to arrive at a fiscal rule whereby *all* expenditure, whether on tangible or intangible assets, is by one means or another written off against taxable profits.

Stocks and Pigeon-holes

We have seen a rather hectic battle in this country over the treatment of stocks. The Revenue has not been uniformly successful in its cases, as the results in *Cock Russell*, *Broadstone Mills*, and *Duple Motor Bodies* show. But the treatment here of stocks is still too rigid and one may reasonably hope that the Common Market researchers will end by advocating more elasticity, so that concerns which prefer to use base stock methods or last-in, first-out may be allowed to employ them. We might recall here that the Royal Commission in 1954 advocated greater elasticity in the treatment of stocks, but its recommendation is still in some Government pigeon-hole.

Companies which draw part of their income from outside the U.K. will doubtless agree that the present system of allowing double taxation relief has become so complicated that it is almost at times incomprehensible. It is sometimes necessary to resort to the use of quadratic equations to find the answer. The system of allowing credit has become inordinately difficult to work in many cases, and because of the

variants of overseas taxes, has often failed in its primary object. Taxation of overseas income is generally more liberal on the Continent than here, and one hopes that harmonization in this field could be reduced to the simpler form of exemption used in France and Italy or the flat reduced rate used in Belgium.

In theory, once the national systems of taxation within the E.E.C. are harmonized, it might not be necessary to tax again income passing over the national frontiers within the E.E.C. But in practice it may be impossible to hope for such a desirable consummation within the foreseeable future, and where income passes over the frontiers, there may have to be a further development of bilateral treaties pending the exemption of such income outside the country where it has been earned.

On top of all this, one must face the fact that between countries like, say, the United Kingdom, Germany, and Holland on the one hand, and France and Italy on the other, there is a vast abyss between what tax law says and what tax practice and morality allows. It is fair to ask how it is possible to harmonize taxation systems till you have harmonized tax morality. This must remain an open question. I do not know the answer to it.

Delphic Oracle Department

Is it possible to attempt a forecast of the changes that may occur in fiscal policy, so far as it affects us? My guesses would be as follows:

(i) *Indirect taxes*

That purchase tax will go, and that in its place we shall have something like the French added-value tax coupled with a small retail sales tax.

(ii) *Direct taxes*

(*a*) That the rates will tend to coincide more with those of Europe, both for companies and individuals;

(*b*) that the base for assessment will be extended to include various types of capital gains, at least so far as companies are concerned

(*c*) that the main types of deductions such as depreciation, and the adjustment of stocks and treatment of losses will be made more uniform;

(*d*) that the tax relationships between companies and shareholders will be put on a more uniform basis.

(iii) *Social security*

My guess is that United Kingdom companies will be faced with a bigger bill to bring them in line with continental practice.

(iv) *Estate duty*

I have not touched on this in my paper because it has not yet, so far as I know, been effectively discussed by any of the Common Market committees of inquiry but I mention it because in my view there is a grave distortion of the Common Market if, in any one of the countries, industrial capital is removed by the State in large chunks on the deaths of individual proprietors or on the deaths of the main shareholders in private companies. There will be a drastic review of estate duty levies in this country within the next ten years.

(v) *Law of domicile*

This is likely to be an important matter for discussion in due course, especially as the law of domicile as applied in the United Kingdom is very different from that of the Common Market. Broadly speaking, the continental idea of 'domicile' is based on a person's 'home', and this idea is very close to the idea of 'ordinary residence'. There have been two abortive Domicile Bills introduced into Parliament within the last three years, ostensibly by private members. Both of them foundered because they did not take sufficient note of the fiscal problems which arise, because in the United Kingdom there is a community of individuals domiciled abroad, but perhaps ordinarily resident here. The authors of the Bills apparently did not consider the disastrous effects of these Bills on the foreign colony here, both for income tax and estate duty. Whether we shall see another Domicile Bill or not in the same series it is difficult to say, but it is clear that the Bills cut both ways – they will make life difficult for the foreign community here, but they will equally make avoidance of death duties by United Kingdom citizens much more possible. This is perhaps why the Inland Revenue might oppose a change in domicile basis. But the Common Market will introduce another complicated problem, and a decision will have to be taken within the next few years on whether we go into the Common Market with a law of domicile similar to that of the other members.

(vi) *Effects outside the Common Market*

Without a doubt, if the fiscal changes inside the Common Market go the way I have suggested they might, it will be the biggest fiscal revolution in civilized countries since the dawn of our history. The right to levy taxes in as curious a way as the national State may demand has been a feature of the history of the rise of every national State. Each country has chosen its fiscal laws in accordance with the national temperament. In this country we have had the window tax, the inhabited house duty, and the tax on liveried servants – all in fairly modern times.

If all the national idiosyncracies disappear and we are to have a harmonization, if not an unified European tax structure, it must have repercussions outside.

Just as the nation-States of the Commonwealth have to a larger or a lesser extent imitated our own fiscal policies, I expect other countries and other continents to follow the lead of Europe. For example, some of the fiscal studies in Canada at present are being conducted to inquire how Canadian trade is being stultified by heavier or more oppressive taxes than in Europe. Just as a stone in a pool throws out ever-increasing circles, I expect the changes in European fiscal policy to have harmonizing influences on similar policies in every other part of the world.

Weekly Notes

OUTDATED ARTICLES?

AN article in the February issue of *Technology* – a monthly review published by *The Times* – discusses articled pupilage, taking the legal and accounting professions as the main examples. The anonymous writer designated 'Our Own Correspondent' describes the familiar system by which chartered accountants are trained in England and Wales, and then fires some reverberating broadsides at the system which he calls 'medieval', and at the report of the Parker Committee. He concedes that the system is admirable in theory, but states that the wages paid to articled clerks are 'scandalously poor', while 'principals no longer have time to instruct their pupils in person' and so leave them to other members of the staff and 'the educational horrors of correspondence courses'. The Parker Committee's proposals are described as 'feeble' and 'profoundly disappointing'; they do not seek, the article states, to raise the minimum entrance qualification of articled clerks, or to provide the latter with free time for study, or to foster full-time education at technical colleges and the universities.

The writer of the article puts forward his suggestions as to how he thinks the Council of the Institute ought to react to the Parker Committee's report. He suggests they welcome the report as a 'worthy piece of work' which does not go far enough. He also sets out some of the difficulties that would face the Institute if it adopted his proposals, but he goes on to ask: 'Can the Institute afford *not* to take these measures? Can they afford to risk a future when their recruits will be drawn exclusively or mainly from the poorer academic levels of school-leavers?'

The article, which is reproduced elsewhere in this issue, is a forthright one and must be one of the most serious pieces of criticism to be levelled against the profession in recent years. It will no doubt evoke strong reactions among practitioners, some of whom may care to submit their views for publication.

IRISH INSTITUTE'S EXAMINATIONS

IN the Final examination (old syllabus) of The Institute of Chartered Accountants in Ireland held in November 1961 there were forty-three successful candidates. The First Place and the Arthur H. Muir Memorial Prize were won by Mr D. L. Hally, of Booterstown, Co. Dublin; the Second Place by Mr D. Delaney, of Dublin, and the Third Place by Mr J. J. Hayes, also of Dublin.

The names of the successful candidates, together with the names of the successful Irish candidates in Part II of the Final examination held under the syllabus of the former Society of Incorporated Accountants, are given elsewhere in this issue.

PLANS FOR INCOMES

THE Conservative Central Office has issued a popularized version of the White Paper *Incomes Policy: The Next Step* (referred to in a leading article in this issue). The main difference between the two documents is that the Party pamphlet sets out quite unequivocally the Government's policy for incomes.

It says that the Government aims to do three things. First, it hopes to achieve a faster rate of economic growth. Second, it wants to obtain a more vigorous development of the export trade. Third, it expects to achieve a steadily rising standard of living with full employment. The pamphlet says that this policy can secure a lasting and steady improvement in living standards but that the policy would be in jeopardy if money incomes were to rise faster than the volume of national production.

The pamphlet says the first phase in this policy is the 'pay pause' which is due to come to an end on March 31st. Thereafter the Government aims to have a period of restraint when wages, salaries, dividends and profits are measured against national output. It is probably more than a coincidence that the end of the pay pause coincides with the end of the fiscal year. The policy as a whole will clearly be vitally affected by this year's Budget when the Government will be able to announce both its own contribution by carefully controlled public expenditure and its taxation proposals for the new fiscal year.

CAPITAL GAINS IN AMERICA

IT is by now common knowledge that Somerset House is finding the task of implementing Mr Selwyn Lloyd's promise to tax speculative short-term gains far from easy. Both on the score of equity and on administrative grounds a capital gains tax offers especial problems. Some of these are very evident in the American tax which is discussed in a short discursive article contained in the current issue of *The Bankers' Magazine*.[1] As a revenue raiser, as is evident from the table below, the tax is distinctly disappointing.

	Estimated total receipts of tax on capital gains ($ thousand million)	Percentage of total individual and corporate income tax receipts
1958	2·0	3·7
1957	1·6	2·9
1956	2·0	3·7
1955	2·1	4·1
1954	1·6	3·7
1953	1·0	2·0
1952	1·1	2·3
1951	1·2	2·6
1950	1·2	3·3
1949	0·6	2·4
1948	0·8	2·9

1 'Lessons from America's Capital Gains Tax', by Ursula K. Hicks and Herschel I. Grossman.

If Mr Lloyd's tax were to produce the same yield in relation to the United Kingdom income tax, it would provide the Exchequer with less than the current stamp duties. The poor yield from the American tax arises in part from avoidance which the exemption of accrued gains on assets passing at death permits, and no doubt from the unwillingness of asset owners to liquidate much appreciated assets.

An especial feature of the American tax is the preparedness of Congress to regard the classification of income as capital gain, whereby it is taxed at a maximum rate of 25 per cent, as 'a convenient vehicle for granting tax relief for a variety of purposes to a variety of groups'. The authors point out that the present statutory definition of the short-term, i.e. six months, is too short to bring into charge all speculative gains which within that period are taxed as ordinary income. Congress is unwilling, however, to extend the period because it may then discourage the liquidation by genuine investors of assets which offer a substantial gain. This 'locked-in' problem which a severe rate of tax can create would exert harmful effects on the securities market. There have been various proposals in the United States for the introduction of tax-free 'rollovers', whereby any gain from realization is tax exempt if the proceeds are reinvested. The conclusion to be drawn from the article is that after nearly fifty years of experimentation, the Americans are still dissatisfied with their tax on capital gains.

NATIONAL LAND FUND IN 1960–61

THE National Land Fund was established under the Finance Act, 1946, empowering the Treasury, in cases where property is accepted by the Commissioners of Inland Revenue for payment of death duties, to pay from the Fund to the Commissioners the amount of the duties and to dispose of the property at their discretion. Under the Finance Act, 1953, the use of the National Land Fund was extended to allow for the acceptance of objects of historical or artistic interest. A section of the Historical Buildings and Ancient Monuments Act, 1953, enabled the Fund to be used for expenses incurred by the Ministry of Works on buildings of outstanding historical and architectural interest. A third extension was made in the Finance Act, 1956, when the Fund was extended to provide for the acceptance of works of art irrespective of their connection with a particular building.

The Fund was originally opened with an issue of £50 million from the consolidated fund in the fiscal year 1946–47 and this was reduced to £10 million by the cancellation of some of the Fund's investments in October 1957.

A sum of £246,000 is recorded in the present account as paid to the Commissioners of Inland Revenue for landed properties chattels associated with certain buildings, property transferred to the National Trust and placed on public view and chattels loaned or transferred to the National Trust for Scotland and placed on view to the public. £33,000 is recorded as paid to the Minister of Works for the expense of management and custody of properties. The total payments made from the Fund since it was established in 1946 have been £4·3 million. At March 31st, 1961, there were a number of cases where the Commissioners of Inland Revenue had agreed to accept property and chattels in consideration of death duties where the transactions were yet to be completed. The total involved was about £625,000.

MORE BUDGET ADVICE

IN a memorandum submitted to the Chancellor of the Exchequer on the coming Budget by the Incorporated Society of British Advertisers and the Institute of Practitioners in Advertising, the two bodies state that any tax on advertising must be a deterrent to the economical marketing of consumer goods and to the sales efficiency of British manufacturers. The existing television advertisement duty is of limited effect, and is, they believe, the first tax to be levied on productive services.

At best, the memorandum continues, such a tax must lessen efficiency and at worst, it amounts to an official discouragement of effective selling. This is particularly apparent in the case of a manufacturer wishing to enter an established market for the first time. His selling effort, in any event, is initially very costly and if, in addition, he has to pay tax on that selling effort he is seriously hampered.

Referring to the Common Market, they express the belief that manufacturers should receive the maximum encouragement from the Government to develop and sell their products with the greatest possible efficiency and economy. A tax on any part of advertising, they declare, must inevitably be a disincentive, just at a time when industry needs the greatest support to meet the fierce competition which the Common Market will bring. 'The case for the abolition of the television advertisement duty is a strong one and there is an even stronger case against its increase or extension', they conclude.

HIGHER GOLD RESERVES

IN January the gold and convertible currency reserves of the sterling area went up by £33 million to £1,218 million. Apart from a small decline in December this was the fifth successive advance in the reserves, excluding the repayments to the International Monetary Fund, since the emergency Budget introduced by the Chancellor of the Exchequer last July.

One of the reasons for the good performance of the reserves in January was the return of funds after the end of the calendar year which had been withdrawn, notably to the Continent, for 'window dressing' purposes. It appears that there has been a strong flow of funds back from Germany and the dollar has been comparatively weak again following

the announcement of the increased United States payments deficit in the fourth quarter of 1961.

The continued high interest rates in London are attracting short-term money for investment, and the opinion is growing that if funds are to come to London for short-term investment they must come soon in case Bank rate is reduced. In the longer term the upward trend of American interest rates suggests that funds are not likely to be committed to London for long periods. What actually happens to foreign funds will depend very much on the attitude which the Government takes in the approaching crucial stages of the negotiations for the wage increases in key industries.

CHANGED BASE FOR PRODUCTION INDEX

IT was announced last month that the monthly index of industrial production is now to be calculated on the base year 1958 instead of 1954. The purpose of the index is to show month-to-month changes in output and it is clearly desirable that an indicator of the short-term trend, as this is intended to be, should be kept up to date so far as the weighting of different industries is concerned. The detailed results of the full census of production in 1958 are now available and this is the reason for choosing that particular year as the new base. The last time the index had a change of base was in 1958 and before that in 1952.

This is My Life . . .

by An Industrious Accountant

CHAPTER 110

OUR board of directors recently assembled in confidential conclave to deliberate on a most momentous decision. The issue was grave – indeed crucial. What salary increases (if any) should the senior staff get?

It's been a liberal education to sit in on these board meetings. The directors have at their fingertips the history of the last decade's industrial disputes; they know the wage-claims, the strikes, the 'go-slows', the settlements in shillings and hours, and the rising cost of living. Our personnel director can assess the merits of a union demand and its chance of success (pay pause apart, of course) to the last halfpenny.

The chairman is of the older generation; his ideas of the value of money are outdated and he still thinks £50 is a generous rise. It's a change from the days when, as an auditor, I accepted unthinkingly the salary or wages books without question or study – provided they were signed by a properly authorized official.

But with our senior staff we come suddenly to uncharted territory. How do you assess the sales manager and his assistants, the factory manager and his deputy, the office manager, or the two chief departmental managers whose shrewd buying has contributed so much to our prosperity? What about our maintenance engineer with his flair for economical repairs, or my own senior accountants? What indeed about the company secretary? Hearing most of the others discussed, he knows the mind of the board; what they say of *him* in his absence is the eternal enigma.

The prospects vary. Some executives, like those in the sales departments and the factory, can be measured by the rough-and-ready figures of improved turnover or output; some, like the engineer, have scalps to be seen at their belts. He recently looked at a foundation collapse near the lift-shaft, for repairing which our architect had estimated an astronomical sum, and fixed it in ten days with his normal staff, by his own ingenious initiative. One departmental manager got an exceptionally big increase without a word of dissent; he's young, able and ambitious; he'll go elsewhere quick if we don't pay him enough. The other is too old to leave us; how much extra should he get for seniority and years of loyal service?

Then comes the turn of my senior accountants. Their case has to be fought hard; there's no yardstick for them. Our year's work has been efficient but not eventful; it hasn't made an impact on the directors; we had no dramatic crises to overcome. I quote 'happy is the country with no history', but the chairman doesn't get the significance. The deputy-chairman states bluntly that only operating staff should share in our enhanced operating profit; accountants rate comparatively nominal rises. I point out that if it wasn't for our brilliant credit-control, against stiff and ill-judged opposition, we'd have incurred some really nasty bad debts. This is tactless and rouses opposition. The directors aren't pleased with my attitude, but if I don't fight, we'll get nowhere.

Why didn't I keep a little private notebook when I was an auditor – black-covered, all codes and initials – giving details of salary ratios among our clients? So much for chief accountants, so much *pro rata* for managers of all grades; such proportions in manufacturing as compared with distribution or administration? If I could have my time over again, I'd equip myself for this type of argument. I fall back doggedly on the old principle that we should get the same average percentage rise as the others.

This time Prinny comes suddenly to succour us. He quotes jovially the analogy of the quaint old Chinese custom of paying the doctor when you're well and vice versa. The deputy-chairman finds this funny and starts chuckling; in the release from tension, our section does quite well. *Deo gratias.* As long as they don't remember our mistakes this time next year and cut our pay accordingly.

Finance and Commerce

Wolseley-Hughes

THE subject of this week's reprint is the accounts of Wolseley-Hughes Ltd of Birmingham (chairman: Mr N. G. Lancaster, M.B.E., F.C.A.), a company with diverse interests in engineering. The Wolseley part of the name covers Wolseley Engineering Ltd, with its sheep-shearing equipment etc., and which, if our recollection is correct, gave the name 'Wolseley' to the motor-car, and also had a connection with the 'Austin' of the motor-car world.

The Wolseley-Hughes grouping is of comparatively recent formation; it came about, in fact, on May 1st, 1958, by the amalgamation of Geo. H. Hughes Ltd with Wolseley Engineering. To this nucleus was added Adams & Benson (Agricultural) Ltd in January 1959; Rapid Magnetic Ltd, with its electro-lifting magnets in November 1959; Nu-Way Heating Plants Ltd, and its subsidiary, Oil Burner Components Ltd, in November 1960; and Accles & Shelvoke in April 1961.

Mr R. E. Woodward, F.C.A., director-secretary of the group, draws attention to one big drawback, information-wise, of the building of a group of businesses in this way: the audited accounts show an apparent growth of profits more rapid than has actually been the case and do not reveal the true progress in profit-earning which has been achieved. It is a point which on more than one occasion has been the subject of comment in these columns.

Ten-year View

Accordingly, with these Wolseley-Hughes accounts, shareholders are provided with a ten-year profit summary which gets around the difficulty. Profit and taxation figures are given on the basis that all the subsidiaries had been members of the group throughout the whole ten-year period but, of course, it has obviously been necessary to apportion profits on a time basis where the time factor was involved.

The usefulness of these figures, given in Table 1 in the report and included in our reprint, can be appreciated when set beside Table 2 (also included) which covers the building up of the group. Table 2 includes only subsidiaries' profits earned after the actual dates of joining the group, the seven months' period, for instance, including seven months of Wolseley's profits but only three months of Hughes's.

This raises a minor point that might be worth consideration. Table 2's £455,965 can quickly be traced to the consolidated profit and loss account but the derivation of the figure in the consolidation, though seemingly obvious, is not as apparent as it might be; the italic type of the £7,783 above it does not give sufficient distinction to the 'minus' figure. The point will be appreciated in the reprint where the italic figures are set in lighter type.

One Column

It is useful in these Wolseley-Hughes accounts to have the account on the left and the relevant notes on the right. This is a matter raised here some years ago when accounting evolution was tending towards the removal of detail from the accounts to separate notes. The conjunction of account and notes certainly obviates the need to 'flip' from one to the other.

The use of one column in the account for all the figures is, however, a debatable point. It may have an element of subconscious attachment to the past which gave us the 'item' figures in one column with group totals carried out and thus emphasized. Maybe the accountant's eye is developing a double sight that keeps one eye, as it were, on the item figures and the other on group totals. It is this sort of thing on which the present generation has an influence because what seems an improvement now may well become accepted practice in the future. One recalls the argument there was at one time, about the elimination of shillings and pence from published accounts!

Wolseley-Hughes also takes the mildly revolutionary step of eliminating the chairman's statement, which has been combined with the directors' report. This, of course, opens up a wide vista for discussion, for which there is no space here at present. There is no doubt that the provision of chairmen's statements with the accounts was an improvement on the traditional chairman's speech at meeting; and despite the fact that it is a statutory document, the directors' report is the 'Cinderella' of published reports and accounts. Provided statutory requirements are fulfilled, therefore, there would seem to be no reason why the directors' report should not be expanded to cover the chairman's statement and this does emphasize, as Mr Woodward points out, the board's collective responsibility.

Replacement TV

WHAT is going to happen in the radio and television industry? There is a reflection of the present situation in the accounts to September 30th, 1961, of Lloyd's Packing Warehouses (Holdings) Ltd which show a trading loss of £258,820 as compared with a trading profit of £633,434. The major contribution to the adverse result, says Sir Eric A. Carpenter, the chairman, was the heavy loss of £528,038 incurred in Regentone Products Ltd.

Sir Eric refers to his statement of the year before

on the 'deplorable' conditions in that industry. These, he now says, led to the decision to dispose of the factory and plant at Romford and to enter into an arrangement for manufacturing to be carried out to specification on a contractual basis. This operation yielded a capital profit of £83,619 on the assets disposed of, eased the financial position and stemmed the further heavy loss which continuance in manufacture, he says, would undoubtedly have entailed. It did not, however, relieve the company of the disposal of accumulated stocks in a deeply depressed market.

Whatever may be said about the effect of hire-purchase restrictions etc., is it possible that the TV industry is getting near 'replacement basis' working?

WOLSELEY-HUGHES LIMITED

Financial History and Information

TABLE 1

Profits of the Companies now comprising the Group

Apportioned on a time basis where necessary and on the basis that all subsidiaries had been members of the group throughout this period.

Year ended 31st July	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961

Number of Employees		1,100	1,150	1,300	1,700
Number of Shareholders		600	625	650	850

NOTE: Wolseley-Hughes Limited was established on 1st May, 1958, by the amalgamation of Geo. H. Hughes Limited, with Wolseley Engineering Limited, and its subsidiaries.

Adams & Benson (Agricultural) Limited joined in January, 1959; Rapid Magnetic Limited in November, 1959; Nu-Way Heating Plants Limited and its subsidiary Oil Burner Components Limited, in November, 1960, and Accles & Shelvoke Limited, in April, 1961.

The profits of the Group, which are summarised in Table 2 above, include only the profits of the subsidiary companies earned after the actual dates of their joining the Group; for instance, the trading period of seven months ended 31st July, 1958, included seven months of Wolseley's profits but only three months of Hughes' profits.

To enable shareholders to appreciate the annual rate of profit earning over a long period of the companies now comprising the Group, their respective profits have been added together for each of the last ten years and are summarised in Table 1 above.

WOLSELEY-HUGHES LIMITED AND SUBSIDIARIES

Consolidated Profit and Loss Account

for the Year ended 31st July, 1961

Figures in italics represent deductions.

STATEMENT A

		1961	1960
		£	£
I	**Surplus on Trading**	459,446	277,290
II	Income from Trade Investments	855	1,243
III	Income from Tax Reserve Certificates	3,447	147
IV	Interest on Loan Capital	*7,783*	*5,344*
V	**Profit before Taxation**	455,965	273,336
VI	Taxation for the year	*244,690*	*144,700*
VII	**Net Profit for the Year after Taxation**	211,275	128,636
VIII	Exceptional Items:		
	Taxation Adjustments—previous years	5,711	*301*
	Others	—	8,918
IX	Amount attributable to outside shareholders' interests in a Subsidiary	1,895	—

	Less tax at 7/9	*60,183*	*34,149*
		95,133	*53,976*
XIV	**Profit Retained in the Business**	£118,236	£77,765

NOTES

STATEMENT A

		1961	1960
		£	£
	Surplus on Trading includes a due proportion of the profits of Nu-way Heating Plants Ltd. and Accles and Shelvoke Ltd., the Issued Share Capitals of which were acquired on the 25th November, 1960, and the 5th April, 1961, respectively, and is after charging:—		
	Depreciation:		
	Written off Fixed Assets	79,186	50,867
	Adjustments of prior years	8,102	—
	Transferred to Reserve against excess replacement cost of Fixed Assets	10,606	9,074
		97,894	59,941
	Directors' Emoluments:		
	Fees as Directors	2,174	2,197
	Management Remuneration	35,829	23,078
	Auditors' Remuneration	4,138	2,931
VI	**Taxation for the year:**		
	Profits Tax	59,574	30,068
	Income Tax	182,232	114,632
	Taxation Equalisation Reserve	2,884	—
		£244,690	£144,700
VIII	Taxation adjustments arise from the release of the provisions no longer required.		
XIII	The Ordinary Dividends for the year ended 31st July, 1961, are payable on the increased Ordinary Capital.		
XIV	The profit retained by the Parent Company and by the Subsidiaries is shown in Statement C.		

WOLSELEY-HUGHES LIMITED AND SUBSIDIARIES

Consolidated Balance Sheet

	Parent Company Ordinary Capital	1,035,448	705,000
	Profits retained in the business and other reserves	777,528	430,280
		1,812,976	1,135,280
III	Outside Shareholders' Interest in Subsidiary	3,705	—
IV	Loan Capital	141,500	88,750
V	Future Taxation	201,873	120,319
		£2,310,054	1,494,349
	EMPLOYMENT OF CAPITAL		
		Cost or Valuation / Depreciation	
VI	Land and Buildings	849,608 / 141,310 = 708,298	395,976
VII	Plant, Equipment and Motor Vehicles	864,093 / 544,339 = 319,754	246,290
		1,713,701 / 685,649 = 1,028,052	642,266
VIII	Trade Investments	75,967	67,815
	FIXED ASSETS	£1,104 019	710,081
IX	Current Assets:		
	Stocks	1,313,600	662,226
	Debtors	900,941	517,496
	Tax Reserve Certificates	27,775	73,275
	Cash and Bank Balances	100,962	44,423
		£2,343,278	1,297,420
X	Current Liabilities:		
	Amount Due to Bankers	*242,502*	*126,927*
	Creditors	*569,937*	*213,683*
	Taxation	*261,382*	*129,361*
	Proposed Dividend on Ordinary Shares	*63,422*	*43,181*
		1,137,243	*513,152*
	NET CURRENT ASSETS	1,206,035	784,268
		£2,310,054	£1,494,349

NOTES

STATEMENT B

		1961 £	1960 £
II	The Ordinary Capital was increased by £330,448 in connection with the acquisition of the issued share capitals of Nu-way Heating Plants Limited and Accles & Shelvoke Limited. Details of movements in reserves are set out in Statement C.		
IV	Loan Capital:		
	6¾% First Mortgage Debenture	56,500	—
	6% Mortgage Debenture	85,000	88,750
		£141,500	£88,750

The 6¾% First Mortgage Debenture is secured on the assets of a Subsidiary and is repayable by thirteen further annual instalments of £4,500. The 6% Mortgage Debenture is secured on the assets of a Subsidiary and is repayable by sixteen annual instalments of £3,750 and a final payment of the balance not later than 1976.

VIII Trade Investments are shown at cost less a provision of £2,973 for the possible depreciation in value of shares held in a certain company.

IX The amount of the stock has been determined on bases and by methods of computation which are considered appropriate in the circumstances of the business and have been used consistently.

General:

The amount of outstanding contracts of Subsidiaries for capital expenditure not provided for in these accounts is estimated at £65,043 (1960 £53,215).

There are contingent liabilities in respect of a Subsidiary's guarantees to various banks of employees' overdrafts amounting in aggregate to approximately £1,300 and of £23,201 in respect of bills discounted.

		£94,040				£341,812		

CITY NOTES

THE return of institutional buyers in force to the gilt-edged market has been the outstanding feature of stock-market activity this week. For some time institutional investors have not been particularly avid supporters of equities and have shown a tendency to turn from overvalued growth shares towards higher yielding issues.

There has not, however, been much drive to the trend until now. With a reduction in Bank rate overdue and with the industrial growth outlook becoming increasingly suspect, both through the pressure on industrial earnings and through continued 'restraint' in dividend payments, there has now been a concerted movement towards fixed interest stocks and towards Government stocks in particular.

Institutional investors have also shown a tendency to go for slightly longer redemption dates and, in a market none too plentifully supplied with stock around current levels, the effect on prices has been considerable.

It is a long time since the gilt-edged market flourished at the expense of equities but the impression is that the movement may go some way further.

New equity investment is now tending to be restricted, on a defensive basis, to new rights offers where shares become available at prices below existing market levels.

Trade Unions and Professional Auditors

SIR, – Although it is true that for many years now trade unions in this country have had their central funds audited by professional accountants, the same situation has not prevailed in many of the local branches of trade unions, although the amounts of money handled may be very large and the accounts complex.

The normal practice has been for two lay members of the local branch to act as auditors, and while the British trade union movement is remarkably free from financial dishonesty, there is no doubt that many local branch accounts are kept and audited in a lackadaisical and haphazard fashion.

The Post Office Engineering Union, representing some 76,000 telephone engineers in the country, is well aware of this situation and has now incorporated into its rules a permissory clause allowing local branches to use professional accountants for the purpose of auditing the annual accounts of the branch.

The National Executive Council has also given positive advice to its branches to substitute, as far as possible, professionally qualified accountants on a professional basis for lay auditors when the annual accounts are due for scrutiny. This measure is being taken, not because there is any suspicion of the loose handling of Union moneys in the branches, but it is felt a far more competent job of work can be performed by a professionally qualified accountant not merely on the mechanics of auditing, but also by way of useful advice which can be given in the preparation of the branch's accounts so that they can be submitted to the membership of the branch in a readily understandable fashion.

This advice is being taken by the majority of the Union's 255 branches and the change-over to the use of professional accountants is now taking place throughout the Union.

Yours faithfully,
L. J. SAPPER,
Deputy General Secretary.
London W5. POST OFFICE ENGINEERING UNION.

The Training of Accountants

SIR, – Like Mr Kenneth S. Most, whose letter on this subject appears in your issue of January 27th, I have had the experience of attempting to devise courses to explain accountancy to managers, and, like him, found myself forced to turn to an American textbook.

It is, in my view, a pity that the Institute does not more courageously develop latent talent such as I am certain exists, to its own additional prestige, by sponsoring the production of books by members. Whether this is done by accepting theses for some additional diploma or merely by selecting subject for study and writing by groups, or individuals, is less important than that we should, as British accountants, help to give a leadership in these matters where it is needed.

It is also, in my view, unfortunate that much of the training of students by postal tuition is necessarily somewhat limited in scope, and would of itself hardly qualify for the description of 'education' in its widest sense. Therefore, though as a practitioner fully aware of the financial problems inherent in placing more emphasis on a university or college system of training, I am still quite certain that the authority of the profession would be strengthened by a trend in this direction, so long as such training does not completely replace the requirement for a certain basic practical experience as an essential to qualification. Where, however, would we at present find the tutors such a development would require?

Yours faithfully,
London EC2. R. S. WALDRON.

SIR, – As accountancy bodies grant concessions to students holding 'special degrees', could not some agreement be reached between the universities and the various professional bodies to allow professional people, such as accountants, to take a degree and granting them certain concessions on 'post professional' courses in certain faculties.

The comments of other readers would be welcome.

Yours faithfully,
Manchester. J. TRAYNOR, A.C.A.

Hiring or Owning Cars?

SIR, – An exercise many accountants are being called upon to do is a comparison between hiring cars on a contract basis and purchasing outright (with the attendant maintenance and repair charges). I wonder if I can draw upon the experience of any of your readers and ask if any general conclusions have been drawn by them?

Yours faithfully,
A. E. ORME, *Accountant,*
Kenton, Middx. COMPUTER DEVELOPMENTS LTD.

Goodwill: Veterinary Practice

SIR, – I should appreciate any information any practitioner is able to supply with regard to the valuation of the goodwill of a veterinary practice. The practice in question is concerned chiefly with large animals, and very little goodwill, if any, is attached to the premises from which the practice is carried on.

Yours faithfully,
Bradford. WILLIAM C. LONG.

FOR STUDENTS

SHARE CERTIFICATES — II*

PRIOR to the Companies Act, 1948, each share in a company having a share capital had to be distinguished by its appropriate number. In the course of time, original holdings became considerably subdivided by transfers, and a holding of, say, one hundred shares might easily comprise several groups of distinctive numbers, e.g. 1356–1365, 1681–1724 and 1951–1996. As the distinctive numbers require to be written on the share certificate, transfer, transfer receipt, balance receipt, register of transfers, register of members, etc., the amount of work involved can become quite considerable where the shares of a company are actively dealt in.

Whilst the Companies Act, 1948, was under discussion, there was considerable difference of opinion over the question of abolishing distinctive numbers. Those in favour of abolition stressed the work involved, whilst those against emphasized their value in preventing or detecting fraud or mistake. The provisions of section 74 of the Companies Act, 1948, represent a compromise between these two views.

The section provides that:

> Each share in a company having a share capital shall be distinguished by its appropriate number, provided that:
> (1) if all the issued shares, or all the issued shares of a particular class, are fully paid; and
> (2) rank *pari passu* (i.e. equally) for all purposes,
> none of those shares need hereafter have a distinguishing number so long as it remains fully paid and ranks *pari passu* for all purposes with all shares of the same class for the time being issued and fully paid.

Where a company desires to take advantage of this section, a resolution of the directors is sufficient, but it may be necessary to alter the memorandum and articles of association, e.g. where these refer to distinctive numbers.

If the shares are quoted on the stock exchange it will also be necessary to arrange for a new quotation for the unnumbered shares. Existing issued share certificates may remain in use, but notice of the change should be advertised, and transfers will be accepted which do not quote the distinctive numbers of the shares. New share certificates, of course, will not bear distinctive numbers.

It would appear that if new shares ranking *pari passu* with existing unnumbered shares are issued only partly paid, then only the new partly-paid shares would require to be numbered, since the existing fully-paid shares still 'remain fully paid and ranking *pari passu* for all purposes with all shares of the same class for the time being issued and *fully paid*', as required by the section. If this were not so, these circumstances would necessitate re-numbering the existing unnumbered shares until such time as the new shares were also fully paid.

If new shares are issued of the same class as existing unnumbered shares but temporarily do not rank *pasi passu* with them, e.g. they are not entitled to participate in the current year's dividend, it would appear that this necessitates re-numbering the old shares unless the new shares could be considered, at least temporarily, as shares of a different class.

Estoppel

By section 81 of the Companies Act, 1948, a certificate under seal is prima facie evidence of title. At common law, however, where a share certificate under seal is issued with the authority of the company, the company is estopped from denying:

(1) that the person named therein is entitled to the shares; or
(2) that the amount stated in the certificate as having been paid on the shares has, in fact, been paid.

The company will therefore be liable to damages to any person, e.g. a mortgagee, who in good faith relies on such a certificate and, in consequence, suffers loss (*Balkis Consolidated Co v. Tomkinson* ([1893] App. Ca. 281)).

Estoppel does not apply where the certificate relied upon has been issued fraudulently without the authority of the company, as where the secretary wrongfully affixes the seal and forges the signatures attesting it, or where, although the signatures themselves are genuine, they have been made and the seal affixed, not as the result of a bona fide transaction, but as part of a fraudulent act on the part of the signers (*Rubens v. Great Fingall Consolidated* ([1904] 2 K.B. 712)).

Duplicate Certificates

A duplicate certificate to replace an old certificate which is torn or mutilated will be issued on surrender of the old certificate, and articles of association as in clause 9 of Table A may require payment of a fee, frequently 2*s* 6*d* or such less sum as the directors think fit. Stock exchange regulations require that the charge shall not exceed 1*s*.

From what has already been said regarding the effect of a share certificate, it follows that adequate precautions to protect the company and its members must be taken where a new certificate is requested to replace one that is said to have been lost or destroyed. Table A authorizes the directors to require such evidence and indemnity, and payment of such out-of-pocket expenses, as they think fit. The precautions usually taken comprise:

(1) A statutory declaration made by the shareholder and sworn by him before a commissioner for oaths, setting out the circumstances of the loss or destruction of the original certificate. The making of a false declaration is a punishable offence.
(2) An indemnity by the shareholder (stamp 6*d*) by which he undertakes to make good to the company and directors any loss or expense they may incur as a result of the issue of the duplicate certificate. (See Example A overleaf.)

*Part I of this article appeared in *The Accountant* of January 27th.

CORRECTION: The reference to section 155 of the Companies Act in the first paragraph of Part I should have read 'section 455'.

(3) A guarantee by a bank or other third party of sound financial standing. (See Example B below.)

Where the amount involved is small, the indemnity alone may be considered to give sufficient security for the issue of the duplicate certificate. Companies usually issue the necessary documents for completion by the shareholder and guarantor. Before a duplicate certificate is issued, it must be ascertained that no 'stop notice' has been served on the company in respect of the shares, as the shareholder may wrongfully be seeking to obtain a duplicate certificate when he has deposited the original as security for a loan.

Example A

Form of Indemnity

I..... of.....
in consideration of the issue to me of a duplicate share certificate for..... ordinary shares of..... each, numbered..... to..... inclusive in your company, the original certificate No..... having been mislaid, lost or destroyed, do hereby undertake for myself, my heirs, executors or administrators to indemnify the company the directors and the officers for the time being thereof and save them harmless from and against all claims and demands in respect of the said share certificate and from and against all losses, damages, costs, charges and expenses which they may incur, sustain and be liable to, in the event of the said share certificate being in any way dealt with or being forthcoming at any future time or in consequence of their issuing to me a new certificate as aforesaid, and I hereby declare that I have not sold, pledged or otherwise disposed of my interest in the said shares, and further undertake and agree, if the said share certificate should hereafter be found, forthwith to deliver up the same to the company without cost, fee or reward.

Dated this..... day of..... 19.....

Signature.....

If required the signature should be witnessed. Where a guarantee is also required, the following paragraph is added:

Example B

And we..... of.....
concur in the above request and guarantee the performance by the said.....
of the above undertaking.

Signature.....

On issue, the duplicate certificate must be conspicuously marked 'Duplicate' and a note of its issue must be made in the member's account in the register of members. Future dealing will be made only against the duplicate certificate, and if the original should later be lodged with the company, a full explanation should be called for and surrender of the duplicate certificate. All correspondence relating to the matter, and the indemnity, statutory declaration and guarantee must be carefully filed.

If a share certificate is lost in transit between the registered office and the shareholder's address, the shareholder may refuse to give an indemnity covering the issue of a duplicate certificate since the fault was not his. If the certificate was sent by registered post so that delivery could be proved, the Postmaster-General may agree to bear the cost of a suitable indemnity issued by an insurance company. Otherwise the matter may require compromise. If the shareholder first used the post as agent between himself and the company, then he or his broker may be prepared to give the indemnity when it is pointed out that the company was justified in using the post as the shareholder's agent. If the company first used the post as agent, then the directors may feel inclined to waive the indemnity.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS ARMSTRONG, ROUTLEDGE & CO, Chartered Accountants, of 57 English Street, Carlisle, announce that they have opened an office at 41 Darlington Street, Wolverhampton.

MESSRS DIXON, WILSON, TUBBS & GILLETT, Chartered Accountants, and MESSRS DIXON, WILSON & CO, Chartered Accountants, announce that they are today (February 10th, 1962) moving from 24 Basinghall Street, London EC2, to St Alphage House, 2 Fore Street, London EC2. The telephone number will remain unaltered at Monarch 6771.

MESSRS KEMP, CHATTERIS & CO, regret to announce the death, on February 1st, 1962, of Mr WALTER TRAFFORD WILLIAMS, F.C.A., who had been a partner in the firm for many years until his retirement in July 1961.

MESSRS MACINTYRE HUDSON & CO, Chartered Accountants, of Craig's Court House, 25 Whitehall, London SW1, announce that Mr JOHN FARRER HUDSON, F.C.A., has retired from the partnership, and that Mr ROBERT HAMILTON MACINTYRE (Jun.), A.C.A., has been taken into the partnership.

MESSRS PEAT, MARWICK, MITCHELL & CO, Southern Rhodesia, announce that Mr D. H. NORTHAGE, A.C.A., and Mr R. F. GRIFFITHS, A.C.A., have been admitted as partners in their Salisbury office as from January 1st, 1962.

MESSRS EDMUND R. GIBBS & CO announce that Mr N. J. CUMMINGS, A.A.C.C.A., A.C.I.S., was admitted into partnership on February 1st, 1962. The firm will continue to practise under the style of EDMUND R. GIBBS & CO, Certified Accountants, at 17 St Michael's Street, Oxford.

Appointments

Sir Douglas Waring, C.B.E., F.C.A., has been appointed a director of Kamunting Tin Dredging Ltd.

Mr Richard Ogden, F.C.A., has been appointed a chief representative for the industrial finance division of the Astley group of companies.

Mr R. L. Henshaw, F.C.A., secretary of Crittall Manufacturing Co Ltd, has been appointed a director of the company.

Mr A. H. I. Hearn, F.C.A., has been appointed financial controller of Ozalid Co Ltd.

Mr C. B. Jewson, F.C.A., has been appointed a joint managing director of Jewson & Sons Ltd.

Mr John H. E. Craster, F.C.A., has been appointed a director of the Licenses and General Insurance Co Ltd.

Mr S. A. J. Young, J.P., F.C.A., chief accountant of John I. Jacobs & Co Ltd, has been appointed a director of the company.

Mr George Ireland, F.C.A., has been appointed a director of the Leeds Fireclay Co Ltd.

Mr R. P. Tovey, F.C.A., chief accountant of The Steel Company of Wales Ltd, has been appointed secretary to the board of the company.

Mr G. E. Young, F.C.A., has been appointed treasurer of Mersey Docks and Harbour Board.

Mr Henry Newman, F.C.A., financial director of Procea Products Ltd, has been appointed joint managing director of the company.

Mr J. L. Brooke, B.COM.(LOND.), A.C.A., A.C.W.A., M.B.I.M., has been appointed chief accountant of A.E.I. Lamp & Lighting Co Ltd.

Mr James Sinclair Shearer, C.A., has been appointed secretary of Calor Gas Holding Co Ltd in succession to Mr K. A. E. Parsons, F.C.A., (retired) with effect from February 1st, 1962. Mr Parsons continues as a director.

Mr P. D. Clarke, C.A., has been appointed secretary of the G. Q. Parachute Co Ltd.

Mr J. M. Craig, C.A., chief accountant of Glaxo Laboratories Ltd, has been appointed a director of the company.

Mr E. J. Perry, F.A.C.C.A., formerly assistant general manager of the Pearl Assurance Co Ltd, has been appointed a director of the company.

HOSPITAL SERVICE INQUIRY

Two Accountant Members of Committee

Two members of the accountancy profession are among the members of the Lycett Green Committee on administration and clerical staffing arrangements in the hospital service announced by the Minister of Health on January 26th.

They are Mr M. S. Rigden, A.C.A., F.H.A., finance officer, St Thomas' Hospital, London, and Mr E. D. B. Todd, F.S.A.A., A.I.M.T.A., treasurer, Leeds Regional Hospital Board.

THE COMPANIES REGISTERS (FEDERATION OF MALAYA) ORDER, 1962

The Companies Registers (Federation of Malaya) Order 1962[1], which came into operation on February 1st, 1962, extends the provisions of sections 119 to 121 of the Companies Act, 1948, to the whole of the Federation of Malaya. Hitherto these provisions have applied only to Penang and Malacca.

The effect of the Order is to enable a company registered in Great Britain and transacting business in Malaya to keep a branch register (referred to in the Act as a 'dominions register') in Malaya of its members resident in that country and thus to facilitate and expedite the local transfer of shares.

[1] S.I. 1962 No. 166. H.M.S.O., price 3*d* (by post 5½*d*).

OFFICIAL RECEIVER APPOINTMENTS

Mr Ronald Frank Savage has been appointed to be an Inspector of Official Receivers attached to the office of the Inspector-General in Bankruptcy with effect from February 1st, 1962.

Mr Geoffrey Charles Enderby, F.C.A., has been appointed an Assistant Official Receiver to act as assistant to any Official Receiver appointed for the purposes of the Companies Act, 1948, and attached to the High Court. The appointment takes effect from January 22nd, 1962.

COMMON MARKET BOOKLET

A useful, factual background to the European Economic Community is provided in a new, forty-eight page booklet – *The Common Market* – recently published by the Information Service of the European Community.

The booklet reviews the reasons for the creation of the European Economic Community, the programme of the Rome Treaty, and the progress made in carrying it out. It describes the institutions of the Community; the steps already taken towards a single market through the reduction of internal tariffs; the first move towards a common external tariff; the gradual abolition of quota restrictions; and associated measures such as provision for the free movement of workers and capital within the Common Market.

A further section details the progress made towards common policies in such fields as agriculture, transport, and external trade. The future of the Community's association with African countries is also discussed, and the prospect of a wider Community opened up by recent applications for membership or association.

Copies of the booklet, price 1*s*, may be obtained at booksellers and newsagents.

ANOTHER RECORD YEAR FOR E.C.G.D.

Business declared under the Export Credits Guarantee Department's 'commercial' insurance during the last quarter of 1961 totalled £197·5 million – a record for any quarter. Business declared during the year was also, at £712·0 million, a record, with transactions amounting to £17·5 million more than in 1960.

The face value of comprehensive policies rose during the quarter by £31·7 million to £867·1 million. New comprehensive policies included general merchandise (£3 million p.a.), machinery (£2·9 million), handling plant (£1·4 million), and steel wire ropes (£1·0 million). Specific policies issued during the quarter amounted to £10·1 million, and included textile machinery (£3·8 million) and fertilizer plant (£1·4 million). Not included in these figures are the 659 'small exporter' policies sold since their introduction in April (*The Accountant*, April 22nd), under which cover for £991,000 has already been allocated. Under the financial guarantee facility (also announced in the issue of April 22nd), cover during 1961 had been agreed in principle on thirteen projects valued at about £95 million with loan values totalling some £70 million.

The face value of short-term policies current at the end of the quarter was £867·1 million, compared with £835·4 million at the beginning of the quarter, and £718·4 million at the end of the corresponding quarter last year.

APPRENTICE OF THE YEAR AWARDS

Since 1958, the British Junior Chambers of Commerce have organized under the title 'Apprentice of the Year', travelling scholarships which are offered to selected apprentices who have fulfilled certain qualifications. In 1958 and 1959, one award was made to a technical apprentice who was given the opportunity of spending nine months in Australia, working with selected firms in that country. In 1960 the scheme was extended and three scholarships were given: to a technical apprentice (nine months in Australia), to a craft apprentice (six months in West Germany), and to a commercial apprentice (six months in the U.S.A.) – the latter award in 1960 was won by Mr David Allen, of Darlaston, Staffordshire, who had passed the Final examination of The Institute of Cost and Works Accountants and was studying for the Institute's examination in Management Accountancy.

The object of the scheme is to select outstanding apprentices of the year from industry and commerce throughout the United Kingdom and to offer them, by means of travel to other countries, the opportunity to widen their horizons and their education, which would not otherwise be available to them.

In making their selections, the judges are asked to concentrate as much as possible on character and personality as on technical achievement.

The awards in consequence are given to those apprentices who are considered to have the characteristics of intelligence and personality that will enable them to take the best advantage of such an opportunity.

The Commercial Apprentice Award is open to all commercial students who:

(*a*) Will complete their training courses between September 1st, 1961, and September 30th, 1962 (both dates included).

(*b*) Will not have passed their twenty-fourth birthday before September 30th, 1962.

(*c*) Have by March 1st, 1962, obtained Higher National Certificate in Commerce or in Business Studies, an external degree by part-time study, or an equivalent professional qualification. Equivalent professional qualification is considered to be the full Final examination of bodies such as the Institute of Bankers, the Institute of Chartered Accountants, the Chartered Institute of Secretaries. [All the recognized accountancy bodies are, of course, included in this category.]

The closing date for applications in respect of the 1962 awards is March 1st, 1962, and application forms and further details are available from any of the Junior Chambers of Commerce in the United Kingdom.

WAR DAMAGE PAYMENTS

During 1961 the War Damage Commission paid out £7½ million compared with £10¼ million in 1960 and £13½ million in 1959. The average weekly rate of payments in the last quarter of 1961 was £143,000.

The Commission paid 2,728 'cost of works' claims for repairs during the year, and made 839 instalment payments or payments on account. The amount involved was £5½ million of which over £¼ million was for the repair and rebuilding of houses. Other principal items were: commercial buildings, £1 million; factories, £¾ million; churches, £1½ million; shops, £¼ million. The average amount of each claim paid during 1961 was £1,971 compared with £2,149 in 1960 and £2,066 in 1959.

Total war damage payments made by the Commission now amount to £1,273 million in 4,742,300 separate payments. Details of the total amounts paid by the Commission in some of the larger cases up to the end of the year 1961 are as follows:

Inner Temple and Middle Temple, £2,518,000; Guildhall, Portsmouth, £685,000; St Mary-le-Bow, London, £51,610; Coventry Cathedral, £846,107; Market, Sheffield, £312,500; Pier, Southsea, £158,000.

BELFAST SOCIETY OF CHARTERED ACCOUNTANTS

At the annual dinner and ball of the Belfast Society of Chartered Accountants held at Woodbourne House Hotel on February 3rd, the President of The Institute of Chartered Accountants in Ireland, Mr A. E. Dawson, F.C.A., and Mrs Dawson were among those received by the Chairman of the Society, Mr D. H. Templeton, F.C.A. The 200 members and guests present included:

Mr R. Bell (*Secretary, Belfast Stock Exchange*) and Mrs Bell; Mr M. A. Graham (*Chairman, Belfast Stock Exchange*) and Mrs Graham; Mr F. W. P. Hampton, B.COMM. (*Chairman, Northern Ireland Branch, Chartered Institute of Secretaries*) and Mrs Hampton; Mr W. J. Jefferson, LL.B. (*President, Incorporated Law Society of Northern Ireland*) and Mrs Jefferson; Mr T. J. Magee (*President, Belfast Chamber of Trade*) and Mrs Magee; Mr W. S. Orr, B.A., LL.B., A.C.A. (*Secretary, The Institute of Chartered Accountants in Ireland*) and Mrs Orr; Mr G. A. Pogue, A.C.W.A. (*Chairman, Northern Ireland Branch, The Institute of Cost and Works Accountants*) and Mrs Pogue; Mr C. G. Walker, F.C.A. (*Chairman, Dublin Society of Chartered Accountants*) and Mrs Walker; and Councillor S. E. Woods, F.A.C.C.A., F.C.W.A., J.P. (*Vice-President, Northern Ireland Branch, The Association of Certified and Corporate Accountants*) and Mrs Woods.

INSTITUTE OF INTERNAL AUDITORS

Manchester Chapter

The Manchester Chapter of the Institute of Internal Auditors is holding its next meeting on Tuesday, February 20th, in The Chartered Accountants' Hall, 46 Fountain Street, Manchester 2, when Mr B. E. V. Sabine, B.A.(OXON.), H.M. Inspector of Taxes, Manchester 13th District, will speak on 'The development of modern income tax'.

A cordial invitation is extended to all interested and further information regarding the activities of the

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON SWI Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

Chapter may be obtained from the honorary secretary, Mr K. Bradley, assistant internal auditor, The Associated Octel Co Ltd, Northwich, Cheshire.

THE INSTITUTE OF OFFICE MANAGEMENT

Organization and Methods Course

A three-week residential course on organization and methods is to be held at the Manor House Hotel, Leamington Spa, from February 25th to March 16th.

Arranged by The Institute of Office Management, the course is designed for those who expect to become full-time O. & M. practitioners or already have some experience in this field. The syllabus includes 'Basic techniques – the study of clerical work', 'Introduction to electronic data processing' and 'Starting and managing O. & M.'.

Further particulars are obtainable from the course secretary, The Institute of Office Management, 56 Victoria Street, London SW1.

PLANNING FOR PROFIT

To demonstrate the importance of techniques other than work study and monetary incentives, the South London Productivity Association (British Productivity Council) has arranged a one-day conference on Tuesday February 27th, to be held in the Council Chamber, The Federation of British Industries, 21 Tothill Street, London SW1.

The conference should appeal to directors and senior executives of both small and larger firms, as well as middle management and all interested in the problems of increased productivity.

Speakers and subjects are:

'Forecasting – the general plan', by Mr A. Holdsworth, B.COM., F.C.W.A., A.A.C.C.A.

'Setting the standards', by Mr S. Erskine-Murray, B.SC., A.M.INST.C.E.

'Budget, profit and sales', by Mr D. G. A. Owen, B.COM., F.C.A., A.C.W.A.

'Measuring the achievements', by Mr A. W. Howitt, M.A., F.C.A., F.C.W.A.

Tickets and further information may be obtained from Mr A. K. Haskins, A.M.I.PROD.E., Borouhg Polytechnic, London SE1, or from Mr W. S. Stoby, F.C.W.A., 38 Northampton Road, Croydon, Surrey.

PRODUCT COSTING COURSE

'Product costing' will be the subject of the first Furniture Development Council Course for 1962. To be held at the Royal Society of Arts, London, on February 20th and 21st, the course will present the Council's principles of costing in a critical manner. Participants will be able to assess the advantages of this system in accurately estimating costs.

Speakers will deal with batch sizes, choice of control points and materials and stores costing. Ways of using these costing records in various types of furniture firms will be discussed.

Only representatives of furniture companies registered with the Furniture Development Council are eligible to attend and applications should be addressed to the Council at 11 Adelphi Terrace, Robert Street, London WC2.

LOCAL GOVERNMENT SERVICES

Three statistical returns giving details of local government services in respect of welfare, housing and libraries for 1960–61 were issued recently by The Institute of Municipal Treasurers and Accountants[1], the former, in conjunction with The Society of County Treasurers.

The return of welfare services includes details of the income and expenditure of authorities per 1,000 population in each branch of the service and costs per resident week in different sizes of home, analysed under the main headings of cost. Total net expenditure falling on rates and grants in 1960–61 amounted to £25,811,364, compared with £22,887,928 in the previous year – a rise of £2,923,436. In terms of average rates, this was an increase from 7·97*d* to 8·74*d*. Brighton had the highest number of people in homes whose total of 559, with 118 in temporary accommodation, represented 4·21 per 1,000, whilst Sheffield had the lowest – 539, with 18 in temporary accommodation, representing 1·11 per 1,000. Average expenditure for county boroughs was £675 3*s* (£600 13*s*); London, £852 13*s* (£760 7*s*) and Welsh counties, £566 11*s* (£521 1*s*).

The return of library statistics contains statistics of all county boroughs, metropolitan boroughs and the City of London Corporation. The booklet, which is in two parts, firstly contains general information as to the number of branches, staff and books, and the second shows the detailed cost of the service, expressed as amounts per 1,000 population.

The twelfth annual return of housing statistics gives comprehensive figures for all the county boroughs, the metropolitan boroughs (including the City of London), together with 269 non-county boroughs, 384 urban districts and 324 rural districts.

In a summary giving the average capital cost of houses completed at March 31st, the lowest cost of two-bedroom houses is shown as £1,033 and the highest £2,026. The equivalent figures for three-bedroom houses are £1,100 and £2,756.

ANNOTATED TAX CASES

Part 7 of Volume XL of the *Annotated Tax Cases*, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is published today and contains reports with notes on the judgments of the following cases: *C. E. Neale & Co Ltd v. Beak* (Ch.D.); *Faye v. C.I.R.* (Ch.D.); *In re McIlroy* (Ch.D.); *Johnson v. Jewitt* (C.A.); *In re Sutherland* (C.A.); *Vestey v. C.I.R.* (Ch.D.); *T.S.S. Investments Ltd v. C.I.R., Feather Bros Ltd v. C.I.R.* (Ch.D.).

The annual subscription to the *Annotated Tax Cases* is 50s post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

BUSINESS EFFICIENCY EXHIBITION

A business efficiency exhibition covering over 33,000 square feet is to be held at the Queens Hall, Leeds, from March 5th–9th. Eighty-five firms will be participating in the exhibition, which is being organized by the Office Appliance and Business Equipment Trades Association.

ECONOMIC CONDITIONS OVERSEAS

A further booklet in the series dealing with economic conditions in member and associated countries of the Organization for Economic Co-operation and Development has recently been issued, and contains a comprehensive analysis of economic conditions in the Federal Republic of Germany. The booklet is available from H.M. Stationery Office, price 3s.

Take-over Tactics

THE mantle of those classic take-over struggles of yesteryear seems certain to descend upon the hotly-contested I.C.I. bid for Courtaulds. The substance of I.C.I.'s eagerly awaited reply to Courtaulds' earlier rejection of the improved share exchange offer (four I.C.I. Ordinary shares for every five Courtaulds, instead of the original three for four terms) indicates that the battle is now entering its final stages.

In arriving at their offer, I.C.I. have taken into account the potentiality of the sections of industry in which the two companies are concerned, including present and future profitability and the market assessment of the profit potential of the two companies. That offer still stands, but an alternative has now been introduced whereby every £10 of Courtaulds' Ordinary stock may be exchanged for £25 6½ per cent Convertible Unsecured Loan stock, 1972–77, of I.C.I. Taking the value of the convertible loan stock at par, this is equivalent to 50*s* for every £1 Ordinary stock unit of Courtaulds.

Conversion of the loan stock at the earliest date in 1963 would produce exactly the same amount of I.C.I. Ordinary stock as would be obtained from accepting the share exchange offer proper. Nevertheless, the exchange into convertible loan stock does offer the chance of increased income to Courtaulds' Ordinary shareholders as well as the option to convert into I.C.I. Ordinary stock over a period when the growth potential of that company together with the benefits arising from the merger should become increasingly apparent.

In sheer size alone the offer – worth close on £200 million in all – towers above any other take-over bid ever made in the United Kingdom. The magnitude of the offer is by no means the only mark of distinction, however, for there are several other issues involved, any one of which would have been enough to incite public controversy and attention.

First, there are complex technological factors at stake which appear to override the financial implications of the offer. In matters of this kind the layman is often at a loss in attempting to assess conflicting points of view. But this much is clear, I.C.I. as a major producer of chemicals is insistent upon the idea of integrating production by moving forward into man-made fibres so as to secure a captive market for the materials it produces from plants built at high capital cost. Courtaulds, on the other hand, is predominantly a producer of man-made fibres (along with paint and packaging materials) intent upon buying its basic raw materials in the cheapest possible market. Herein lies the

core of the argument, with I.C.I. set upon vertical integration and Courtaulds standing fast upon horizontal integration – though limited to that part of the industry where overlapping of effort is said to exist.

Following the rejection of the original I.C.I. terms by Courtaulds, ten-day truce talks were held for the purpose of seeking ways and means of solving the impasse, but these broke down because of the basic difference in approach.

The battle was now joined in earnest, with I.C.I. firing the first salvoes by improving upon the terms of its original offer. This new offer was vigorously opposed by Courtaulds on the grounds that it seriously undervalued their earning capacity in relation to that of I.C.I. Impressive forecasts of the future growth expected in profits were dangled in front of their shareholders and, at the same time, trade and other investments were currently shown to be worth £120 million (against a book value of only £70 million), equivalent to more than 30*s* per £1 Ordinary stock in issue without taking in the manufacturing side at all.

I.C.I. retaliated by issuing a statement expressing the view that the world demand for chemicals would double in the next ten years; that despite the sharp fall in group income last year, 1962 is expected to bring better trading and, looking beyond 1962, the trend of profits is confidently expected to continue upwards; at the same time the I.C.I. board wisely refrained from entering the realms of detailed forecasting by stating that:

> '. . . these depend in part on factors outside its control and can be influenced by political events – both at home and abroad – by labour conditions and, above all, by the success or failure of plans to raise living standards throughout the world.'

Moreover, it is asserted that a complete merger between I.C.I. and Courtaulds would increase efficiency and reduce costs in a number of ways. For instance, a large integrated organization would be able to spread the cost of research and development over a large production volume and a wide field of fibres; common ownership of the plants for the manufacture of the polymers and the fibres would lead to substantial reductions in capital and operating costs; a common marketing organization would lead to lower selling costs as well as better advice and technical service to the user; and above all, the United Kingdom industry would be in a much stronger position in competing for overseas markets.

While the two contestants have been locked in conflict, public attention has centred upon the question of monopoly for, if the merger goes through, the combined group would control over 90 per cent of Britain's synthetic fibre production. This prospective concentration of resources has already caused some public disquiet which has found expression through questions raised in Parliament, demands for a public inquiry, and a request that the matter be referred to the Monopolies Commission.

At present, the Government has little or no power to intervene until a merger is complete and until the new combine is operating in a way which appears to be against the public interest. THE PRESIDENT OF THE BOARD OF TRADE explained that it has been the policy of successive Governments to judge monopolies by their actual effects in practice, and not to attempt to reach conclusions on the possible effects of any particular monopoly before it has come into existence and there has been experience of its working.

In point of fact, monopoly conditions already exist in the man-made fibres industry, because I.C.I. and Courtaulds jointly own a third firm, British Nylon Spinners. A formal merger would therefore only have a marginal effect upon the position. In any case, the new giant would, in all probability, be in stern competition with the fully-integrated giants of Europe and the United States. Tariff protection may go by the board, too, if Britain joins the Common Market. Do we now have to abandon the established domestic attitude towards monopoly in favour of a wider European concept of 'the market'?

The way is almost clear for Courtaulds' 180,000 shareholders to come to a decision. In the final analysis, they are unlikely to be unduly swayed by technical considerations, fears of monopoly, or disclosure of previously hidden asset values. The I.C.I. bid will be accepted if it is better than the market price of Courtaulds' shares, and refused if it is not. So the ingenious alternative lately introduced into the bid terms may prove to have been just enough to clinch the deal in I.C.I.'s favour. It now remains for Courtaulds to muster some more ammunition in its own defence.

Contractors' Profits

by PETER D. TAYLOR, F.C.A.

A review of the way in which contractors can bring profits into their accounts, in the light of the latest recommendation of The Institute of Chartered Accountants in England and Wales on the valuation of work in progress.

THE significant difference between a contractor's accounts and those of almost any other type of business is that most other types of business can aggregate a large number of small profits, so that profits can be related to a given period of time. Normally this period is the financial year, but profits may also be related to the half-year, quarter, month, week or even a day; this depends in each case on the period of time involved in a sale. Contractors have their equivalent of a sale, a contract, extending over varying periods of time up to several years. Not only is there this variation in time, but the value will also be different, not necessarily in proportion to the period of the contract. In these circumstances a contractor needs a period of time longer than a year to assess the true profit figure.

A contractor can be anything from a public company carrying out huge 'turnkey' projects, worth hundreds of millions of pounds, to the local building firm; but whatever the size the fundamental problem is the same: to reconcile the need for annual accounts with contract profits related to one or more years. In the case of a public company, or any limited company for that matter, there is a legal obligation to produce annual accounts which must give a true and fair view of the profit for the period.

Since the obligation to prepare annual accounts is unavoidable, the only way to obtain the necessary reconciliation is to apportion contract profits to each year. This apportionment causes great difficulty to all concerned: to the accountant who makes the original decision; to the auditor who has to agree the figures; and to the Inspector of Taxes who uses the figures as a basis for assessment. It is a difficult job to tackle, but in some cases the fundamental problem is not even appreciated and as a result methods of valuing work in progress at the end of a financial period are applied as if to a factory producing, for example, nuts and bolts. A true perspective is shown if one considers the magnitude of work in progress in a firm handling really long-term contracts; the value can be of the same order as the total turnover for the year.

Overheads

Before investigating the allocation of profit to the years involved, it is necessary to consider the treatment of overheads. All overheads directly chargeable to a contract site – for example, site supervision, site insurance and carriage to site – must be charged to the particular contract. Similarly, if there is a factory, all overheads solely applicable to it should be charged. This would include all factory supervision up to and including the works manager. The remaining overheads, referred to here as the general overheads, are the ones that can be classed as those applicable to the business of contracting, as opposed to that of manufacturing. These overheads would include the design staff, project engineers and estimators, contract and other engineers, surveyors, and planning, purchasing and progressing staffs, together with the general management and administration. Any special factory estimator or the planning, purchasing and progressing staff applicable solely to the factory would be treated as a factory function, and charged therefore to factory overheads.

The recent Institute Recommendation No. 22 covers the treatment of overheads in paragraph 9 (*f*):

> *Long-term contracts*
>
> In businesses which undertake contracts extending over a period of years the normal tendency is to include overhead expenditure in work in progress except where it is considered to be irrecoverable. If overheads are not included in work in progress on such contracts the accounts for the early years may indicate losses, followed by unduly large profits in the years when the contracts are completed. This would be a wholly unrealistic presentation in relation to a contract showing a normal profit. . . .

This is admirable and indisputable, but it presupposes that overheads and profit can be separated; in practice it is preferable to consider the total gross margin as a contribution towards

the overheads of the firm, and in the sort of business under consideration the general overheads of the firm must be considered as fixed. Short-term fluctuations to meet the current activity disappeared with the advent of full and over-full employment.

Any attempt to treat these general overheads as a percentage recoverable in each contract can only lead to rising percentages at times of falling activity, exactly the opposite of what is required. Exponents of marginal costing have covered this ground pretty thoroughly. Suffice it to say that the gross margin or contribution for each future quarter, half and whole year must be compared with the overheads for the corresponding period to show the required profit margin. The contractor has the advantage that he knows in advance what work is in hand for a given period, and a certain amount of planning can be done according to the long-term trend, either by increasing the contribution, or reducing the overheads if there is no way to increase the contribution.

Contingencies

Any contract price can be divided broadly into two parts – the direct or prime costs, and the gross profit. Between the two come the contingencies, which are neither one nor the other but which are treated as prime cost or margin according to the circumstances. Thus, contingencies only serve to confuse the figures and hence the interpretation.

Contingencies should never arise out of inaccurate or approximate estimating. If there are many small items of direct expense which can only be lumped together in a sort of omnibus figure, there is no need to call this figure a contingency; rather it should be called miscellaneous material or some similar description, and hence included in the prime cost. The so-called contingency must never be used to cover up inefficiencies.

Where there is a genuine risk of further expenditure on, say, a plant or a building, arising out of a failure to meet the required performance or specification, a contingency should be included in the original estimate. The likelihood of such conditions arising will be known to the contractor by his experience and the contingency figure should be based on the *chance* of the additional expenditure being needed on a particular contract, not on the basis of assuming the worst on every contract.

The contingency figure, if any, should be kept apart from the estimated prime cost against which actual costs are compared, and also from the gross margin which is spread over the life of the contract. When the contract work is finally accepted by the customer, then the contingency, or the balance of it remaining, can be brought into the gross profit. Alternatively, it can be transferred to a separate reserve against which exceptional expenditure on other contracts can be set off. However, it is apparent that this has a misleading effect on the contract cost accounts concerned; and it does make the release from the reserves a purely arbitrary decision. If contingencies are correctly included in estimates, and then finally brought in to gross profit, a reserve account is carried automatically and it always remains a fair figure.

Profit Spreading

It has already been stated that the fundamental problem is the allocation of contract gross profits to each year. Broadly speaking, this can be done in three ways. Firstly, we can attempt to make a valuation of a contract at any given time. Secondly, we can wait until the contract is completed before we attempt to bring any profit into account. Thirdly, we can attempt to assess the profit for each period on a rather artificial basis.

The first method referred to involves the measurement of work done on any contract at a given date. This itself can be done in two rather different ways. There can either be a physical valuation of the work done, with a figure based on the appropriate proportion of the contract price, or there can be an assessment of the value using cost as the basis.

Dealing first with the physical valuation, the problem can be considered more easily in an over-simplified case. For example, a straightforward run of concrete work can be measured accurately as a proportion of the total work. This work can be done at any time, and the work involved in the measurement is relatively easy and therefore relatively cheap. It also pays for itself from the point of view of the greater degree of control which is possible. This is because if the interim valuation of the concrete work mentioned above shows that a loss is being incurred, remedial action can be taken before the job is actually completed. But to carry this method further, to more complicated plant, is not so easy, nor is it so useful. The measurement or attempt at measurement of a complicated chemical plant would take a long time, and would be inaccurate even without the difficulty of arriving at a satisfactory valuation of a large plant at the one specific time. This is

inevitable in view of the amount of work needed to do the valuation, but the relative inaccuracy of the result in valuation makes the cost involved in producing it virtually a waste of money.

Book Value

The alternative way of arriving at a valuation is to use the 'book value' using cost as the basis. In this case, the valuation is based on the current prime cost, plus an estimated percentage of gross profit margin. The danger of this method is of course, that excessive expenditure on a contract will result in extra profit being taken, rather than the reverse. Eventually a stage will be reached when the valuation has reached the contract price, but costs will still continue to rise and the fictitious profit will disappear and may become a loss.

A further difficulty involved in both methods of valuation referred to above, is that costs must also be assessed accurately up to the date of valuation. This is particularly important when the measurement is a factual one, but is not so important when the valuation is itself based on cost. The correct assessment of cost may seem easy to those used to dealing with material control in a factory, but delivery and control of material to a contract site is not nearly so straightforward. Nor is it easy to assess the cost of subcontracted work at a specified date. There may be an order from a subcontractor for electrical installation, or another order for steelwork based on a tonnage price. Both these will be very difficult to assess from the cost point of view at a given time. There will also probably be extras of some sort, claims for daywork, claims on the price variation clause and other complications affecting the assessment of actual cost.

So there are two figures involved in the assessment of profit at any given date and both of these, the valuation and the assessment of cost, can be subject to relatively large inaccuracies.

It has already been pointed out that there is a very great danger in any valuation, that if the valuation is based on cost plus the expected profit margin, the result of excessive cost will be to increase the profit brought into account rather than reducing it which would be the desired result. A further danger is that a contractor may make an assessment of the valuation to date to enable him to make an interim progress claim on the client. Such a progress claim may tend to err on the high side so as to improve the contractor's cash position, but if the same figure is used for a valuation for ascertaining a profit, it would be preferable for it to err on the low side. So sometimes in a justifiable attempt to improve the cash position, profits become overstated.

The Conservative Approach

Having emphasized the inherent dangers of any system of valuing contracts at a given date, the alternatives must now be considered. One of the other ways of dealing with this problem is to withhold all gross profit until a contract has been completed, a very conservative approach. All costs incurred are merely carried forward in the balance sheet at any given date and this position will have to continue until the contract has been completed, not only from the physical point of view, but also until all cash has been collected. Obviously this will be a considerable time after the physical completion. At the time of completion the profit is known and can therefore be brought into the accounts, subject to any small retentions for unknown factors. If performance guarantees are involved it may be a long time after the physical completion that the correct final profit is known. This position can be compared with that of underwriters who keep their accounts open for three years, so as to be able to collect all claim figures. However, in the case of a contractor the various contracts will be of differing sizes, and of differing percentage profitability and the result of this method of bringing in contracts at the conclusion will give violent fluctuations in the annual profit figure. Furthermore, it means that the size of the firm, as measured by the cost of its fixed overheads, will bear no relation to the profits brought into the accounts.

Some companies modify this latter procedure slightly by bringing into their accounts an assessment of the overheads incurred, but excluding the actual net profit until it is known. This does help to iron out the fluctuations in profits, but it should not be forgotten that the overheads themselves may easily be absorbed in losses on a contract.

Formulae

It has already been indicated that in order to measure the profitability of the firm, particularly for the benefit of shareholders, a true figure of contract profits for the financial year is required. The only satisfactory way of doing this is to carry forward all costs incurred on contracts, and to bring in to the profit and loss account an estimate of the gross profit earned to date. At one time this would have been considered impossible, and it is quite evident that even in these enlightened

days it is no easy matter and is subject to very dangerous pitfalls.

To enable us to assess the profit at any given time we have to have three things. First, the anticipated gross profit; second, the anticipated cost broken down into its individual items; third, a very tight control of actual costs against the estimated costs so that the anticipated profit figure can be revised continuously.

Even with the tightest control of cost, there will be certain contracts on which unexpected expenditure will be incurred, possibly to correct faults during construction, or possibly to put right operational difficulties. It is therefore necessary to be somewhat conservative in the spreading of the anticipated profit over the time of the contract. This spreading of profits needs to be on a consistent basis from the shareholders' point of view, as well as that of the Inspector of Taxes. In order to achieve consistency it is advisable to spread this profit on the basis of a known and previously agreed formula. For example, a certain percentage of the profit may be brought into the accounts when the whole of the drawing office work is complete. Alternatively, the same percentage may be brought in, in proportion to the drawing office work completed. A further percentage can then be included as site erection proceeds, increasing to a maximum percentage on completion of the plant. This maximum percentage should not be 100 per cent, but should be a figure such as 80 per cent, assessed according to the expected risk in the particular type of work involved. A further 10 per cent may be brought in when the plant is successfully put to work. The final 10 per cent of the profit should not be brought in until all the contractual obligations have been completed and the final payment received from the client.

Cost Control

The procedure outlined above is entirely dependent on a very close control of costs. To do this it is necessary to have a complete list of material with estimated prices, the estimate of the cost of delivery and unloading at site, an estimate of the cost of erecting the plant, including all allowances to workmen, the hire of plant, insurance, and visits of head office staff. The same applies to any other costs which are considered as direct charges to a contract.

The actual costs incurred are then compared in detail with the equivalent item in the original estimate, with the additional refinement that costs are actually incurred in some cases at the stage that an order is placed on a supplier. It is not necessary to wait until the invoice is submitted and paid. This comparison of actual costs with estimated costs will throw up a net difference, and this difference can be used as an adjusting figure to the anticipated profit; this adjustment is carried out continuously.

The control referred to above is not in itself sufficient, as there may be, for example, items which have been omitted from the original estimate. In order to deal with this sort of situation, it is necessary to have frequent reviews of further expenditure still to be incurred. This is done by obtaining an estimate of any materials that are still required, and it may be facilitated by a scrutiny of the original estimate which has marked on it the items which have already been purchased. In addition to a consideration of the cost of materials still to be ordered or manufactured, an estimate is needed of the cost of any work still to be done on site, and any additional work which may be necessary in order to complete a successful installation. This latter item will obviously not be easy to ascertain and will have to be an estimate with a rather large margin of error. Further provision should also be made for anticipated claims for extras from suppliers and subcontractors.

An additional complication arises when we try to compare actual cost with estimate in this type of business, due to changes in design either by the client or by the contractor. Some of the changes in design by the client may be chargeable to him, and in such a case there is a fresh estimate of additional material involved and the additional costs can be set against this.

On very long-term contracts there may be large increases in costs due to wage awards and increases in costs of materials, and these are often recoverable from the client. Such increases do cause an additional complication in the comparison of actual cost with estimated cost, but the percentage increases are not high in proportion to the normal degree of error in estimating. (The point is that although an estimate in total may be very close to actual cost, any one item within the estimate may not be so close.)

Conclusion

Summarizing then, costs are controlled at the time expenditure is incurred; in addition a regular and constant review is made of costs still to be incurred so that there is a continuous reappraisal of the ultimate gross profit figure. This latest

figure for anticipated gross profit is then spread over the period of the contract on the basis of an agreed formula.

This is also in line with Recommendation No. 22, paragraph 22, which states:

Long-term contracts:

In businesses which involve the acceptance and completion of long-term contracts it is often appropriate to spread over the period of the contracts, on a properly determined basis, the profits which are expected to be earned when the contracts are completed. This procedure takes up in each period during the performance of the contract a reasonable amount as representing the contribution of that period towards the eventual profit; it thus recognizes to a prudent extent the value of the work done in each period and restricts the distortion which would result from bringing in the whole of the profit in the period of completion. The principles which determine whether an element of profit is to be included are:

(*a*) profit should not be included until it is reasonably clear from the state of the work that a profit will ultimately be earned; it is therefore inappropriate to include any profit element where at the balance sheet date the contract has been in progress for a comparatively short time or to include an amount in excess of the profit element properly attributable to the work actually done;

(*b*) provision should be made for foreseeable losses and allowance should be made as far as practicable for penalties, guarantees and other contingencies;

(*c*) a clear basis for including a profit element should be established and adhered to consistently.

It must be accepted that gross profits already brought into profit may subsequently be written back as the continuous reappraisal of gross profits shows a reducing final gross profit. This does not mean that it was wrong to bring some profit in originally, but that a later period has produced a loss. In other words, the loss is attributed to the period in which it first appeared. It must also be evident that if the cost control is functioning correctly there should be no need for appropriations of profit (after tax) for possible future losses on contracts.

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

AUSTRALIA

Audit Records

AUDIT working papers should be more than a key to the composition of the figures in the financial accounts. They should indicate the extent of the work done at the audit and reflect the accuracy of the client's accounting system and the strength or weakness of the system of internal control in operation. From studying them, the auditor should be able to determine the nature of his audit report and to decide on the need, if any, to modify detailed checking at subsequent audits. Finally, the working papers should be in good order so that necessary changes in staff cause the minimum of inconvenience both to the auditor and his client.

With all these objectives constantly in mind it should be the aim of every practitioner to try and ensure that a high standard is attained *ab initio* and then maintained. To help him to do so, Bulletin 5 of the Australian Chartered Accountants' Research and Service Foundation, issued recently, gives guidance on matters which should be covered in all working papers, whatever the size of the audit or of the firm conducting it.[1] The bulletin deals with the subject under three headings – the need for working papers, how to compile them and what they should contain. Two appendices, covering nearly one-half of the publication's sixty pages, set out specimen indexes and schedules.

While the Foundation does not insist that the forms it prescribes are necessarily those always to be used, it succeeds in conveying the importance of carefully documented and properly filed working papers by its own examples, the high quality of which should be an inspiration to every practitioner and clerk who studies them.

CANADA

Lease-Backs and Consolidated Statements

MR JEAN-MARIE GAGNON, C.A., referring with approval to an article in the *Harvard Business Review*, states in *The Canadian Chartered Accountant* for January that large concerns often set up subsidiaries for the sole purpose of financing expansion. Funds are collected mainly through the sale of debentures by the subsidiary, which buys the equipment or building needed by the parent company. The two companies enter into a long-term lease which gives the parent complete control over the assets of the subsidiary. With the rental charged

the subsidiary pays the interest and provides for the redemption of the debentures. If the parent company avoids holding more than 50 per cent of the voting capital stock of the subsidiary, the balance sheets of the two companies will not be consolidated, so that the assets available to the parent together with the long-term debt will not be disclosed.

Mr Gagnon says it is the public accountant's responsibility as auditor to determine whether consolidation fairly presents the financial position. He thinks the profession should consider as a criticism the remark of the Royal Commission of Inquiry into the Prices of Food Products that balance sheets are not a reliable tool for measuring the total investment in fixed assets, because many chain groceries operate in premises leased from subsidiaries. Had the profession advocated proper accounting for leases and proper criteria for consolidation, a situation harmful to its prestige would have been prevented. Mr Gagnon urges the Canadian Institute to set up a comprehensive research programme. Thus far it has investigated only how generally accepted accounting principles should be applied. It should now provide leadership in reviewing accounting concepts before they become outmoded.

International Tax Conference

A ONE-DAY international tax conference will be held on February 22nd at the Queen Elizabeth Hotel, Montreal, under the auspices of the Canadian Tax Foundation and the Canadian Council, International Chamber of Commerce.

The proceedings will comprise five business sessions and subjects will include 'Canadian–U.S. personnel movements and taxes', by Mr Lancelot J. Smith, F.C.A.(CAN.), vice-chairman, Canadian Tax Foundation; 'U.S. western hemisphere trade corporations', by Mr Julian O. Phelps, C.P.A., of Coopers & Lybrand, of New York; and 'Tax planning for exporters', by Mr Frank B. Common, Junr, Q.C. At the session on 'Taxation policies in relation to international investment', one of the three speakers will be Mr E. B. Nortcliffe, overseas taxation manager, Unilever Ltd. The guest speaker at the conference will be Mr Hickman Price, Junr, Assistant Secretary, Department of Commerce, Washington.

UNITED STATES

Mathematics and Statistics in the Accounting Curriculum

MR R. GENE BROWN, graduate of the Harvard Business School, suggests in the January issue of the *Journal of Accountancy*, that the accountant, as adviser to management, must be familiar with the new quantitative techniques available for the decision of many managerial problems. The best member for that specialized section of a professional accounting firm's staff which is concerned with such matters as operations research is generally felt to be one trained in mathematics and statistics as well as accounting. But even those accountants involved in more traditional activities should have sufficient acquaintance with the latest quantitative techniques to recognize their potential application.

Mr Brown thinks that many of the accounting courses at present given in the universities have gone beyond the point of diminishing returns – advanced cost, advanced tax, advanced auditing, systems, machine accounting, EDP, etc. He would have dead wood such as the outmoded mathematics of finance and descriptive statistics cut away, together with one or two accounting electives, and replaced by mathematics, mathematical statistics and a quantitative methods course related to the business world.

Professional Development Programme

MR EDWARD J. BUEHLER, C.P.A., President of the New York State Society of Certified Public Accountants, writing in *The New York Certified Public Accountant*, for December 1961, refers to the appointment of Dr Francis K. Ballaine formerly Dean of Adelphi College and Director of its Executive Development Programme, to develop and co-ordinate a professional development programme for the Society.

New courses developed by the American Institute will be used, and some of them, such as budgeting, preparation of reports and tax planning, are already being operated. The courses run from one to four days. Eight others are in various stages of completion. Ultimately courses of its own will be developed by the Society to fill the special needs of the State.

The President sees this as an important factor in the future growth of the profession in New York State. It should help members to keep abreast of the tremendous potential ahead for C.P.A.s, as they enter the electronic age and move ever closer to their function as business advisers to top management.

GERMANY

Tax Law Limits Travel Expenses

THE Finance Minister of the State of North Rhine-Westfalia recently issued regulations limiting the amount of travel expenses which may be deducted in arriving at taxable profit. For commercial travellers' journeys within the country, the following rates are to be used:

(*a*) Employee's income less than DM9,000 p.a. (about £800)..	DM16 per day
(*b*) Employee's income DM9,000–DM18,000 p.a.	20 ,,
(*c*) Employee's income over DM18,000 p.a.	22 ,,
(*d*) New businesses – all employees	20 ,,

Other employees enjoy the same rates of allowance for journeys within the country, except that in some cases reductions may apply.

Stock Valuation — The Revenue's View

by H. G. THOMAS

Senior Principal Inspector of Taxes concerned with Stock Valuation

A practitioner's view of the valuation of stock and work in progress was given in 'The Accountant' of January 27th. The paper reproduced below, which gives the Inland Revenue view, was presented at a lecture meeting of the London and District Society of Chartered Accountants.

THE valuation of trading stocks has assumed increasing importance in recent years and has attracted a great deal of attention during the past twelve months, what with the issue by The Institute of Chartered Accountants in England and Wales of Recommendation 22 and the judgment in the House of Lords in the *Duple Motor Bodies* case. Both the accountancy profession and the Inland Revenue have recognized this situation.

It is true that the ranks of Inspectors of Taxes, as well as those of the accountants, no doubt contain a small quota of heretics. There is always the school of thought which regards the exploration of stock valuation as an unrewarding pursuit because, it is argued, what is lost or gained by an incorrect valuation is adjusted in the next or at least some future year. Nobody, of course, could apply this reasoning to terminal taxes like E.P.T. and E.P.L., but there would be some colour for this line of thought as applied to a continuing tax, such as income tax, if the levels of prices and economic activity were to remain more or less constant. But in fact they never do and this has been particularly the case in the post-war world, with a steady long-term trend towards growth in the economy and an increasing physical volume of stock accompanied by an inflationary tendency as far as most costs are concerned.

Mr H. G. Thomas

From a fiscal standpoint the correct valuation of stock is important for several other reasons. In the first place, there is the statutory requirement that the profit under Schedule D is to be the full amount of the profits or gains of the basis year (section 127, Income Tax Act, 1952), i.e. what has to be computed are the profits or gains of a particular year. Secondly, where the liabilities of individuals are concerned, involving possibly substantial amounts of surtax, the incorrect attribution of profit, as between one year and another, may materially affect the tax payable. Moreover – and this may apply to individuals, partnerships and corporate bodies alike – a long-term undervaluation may present the trader finally with a heavy liability arising out of the provisions of section 143, Income Tax Act, 1952, which as you know deals with the valuation of stock whether realized or not on the discontinuance of a trade – unless the trader is an individual and dies in harness, so to speak, when the provisions are inapplicable. But the most powerful consideration is the one I have already mentioned, namely, the long-term tendency for the volume of stock, as well as its cost, to increase. In these conditions a continuing undervaluation will result in an indefinite time lag operating against the Revenue with the risk of permanent loss of tax.

Accountants are well aware of these tax considerations. In addition, of course, they have their responsibilities as auditors and as advisers to their clients. It would be presumptuous on my part to tell an audience such as this the scope of their responsibilities, or to attempt to define these. An outsider may perhaps be permitted to observe that the majority of the profession would no longer regard Lord Justice Lindley's judgment in the *Kingston Cotton Mill* case, delivered over sixty years ago, as providing a golf-size umbrella exempting auditors from all but the minimum of inquiry. Indeed, the leaders of the profession have in recent years on a number of occasions publicly stressed the importance of an inquiring and critical approach towards the valuation of stock. Recommendation 22, if I may say so, has given up-to-date and comprehensive guidance and quite recently further counsel has been delivered in the Institute's 'Statements on Auditing – 1: General Principles of Auditing'.

Enough has been said to show that the accountancy profession shares with the Revenue a great deal of common ground in this matter of stock valuation. Broadly, the two sides are moving in the same direction although their particular routes may diverge. What I hope to do in this paper is to give you a glimpse of the philosophy of stock valuation as it is understood in Somerset House.

In a fairly recent issue of *The Accountant* a leading article appeared under the interesting heading 'The Revenue on the carpet'. The writer pointed to a parallel, although he good humouredly admitted it was not a very close one, between the 'castle' of Franz Kafka's famous novel and the organization immured in Somerset House. At this point may I be allowed to make a confession and perhaps commit an indiscretion. Most of my own career has been spent outside those walls. At the time I took up duty at Somerset House I happened to be reading *The Castle* and the same wicked thought did actually cross my mind. I am sure that it was the architectural characteristics of the structure, rather than the ideological outlook of its personnel, or their attitudes, which stimulated the misconception. No doubt those of you who have happened to have read this book will agree that any resemblance is of the most superficial kind. The Revenue does not wish to operate in the same mysterious and arbitrary fashion as the inhabitants of *The Castle*. As far as stock valuation is concerned, I think this is instanced by the talks between the representatives of the Institute and the Board of Inland Revenue following the publication of Recommendation 22 and the delivery by the House of Lords of the *Duple* judgment. The talks, as you know, were followed by the issue of a letter from the Chairman of the Board, putting on record the matters discussed and the measure of agreement reached. This paper is a further attempt to explain the Revenue's attitude.

Revenue Inquiry Technique

Most of the business between the Revenue and the profession is conducted between the inspector of taxes in the district and the practising accountant. The best way is perhaps to begin with the technique of the normal inquiry made by the inspector of taxes in the district, when he sets out to examine the basis of stock valuation in a particular case. We can then proceed to look at some principles on which accountants and inspectors are not always in complete agreement.

Broadly, the inspector's inquiry may be divided into two stages. In the first place he must ascertain the facts, and secondly he has to ask himself whether on these facts the valuation is a satisfactory one for tax purposes. May I be forgiven for appearing to stress the obvious when I say that the prime duty of an inspector of taxes is to assemble all the necessary information in a precise form. Without this prerequisite there can be no intelligent criticism or appreciation of the situation. There was a time when a simple assurance that the stock was valued on the same basis as before, i.e. at cost or market value, whichever was the lower, was normally regarded as sufficient. The accountant's reply was ticked by the inspector and a note made in the District Permanent Notes file, and everybody relaxed for another few years, at the end of which period the exercise was probably repeated. Nowadays, of course, it is necessary to carry out the inquiry at rather greater depth. At least, the inspector must understand the terms used by the taxpayer or his adviser and this may involve, in some cases, some knowledge of the processes of production in the kind of business being examined. Clearly it is essential to know precisely what is meant by such an all-embracing term as 'cost'; whether, for example, transport charges to bring the stock to its existing location have been included, whether the basis is that of actual cost, unit cost, average cost, moving average cost, standard cost, etc., and the degree to which oncost has been included. Similarly, it is necessary to know what is meant by market value – replacement cost, notional replacement cost, market selling value, etc. Until the facts are fully known the inspector cannot consider whether the basis is one which fits the facts.

Inspectors, of course, are encouraged to be reasonable in ther requirements. The Revenue has no desire to start a general witch hunt or to obtain an excess of detail in cases which are clearly small and unimportant. The Revenue welcomes the emphasis in Recommendation 22 that all stocks belonging to a business should be taken into account 'whatever their location or nature', as well as the paragraphs dealing with 'Description in the annual accounts'. To the extent to which the recommendations are accepted and implemented by the majority of members, the field of inspectors' inquiries should be by so much circumscribed.

It should not be necessary for the inspector to burden the accountant with a stock inquiry every year. Normally, an inquiry at intervals of something like five years would be sufficient. This would be particularly true if the suggestion in Recommendation 22 that 'the effect of any change of basis or method of computation should be disclosed if the effect of the change is material' (that is to say, disclosed on the face of the accounts) were to become the generally accepted practice.

Commercial Valuations not the Criterion

The facts have now been assembled and the inspector must decide whether the basis is acceptable. We are now entering a more controversial field. The *Duple* case has answered one question, but the application of the ratio of its decision raises some others. My colleagues in Somerset House have suggested, playfully I think, that after *Duple* I should be out of a job, or rather out of one of my jobs. But the signs are that *Duple* has not finally stifled controversy and legitimate differences of opinion will no doubt arise for quite a while yet.

There is no statutory guidance on the principles of stock valuation for tax purposes, but the decided

cases do provide a certain number of pointers. The problem that is always with us is the relationship between commercial valuations and valuations which are acceptable for tax purposes; and this is the nub of the relations between the Revenue and accountants on stock questions. Not infrequently the accountant contends that if a valuation is acceptable from the commercial point of view, and if it is in accordance with recognized accountancy practice, it cannot be challenged for tax purposes. This, although an understandable point of view, is one which the Revenue must reject. It is understandable because of the attitude of the Courts towards questions of value. Professor Gower speaks of this in his book *Modern Company Law*, when writing of the maintenance of capital, involving the valuation of business assets:

> 'But even then the principle was not as watertight as it appeared for value is an uncertain concept and the Courts were ill equipped to assess it. Hence they were largely in the hands of accountants, and accountants, as we have seen, had their own notions including that of the division of assets into fixed and circulating capital and the non-revaluation of the former. After a few years, therefore, the Courts abdicated almost completely in favour of accountants and their business men clients.'

But he goes on to point out that this was not quite the end of the story.

In the matter of stock valuation, it is recognized that perfection is not attainable, but the Courts have stressed that whatever system of valuation is adopted it should as nearly as possible accord with the facts. The case of *Minister of National Revenue v. Anaconda American Brass Ltd*, Privy Council, December 13th, 1955, on appeal from the Supreme Court of Canada illustrates this principle. This case concerned the LIFO method which had been adopted by the company and had been approved by the Canadian Court. The point at issue goes to the heart of the matter. The following passage is taken from the headnote to the judgment.

> 'Held that the FIFO and not the LIFO method must be adopted in the present case. Since the decision in *Whimster & Co v. C.I.R.* (1925) 12 T.C. 813, what was to be valued at the beginning and end of the accounting period had for tax purposes been taken to be the actual stock as far as could be ascertained. Here there was a large quantity of metal in the 1947 closing inventory to which the 1936 cost had been ascribed by the company. The profit of a trade or business was the surplus by which the receipts exceeded the expenditure necessary for the purposes of earning those receipts, and no assumption need be made unless the facts could not be ascertained. There was no room for theories as to flow of costs, nor was it legitimate to regard the closing inventory as an unabsorbed residue of cost rather than as a concrete stock of metals awaiting the day of process. It was the failure to observe or the deliberate disregard of facts which could be ascertained and must have their proper weight ascribed to them, which vitiated the application of the LIFO method in the present case. New theories of accountancy, though accepted for business purposes, might not necessarily determine income for tax purposes.'

The same point was made in the case of *Patrick v. Broadstone Mills Ltd* (35 T.C. 44; 32 A.T.C. 332). This case as you know concerned the valuation on the base stock principle of certain stocks in process in a cotton spinning mill. The Special Commissioners had found as a fact that the base stock method was one of the methods recognized in the trade of cotton spinning and was in accordance with sound commercial practice. Nevertheless, both the High Court and the Court of Appeal rejected the base stock method, regarding it as unacceptable for tax purposes. The method involved the adoption of arbitrary rather than actual figures. Although the method accorded with a recognized system, it was not the method which showed most accurately the position between the Revenue and the taxpayer.

This principle that the practice of accountants 'though it were general or even universal, could not by itself determine the amount of profits or gains of a trade for tax purposes', was affirmed by the House of Lords in the *Duple Motor Bodies* case.

I apologize if I have unduly laboured this point, but the relationship between recognized accountancy practice and the basis acceptable for tax is a subtle one and a matter which gives rise to a good deal of misconception. Paragraphs 23 and 24 of Recommendation 22 describes the base stock and last in, first out methods. I have tried to explain why the Revenue has to reject them. I should perhaps add that I have seen little sign that these methods are employed nowadays to any great extent by concerns in the United Kingdom.

I should perhaps say a word about standard cost. This method, in strictness, is not acceptable for reasons similar to those which prompted the rejection of the base stock and LIFO methods. The method involves the use of a predetermined or budgeted cost per unit instead of actual cost. In practice, however, if standard costs are shown to be reasonably accurate and are revised at frequent intervals, they are accepted by the Revenue as a sufficiently close approximation to actual cost. This attitude does not differ greatly from the views expressed in paragraph 11 (*d*) of Recommendation 22.

The Revenue View of 'Cost'

The basic Revenue view is that 'cost' means actual or historical cost. At the same time it is recognized that there are sometimes bona fide difficulties in arriving at true historical cost and some compromise has to be effected. If actual cost can be ascertained, assumptions are unnecessary. If not, the method which gets as near as possible to historical cost is the one to be used. Thus in the case of certain departmental stores the adjusted selling price method has been admitted. In this type of business, it is often found that the original cost is not recorded on the article or in branch records and that the attribution of a cost figure to each article is either impossible or impracticable. In the circumstances we have adopted a working approximation.

I am sure that this talk would not be regarded as complete without reference to the consequences of the recent decision in *Duple Motor Bodies* on Revenue policy. Before the *Duple* case, the Revenue's view was that in the case of a manufacturing concern, strictly speaking all expenses other than those of finance and selling were costs of production and should be reflected in the oncost loading. At the same time, the diversity of accountancy opinion and variations of commercial practice were recognized and the Revenue was prepared to negotiate settlements on reasonably broad lines. In *Duple*, the Courts refused to decide between the rival claims of direct cost and oncost as a matter of broad principle. They decided that the Duple company which had valued its work in progress on the direct cost basis for many years could not be compelled to change to the oncost basis. The House of Lords found that the direct cost method was one of the methods which was recognized as sound accountancy practice and at the same time did not violate any of the taxing statutes. There was no one, universally acceptable, basis. The basis must be considered in relation to the circumstances of the particular business. It is interesting to note that Viscount Simonds saw no impossibility in either the direct cost method or the oncost method showing the full amount of the profits or gains, although each method would produce a different result. Lord Reid, in commenting on the Special Commissioners' findings, thought that this might mean that over a period of years both methods might produce roughly the same aggregate profit. Alternatively, he said, that it might be that 'one or other method will produce a true figure, depending on the nature of the business, and that seems to accord with the recommendations of the Institute'.

Importance of Consistency

I do not think that Recommendation 22 amounts to a system of rules or principles from which it is possible to select for any particular business according to its nature, one method and one method only of stock valuation, although, of course, it gives valuable guidance. In any case, we do not start off in this way. We face a business world in which a great diversity of bases actually exists. The Inland Revenue Department is perhaps in the best position to appreciate this diversity because it sees all the cases. From my own experience and some statistics I have collected, it is clear that some degree of oncost is included by the great majority of manufacturing concerns, but the degree of the oncost loading proceeds through all kinds of varieties of variable factory oncosts, through full factory oncosts to full oncosts. It is difficult to perceive any coherent pattern according to industry, although perhaps the older established kind of industry tends to include a greater proportion of direct cost valuations. There is no doubt that tradition has a certain influence on the basis adopted and that the pattern is not entirely a logical one.

The judges in the *Duple* case stressed the importance of consistency as does Recommendation 22. As Lord Reid said:

> 'One thing clearly emerges as approved by the accountancy profession – whatever method is followed it must be applied consistently. I accept that. So the real question is what method best fits the circumstances of a particular business. And if a method has been applied consistently in the past, then it seems to follow that it should not be changed unless there is good reason for the change sufficient to outweigh any difficulties in the transitional year.'

Both practical considerations and the opinion of the judges put a heavy emphasis on the maintenance of the *status quo* in an existing business. In a new concern it is hoped that the guidance of Recommendation 22 will be observed. The majority of accountants would, I think, agree that in the general run of manufacturing businesses it would be appropriate to include at least variable overheads and that in a substantial number of cases it would also be appropriate to include a measure of fixed overheads.

I should like to say a few words about change of basis and about consistency. The House of Lords said that there must be good reason for a change, sufficient to outweigh the difficulties in the transitional year. Obviously the case for justifying a change can only be considered in relation to the individual circumstances of each instance. As we gain more experience in the post-*Duple* world, we shall no doubt be able to evolve some principles or, if that is too high sounding a term, some working rules. A change in the nature of the business would be one kind of case where a change of valuation might be justified. The acquisition of a company by a group and a change of basis to conform with group practice might be another – although it might not be easy in a particular case to reconcile this with Recommendation 22. In every case of change the transitional difficulties have to be faced. This means that normally, in accordance with the decision in *Bombay Commissioners of Income Tax v. Ahmedabad New Cotton Mills Co Ltd*, the stock at the beginning of the basis year of the year of change must be valued on the same basis as at the end. Moreover, where in the case of an oncost change there is a change from one valid basis to another valid basis, there is no scope for the revision of liabilities of earlier years either by way of additional assessments on the one hand, or error or mistake claims on the other. This does not mean to say that every small change in the method of computation of stock values should necessarily call for *Ahmedabad* treatment. Where the change is no more than a refinement of an existing basis, or is designed to ensure greater accuracy, or in particular arises from a change in the circumstances or processes of a business giving rise to a change of oncost loading, there may be a case for ignoring *Ahmedabad* treatment but each case will have to be considered on its own facts.

There is one thing I should like to say about consistency. Consistency in my view means consistency of principle, i.e. consistency of the factors entering

into an oncost loading. Mere numerical consistency is unlikely to achieve this. A loading of, say, 100 per cent fixed ten years ago is unlikely to be equally appropriate to the circumstances of today. Yet we find quite a few cases where this kind of fixed percentage loading is applied. To my mind it cannot be reconciled with the counsel of Recommendation 22. In any particular business the oncost element may tend to increase or decrease, but taking the economy as a whole there is plenty of evidence that oncosts tend to be an increasing proportion of total costs. It is common knowledge, for example, that the proportion of white-collar workers to manual workers is ever increasing.

Market Value

I have been speaking so far mainly about the conception of cost and I should now like to round off my remarks on the theory of valuation with a very quick consideration of the other leg of valuation, namely, market value. There is judicial authority (arising from *Whimster & Co v. C.I.R.* (12 T.C. 813; 4 A.T.C. 570) and recently approved by the House of Lords in the *Duple* case) for the principle that the only reason for permitting a valuation below cost is to enable the trader to provide against an eventual loss on sale. Market value therefore means, in the Revenue's view, market selling value measured by estimated eventual sale proceeds, i.e. in the market in which the trader normally sells his goods. Replacement cost is therefore not normally acceptable. The Revenue, however, does accept replacement price in the case of raw materials. The reason for this apparent exception to the general rule is that normally in the case of raw materials of a taxpayer's trade there is no selling market, as such, for the raw materials and the price at which he can replenish his stock of raw materials is the only available measure of the current market price of such raw materials. We do not admit replacement price in the case of raw materials covered by firm orders (there are examples in the textile trades), for the reason that in this case there can be no eventual loss on sale and the correct valuation is at cost. In order to dispel any misconception, I should like to make it clear that when the Revenue speaks of raw material in this context it means raw materials of the particular trade or business.

In certain industries the value of the raw material content forms a high proportion of the total value of stock in process of production and the price of the raw material is liable to considerable fluctuations. In such circumstances, it is common practice to make rapid changes in selling prices to accord with the changes in the price of raw material. In cases of this kind the Revenue would agree that in practice the replacement price basis may be extended to cover stocks in process of production and finished stocks as well as to stocks of raw material.

The term 'net realizable value' appears in Recommendation 22. In general, the Revenue has accepted what the Recommendation says on this subject. However, the suggestion in paragraph 13 that 'all expenditure to be incurred on or before disposal should be deducted' is only acceptable with reservations. The Revenue would not admit that the general selling costs should be allowed. In practice, specific indentifiable items of expenditure directly connected with the stock in question, including provision for commission and brokerage which have to be incurred on sale, would be allowed.

Before I leave the subject of market value, I had better add a few words about the problems of slow moving stock, e.g. motor-car spares or books. We shall assume in these cases that the goods are in perfect condition and the full price is still asked but that stocks are held in such quantity that it is probable that some will never be sold. For example, a publisher may say that a particular book is slow moving. This fact alone does not justify valuing any of the stock below cost if, in fact, all copies will ultimately be sold at a profit. At the same time, the publisher is entitled to have regard to the level of stock, the level of sales and the probable course of future sales and the number of copies which will probably never be sold. We do ask that the trader in these cases should make use of his knowledge and experience to make a genuine estimate of the loss he can expect to suffer and not, as we sometimes find, deduct a purely arbitrary percentage from cost which does no more than ensure that the stock will certainly not be overvalued.

A great deal more could be said about theories of stock valuation. Some theorization and systematization is of course essential, but it is necessary to avoid the danger of becoming theory obsessed. Valuation is probably more of an art than a science and it cannot be over-emphasized that as Recommendation 22 says in its first paragraph: 'The need to give a true and fair view is the overriding consideration applicable in all circumstances.' Terms like true and fair import value judgments and are perhaps largely subjective concepts. We are, however, more likely to come to terms on these matters if both sides approach the problem as reasonable men.

Form 81

Before I bring this talk to a conclusion, I should perhaps say something about the only form the Revenue uses in connection with stock valuation, a form which is certainly known to you all, the Form 81 or stock certificate, as it is commonly called, at least within the department. The front of the form contains the certificate while on the back there are questions about reserves and suspense accounts as well as the value of the stock and the basis. At one time, the form was used perhaps rather too indiscriminately and a greater selectivity has been encouraged in recent years. The form is often used at the close of an inquiry into the basis of stock valuation and it does not seem to me to be an unreasonable request that at the close of such an inquiry, which has normally taken the form of question and answer as between inspector and accountant, a certificate signed by the taxpayer himself should be obtained.

It may be mentioned also that when the present form was drafted the accountancy profession was consulted. Moreover, little or no objection to the form was taken during the proceedings of the Tucker Committee and the Royal Commission. On the whole, the form has provoked very few objections or complaints, but occasionally we have had an objection from an accountant on the grounds that one or more questions in the form are covered by the responsibilities placed on the accountant by the Companies Act, 1948. This, of course, applies to the accounts of limited companies and the objection is not relevant and is usually not made as far as the accounts of individuals or firms are concerned. The Revenue's attitude to this type of complaint is that the responsibility of auditors for the actual stock figures appears to be left in some uncertainty by the Companies Act and that there are auditors who still consider that the main responsibility for the accuracy of the valuation rests with the company. The Revenue considers that the use of some type of stock certificate is justified. There are matters on which the Revenue is entitled, if it wishes, to have an assurance from the taxpayer himself. The use of the form does not imply any reflection on the honesty of the taxpayer or the honesty or competence of the accountant. It is felt that the certificate is a safeguard both to the Revenue and the accountant.

Nevertheless, I would admit that there may be some room for criticism of certain of the questions as being superflous in view of the Companies Act, 1948. However, the form has been with us for a long time and has aroused few critics and the time is not opportune for change. It may be more appropriate to await the results of any change in the law which may arise out of the report of the Jenkins Committee. It is noted that the Institute has made certain submissions to that committee with regard to the amendment of the Companies Act in connection with stock, including a recommendation for the indication of the basis of valuation on the face of the accounts. No doubt, when the time is ripe, the layout of the form will be reconsidered and the profession will be consulted. Meanwhile, I would ask the few accountants who do not like the form very much to be patient and for the time being to co-operate in its completion.

Retirement and Superannuation Benefits

LIABILITY TO ESTATE DUTY

The following notes prepared by the Board of Inland Revenue set out in general terms the present practice of the Estate Duty Office regarding liability to estate duty on lump sums and annuities payable on death under employees' retirement benefit schemes and superannuation funds. They also apply to retirement annuity contracts and trust schemes approved under section 22 of the Finance Act, 1956.

A. Payments to the Deceased's Legal Personal Representatives

1. Payments that are legally due to the legal personal representatives and cannot be withheld from them at the discretion of any person exercisable after the death are liable to duty as part of the deceased's free estate. The legal personal representatives are accountable for the duty under section 8 (3) of the Finance Act, 1894.

2. Amounts liable to duty under this head are subject to normal aggregation with other property passing on the death for the purpose of determining the rate of duty.

B. Where the Deceased had a General Power of Nomination

3. Where the deceased had a general power to nominate a benefit to anyone he wished and he had not exercised his power irrevocably in his lifetime, the benefit is liable to duty under section 2 (1) (*a*) of the Finance Act, 1894, and the legal personal representatives are accountable for the duty under section 8 (3).

4. The case where the deceased had at the time of his death an option to have a sum of money paid to his legal personal representatives normally falls under this head. Where, however, an annuity is payable to the deceased's widow, widower or dependant under a contract or trust scheme approved under section 22 of the Finance Act, 1956, and the deceased had an option to have a sum of money paid instead to his legal personal representatives, duty is not charged under this head (section 39 (2) of the Finance Act, 1957).

5. Amounts liable to duty under this head are subject to normal aggregation with other property passing on the death.

C. Annuities which Continue to be Payable after the Deceased's Death

6. Where an annuity was payable to the deceased during his lifetime and the same annuity is payable after the death to some other person, duty is claimed under section 1 of the Finance Act, 1894, if *both* the following conditions are satisfied:

(*a*) A single annuity must have been created which continues after the death; for example, an annuity for the life of the deceased or for five years certain whichever is the longer, or an annuity for the longer of the lives of the deceased and his wife.

(*b*) The annuity must subsist as a separate item of property. This condition is regarded as satisfied

if the annuity was a continuing charge on some property, for example, on the income of a trust fund; or if the annuity, although not a charge on any property, was payable for the whole of its term to the same grantee, for example to an employing company or to the trustees of a scheme, and was held by the grantee on trust for different persons in succession.

7. The beneficiary, and also the trustees or other persons in whom the annuity or the management of it is vested, are accountable for the duty under section 8 (4) of the Finance Act, 1894.

8. Annuities payable under employees' superannuation arrangements, which are liable to duty under this head, are subject to normal aggregation with other property passing on the death. An annuity payable to the deceased's widow, widower or dependant under a retirement annuity contract or trust scheme approved under section 22 of the Finance Act, 1956, is subject only to the limited aggregation with policies on the deceased's life in which he never had an interest, as defined in section 33 (2) of the Finance Act, 1954.

D. Interests Provided by the Deceased

9. Where an annuity or other interest was purchased or provided by the deceased, duty is chargeable under section 2 (1) (*d*) of the Finance Act, 1894, to the extent that a beneficial interest accrues or arises on his death. Before duty can be charged under this head, all the three following conditions must be satisfied:

(*a*) *The deceased must have purchased or provided the annuity or other interest.*

This condition is regarded as satisfied if the deceased made some pecuniary contribution towards its cost, for example, by deducting from his pay or by forgoing some part of his emoluments; or where he gave up some benefit to which he was otherwise entitled, for example, by surrendering part of his pension. It is also regarded as satisfied if the annuity or other interest was purchased or provided by a person, for example, the employing company, who was entitled to, or amongst whose resources there was included, property derived from the deceased (section 30 (1) of the Finance Act, 1939).

(*b*) *The benefit must be legally due and not subject to the discretion of any person exercisable after the death.*

(*c*) *There must be 'a beneficial interest accruing or arising' on the death.*

This condition is regarded as satisfied only where a contingent interest becomes vested, or a defeasible interest becomes indefeasible, on the death so that the identity of the beneficiary is not finally determined until the death.

Examples of cases where this condition is regarded as satisfied are:

(i) where the deceased dies before retirement and an annuity or lump sum becomes payable to his widow instead of the retirement pension he would have got if he had reached retiring age;

(ii) where the deceased surrendered part of his retirement pension for an annuity for his widow to start on his death *and he retained the right to revoke the surrender up to the time of his death* (the condition would not be regarded as satisfied if the surrender was irrevocable or became irrevocable before the deceased's death).

10. The mere fact that an annuity for life is expressed to be payable only if the annuitant survives the deceased is not of itself regarded as making it 'a beneficial interest accruing or arising' on the death nor is the fact that certain events such as divorce or dismissal would have prevented its being payable.

11. It is no longer the practice to regard an annuity as 'a beneficial interest arising or accruing' on the death simply because the recipient was debarred from surrendering, charging or assigning it before the death.

12. The beneficiaries, and also the trustees or other persons in whom the property or the management of the property is vested, are accountable for the duty under section 8 (4) of the Finance Act, 1894.

13. Where duty is claimed under this head, the property chargeable is treated in accordance with section 4 of the Finance Act, 1894, as property in which the deceased never had an interest and is not liable to normal aggregation for the purpose of determining the rate of duty.[1]

14. Where the property chargeable with duty is a policy on the deceased's life, or is the money received under such a policy, or is an interest in such a policy or money, it is subject to limited aggregation under section 33 (2) of the Finance Act, 1954. Section 33 (2) is not considered to apply, however, where the beneficiary is entitled under the rules of the scheme or fund to a lump sum or annuity of stated amount, even though the trustees or the employers may have effected a policy payable to themselves in order to satisfy their obligations, and such benefits are therefore not subject to any aggregation.

15. Any annuity in favour of a widow, widower or dependant arising under a contract or scheme approved under section 22 of the Finance Act, 1956, if chargeable to duty is subject to the limited aggregation under section 33 (2) of the Finance Act, 1954.

General

16. A benefit which escapes duty under one of the above heads may, of course, be liable to duty under another head. For example, where the deceased had a power of nomination, but the power was restricted to a limited class, duty will not be chargeable under head B, but it may be chargeable under head C or D.

[1] Exceptionally, if the benefit was purchased or provided by a person who was entitled to, or amongst whose resources there was included, property derived from the deceased the special provisions of section 30 (2) of the Finance Act, 1939, apply and the sums chargeable are fully aggregable.

Weekly Notes

THE INSTITUTE'S EXAMINATIONS

THERE were 4,005 candidates for the November 1961 examinations of The Institute of Chartered Accountants in England and Wales. Of 1,696 candidates for the Final examination, 813 (47·9 per cent) passed and 883 failed; in the May 1961 examination 693 (46·3 per cent) passed and 805 failed. The First Certificate of Merit, the Institute Prize, the W. B. Peat Medal and Prize, the William Quilter Prize, the O. C. Railton Prize for the year 1961, and the Plender Prizes for the papers on Auditing and English Law (Part II) were won by Mr William Bates, of Nottingham. Mr Jeffery Haverstock Bowman, of London, won the Second Certificate of Merit, the Walter Knox Scholarship and the Plender Prize for the paper on English Law (Part I); and the Third Certificate of Merit and the Charles M. Strachan Prize were won by Mr Anthony Warren Davies, also of London.

In the Intermediate examination, there were 2,091 candidates, of whom 939 (44·9 per cent) passed and 1,152 failed; in the May 1961 examination 944 (48·3 per cent) passed and 1,012 failed. The First Certificate of Merit, the Institute Prize and the Stephens Prize were won by Mr Robert William Maas, of London. The Second Certificate of Merit and the Tom Walton Prize were won by Mr Christopher Douglas Collins, also of London; and the Third Certificate of Merit and the Flight-Lieutenant Dudley Hewitt, D.F.C., Prize were won jointly by Mr Frederick William Bush and Mr Raymond Victor Jayson, both of London.

In the Preliminary examination, 218 sat, of whom 57 (26·1 per cent) were successful and 161 failed; in the May 1961 examination, 71 (33 per cent) passed and 144 failed.

A full list of successful candidates, together with a summary of results, appears elsewhere in this issue.

THE SOCIETY'S EXAMINATIONS

THE three Chartered Institutes, in accordance with the schemes of integration with The Society of Incorporated Accountants (in voluntary liquidation), conducted the Final examination of the Society in November 1961. There were thirty-six successful candidates eligible for membership of the English Institute, and eight successful candidates eligible for membership of the Irish Institute.

A list of successful candidates, together with a summary of the results, appears on another page.

EUROPEAN ACCOUNTANTS' CONGRESS

THE Policy Committee of the European Congress of Accountants to be held in Edinburgh in September 1963, announced this week that H.R.H. The Duke of Edinburgh has kindly consented to give his patronage to the Congress, of which The Institute of Chartered Accountants of Scotland will act as host organization. The news was received by the Committee on February 9th at its second meeting (preliminary details of the Congress were first announced in *The Accountant* of December 2nd last).

The Policy Committee – which is an international one, with representatives not only from accountancy bodies in Great Britain and Ireland, but also from Belgium, Denmark, France, Germany, the Netherlands and Switzerland – has now decided that the official days of the Congress will be Tuesday, September 10th, to Friday, September 13th, 1963.

Four business sessions will be held, and a full programme of social events is being arranged to include at least one banquet and a ball, and special entertainment for the ladies of participating accountants. At the business sessions papers will be presented by accountants from different parts of Europe; the subjects of the papers, as determined by the Congress Policy Committee, will be:

Auditing – the ways in which the professional responsibilities of the auditor are discharged in the context of the obligations imposed on him in various countries.

Accounting Principles – the accounting principles and conventions adopted in the preparation of statements of operating results and of assets and liabilities for purposes of management and for publication to shareholders.

The Impact of Electronics on the Accountant of the Future – in relation both to the accountant in practice and to the accountant in industry.

The Accountant's Contribution to Small Businesses, particularly in connection with Specialized Services.

The official languages of the Congress will be English, French and German, and arrangements are being made to provide simultaneous translation at the business sessions for all three languages.

LEVERHULME RESEARCH SCHOLARSHIP

ON another page an official announcement relates to the offer of a Leverhulme Research Scholarship in accounting services for management purposes and invites applications. The scholarship will be tenable for one year and is worth £2,000 in addition to the reimbursement of the expenses of travel necessarily undertaken by the scholar in the course of his research studies.

Applicants, who should be British born, are required to hold a recognized accountancy qualification besides having had experience which has enabled them to acquire an appreciation of the problems of operating management, either in public practice or in a commercial or industrial appointment.

These accounting scholarships were first offered by the Leverhulme Trust in 1955, though no award was made in that year as no suitable candidate appeared before the selection panel. However, in 1956, two accountants were awarded scholarships; one was Mr Christopher Bostock, M.A., F.C.A., whose thesis has since been published under the title of *Management, Accounting and Profitability* (Pitmans, 18s); the other was Mr Leonard Hardy, A.A.C.C.A., F.C.W.A., whose thesis on financial forecasting and planning in the field of product development and distribution is now in process of publication.

The chairman of the selection panel for the present scholarship is Sir Harold Howitt, G.B.E., D.S.O., M.C., F.C.A., and the members are Mr H. A. Benson, C.B.E., F.C.A., Mr W. W. Fea, B.A., F.C.A., Mr L. C. Hawkins, F.C.A., members of the Council of the Institute, with Mr J. C. Walker, F.C.A., chief accountant of Unilever Ltd.

N.E.D.C. APPOINTMENTS

WITH the promise of T.U.C. participation, Mr Selwyn Lloyd has announced the first ten members who, together with himself, the President of the Board of Trade, the Minister of Labour, and the Director-General of the Council, Sir Robert Shone, and six T.U.C. nominations, will make up the twenty-member Council.

The ten appointments include that of Mr J. N. Toothill, C.B.E., F.C.W.A., of Edinburgh, director and general manager of Ferranti Ltd, and chairman of the committee whose forthright report on the state of the Scottish economy was recently published. Among other industrialists appointed to the Council are Mr F. A. Cockfield, who, since leaving the Inland Revenue, where he was Director of Statistics and Intelligence and latterly a Commissioner, has been chairman of Boots Pure Drug Co Ltd, and Mr R. M. Geddes, O.B.E., managing director of Dunlop Rubber Co Ltd. They are joined by Mr C. E. Harrison vice-chairman of the English Sewing Cotton Co Ltd, who is also this year's President of the Federation of British Industries; Mr E. J. Hunter, C.B.E., chairman of Swan, Hunter & Wigham Richardson Ltd who is Director of the British Productivity Council; and Mr J. M. Laing, managing director of the construction firm bearing his name, who is also a member of the Economic Planning Board.

It is gratifying that room has been found for two members who are unaffiliated to any industrial or trade organization; they are Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., Provost-elect of Worcester College, Oxford, and Professor H. Phelps Brown, of London University, an economist specializing in labour problems, who is also a member of the Council on Prices, Productivity and Incomes.

Perhaps the most contentious of the appointments are those of Lord Robens and Dr Beeching in their capacities as the heads of the two biggest of the nationalized industries, both of which are struggling towards financial solvency. Their inclusion probably hinges on the fact that these two industries employ well over a million workers in two of the largest and most important unions, whose co-operation with the Council's recommendations is greatly to be desired. Whether this is the best way of ensuring such co-operation is debatable, but it has almost certainly been the cause of Sir Ronald Gould's letter on behalf of seventeen 'white-collar' organizations unaffiliated to the T.U.C., pointing out that their particular interests are unrepresented on the Council.

The whole point is that the last situation to be desired is that the Council should be a meeting-place for sectional interests. Nevertheless, given its present size and the two appointments from the nationalized industries, Sir Ronald Gould's argument is difficult to resist.

Besides these appointments to the N.E.D.C., Sir Robert Shone, the Director-General, announced that he had appointed Sir Donald MacDougall, C.B.E., an Oxford economist, to be economic director, and Mr Frank Pickford, of the Ministry of Labour, to act as administrative secretary.

CAPITAL ALLOWANCES ON LEASED FACTORIES

CAPITAL allowances on industrial buildings are granted to the owner for the time being of the 'relevant interest', i.e. broadly speaking the interest which the person erecting the factory etc. had at the time of erection. If, for instance, the freeholder incurs the cost of erecting a factory and then sells the freehold, the title to the capital allowances passes to the buyer. What legislation has not provided for is the case where the owner of the 'relevant interest' grants a lease at a high premium which reflects the value of the industrial building. Such a person continues to have the 'relevant interest' and consequently the capital allowances, while the lessee who in essence has borne the cost of the building receives no allowance. We understand that the Chancellor of the Exchequer is being approached to introduce legislation to remedy this anomaly. It is suggested that wherever the owner of a 'relevant interest' grants a long lease (as defined for income tax) this shall be deemed for capital allowance purposes as a sale of the relevant interest, any premium to be treated as 'sale moneys'.

TAX AIDS TO THRIFT

REPEATED pleas for the abolition of transfer duty and the simplification of share transfers make it appear that transfer costs are the chief stumbling block in the way of a property-owning democracy with small investors holding stock exchange securities. In an article in the current *Westminster Bank Review*, Mr Basil Taylor throws a good deal of rather cold light on this idea and puts forward some rather more convincing ideas of his

own. He points out that the main obstacle to the small investor's participation in share-owning is not transfer costs but the raising of the purchase price itself. He gives some very impressive statistics to show that small investors are very much in the minority; most people are not even investors at all, large or small.

Mr Taylor argues that the tax structure favours, in relation to capital accumulation, persons assessed under Schedule D. They receive encouragement to acquire plant and machinery in that a good deal of the cost is met by the Chancellor of the Exchequer; they can take full advantage of the retirement benefit provisions. The ordinary employee receives no such tax encouragement. His enjoyment of retirement benefit tax relief is dependent on the goodwill of his employer; even a small pension scheme debars him from taking advantage of the 1956 Act.

With house purchase, the scales are weighted in favour of the mortagor who borrows from an insurance company; the premiums on the policy that repays the loan qualify for tax relief, whereas repayments to a building society do not.

Mr Taylor suggests that every taxpayer should have the right to save a certain percentage of his income tax-free, thus rationalizing the present irrational and haphazard system.

RESEARCH ON DECISION MAKING

ANOTHER article in this issue of the *Westminster Bank Review* deals with the question of research into decision-making in business. This is a subject which in the form of the theory of gains and the development of simulatrics has seen a certain amount of development in the United States. Now Mr C. F. Carter in his article 'An experiment on business research' describes the Centre for Business Research at Manchester. The Centre is part of the research section of the Faculty of Economic and Social Studies. For its first five to seven years it will be financed by a group of companies. At the moment these are fourteen in number.

The Centre is going to study some of the major decision problems of business and to build up, by an examination of real situations, knowledge of the information systems and the methods of decision appropriate in particular circumstances. It will concentrate on certain approved lines of research and will not try to solve problems over a wide range of industry nor will it compete with management consultants. The work of the Centre will be organized in 'project-groups' each of which will usually be led by a research worker whose status and industrial experience will allow him to make easy contact with managements. The sponsors of the scheme are gratified by the response they have had from industry and they look forward to the time when it will be possible when they will be able to offer a systematic analysis of how management training courses should be prepared.

COURTAULDS' COME-BACK

SINCE our leading article was prepared, Courtaulds' ripost to I.C.I.'s latest offer was announced on Wednesday afternoon. Its tone is again emphatic and uncompromising; a judicious mixture of increased dividends promised for 1961–62 and 1962–63, and a 2½ per cent tax-free cash distribution out of capital profits for each of the next three years. This goes along with a £40 million capital bonus in 7 per cent Unsecured Loan Stock 1982/87. It will be interesting to see how Courtaulds' shareholders react to the latest handout.

TAKE-OVER BIDS AND THE SHAREHOLDER

THE Stationery Office has published a private member's Bill which would prevent companies from making take-over bids unless authorized by a special resolution to do so. As the Jenkins Committee is still deliberating on similar suggestions made to it, it seems unlikely that this private members' Bill will meet with any support from the Government.

NATIONAL PRODUCTIVITY YEAR

THE idea of the British Productivity Council that a National Productivity Year be held from next November has received a warm welcome and more than one hundred major organizations have already signified their backing. H.R.H. The Duke of Edinburgh has consented to take an active part as patron.

The object of the National Productivity Year will be to focus attention on the means that lie within the capacity of management and workers to raise efficiency and lower costs. The Year will provide an opportunity for the methods which have enabled leading firms, large or small, to achieve success in this sphere to be given the widest possible currency as an encouragement to others. A major aim, of course, will be to foster a more favourable climate of opinion to better methods, and their appropriate use, in industry and the community.

The Year is envisaged as having two main aspects, distinct though by no means separate. One is the industry-by-industry aspect. In each industry or group of industries, it is hoped that all the bodies concerned – such as trade associations, employers' federations, trade unions – would, with whatever consultation and collaboration they consider appropriate, formulate plans to give effect to the Year and its aims in that industry or group.

The other aspect concerns the professional bodies (two of the Vice-Patrons of the Year are Mr P. F. Granger, F.C.A., President of The Institute of Chartered Accountants in England and Wales, and Mr F. M. W. Hird, F.C.A., F.C.W.A., President of The Institute of Cost and Works Accountants). It is expected that all the bodies concerned will, at the national level, discuss ways in which they can link

their individual programmes to the aims of the Year, and also arrange such co-ordination and collaboration as may be desirable. The main emphasis will be laid on activities at local level and directed towards firms and the general industrial community in every area. Local plans will be formulated by specially formed national productivity year local committees on which all appropriate participating bodies, including trade unions, educational establishments and chambers of commerce, will be represented.

The first step to form these area committees is being taken by the 116 local productivity committees and local productivity associations of the British Productivity Council.

Reports from the B.P.C.s eleven regional officers show that already the first steps have been taken, and that almost everywhere the area committees will have been formed by the end of this month.

The British Productivity Council has undertaken a number of the main administrative tasks in connection with the Year, and inquiries should be addressed either to the British Productivity Council, Vintry House, Queen Street Place, London EC4, or to any of the Council's regional officers.

This is My Life . . .

by An Industrious Accountant

CHAPTER III

I HAD a long talk with our chairman recently; he's getting on in years and is planning retirement soon. He wanted to talk about tax. It appears that his personal financial affairs have always been handled by an elderly contemporary of his, a local accountant who suddenly collapsed the other day with a stroke. I found myself confronted with a bulging file of old taxation assessments, schedules of investments and annual income, etc., and being asked, out of the blue, to comment.

Advice on tax and estate administration is a function which an accountant should welcome, he naturally being able to discharge it to his client's benefit and to his own enhanced credit; but it proved unexpectedly difficult. The aforesaid client seemed strangely vague about the technicalities which he should have known for years; I got bogged down early.

Our one-time private family company has vastly expanded since its beginnings, and the structure of shares and debentures is complex. Blocks of shares with various proportions of control are held by assorted groups of relations who have a background influence on policy much greater than is generally known. Subsidiary companies were hived off in the past for tax or personal reasons; the chairman has holdings in all of them; their disposal is important. His previous adviser had persuaded him to transfer large holdings into the names of junior relatives, to minimize the impact of death duties in due course, and there was an arrangement to hand back dividends. Now my good chairman wants to rescind these transfers and reorganize the allocation. . . .

I talk about forming a private company, Himself Ltd in effect, with himself as all-powerful sole director; this, I explain, has great benefits tax-wise and he can nominate his successor. He likes the idea, but has reservations. Deep down in his subconscious mind is the fear of losing control, of being superseded by the younger generation. He plays around with the thought and asks remarkable questions. Some of them I can't answer at short notice and he looks rather superior.

Then he gets round to the reclamation of tax deducted at source from his dividends from the family companies. He obviously has had his private suspicions about this procedure for a long time; I find it hard to convince him that in his capacities as shareholder and director he is not being taxed twice on the same revenue. I do some rapid diagrams showing dividend debited to appropriation account, tax debited to dividend account, tax credited to Revenue Commissioners, and so on, but we just go round in circles. 'Probably all right, if you say so,' he admits grudgingly, 'but it looks like a fiddle to me.'

Then we turn to the long-term financial forecast of our major subsidiary and I feel my hair growing grey. Bearing in mind the tax liability on dividends payable and the strengthening of the net asset position, I recommend so much to be put aside to dividend equalization, so much to gradual repayment of the substantial loan from the holding company. There will be an enhancement of the share values, of the equity . . . but the chairman gets hopelessly fogged. He listens warily and scribbles little sums in subtraction. He's conscious that additional death duties will accrue from the higher share valuations to be expected when the dividends increase, but is less sure about asset valuations when profits are retained. These, he indicates vaguely, can be . . . well, arranged, what?

At this stage I suddenly understand why he seems mistrustful. He has been taking the annual net profit figure as representing the sum available for repayment; he fails to comprehend that liquid cash is also available to the extent of the depreciation charge annually; the discrepancy has always worried him. Explanations clear his mind rapidly but he needs time for reappraisal. He withdraws with courteous thanks but without arriving at conclusions.

I hope the impression I made on him was better than the impression he made on me.

Finance and Commerce

Oxo Accounts

THIS week's reprint comes from the annual report and accounts of Liebig's Extract of Meat Co Ltd. The company is probably known better through some of its leading products such as 'Oxo', 'Fray Bentos' and 'Viandox'. The report includes a list of the companies comprising the group throughout the world together with details of the group's principal trademarks and products. This, of course, is what one expects these days; the annual publication should be entirely self-explanatory.

The report this year has been redesigned both in its general layout and in the presentation of the accounts. Additional information incorporated for the first time includes statistics covering the financial years 1955 to 1961. These are mainly in the form of balance sheet and profit summaries but two indices are worth noting: the expression of group profit before debenture, loan interest and taxation as a percentage of the funds employed in the group at the year-end, and the expression of the gross ordinary dividend as a percentage of total ordinary stockholders' funds. The profit percentage has come down from 17·7 to 10·5 in the seven years and the dividend percentage this time is 5·0 after two years at 6·1.

Revaluation

Mr K. R. M. Carlisle, Liebig's chairman, admits that although a year ago he expected profits to show some expansion, it became apparent as the year progressed that – with the exception of 'excellent results' in the United Kingdom – profits were not going to come up to expectations.

Substantial losses were incurred on production of canned meats and meat extract in Argentina and, to a lesser extent, in Paraguay; farming returns, however, were generally better; profits from the continent of Europe were 'much lower'; there was one good development in South America. Mr Carlisle says that advantage has been taken, as regards land and livestock, of recent Argentine legislation which gave favourable opportunities to revalue fixed assets and breeding livestock. Some of the *estancias* in Paraguay have also been revalued in accordance with similar legislation in that country.

The resultant increases in the balance sheet values of fixed and current assets, with corresponding increases in capital reserves, are reflected in the accounts. 'Movements of reserves' shows that group capital reserves have been raised by £1,297,067 by the revaluation of breeding livestock, a footnote explaining that the credit has been to capital reserves in conformity with requirements in Argentina. Land revaluation has produced a surplus of £552,321.

Rising Costs

Mr Carlisle has no doubts about the future for Liebig's in the Common Market. 'Our products have been on sale in the Common Market countries for the greater part of a century and with the passing years their variety has increased', he says, but there is scope for rationalization and standardization.

In Argentina and Paraguay, troubles are particularly concerned with inflation, he reports. 'Over the past three years, internal costs, including the cost of cattle, have risen enormously, but external exchange rates have been relatively stable and there has been no compensating increase in the currency proceeds of exports. On top of this, the industry has been taxed viciously in the form of retentions on the export sales of its produce and heavy surcharges on the import of plant and packing materials necessary for the conditioning of the products for export.' But the Governments concerned, he adds, are beginning to realize the seriousness of the situation and some easing has been instituted.

A feature of the balance sheets in these accounts is the single column for all figures – items and group totals – the latter, of course, being ruled off.

S. & W. Berisford

THERE is the feeling with the annual report of S. & W. Berisford Ltd that one has picked up a serial – after the first instalment – to which there is no synopsis. How much better it would have been to have included a short description of the company and its business and of how it acquired Joseph Travers & Sons Ltd in March 1959.

Berisford, of course, is one of the big names in the marketing of sugar. Sugar sales account for the greater part of its turnover. Travers, the centuries old grocers and commodity merchants of the City of London, has not, unfortunately, fulfilled earlier hopes. Some of its departments – sugar, canned goods, dried fruit, cereals and spices – have been absorbed by Berisford and the 'Mark Lane companies'; while the tea and coffee sections have been closed down and sold. The specialist departments of wines and spirits, and green fruit, with the overseas branches continue to trade as Travers.

Which leads to the 'big point' in the Berisford accounts this year: the separation and separate statement of the Travers's accounts. By so doing, the Berisford directors feel that the position will be more readily appreciated – a view which shareholders will undoubtedly welcome. One important event was the sale of the Travers's Cannon Street lease at a capital profit of £191,095, as a result of which Travers's net assets are up to £1,290,608 'which compares with the cost of the investment to S. & W. Berisford Ltd of £1,218,941. There is thus still a substantial surplus on the investment'.

LIEBIG'S EXTRACT OF MEAT COMPANY LIMITED AND SUBSIDIARIES

Consolidated Profit and Loss Account for the year ended 31st August 1961

	Notes		1961 £		1960 £
Group Trading Profit before Taxation	3		2,043,802		2,213,860

LIEBIG'S EXTRACT OF MEAT COMPANY LIMITED AND SUBSIDIARIES

Notes on the Accounts

1 CONSOLIDATION OF ACCOUNTS

The Consolidated Accounts incorporate the Profits and Losses, and the Assets and Liabilities, of the Parent Company and thirty-five Subsidiaries. Seven Subsidiaries make up their Accounts to 31st December, and one Subsidiary to 31st May, in each year, these being considered the most suitable dates owing to the seasonal nature of their operations. One Continental European Subsidiary makes up its Accounts to 30th June for fiscal reasons. The Accounts of those Subsidiaries, the financial years of which do not coincide with that of the Parent Company, have been incorporated as at the last closing date prededing 31st August 1961.

2 EXCHANGE

Conversions to Sterling have been made on the following bases:—

A. Fixed Assets:
  (i) On the Continent of Europe:
    (*a*) balances brought forward from Consolidated Balance Sheet as at 31st August 1960: at the Sterling values adopted at that date.
    (*b*) subsequent acquisitions: at the rates of exchange ruling at the dates of acquisition.
  (There is a change in basis as compared with previous years, when Fixed Assets on the Continent of Europe were converted at the rates of exchange ruling at the relevant Balance Sheet dates).
  (ii) Other than on the Continent of Europe: at the rates of exchange ruling at the dates of acquisition or, where revalued, at the dates of such revaluations.

B. Current Assets and Liabilities and Long-term Liabilities: at the rates of exchange ruling at the relevant Balance Sheet dates.

3 GROUP TRADING PROFIT BEFORE TAXATION

	1961 £	1960 £
	£2,043,802	£2,213,860
This figure has been arrived at after crediting:		
Dividends Received (gross):		
From Trade Investments	96	102
From Other Investments	5,309	7,625
	£5,405	£7,727
and after charging:		
Depreciation and Amortisation of Fixed Assets	731,613	617,445
Interest on Debentures and Long-term Bank Loan	212,853	120,198
Remuneration of Directors of Parent Company:		
Fees	11,392	10,144
Other Emoluments	29,331	27,522
Pension of a past Director	5,000	5,000
Provisions	253,509	201,262
Exchange Losses *less* Profits	10,648	31,671
Auditors' Remuneration and Expenses	23,607	22,602
	£1,277,953	£1,035,844

4 TAXATION

(a) The provision for Taxation in the Consolidated Profit and Loss Account, £1,148,000, consists of:		
United Kingdom Profits Tax	231,000	189,000
United Kingdom Income Tax (including £19,500 transferred to amount deferred by Initial Allowances)	770,000	695,000
	1,001,000	884,000
Overseas Taxation	147,000	201,000
	£1,148,000	£1,085,000

(b) The provision for United Kingdom Taxation included in the Consolidated Profit and Loss Account, amounting to £1,001,000 as shown in Note 4 (a), includes the estimated amounts of Profits Tax and Income Tax arising on the profits of the Group for the year ended 31st August 1961 and is after deducting £70,000 Double Taxation Relief in respect of Dividends brought into the Accounts of the Parent Company for the year ended 31st August 1960. No credit has been taken for any Double Taxation Relief which will arise on Dividends brought into the Accounts of the Parent Company for the current year. In the case of Subsidiaries resident abroad, and of Subsidiaries which are qualified as Overseas Trade Corporations, United Kingdom Taxation has been provided only on so much of their profits as has been distributed by way of dividend.

(c) Provision has been made in the Balance Sheet of the Parent Company and in the Consolidated Balance Sheet for the estimated liabilities to United Kingdom Taxation assessable by reference to profits earned or losses incurred up to the dates to which the relative Accounts have been made up and includes estimated liabilities still outstanding in respect of previous years.

The amounts set aside for Future Income Tax include taxation deferred by Initial Allowances, namely in the Balance Sheet of the Parent Company £63,000 (1960 £43,500) and in the Consolidated Balance Sheet £123,000 (1960 £103,500).

5 MOVEMENTS OF RESERVES ARE AS FOLLOWS:

	PARENT COMPANY			GROUP

Notes on the Accounts—(continued)

8 VALUATIONS OF LIVESTOCK, PRODUCE, STORES AND MATERIALS

The bases on which stocks throughout the Group have been valued are substantially as follows:

(a) Breeding and own-bred livestock in Argentina have been valued in conformity with recent legislation in that country: elsewhere, valuation has been at standard rates. Bought store cattle have been valued at cost.
(b) Finished and unfinished products have been valued at the lowest of cost, net realisable value and replacement price.
(c) Stores and materials have been valued at the lower of cost and replacement price.
(d) Suitable allowance has been made for old, deteriorated and surplus items.

	£6,334,654	£6,405,446

12 STAFF PENSION FUND

An actuarial valuation of a Staff Pension Fund as at 31st December 1958 disclosed a deficiency which is guaranteed by the Parent Company and two of its Subsidiaries. The companies concerned are making a series of special annual contributions of £27,600 which it is proposed to continue until such time as this deficiency is made good. As stated in Note 9 there is a balance of £147,327 standing to the credit of Employees' Provident Account in the books of the Parent Company, which provision is also regarded as being available towards a deficiency of this kind.

13 TRANSFER OF FUNDS AND MOVEMENT OF STOCKS

The transfer of funds and movement of stocks within the Group, and elsewhere, are subject to prevailing controls.

(d) Contested tax liabilities overseas	—	83,000

CITY NOTES

BANK rate and industrial profits – the problem of whether the first should be reduced and the evidence that the second are under increasing pressure – have been the City's concern for some time. The regularity with which the discount market has been forced 'into the bank' has emphasized to the discerning onlooker that Bank rate reduction, although freely forecast, is unlikely.

On a wider plane, the Government's intention to push the 'pay pause' policy through to the end of March and the prospect that the surplus budgeted for last April will in fact turn out to be a deficit, are two further points arguing against Bank rate reduction. Another factor is that, to an extent, capital goods export finance has been taken outside the Bank rate sphere.

On industrial earnings, the stock-market is noting with some apprehension that pressure on earnings is being shown by companies whose shares have for long been standing on a low yield growth basis. That particularly applies to store shares where the market, at first affected by the slowing down in Woolworth's profit growth rate, has this week learned of an actual and sizeable reduction in earnings by British Home Stores.

Part of the recent improvement in the gilt-edged market reflected a movement out of low yielding equities where growth prospects are not as rosy as low share yields popularly suggest them to be.

The Training of Accountants

SIR, – You have performed a service to the profession by reproducing the article 'Outdated articles' in your issue of February 10th. The fact must be faced that much of what was written is undoubtedly true, and to keep abreast of a rapidly changing world, the Institute, too, must consider radical changes or the profession in Britain will lose much of its prestige.

While agreeing that a certain period of articles is essential, this need not exceed three years, and higher educational standards for entrants will also be vital if the Institute is to retain any prominence among the professions.

The main point of my letter, however, and one which is touched upon in the article, concerns remuneration. As the author states, chartered accountants' clients are being subsidized by the parents of articled clerks, in fact, they always have been. This argument may be widened to include almost everyone employed in the profession, as well as many principals, particularly the smaller practitioners. They themselves, not their parents, are also subsidizing their clients.

Profit margins are at present far too narrow, although the writer of the article obviously doubts this. The Council should certainly recommend a minimum rate of pay for articled clerks competitive with industry, and this should be tied up with recommendations of scale fees and remuneration for all levels of staff employed in the profession.

Accountancy is becoming less and less attractive to intelligent young people, the main reason being not that they have to serve articles, but that the financial rewards are just not good enough. The 'articled clerk salary scale' mentality is carried on right through the profession after qualification and beyond, and as a result we are now being 'found out' and potential chartered accountants are, in fact, going into other professions with better prospects.

Yours faithfully,

Derby. K. C. SAUNDERS.

SIR, – I have read with interest Mr K. S. Most's letter on the education and training of accountants in your issue of January 27th.

Mr Most cites various instances where American accountants have been consulted or American accounting practices have been adopted rather than British. He then suggests that these examples are 'the results of our apathy' and the failure of the Institute to make vigorous reform in the system of education for the profession. Whilst I have no doubt that the present system could be improved, I suggest that there is no direct connection between this system and the cases mentioned by Mr Most.

As American capital spreads around the world and as American industrial and political influence increases, I think the American accounting profession is bound to become more prominent and influential. This should not, I feel, be automatically attributed to the American system of education.

On the question of university courses in accounting, the C.P.A. boards of most States in the U.S.A. require a candidate to have a college degree followed by three years of practical experience. This procedure has many advantages, but after having worked with accountants of various nationalities in Europe, America and elsewhere, I have yet to find any evidence that the American method of training necessarily produces better accountants.

Yours faithfully,

H. JAMES COX, F.C.A., A.C.W.A.

Nassau, Bahamas.

SIR, – May I, as a university graduate who has just passed the Final examination of the Institute, add my comments to the article reproduced from *Technology* in your issue of February 10th?

1. Far from being 'a necessary evil', I found my correspondence course, from a leading specialist in this field, well-planned, well-presented and easy to understand, which is far more than can be said of some lectures given by university staff.

2. My principal, certainly, does his best to ensure that an articled clerk is given practical work and advice which supplements the theoretical stage of studies.

3. I would submit that the articled pupilage system is the only practical method of training an accountant in the fundamental skills of auditing, accountancy and taxation.

4. The great failure of the system, particularly when applied to the small practice, arises when the newer skills of costing, management accountancy and mechanized systems are considered. Clearly the new syllabus for the Final examination, with one paper devoted wholly to these subjects, as recommended by the Parker Committee, recognizes this, but any system which requires a student to submit himself to an examination on an essentially practical subject, without practical experience, must be doomed to failure.

I submit that any change in the present system should be designed to fill this dangerous gap in a young accountant's education. Provisions already exist for training clerks outside the profession to a limited extent, and I feel that this is the avenue which should be explored.

Yours faithfully,

Worcester. K. J. HAMILTON.

Stock Valuation

SIR, – May I suggest that auditors should seriously consider the recommendation to their clients of a note on their published balance sheets, covering the basis of valuation of stock and work in progress and any material change in that valuation from one year to another.

The consolidated balance sheet of Turner & Newall Ltd has a note which is as follows:

> 'These have been valued at the lower of cost (including, in the case of stock-in-trade, an appropriate proportion of production overheads) and net realizable value on a basis consistent with that adopted in previous years, after deducting provisions for unearned inter-company profit and possible obsolescence.'

Yours faithfully,

London W6. N. F. SHEARMAN, A.A.C.C.A.

Company Reports

SIR, – The appearance of the recent article, 'On compiling company reports', in your issue of February 3rd, suggests that readers will be interested to hear from an industrial publisher what processes of thought have accompanied many of those developments in the presentation of annual reports to which the article alludes.

For the very reasons that make him a publisher, this 'outsider with the outside view' sees a potential usefulness in annual reports that very often escapes those who must perforce publish them. He sees in this annual authoritative document from a board of directors an opportunity for a company to communicate information beyond what the law ordains, and to communicate it to readers beyond, as well as within, the ranks of the shareholders: he sees the annual report as an opportunity for the kind of communication upon which the health of an industrial democracy increasingly depends.

For this reason the industrial publisher's eye is fixed not only on the shareholders, but on those other readers whose interest in, knowledge of, or concern for a company can be expected to advantage the company *and* our society. He steels himself (or should) to resist the blandishments of the company that appears anxious to spend a great deal of money on a pointless pursuit of the will-o'-the-wisp of glossy 'prestige' (surely a meaningless word?), and directs his client's attention to the interest that awaits sober *information*, among customers, suppliers, dealers – and employees; among financial editors, stockbrokers, investment analysts, the City press, and the company's trade and local press.

The great increase in stockholding in all sections of the community in recent years should alone affect the presentation of reports; but there is more to it

than that. The annual report, if it is planned to communicate information about a company's plans and prospects, its policies and products, its past, its present, and its particular view of its duties, responsibilities, rights and performances, can constitute an act of leadership in a society whose health depends utterly upon a wide dissemination of the raw material of debate and opinion.

The annual report is neither a tiresome annual chore at one extreme, nor an excuse for a public relations beano at the other. It is part of the free press of a free society.

Yours faithfully,

London W1. RICHARD BLYTHE.

The Silver Mirror

SIR, – Your 'Industrious Accountant's' reference in his Chapter 107 on January 20th to this story by Sir Arthur Conan Doyle is of great interest to the members of our profession who also belong to the Sherlock Holmes Society of London and kindred bodies.

As Doctor Watson tells us in *The Greek Interpreter*, Mr Sherlock Holmes' brilliant but unambitious brother, Mycroft, had 'an extraordinary faculty for figures, and audited the books of some of the Government departments'. Since Conan Doyle edited Watson's work there may be some link here calling for research.

It would be a kind act if your 'Industrious Accountant' would tell us by whom the story was published and in what magazine, if he can remember. Is it possible to get on the track of a copy?

Yours faithfully,

RONALD SHERBROOKE-WALKER.

London NW8.

[Conan Doyle's short story 'The Silver Mirror', originally included in *Tales of Long Ago* which is out of print, is now to be found in *Conan Doyle Stories*, published by John Murray (Publishers) Ltd, London, price 20s. – Editor.]

PROJECTING THE ACCOUNTANT'S 'IMAGE'

Chartered Accountants' Dinner at Bournemouth

A total of 150 members and guests attended a dinner of the South Eastern Society of Chartered Accountants held at the Carlton Hotel, Bournemouth, on February 9th, and were received by the President of the Society, Mr Arthur S. Watson, F.C.A., together with Mr P. F. Granger, F.C.A., President of The Institute of Chartered Accountants in England and Wales.

Mr A. John Jenkins, a Southampton barrister, proposed the toast of 'The Institute of Chartered Accountants in England and Wales and the Accountancy Profession', and after a number of amusing stories about his native Wales, he was serious for a few minutes for a complimentary remark about the accountancy profession.

The average man's picture of the chartered accountant in this country, he said, was of someone pleading his cause with the inspector of taxes. 'He looks upon you as being a link between himself and the Inland Revenue. An important and difficult task made doubly difficult because of the wrong attitude so many people have to their financial responsibilities towards the State.'

This theme was developed by Mr Granger who responded to the toast. 'One of the things we are up against is publicity,' he declared. 'We are modest violets as chartered accountants and we do not like throwing our weight about in the newspapers.'

When it comes to projecting the accountant's image, the difficulty is, said Mr Granger, that a man who qualifies as a member of the Institute does not necessarily stay in practice. There were members abroad and members in industry.

'It makes it very difficult when talking about "images" to get over something applicable to all sections of our membership. So when you hear people saying how well they do in tax matters, it is not very easy for us to stick up a notice on the counter saying: "We do tax matters better."'

Mr Granger went on to say that the Institute frequently had talks with, and made representations to, the Inland Revenue authorities on tax matters, and arising out of one or two recent meetings it had become apparent that the Revenue were troubled about the increasing number of cases of assessments under appeal. Probably the main cause of this was delay in the submission of accounts.

In so far as a remedy lies in members' hands, he urged those in practice to take all steps they could to see that accounts were prepared or audited and sent in as soon as possible. He was aware of staff difficulties and other problems but if they were in practice they should see that their clients' affairs were dealt with as expeditiously as possible.

Membership of the Institute, he continued, was now approaching 35,000 and a lot of help was required from the district societies.

Mr Granger said he would like to acknowledge the work of the district societies in respect of the Institute's small practitioner inquiry. To Mr Watson he said: 'Your society has sent in some very good work. We at Moorgate Place cannot do this job without the help of the district societies.'

In conclusion, he added: 'Today I talked to a lot of your articled clerks. They were young men and young women who were coming along well. I liked the sort of questions they asked and what they talked about.'

Mr Watson, in proposing the toast of 'The Guests', welcomed particularly the presidents and chairmen of other societies and professional bodies. The reply was made by Judge A. H. Armstrong, in a characteristically witty speech.

Electronics in the Office

Air Ministry to save £25,000 a Year

SIR MAURICE DEAN, K.C.B., K.C.M.G., Permanent Under-Secretary of State for Air, recently set in motion an Emidec 1100 computer at the Central Civilian Pay and Records Office, Cheadle Hulme, Cheshire. In the course of the next eighteen months the computer will progressively take over the pay accounting and records of the Air Ministry's 70,000 civilian employees in the United Kingdom which are at present maintained at various regional centres at individual Royal Air Force units and Air Ministry Headquarters.

The planning staff for the system was set up in London in 1957 and an order was placed for the computer in June 1959 (*The Accountant*, November 28th, 1959). The nucleus staff of the C.C.P.R.O. moved to Cheadle Hulme in August 1960 to prepare programmes and systems and the computer was delivered in April 1961. Since then many programmes for the computer have been completed and tested and the clerical staff recruited and trained. The capital cost of the whole system is estimated at £328,000 and, spread over the next ten years, is expected to show a saving of about £25,000 a year, in addition to increased efficiency arising from specialization. At present, the centre has about 130 employees and the eventual total will be about 180. By the time it is fully operational, just over 300 employees at the existing pay offices throughout the country will be released for employment elsewhere within the Air Ministry.

The computer system is not merely designed to produce a payroll. It is able to interpret the effect on individuals of complicated staff regulations covering some hundreds of different grades. The system contains a number of unique features in the field of personnel management. For example, sick leave entitlement, a complicated subject which has hitherto required considerable attention from specialized management staff, will be controlled automatically.

The computer uses magnetic tape for storing historical data which can be held outside the computer available for use as and when required. One application of this feature is to maintain master records of service for all Air Ministry employees for use by central and local management.

Data Processing System for Jaguars

AN IBM 1401 data processing system was recently delivered to Jaguar Cars Ltd, Coventry, to take over payroll for 7,000 weekly paid employees and the initial steps of an overall production control programme. It will be operational early in March and the complete change-over from the present data processing system is scheduled for the end of June.

The 1401 will break down the three-monthly car production schedule into weekly requirements of all components and relate them to stock in hand and work in progress to determine the date when replacement orders are required to maintain continuity of production. Future plans envisage an extension of the weekly material control report, automatically calculating and printing a schedule of orders to the factory for the production of components, together with the necessary documentation for initiating and progressing the order through to completion.

Further applications will include labour costing, purchase analysis and non-productive material control, with the eventual aim of providing a complete system of production control with a greater degree of management information than has hitherto been possible.

New Development in Audience Research

THE British Broadcasting Corporation is to install in the next six months a National-Elliott 803 computer. One of the machine's main tasks will be to produce day-to-day audience figures for B.B.C. sound and television programmes. It will also assist the engineering departments by performing mathematical calculations.

For some time most of the Corporation's routine audience research figures have been analysed at the National Cash Register Company's Commercial Computing Centre in Marylebone Road, London, where information received from panels and interviewers all over Britain is punched into paper tape and fed daily to a computer, which produces printed records for consideration by programme heads, producers and other executives.

The 803 is an exceptionally compact computer and is equipped with electronic memory units in which large quantities of information are stored on reels of magnetic film. This feature will enable the B.B.C. to accumulate statistics on different programmes and to provide any special types of analysis which may be required in addition to the day-to-day work.

Stockbroking by Computer

A LEADING firm of stockbrokers has ordered a National-Elliott 803 magnetic file computer and is believed to be the first United Kingdom stockbroking firm to do so.

Due to be installed this summer, the computer will take over a wide range of clerical tasks, including the preparation of contract notes, clearing returns, jobbers' ledgers, ticket accounts and transfers, foreign currency ledgers, dividend accounts and other internal accounts, as well as clients' records and valuations.

The object of the new venture is to develop a fully automatic system in which all documents and statistical reports are produced from a single recording of transaction data. Programmes for the computer are now being written by members of the firm's staff, who have been trained by The National Cash Register Co. Information will be fed to the computer in the form of punched paper tape. Ledgers and other records will be kept on reels of magnetic film and automatically up-dated as transactions take place.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, February 7th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President, in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. F. Allan, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay Davison, W. G. Densem, S. Dixon, W. W. Fea, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, L. C. Hawkins, J. S. Heaton, D. V. House, J. A. Jackson, W. H. Lawson, C.B.E., H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., C. U. Peat, M.C., Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, L. Steele, J. E. Talbot, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, R. P. Winter, C.B.E., M.C., E. K. Wright, Sir Richard Yeabsley, C.B.E.

Denmark
Föreningen af Statsautoriserede Revisorer

The Council received a report from the President on his attendance at the Fiftieth Anniversary celebrations of the Föreningen af Statsautoriserede Revisorer at Copenhagen on January 12th, 1962, during which the congratulations and good wishes of the Council were conveyed to the Föreningen af Statsautoriserede Revisorer.

Summer Courses – Emmanuel and Sidney Sussex Colleges, Cambridge, July 18th to 22nd, 1962, and Christ Church and Pembroke College, Oxford, September 13th to 18th, 1962

The Council authorized the distribution to all members of the Institute of a notice giving preliminary details of the summer courses to be held at Emmanuel and Sidney Sussex Colleges, Cambridge, July 18th to 22nd, 1962, and Christ Church and Pembroke College, Oxford, September 13th to 18th, 1962. The notice will be accompanied by an application form.

The subjects and speakers at the Cambridge course will be:

'Taxation aspects of amalgamations and reconstructions,' by Mr D. O. Bailey, F.C.A.

'Service to management,' by Mr R. D. S. Shrimpton, F.C.A.

'Insurance and the accountant,' by Mr D. Williamson, F.C.A.

The subjects and speakers at the Oxford course will be:

'The training of accountants for industrial responsibility,' by Mr G. W. Searle, D.F.C., F.C.A.

'The problems of the smaller practice,' by Mr R. W. Smith, O.B.E., T.D., F.C.A.

'Investment in stocks and shares,' by Mr A. G. Touche, F.C.A.

Examination Results – November 1961

The results of the Institute examinations held in November 1961, were as follows:

	Passed	*Failed*	*Total*
Preliminary ..	57	161	218
Intermediate ..	939	1,152	2,091
Final	813	883	1,696
	1,809	2,196	4,005

[The names of the successful candidates and the recipients of prizes and certificates of merit are reproduced on other pages of this issue].

The results of the November 1961 examinations, conducted by the Institute as examinations of The Society of Incorporated Accountants were as follows:

	Passed	*Failed*	*Total*	*Completing Final*
Final:				
Parts I and II together ..	1	1	2	1
Part I only ..	–	1	1	–
Part II only ..	35	30	65	35

No honours certificates were awarded. [The names of successful candidates are shown on page 216 of this issue.]

The November 1961 examinations were the last occasion for the holding of the Final examination of the Society.

The Charles M. Strachan Prize

The Council has expressed its thanks to Mr Charles M. Strachan, O.B.E., F.C.A., a member of the Council from 1949 to 1961, for his generosity in giving £900 Hull Corporation 3½ per cent stock to provide for a new prize at the Final examination. This award commenced with the November 1961 Final examination and is awarded to the candidate (other than a candidate taking any other prize) who obtains the highest number of marks in the examination.

Final Examination
English Law (Part II) Paper

The present syllabus for the above paper is outlined in the booklet *General Information and Syllabus of Examinations* as follows:

English Law (Part II), including the law relating to:

(*a*) Contracts generally;

(*b*) Sale of goods, negotiable instruments, hire-purchase, bills of sale and arbitration;

(*c*) Bankruptcy;

(*d*) Trusts, as contained in the Trustee Act, 1925.

With effect from the November 1962 Final examination the detail under head (*d*) above will be as follows;

(*d*) Trusts, as contained in the Trustee Act, 1925, and the Trustee Investments Act, 1961.

Taxation and Research Committee

The Council appointed Mr Roland Walter Foad, F.C.A., to membership of the Taxation and Research Committee to fill the vacancy caused by the resignation of Mr Reginald Oscar Arnold Keel, F.C.A.

Registration of Articles

The Secretary reported the registration of 197 articles of clerkship during January 1962.

The P. D. Leake Trust

The Council approved for publication the accounts of the P. D. Leake Trust for the year to October 31st, 1961, a report on the administration of the trust and a report of the P. D. Leake Committee. A booklet containing these reports and accounts may be obtained without charge on application to the offices of the Institute by any interested person. (It is expected that copies will be available by the end of February 1962.)

Festival of the City of London – July 1962

In response to an invitation from the Lord Mayor of London the Council has nominated the President of the year to represent the Institute on the Council of the Festival of the City of London. A donation of 200 guineas is being made from the Chartered Accountants' General Charitable Trust.

Admissions to Membership

The following were admitted to membership of the Institute:

Deller, Brian William, A.C.A., *a*1962; 60 Portmore Park Road, Weybridge, Surrey.

Dixon, Anthony William, A.C.A., *a*1962; 80 Moor Drive, Great Crosby, Liverpool 23.

§Hooper, William James Ernest, A.S.A.A., *a*1962; 32 Louis Botha Drive, Florida Park, Florida, Transvaal, South Africa.

Fellowship

The Council acceded to applications from nineteen associates to become fellows under clause 6 of the supplemental Royal Charter.

Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Appleton, Anthony Frederic, A.C.A., *a*1958; 48 High Street, Godalming, Surrey.

Arram, Michael, A.C.A., *a*1961; Michael Arram & Co, 172 New Road, Chingford, London E4.

Ashby, John Durham Jocelyn, F.C.A., *a*1950; Haskew, Twist & Co, 3 Cherry Street, Birmingham 2.

Askham, Francis Guy Lewis, A.C.A., *a*1955; Burnett, Swayne & Co, and Askham & Co, 11 Westwood Road, Southampton.

Banfield, John Clayton, A.C.A., *a*1961; Main, Banfield & Co, Lloyds Bank Chambers, The Borough, Yeovil, Somerset.

Barnes, Hugh Edward Michael, A.C.A., *a*1958; †Tansley Witt & Co, 22–24 Ely Place, London EC1, and at Sydney; also at Melbourne, *Tansley, Witt & Co.

Benjamin, Theodore Toby, B.COM., A.C.A., *aS*1956; T. E. Rowell & Co, 1 Northumberland Place, North Shields, Co. Durham.

Bennett, Frank Cecil, F.C.A., *a*1950; 40A Marlborough Court, Pembroke Road, London W8.

Bermon, John Harry, A.C.A., *a*1961; Goldwyn Bros & Co, 88–90 Temple Chambers, Temple Avenue, London EC4.

Booth, Ian Gordon, A.C.A., *a*1957; Mann, Judd & Co, 8 Frederick's Place, Old Jewry, London EC2

Bosworth, John Michael Worthington, F.C.A., *a*1951; Peat, Marwick, Mitchell & Co, 11 Ironmonger Lane, London EC2.

Bower, Julian Thurston Syndercombe, A.C.A., *a*1961; †Binder, Hamlyn & Co, 121 Queen Victoria Street, London EC4, and at Manchester.

Brett, Raymond Michael Ashby, A.C.A., *a*1958; 11 The Uplands, Ruislip, Middlesex.

Bygrave, Clifford, A.C.A., *a*1958; Hillier, Hills, Frary & Co, 26 Victoria Street, Luton, Beds, and at Dunstable.

Carnwath, Thomas Douglas, M.A., F.C.A., *a*1938; †Peat, Marwick, Mitchell & Co and †Edwin Guthrie & Co, Norwich Union House, King Street, Manchester 2; also at Barrow-in-Furness and Liverpool, †Peat, Marwick, Mitchell & Co.

Cayless, Basilwood Leonard, A.C.A., *a*1952; 124 Carlyon Avenue, South Harrow, Middlesex.

Cheaney, Bryan, A.C.A., *aS*1955; Smith, Hodge & Baxter, National Provincial Chambers, High Street, Kettering.

Cheswright, David Michael, A.C.A., *aS*1956; 'Chesnut', Waverley Crescent, Runwell, Essex.

Clayton, Edgar Francis, M.A., B.SC.(ECON.), F.C.A., *aS*1932; 'Woodlea', Bredhurst, Gillingham, Kent.

Constable, Frederick Leonard, F.C.A., *a*1949; Asbury, Riddell & Co, Lloyds Bank Chambers, Ellesmere, Salop.

Cross, John Michael, A.C.A., *a*1959; 39 Chestnut Avenue, Priory, Dudley, Worcs.

Cunningham, Geoffrey, A.C.A., *a*1961; Rickard & Co, 12 Nelson Street, Southend-on-Sea, and at London; also at Worthing, Rickard, Chambers & Co.

Day, Arthur Alfred, F.C.A., *a*1936; Sharp, Parsons, Tallon & Co, 5 Laurence Pountney Hill, London EC4.

Dean, Kenneth, A.C.A., *aS*1954; *Dean, Prestwich & Co, 29 Water Street, Radcliffe, and at Manchester.

Dickinson, Walton Peter, A.C.A., *a*1954; Bolton, Wawn & Co, Alliance House, Hood Street, Newcastle upon Tyne 1, and at Sunderland.

Dixon, Leslie Albert, A.C.A., *aS*1956; Squiers & Co, Kings Court, 115 Colmore Row, Birmingham 3.

Dodsworth, Ian James, A.C.A., *a*1959; 15 Ainslie Wood Gardens, Chingford, London E4.

Donovan, Arthur James, A.C.A., *a*1958; Maw, Ellis, Warne & Co, 4 Gray's Inn Square, Gray's Inn, London WC1.

Dunkerley, George William, M.C., F.C.A., *a*1948; †Peat, Marwick, Mitchell & Co, 11 Ironmonger Lane, London EC2.

Everitt, Alan William, A.C.A., *aS*1956; Hillier, Hills, Frary & Co, 26 Victoria Street, Luton, and at Dunstable.

Franklin, Geoffrey, F.C.A., *aS*1950; Carpenter, Arnold & Turner, Regent House, Princes Place, North Street, Brighton 1, and at Chichester, Crawley, Horsham and Steyning.

Garlick, Squire Horace, F.C.A., *a*1948; S. J. G. Southon & Co, 10 Richmond Road, Exeter, and at Newton Abbot, Parkstone and Totnes.

Garman, Derek Owen, A.C.A., *a*1957; Crouch & Co, 17 Queens Road, Brighton.

Garthwaite, Roy, M.A., A.C.A., *a*1954; Brown, Butler & Co, 32–33 Commercial Street, Leeds 1.

---

§ means 'incorporated accountant member'.

a indicates the year of admission to the Institute.

aS Indicates the year of admission to The Society of Incorporated Accountants.

Firms not marked † or * are composed wholly of members of the Institute.

† Against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

* Against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

Gill, John, A.C.A., *a*1961; Neaves, Bell & Co, 55–57 Barton Arcade, Manchester 3.
Goldberg, Harvey, A.C.A., *a*1961; *Hyman Freedman & Co, 92 Gray's Inn Road, London WC1, and at Southend-on-Sea.
Goldring, John Irwin, A.C.A., *a*1958; Trevor & Co, 14 Mayfield Gardens, Hendon, London NW4.
Greenfield, Peter, A.C.A., *a*1958; Charles F. Beer & Co, Gordon Chambers, 21 Bond Street, Leeds 1.
Grundy, Thomas, F.C.A., *a*1936; W. H. Cork, Gully & Co, 19 Eastcheap, London EC3.
Hammond, John Bateman, A.C.A., *aS*1956; Smith, Hodge & Baxter, National Provincial Chambers, Kettering.
Harden, Peter Lee, B.SC.(ECON.), A.C.A., *a*1957; C. Neville Russell & Co, 11 Poultry, London EC2, and at Egham.
Haward, William Edward, A.C.A., *a*1960; Franklin, Wild & Co, Orient House, 42–45 New Broad Street, London EC2, and at Bognor Regis.
Heather, Cecil, F.C.A., *a*1950; Pannell, Crewdson & Hardy, 9 Basinghall Street, London EC2.
Hughes, Philip John, A.C.A., *a*1954; Annan, Dexter & Co, 21 Ironmonger Lane, London EC2.
John, Ivor William Murray, F.C.A., *a*1934; Maw, Ellis, Warne & Co, 4 Gray's Inn Square, Gray's Inn, London WC1.
Johnson, David Robert, A.C.A., *a*1961; 5 St. Bernards Avenue, Belgrave, Leicester.
Jowett, Kenneth, A.C.A., *a*1961; Thomas Craggs & Co, 'Welgarth', Masham, Ripon, Yorks, and at Darlington, Hawes and Leyburn.
Kimpton, Eric John Arthur, F.C.A., *a*1949; Carpenter, Arnold & Turner, Regent House, Princes Place, North Street, Brighton 1, and at Chichester, Crawley, Horsham and Steyning.
Lawrence, Peter John, A.C.A., *a*1961; P. J. Lawrence & Co, 4 Dollisroft, Holders Hill Circus, London NW7.
Leece, Geoffrey Robert, A.C.A., *a*1954; W. H. Walker & Co, 42 Castle Street, Liverpool 2, and at Douglas; also at London, W. H. Walker & Co, E. C. Price, Son & Reid and Slade, Lewis & Slade.
Lees, Geoffrey, F.C.A., *a*1951; A. E. Smith, Craven & Co, Regent Chambers, Hall Cross, Doncaster.
Leesing, Brian, A.C.A., *aS*1957; 14 The Boulevard, Long Sandall, Doncaster.

Wade, Robert Ludley, A.C.A., *a*1959; Charles Hamer & Co, 107 Grange Road, Middlesbrough, at the Stokesley.
Whitley, William, F.C.A., *aS*1931; Squiers & Co, Kings Court, 115 Colmore Row, Birmingham 3.
Wyatt, Jack, F.C.A., *a*1948; M. Spencer Ell & Co, 81 Bell Street, Henley-on-Thames, Oxon.

Admission to Membership under the Scheme of Integration

The Council acceded to one application for admission to membership of the Institute under clause 4 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter. One application under clause 5 was refused.

Re-admission to Membership

It was reported to the Council that the following re-admission, made at the Council meeting on January 3rd, 1962, subject to payment of the amount required, had become effective.

Mitchell, David Campbell, F.C.A., 28 Ridgeway North, Highlands, Southern Rhodesia.

Change of Name

The Secretary reported that the following changes of name have been made in the Institute's records:

Venkatachellam Vaidyanathan to Vaidya Nathan Chellam.
Michael David Weisburg to Michael David Whitehill.

Resignations

The Council accepted the resignations from membership of the Institute of:

Andrews, Leslie Graham, F.S.A.A., Monkstown, Co. Dublin.
Blake, Claude Stanley, F.C.A., Somerton, Somerset.
Clegg, Ernest Bosomworth, F.S.A.A., Saltdean, Brighton.
Daroowalla, Nadirshah Ardeshir, F.S.A.A., Bombay.
Davies, Eric, F.S.A.A., King's Norton, Birmingham.

Gibson, John Ridley, F.C.A., London.
Hannam, Herbert Lovel, F.C.A., Exmouth.
Harrap, Ernest Charles, F.C.A., Eastbourne.
James, John Henry Lewis, B.A., F.C.A., London.
Mitton, John Charles, F.C.A., Bournemouth.
Nadin, Neville Radford, F.C.A., Derby.
Rawkins, Edward George, F.C.A., West Worthing.
Reynolds, James Heydon, A.C.A., Crewe.
Ridley, Arthur Bertram, F.S.A.A., Reading.
Robinson, William Heaton, F.C.A., Colne, Lancs.
Rosset, Gino Oliver, F.C.A., Staines, Middlesex.
Shaw, Henry Cooper, F.C.A., Liverpool.
Sterling, James Charles, F.S.A.A., Bournemouth.
Stone, Donald Cuthbert, F.S.A.A., Iver, Bucks.
Thornton, William Standcliffe, F.C.A., Elland Yorks.
Vivian, Norman Kingsley, F.C.A., Chipstead, Surrey.
Weddell, Ernest Henry, F.C.A., Long Eaton, Derbyshire.

„ Maurice Evan White, O.B.E., F.C.A., London.
„ Thomas Whyman, F.C.A., Manchester.
„ Arthur Horsford Williams, F.C.A., Wiveliscombe.
„ James Arthur Wilson, F.C.A., Rio de Janiero.
„ Herbert Ison Wonfor, C.B.E., F.C.A., London.
„ Cyril McKerron Young, M.B.E., F.C.A., London.

FINDING AND DECISION OF THE DISCIPLINARY COMMITTEE

Finding and Decision of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on December 14th, 1961.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that an Associate of the Institute, practising with two other persons as a firm of accountants, had been guilty of an act or default discreditable to a member of the Institute within the meaning of clause 21, sub-clause (3) of the supplemental Royal Charter in that the firm commenced to act as professional accountants to a lady without first communicating with her then professional accountant, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint had been proved and the Committee ordered that the member be reprimanded but considered that there existed special circumstances justifying the omission of his name from the publication of the Finding and Decision.

FINDING AND DECISION OF THE APPEAL COMMITTEE

Finding and Decision of the Appeal Committee of the Council of the Institute appointed pursuant to bye-law 108 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on January 10th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Adrian Jacobs, A.C.A., was adjudicated bankrupt on November 29th, 1960, so as to render himself liable to exclusion or suspension from membership of the Institute. The Appeal Committee affirmed the Finding of the Disciplinary Committee that the formal complaint against Adrian Jacobs, A.C.A., had been proved and the Appeal Committee affirmed the Decision of the Disciplinary Committee that Adrian Jacobs, A.C.A., of 21–22 Grosvenor Street, Mayfair, London W1, be excluded from membership of the Institute.

MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

The Anatomy of Work: the implications of specialization; by G. Friedman: translated by W. Rawson. 1961. (Heinemann, 25*s*.)

Auditing Automatic Data Processing . . .; by A. B. Frielink. Amsterdam. 1961. (Elsevier Publishing Co, 15*s*.)

Australian Tax Planning with precedents; by P. R. Adams and B. J. McMahon. Sydney. 1961. (Butterworths, 65*s*.)

Senior, (*President of the Sheffield Chamber of Commerce*); Mr S. Carter, A.C.W.A.; Mr Richard T. Doncaster (*managing director, Daniel Doncaster & Sons Ltd*); Mr D. E. Edmonds, F.C.W.A.; Mr H. Pattison, F.C.W.A.; Mr W. D. Pugh (*managing director, English Steel Corporation Ltd*); Mr E. E. Vessey, F.C.A., A.C.W.A.; Colonel H. Wise, M.C. (*director, Tennant Bros Ltd*); Mr Derek du Pré (*Secretary of the Institute*).

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Luncheon Meeting

Professor W. J. Fairbairn, C.A.(S.A.), Professor of Accounting and Auditing at the University of Natal, will be the guest speaker at a luncheon meeting of the London and District Society of Chartered Accountants to be held at the Connaught Rooms, Great Queen Street, London WC2, on Monday, February 26th, at 12.30 for 1 p.m.

Members may bring guests and ladies are invited. Tickets at 19s each are available from the secretary, Mr J. W. G. Cocke, T.D., M.A., F.C.A., 2 Norfolk Street, London WC2.

NORTH LONDON DISCUSSION GROUP

The next meeting of the North London Discussion Group of Chartered Accountants will take place at the Russell Hotel, Russell Square, London WC1, on Wednesday next, February 21st, at 6 for 6.30 p.m. The subject for discussion will be 'The report of the Parker Committee on education and training' and the leader will be Mr W. G. Densem, F.C.A.

The honorary secretary of the group is Mr P. D. Knox, A.C.A., Somerset Cottage, Duxhurst, near Reigate, Surrey. Office telephone: Prospect 3499.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

'The Mystery of the Three Clocks' and 'The Glass Eyes That See' are the titles of films which will be shown at a meeting of the Fellowship at 6 p.m. on Wednesday next, February 21st, in the Oak Hall of the Institute, Moorgate Place, London EC2.

The showing of the films will be followed by a business session for the annual general meeting of the Fellowship. All who are interested will be welcome.

LEEDS AND BRADFORD STUDENTS' RESIDENTIAL COURSE

The eleventh annual residential course to be arranged by the Leeds, Bradford and District Society of Chartered Accountants in conjunction with the Leeds and the Bradford chartered accountant students' associations, will be held during the periods March 26th–29th (for Intermediate students) and April 9th–12th (for Final students) at Grantley Hall, near Ripon.

The courses will cover a wide variety of subjects within the Institute's syllabus and will also enable students to discuss their problems with lecturers and amongst themselves. The course secretary is Mr B. Hainsworth, c/o Messrs Blackburns, Robson, Coates & Co, Commerce House, Cheapside, Bradford 1. Applications to attend the course should be received no later than February 24th.

'COMMUNICATION IN INDUSTRY'

A half-day conference organized by the Willesden & Hendon Productivity Association on the subject 'Communication in industry' is to be held on February 22nd commencing at 2.30 p.m. at Hendon Technical College, The Burroughs, Hendon, London NW4. The conference, which will be under the chairmanship of Sir John Paget, works director, Napier Aero Engines Ltd, has been arranged to show various ways and means by which channels of communication can be improved in order to increase efficiency in the day-to-day running of a business. Speakers will be Mr Andrew Moffat, head of training services, Industrial Welfare Society, and Mr T. E. Fassam, head of intelligence, central work study department, Imperial Chemical Industries.

Further particulars may be obtained from Mr L. M. Fisher, Book Centre Ltd, North Circular Road, Neasden, London NW10.

SEVENTY-FIVE YEARS AGO

FROM The Accountant OF FEBRUARY 19TH, 1887

A Weekly Note

"You will note that our auditor's report is thoroughly satisfactory as regards the position of the bank, and gratifying to the directors as such a report relieves the mind of a grave responsibility. The importance of an audit cannot be exaggerated, and if I may be allowed to make a suggestion derived from an intimate knowledge of accounts extending over a good number of years, it is that if more business firms were in the habit of having a yearly audit by competent and independent accountants some of them would be saved a great deal of anxiety and embarrassment caused by trading beyond the capacities of their capital." The foregoing extract is from the speech of the chairman (Dr. Harrison) of the Bristol and West of England Bank, at the annual meeting of the bank held a few weeks ago. They are satisfactory remarks, because they are as we believe, true. Whatever newspaper writers, whose articles are written for a public which after all does not understand the matter may say, accountants and the work of accountants is rising, slowly and surely, but surely if slowly in the estimation of practical men in all the walks of manufacture, commerce and finance. The quotation we have just given if in one sense it is gratifying has this serious import, that on accountants a great responsibility devolves, and will continue to devolve. That is as it should be. The object of the members of the Institute should be to enlarge the area of their work, and not to shrink from the due and reasonable responsibility which is an essential concomitant of that enlargement.

MANAGEMENT ACCOUNTING COURSES

Two one-day courses on 'Business forecasts and market research' and 'Better business decisions' are to be held in London on February 27th and March 1st respectively, and will be repeated in Manchester on March 13th and 14th.

The first course will include subjects dealing with the conditions and climate in which companies may expect to operate in the future, the use of internal statistics and the nature of factors to be taken into account in making a business forecast. The second course will examine the nature of business decisions, organization structure, and the development and growth of operational research.

Further information regarding the courses is available from Management Courses Ltd, 8 St George's Terrace, London NW1.

INSTITUTE OF ACTUARIES

New President Elected

Mr K. A. Usherwood, M.A., F.I.A., has been elected President of the Institute of Actuaries in succession to Mr J. H. Gunlake, C.B.E., F.I.A., whose term of office will expire on June 18th, 1962.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Advice for the Chancellor

As the Budget approaches, more and more memoranda containing hints for THE CHANCELLOR are published. Sharply contrasted views were revealed by two documents published at the end of last week. One is a statement on the economic situation and the Budget which is the work of the Economic Committee of the Trades Union Congress; the other is a memorandum on the next Finance Bill (and matters connected with it) submitted by the Council of The Institute of Chartered Accountants of Scotland. The only point at which the two statements tend to converge is on the question of depreciation allowances. The T.U.C. statement says that the Government should be prepared to supplement more general measures for stimulating activity (which would themselves restore investment demand) by the use of selective and more rapid depreciation allowances. The Scottish Institute 'again draws attention to the inadequacies of the existing depreciation allowances', particularly the absence of any allowance for commercial buildings, and the restrictive definition of industrial buildings.

The other tax suggestions in the T.U.C. statement are tied up with political polemics. There is a call for extended social benefits and 'the reorganization of the structure of income tax allowances to redress the discrimination against people on lower incomes with family commitments'. These moves are to be paid for 'by heavier taxation of those best able to bear it'. The '£80 million gift to surtax payers' should be withdrawn forthwith; a tax on capital gains, it is stated, is now 'long overdue', and the country expects these sources of untaxed income to be tackled comprehensively and stringently. THE CHANCELLOR is also called upon to 'redeem the undertaking which he gave a year ago to tackle at their roots the offensive features of so-called business expenses'. Finally, the statement complains about the activities of land speculators and their effect on housing costs, and declares 'this public scandal should be dealt with by taxing all land deals and property development schemes which involve increases in the price of land over present use value.'

The Scottish Institute expressly disavows itself from any concern with overall reductions or increases in taxation, or with questions of party politics. It deals instead with reforms intended to improve the administration of the tax system or to remove or mitigate inequities or hardships. In this examination of inequities surely pride of palce must go to the state of the law as affirmed by *Bidwell v. Gardiner* (39 A.T.C. 83). In that case a taxpayer who had succeeded to the proprietorship of a small hotel spent £168

in his first year's trading on ordinary renewals of curtains, floor coverings and bedding. Since he had inevitably bought the existing articles second-hand, the General Commissioners stated that to the extent of £100 the £168 was capital expenditure and therefore that £100 must be disallowed. It was conceded that had the taxpayer's predecessor incurred the £168, all of it would have been deductible. MR JUSTICE DANCKWERTS upheld this decision. As the Scottish Institute points out, this principle is even more inequitable where there has been a mere partnership change, and its inequity is emphasized by the new provisions for taxing post-cessation receipts.

The memorandum suggests that a company claiming management expenses relief should be allowed to carry forward as a loss any section 170 assessment made upon it, as well as bank interest relief which cannot be allowed in the year of payment. It reiterates the suggestion that the Schedule E expenses rule should be less restrictive, particularly in relation to professional men holding public appointments.

The Institute considers that the time limit for exercising the statutory option on a change of partnership should be extended sufficiently to enable the parties to know the amount of the profits for the year following the change, before they have to decide on whether or not to exercise the option. Another oft-repeated recommendation is that an expert body be set up with a view to having the anti-avoidance legislation made more brief and precise. The Institute also submits that, pending this examination, there should be a general 'clearance' provision, on the lines of section 468 of the Income Tax Act, 1952 (change of a company's residence), or section 28 (10) of the Finance Act, 1960. We are not sure that we would wish to see a wide extension of the application of section 28 (10); under that subsection the Inland Revenue can refuse either to give clearance or to take immediate action.

An obvious injustice lies in the practice of making an automatic direction on a company's investment income without making any direction on its estate or trading income, with the result that although the bulk of the aggregate income may be apportioned for surtax, the company still has to pay profits tax as well. The memorandum urges that the law be changed to bring an end to this anomaly.

The law relating to overseas trade corporations can be said to be still in the teething stage. The memorandum argues that dividends out of trading income paid by one O.T.C. to another O.T.C. should not attract United Kingdom tax until the income is distributed to a shareholder who is not an O.T.C. It also suggests that dividends from trading subsidiaries resident overseas should be regarded as trading income in the hands of the recipient O.T.C. parent. Another criticism is directed against paragraph 4 of Part I of the Fifth Schedule to the Finance Act, 1957. This paragraph directs that 'charges' paid by an O.T.C. are to be set off primarily against its investment income, only the excess over investment income being set off against trading income. If the charges are payable abroad so that the O.T.C. cannot deduct tax, and they are set off against taxed investment income, the O.T.C. obtains no relief for them.

Some of the tax problems of British companies trading abroad, as compared with their foreign competitors, are also discussed in a contributed article in this issue.

The administration of income tax and other taxes on income has been the subject of much comment in the past year or so and the Scottish Institute has four points to make. It suggests that statutory provision should be made to give binding effect to an agreement between a taxpayer and the inspector that the former need not attend a particular appeal meeting for which his appeal had originally been set down. At present the Appeal Commissioners are not bound to pay any attention to such an agreement. The Institute also supports the suggestion already made that a statutory power be given to taxpayers to elect that notices should be sent to their agents. Support is given in the memorandum to the suggestion that inspectors should have power to sign assessments, the assessment functions of General Commissioners being abolished. It is suggested that in any review of the design of forms, regard should be had to the fact that many accountants now use photocopying processes in relation to such forms. One improvement would be to cut down the number of pages over which a return form is spread. Finally, it is argued that where a company submits accounts and computations it should not be subject to any requirement to complete a statutory return form.

COMPARATIVE TAXATION

Profits from Foreign Sources

by A. DALE, F.A.C.C.A.

THE question of incentives to induce United Kingdom enterprises to increase their exports has been raised frequently in Parliament and Press in recent years, and Government spokesmen must be weary of repeating their reasons for rejecting the suggestions made. They maintain that any incentives offered would be quickly countered by the granting of bigger and better incentives by other countries, so that in the end nobody would be any better off, and that in any case various international agreements preclude the offering of export incentives.

These international agreements do not preclude, however, the granting of special treatment to foreign earnings in the field of direct taxation and there are major variations in different countries in the scope of the tax charge on such earnings. It is of interest to study these differences in order to determine whether United Kingdom taxation laws place British traders in an adverse competitive position as compared with their foreign counterparts.

As most foreign earnings accrue to companies this review is restricted to company taxation, and it is concerned primarily with manufacturing and trading profits arising within foreign countries (i.e. from business activities carried on in those countries) as distinct from profits arising within a country from the exporting of goods to foreign markets. It will be appreciated, also, that sometimes the operation of the basic tax laws of a country is affected by double taxation relief granted either unilaterally or under bilateral agreements.

Scope of Tax in the United Kingdom

Tax is charged in the United Kingdom on:

(*a*) all income arising in the United Kingdom no matter to whom it accrues, and

(*b*) all income, wherever arising, that accrues to a resident of the United Kingdom.

A company which is resident (i.e. managed and controlled) in the United Kingdom is therefore normally liable to tax on all its domestic and foreign profits. If, however, the foreign profits are earned by a subsidiary company which is managed and controlled abroad tax is charged in the United Kingdom only on dividends received by the parent company from the subsidiary.

The scope of the tax charge has been limited since 1957 in the case of a special category of United Kingdom company known as an overseas trade corporation (O.T.C.). An O.T.C.'s business is treated as if it were carried on outside the United Kingdom by a non-resident, and consequently the trading income is not chargeable. When, however, dividends are paid out of the exempt income the O.T.C. has to pay income tax on an amount equal to the gross dividend paid. Profits tax is not charged, but any shareholders who are subject to that tax must include dividends from O.T.C.s in their taxable profits.

To qualify as an O.T.C. a company must:

(i) be resident in the United Kingdom,

(ii) be carrying on a trade outside the United Kingdom, or be a principal company not itself carrying on a trade but having a subsidiary company which is an O.T.C. and which is carrying on a trade outside the United Kingdom, and

(iii) satisfy a number of conditions as to its mode of trading.

But a principal company not carrying on a trade cannot be an O.T.C. if it has a subsidiary company resident in the United Kingdom which is not an O.T.C. A company is deemed to be a subsidiary of another company if more than one-half of its ordinary share capital is owned, directly or indirectly, by that other company. The conditions which must be satisfied include the following:

(i) The company's activities in the United Kingdom, leaving out of account the management and control of its trade, must not by themselves amount to the exercise of a trade.

(ii) A company which purchases goods for export from the United Kingdom must not take delivery of them in the United Kingdom otherwise than on board the ship or aircraft in which they are exported and must not bear any expenses or incur any charges in connection with the delivery, warehousing, etc., of the goods in the United Kingdom. The object of this condition is to ensure that there can be no

question of the subsidizing of exports by means of this scheme.

(iii) The profits arising from the whole of the company's trade must be chargeable in an overseas country to some tax similar in character to income tax or profits tax in the United Kingdom, or would be chargeable in one or more overseas country to tax of a character and scope corresponding to income tax if in every country outside the United Kingdom such a tax were charged on the profits arising from any trade exercised within the country by either a resident or a non-resident.

It will be noticed that a parent company can qualify only if it has a subsidiary company *which is an O.T.C.* carrying on business outside the United Kingdom. It is necessary, therefore, for the subsidiary to be resident in the United Kingdom and to satisfy all the other conditions.

Other Countries' Rules

(1) The Commonwealth

The committee which drafted the Model Income Tax Ordinance in 1922 considered that the most appropriate scheme for the colonies was one which imposed tax upon income which either had its origin in the colony or was received in the colony. The scope would thus be limited to income coming within the colonial jurisdiction. This is still the basic rule in many Commonwealth countries including Aden, Cyprus, the East African territories, Gambia, Ghana, Gibraltar, Malaya, Nigeria, Sierra Leone and Singapore.

In a few countries, e.g. Hong Kong, and the Federation of Rhodesia and Nyasaland, the basic rule is that only income having its origin within the country is chargeable. (This applies also in South Africa which, of course, is not now a Commonwealth country.)

Most of the other Commonwealth countries have the same system as the United Kingdom (except for the O.T.C. modification) but there are a few refinements:

(i) Jersey, Mauritius and the British West Indies territories, except Jamaica, charge income from foreign trade to the extent only to which it is received in the country.

(ii) In Jamaica the income of companies engaged in business outside the British Caribbean area whose centre of management is in the country but which do not trade there, is exempt. Tax concessions are offered also to 'approved export manufacturers' whose products are sold outside the West Indies Federation.

(iii) New Zealand grants exemption to income from Commonwealth sources provided it is chargeable to income tax (or a substantially similar tax) in the country of origin. The income is taken into account, however, in determining the rate of tax payable on other income. Income of a company from non-British Pacific Islands is taxable only if remitted to New Zealand.

(iv) Canada does not charge tax on dividends received by a corporation if it owns more than 25 per cent of the shares in the paying corporation and that corporation is non-resident or is a 'foreign business corporation'.

A 'foreign business corporation' is exempt from tax. Its assets (except securities and bank deposits) must be outside Canada and except for management and the designing, purchasing and transportation of goods it must carry on business operations of an industrial, mining, commercial, public utility or public service nature entirely outside Canada. This exemption was withdrawn in 1959 except for those corporations which had previously qualified.

(v) Australia grants exemption in respect of income, other than dividends derived from sources outside Australia, provided:

(*a*) the income is not exempt from income tax in the country from which it is derived, or

(*b*) the taxpayer has paid a royalty or export duty in some other country in respect of goods from the sale of which the income was derived.

(2) Common Market Countries

In France a corporation established there is subject to corporation tax only on its income from French sources. Dividends received from a foreign subsidiary (normally a company in which at least 20 per cent of the capital is owned) are not taxable but the administrative expenses applicable have to be disallowed and for this reason tax is charged on 25 per cent of the dividends.

The Netherlands charges corporation tax on all the profits of corporations established there, but dividends received from foreign corporations in which at least 25 per cent of the share capital is held and which are liable to tax on their profits in the foreign countries are excluded from profits. This relief may be extended to cases where a smaller percentage is held if the holding can be regarded as a trade investment or if it serves the national interest. Investment companies are also normally granted exemption from tax in respect of dividends from foreign companies.

Profits arising from a trade or business carried on through a permanent establishment abroad and which are subject to tax there are normally exempt in the Netherlands but affect the rate of tax payable on domestic income.

In Germany and Luxembourg tax is charged on income from all sources but in the latter country some holding companies qualify for exemption.

Italy subjects resident companies to company tax, but not to income tax, on profits and dividends from foreign sources.

In Belgium income arising abroad to companies which have their registered office or their principal administrative office in Belgium is taxable at reduced rates:

(*a*) Income tax on business profits is charged at only one-fifth of the ordinary rate, provided the profits are taxed abroad.

(*b*) Income tax on investment income is charged at 12 per cent instead of 30 per cent for dividends and 18 per cent for interest.

(*c*) National crisis contribution on that part of a Belgian company's dividends which is derived from income earned abroad is charged at one-fifth of the ordinary rate.

(3) E.F.T.A. Countries

In Austria, Norway and Sweden the basic rule is that income arising abroad is taxable. This applies also in Denmark except that in the case of companies relief is granted from company income tax, but not extraordinary company income tax, in respect of profits of foreign branches.

Switzerland charges resident companies on all profits except that profits arising abroad through a permanent establishment are not taxable but are taken into account in determining the rate of tax payable on other income. Some holding companies qualify for exemption.

In Finland (associated with E.F.T.A.) a resident company is subject to tax on income from all sources except dividends from foreign companies (regardless of the extent of the shareholding).

(4) U.S.A.

Subject to the following special provisions, a United States corporation is, in general, liable to tax on all its domestic and foreign income.

(i) Western Hemisphere trade corporations are allowed a deduction from taxable income of 14/52nds of that income. This is equivalent to a reduction in the rate of tax from 52 per cent to 38 per cent. These corporations must carry on the whole of their business (except incidental purchases) outside the United States in North, Central or South America or in the West Indies. Ninety per cent of their income must come from active business and 95 per cent of their income for the previous three years must come from outside the United States.

(ii) A special relief is available also to corporations organized under the China Trade Act, 1922, which derive income from Formosa and Hong Kong.

(iii) Income from the Panama Canal Zone, Guam, Samoa, Wake and Midway Islands is taxed on the remittance basis, provided 80 per cent or more of the gross income of the tax year and the two preceding years was derived from one of these territories and 50 per cent or more of the gross income was derived from the active conduct of a trade or business within the territory.

Adverse Position of British Traders

In paragraphs 638 and 639 of their report, the majority of the Royal Commission on the Taxation of Profits and Income stated:

'It can be taken as axiomatic that a volume of overseas earnings is essential to the economic life of the United Kingdom. No plan of our future economy could fail to rely upon it. The maintenance of a satisfactory balance of payments in our relations with other countries is not merely an important feature of the policy of the United Kingdom; it is an inescapable element of any long-term policy; since the history of our economic development has not left us with any large freedom of choice that would enable us to adapt our position to the new circumstances of the twentieth century.

Such a country is bound to do what it can to foster the growth of its overseas trade. At least it should be scrupulous to avoid the adoption of any measures that tend to place its overseas traders at a positive disadvantage in competition with traders in or from other countries in the field of international trade. Yet the United Kingdom does succeed in imposing just this disadvantage by its present method of taxing overseas profits.'

It was in order to remove the disadvantage that the majority put forward the O.T.C. scheme, and it is most regrettable that their ingenious and imaginative conception was not fully implemented. They contemplated that overseas profits should 'include the profits of overseas subsidiary companies whether controlled from the United Kingdom or outside it' but the 1957 Act extends relief, as has been explained, only to United Kingdom parent companies with subsidiaries controlled from the United Kingdom.

The adverse position of British traders as compared with their foreign competitors can be summarized as follows:

Companies which merely export without setting up permanent establishments

The profits of such companies are normally regarded as arising within the home country and do not therefore qualify for the special treatment

available for profits arising abroad. In some cases, however, profits may be deemed to arise abroad under some special concept. The United States, for example, treats profits from exports as foreign earnings if title to the goods passes abroad. This is particularly important in the case of Western Hemisphere trade corporations since the relief from United States tax can be obtained without any liability to foreign tax arising if arrangements are made to pass title in exported goods in a 'tax haven'. This scheme must, in fact, come perilously close to infringing the export incentive clause of international agreements.

Companies which set up permanent establishments, e.g. branches or depots, abroad

British companies are subject to tax on the profits of such establishments unless they qualify as O.T.C.s. If they cannot so qualify they are at a disadvantage as compared with companies in:

(i) Countries which grant complete exemption in such cases, e.g. Hong Kong, South Africa, Canada, Australia and France, or countries which exempt the profits but take them into account in determining the rate of tax payable on other income (in the case of companies charged at a flat rate this is equivalent to complete exemption), e.g. the Netherlands and Switzerland.

(ii) Countries which grant exemption from some but not all taxes, or which charge tax at reduced rates, e.g. Italy, Belgium, Denmark and U.S.A.

(iii) Countries which charge tax only on remittances, e.g. many Commonwealth countries.

Companies which operate abroad through local subsidiary companies

British companies are liable to tax on dividends received if the subsidiary is managed and controlled locally and no relief is obtainable under the O.T.C. scheme. If the subsidiary is controlled in the United Kingdom all its profits are taxable unless it qualifies as an O.T.C., and the parent company is exempt in respect of dividends only if it also qualifies as an O.T.C. Where O.T.C. qualification is not possible British companies are at a disadvantage as compared with companies in:

(i) Countries which grant complete exemption in such cases, e.g. Hong Kong, South Africa, Canada, France, the Netherlands, Luxembourg, Switzerland and Finland.

(ii) Countries which grant exemption from some but not all taxes or which charge tax at reduced rates, e.g. Italy and Belgium.

(iii) Countries which charge tax only on remittances, e.g. many Commonwealth countries.

What Should Be Done?

The network of bilateral double taxation agreements which has been built up during the past twenty years or so, and the reliefs granted unilaterally by many countries, indicate that it has been accepted internationally that the country from which income is derived has the prior right to tax that income. If another country levies a tax on the same income it should give credit for the tax paid in the country of origin. It seems likely, therefore, that the long-term solution to these problems lies in the acceptance of the principle that the country of origin has the sole right to tax the income. This is not likely to come about, however, for many years, although the process may be accelerated in Europe as a result of the closer harmonization of taxation laws within Common Market countries.

Meanwhile, under present United Kingdom legislation, the key to the problem so far as most British companies are concerned lies in the question as to whether they can qualify as O.T.C.s. When overseas trading is carried on through branches or depots, it is normally practicable so to arrange the operations that qualification is possible. This can cause distortion of normal commercial transactions and the qualifying conditions should be modified in the light of experience gained since the scheme was introduced.

This form of trading through branches is, however, virtually obsolete in most countries. Where operations are on such a scale that some form of local organization is necessary, national susceptibilities and competitive trading conditions make it essential that subsidiaries should be formed under the laws of the overseas countries and that they be managed and controlled there. The businesses then become closely identified with the national background and the full co-operation of local interests can be obtained.

It is difficult to understand, therefore, why companies which qualify for relief as O.T.C.s while they trade overseas through branches should be denied relief when they convert those branches into locally controlled subsidiary companies in order to fight intensifying competition.

There is no doubt that taxation factors have seriously hampered the efforts of United Kingdom enterprises in foreign markets and have caused many profitable trading and investment opportunities to be taken up by foreign companies instead of United Kingdom companies. The removal of the O.T.C. anomaly would help to remedy this state of affairs but it may be that more drastic action will become necessary.

Education for the Profession

THE NEW ZEALAND SCHEME

by ROY SIDEBOTHAM, B.A.(Com.), A.A.C.C.A.
Professor of Accountancy,
Victoria University of Wellington

IT is perhaps appropriate, at a time when the report of the Parker Committee has aroused some controversy, to consider the arrangements made for the education of accountants in other countries, and to see what lessons, if any, might be drawn therefrom. In this context, the situation in New Zealand is of particular interest; in a country whose institutions are peculiarly British (indeed, some of them are more British than Britain's), the arrangements for the education of accountants could hardly be more different from those in England and Wales.

Professional Examinations

The profession in New Zealand has the advantage of being organized in a single professional body, the New Zealand Society of Accountants, which has a statutory monopoly of professional practice and of the use of the designations 'Public Accountant' for members in practice, and 'Registered Accountant' for members in industrial, commercial or governmental employment. It is thus possible for the system of education for accountancy to be planned by a single professional authority, responsible to the community for the maintenance of high professional standards and for the provision of adequate numbers of qualified men.

The Society admits students to membership after five years' professional experience (three for university graduates), and after passing the following examinations: Accounting I; Accounting II; Accounting III; Commercial Law I; Commercial Law II; Auditing; Economics; Trustee Law; Secretarial Practice.

Accounting I, II and III and Commercial Law I and II are progressive stages. This excepted, the units may be taken in any order, and any number up to five may be taken at one time. The examination for a unit may consist of several papers. The total syllabus is comprehensive, covering much the same ground as that of the examinations for membership of The Institute of Chartered Accountants in England and Wales. It differs from those examinations mainly in the division of the material into nine units as compared with an Intermediate and a Final examination.

The Society does not itself conduct its qualifying examinations, and never has done so. Administrative responsibility for the examinations has for many years rested with the University of New Zealand. When this university was wound up on December 31st, 1961, responsibility for the examinations passed to the University Grants Committee. Examiners are nominated by the Society, some being practising accountants, others university teachers. This arrangement, besides relieving the Society of the administrative work of conducting the examinations, provides for their conduct by an authority expert in examination practice, with experience in many fields, and ensures that the examinations are strictly a test of merit and are not suspect of being an exclusionary bar to qualification.

Education for Accountancy

Instruction for the professional examinations is provided by correspondence schools, technical colleges and the universities. The correspondence schools, which have a high reputation, serve some students in the main centres, but their major usefulness is in training students in the country districts. Some of the technical colleges are very good, but all suffer from staff recruitment difficulties. Teachers' salaries are not high enough to attract many accountants from their practices. The Society and the universities back up the work of the correspondence schools and technical colleges by providing seminars and lectures in some of the provincial towns. University sponsored week-end schools in country areas are in great demand.

By far the greater part of the Society's students

who live in the main cities, are taught in the four universities, the University of Auckland, Victoria University of Wellington, Canterbury University in Christchurch and Otago University in Dunedin, which provide courses for the Society's examinations as well as for their own degrees. It is the usual thing for a clerk, seeking instruction for the professional examinations, and without any intention of taking a degree, to attend at his local university. A large number of the students in each of the university departments of accountancy are 'professional' and not 'degree' students.

Additionally, however, the degree structures at the universities contain subjects corresponding to the professional examination units. Thus the B.Com. degree at Victoria University requires passes in the following:

English, *or* a modern foreign language, *or* Maori studies; Accounting I and II; Economics I and II; Commercial Law I.

Four subjects chosen from the following list, of which one must be *either* Economics III *or* Accounting III: Economics III; Accounting III; Auditing; Advanced Management Accounting; Commercial Law II; Arts or Science units provided for the degrees of B.A. or B.Sc.

Students who include Accounting I, II and III, Commercial Law I and II, Economics I and Auditing, or any of these subjects in their degrees are credited therewith by the New Zealand Society of Accountants also, and need sit only the remaining units of the professional examinations to qualify. Not surprisingly, many students read for the B.Com. degree before completing their professional qualifications.

Advantages of the System

Because of the close similarity between the prescriptions, it has been possible for arrangements to be made for joint examining of some professional and degree units, the same paper being set for both, the examiners being selected from panels nominated by the Society and the universities.

Thus, the universities are not merely a part of the system of education for accountancy, they are its main prop. About 900 students registered at Victoria University for accountancy units in 1961 – more than the total accountancy registrations at the English universities combined.

From the point of view of the Society these educational arrangements have many advantages. The close relation which exists with the universities grades accountancy as a learned profession. This confers some advantages of status. Of more practical moment, it ensures the recruitment of a reasonable share of the best products of the schools. Schoolmasters who do not expect their best children to go to university are unusual. Parents who, thirty years ago, would have considered it beyond their means to send their children to college, now regard university education as their right. The children themselves are looking for jobs with standing; for professions with adequate educational facilities; for the social opportunity which membership of a university brings. At seventeen years of age the Victoria Rugby XV exerts a bigger pull than the Accounting I classes! It would be surprising if correspondence courses did not seem a little dull by comparison.

These recruitment factors are not to be underestimated. A substantially higher proportion of school-leavers enters the universities in New Zealand than in Britain. The Society could not afford to miss its share.

Practitioners as University Lecturers

From the point of view of the universities, the close link with the profession has many benefits. It brings keen and ambitious students to university studies. Many practising accountants take a share, on a part-time basis, in the teaching of the students, bringing with them their experience of practical conditions and up-to-date methods, and providing introductions to opportunities for the full-time staff and advanced students to pursue research in industry and commerce.

Accounting research in New Zealand is co-ordinated and directed by a board of research upon which members of the Society and of the universities sit together. The universities are active in promoting post-graduate studies for qualified men. Courses ranging from full-time work for M.Com. and Ph.D. degrees, to week-end schools in electronic data processing, are available to members of the profession.

The propriety of accountancy as a university subject is no longer challenged in New Zealand. A chair of accountancy has been established at each of the four universities (they are all occupied by accountants) after pressure by the Society, supported by business and industrial organizations. In general, accountancy is accepted in the universities as a proper subject for study there, and in the profession the universities are regarded as the proper place for the study of accounting.

The New Zealand system of education for

accountancy is quite strikingly different from that in England and Wales. It could hardly now be adopted in Britain. New Zealand is a young country. Although its institutions are modelled on the British pattern, they lack the rigidities of the cloying attachments of history; the articling system, for instance, so fundamental to accountancy practice in Britain, has never taken root in New Zealand. The universities, too, being newer, are in many ways more ready to keep abreast with changes in the direction of the demand for learning.

New Zealand's experience of co-operation between the profession and the universities is not entirely irrelevant to possible future developments in Britain, however. It at least illustrates some topics of current controversy in England.

The crude facts of university development rates are as true in England and Wales as they are in New Zealand. More and more young people are expecting, and will receive, university education. As for the New Zealand Society of Accountants, so for the British professional bodies, it is not a matter of option. If the standard of the profession is to be maintained, large numbers of university graduates must be recruited.

It is sometimes suggested that the increased flow of graduates might come from the faculties of arts and science, and that it is better that prospective accountants read some subject other than accountancy at the university. There is no reasonable doubt that a man who takes his first degree in classics, and subsequently qualifies in accountancy, would be better educated than an accountant whose first degree is in commerce. Such is the effect of learning. The more – and more diverse – a student's reading, the more mature his mind. It is also reasonable to assume that a solicitor would be the better for a first degree in literature; a doctor might benefit from beginning his studies with a degree in history; an architect might profit from early studies even in accountancy. But this is not a practical proposition for large numbers of students. In rare instances it might be achieved, but for most people life is too short for the lengthy study required for advanced qualification in two subjects.

One would not expect the best of the graduates of arts and science faculties to be drawn to accounting. Not unreasonably, good science graduates usually become scientists. Good arts graduates, too, have been in high demand since the war, and are offered many prospects not beset by the daunting necessity of professional qualification. One can really only expect to get accountants in any quantity from universities which teach accounting. Apples do not grow on pear trees.

It is often suggested that accounting is not a suitable subject for university education, and not infrequently it is by members of the profession themselves that their subject is thus decried. Accountancy, of course, is a practical subject, and practical experience is essential before professional qualification. Yet medicine, law, engineering, architecture, education and others are equally practical, and all are established university disciplines. The question of practical experience is for the professional body to decide before admitting an applicant to membership. The task of providing the candidate with the education necessary to benefit from his experience must necessarily be delegated to a teaching organization. There is no reason why university teaching should be more, and there are some reasons why it might be less, 'theoretical' than correspondence course tuition.

The Profession's Duty to the Universities

Much argument on these topics centres on the question of what the profession can, or can not, get out of the universities. Little, if any, comment has been recorded about what duty the profession owes to the universities. The universities stand at the apex of the educational system. They are charged with training the minds of the leaders of future society. It might be expected that the accountancy profession would expect to be an important force in that society, whence it might be argued that the profession has a responsibility to ensure that the significance of its subject is not lost in the universities. British economists are sometimes accused of failing to grasp the realities of accounting and business life. This is hardly surprising, considering how few of them had the opportunity to read accounting during their own degree studies, and considering the tiny accountancy departments established at the British universities charged, among other things, with making their contribution to university thought.

The educational system of New Zealand would not be appropriate in Britain. Histories and circumstances are too different. It might be hoped, however, that one result of the deliberations following the publication of the report of Mr Parker's committee would be a realization in the profession of the services the universities could give, and perhaps even of the duty accountancy owes to the universities.

Control of Overheads

by H. H. NORCROSS, F.C.W.A.

WISE control of overhead costs can do much to help a business to face the future with confidence. But in this field, as in many others, to acquire true wisdom is not easy. Overhead costs tend to grow more rapidly than sales volume and a superficial view can suggest that radical pruning of overhead costs is needed. This may well be true, but the pruning of overhead costs, like the pruning of an apple tree, is a very skilled job. If a tree is pruned skilfully, it becomes healthier and gives a better crop. If the pruning is done badly, the tree may be ruined.

Factors Causing Growth of Overhead Costs

As part of the trend which is leading us to higher productivity and a higher standard of living, there are a number of factors which have caused, and will continue to cause, overhead costs to rise. Here are some of them:

(1) *Business units are getting larger* and the larger a company, the greater the need for statistics and control procedures of various kinds. In the very small business the manager can see with his own eyes much that is going on. To be equally well informed the man who is running a large company needs highly developed management accounting services which inevitably add to overhead costs.

(2) *Business units are getting more complicated.* In some of the most efficient and prosperous companies the management team has been so constructed that it comprises an astonishingly wide range of specialist services of various kinds. In the marketing field there are specialists in advertising, in market research, in statistics, in public relations and so on. In the production field are specialists in a variety of subjects such as quality control and ergonomics. Again, in the fields of financial control and long-range planning there are specialists in economic forecasting, management accounting, electronic data processing and so on.

(3) *Production processes are becoming more highly mechanized.* This is significant in various ways. Higher capital investment is required for the machinery, and the higher the investment the more important it becomes to keep plant fully occupied. This in turn means that marketing must be so organized as to feed the plant with the necessary volume of orders. Some industries are already at the stage when those responsible for marketing policy must think on a global basis rather than on a national basis. Only by doing so can they hope for the volume of orders which will make it economic to install, and operate profitably, the most efficient plant. This also means that the purchasing, material control and production control organizations must be more highly developed so as to ensure a steady supply of material and components and a steady flow of production through the plant.

Paper presented at the British Institute of Management conference on 'Planning for Maximum Profits' held in London on January 11th.

(4) *Changes are taking place more rapidly.* The world in which we live is changing more rapidly than it has ever done and the pace of change is going to increase. There have been, and there will continue to be, big shifts in purchasing power. Manual workers in Great Britain have adopted standards of living which were those of middle-class people before the war. This has meant enormous changes in the industries affected by these changes in living standards – in the furniture, washing machine, motor-car and other industries. Further shifts in purchasing power and further changes in living standards are to be expected. These will involve not only shifts in purchasing power within our own country. There will also be big international shifts in purchasing power. Productivity in Japan, for example, has been rising so much more rapidly than in many other countries that her share of the world's purchasing power is growing and will continue to grow. Inevitably this will have an effect on the future pattern of world trade.

Changes are, however, not only due to marketing factors, they are also caused or accelerated by the development of new materials, new products and new processes. But because changes occur more rapidly it is necessary for a business to be equipped with the ability to adjust itself to changed conditions and to take advantage of them rather than be swamped by the tide of progress. And the need for change is very much greater than many companies seem to realize. How many companies in the food industry, for example, yet realize the long-term implications of the revolution that is going on in the retail distribution of food? How many manufacturers and wholesalers of food products have yet made adequate plans to change their marketing methods to meet the problems of today and tomorrow? To meet such problems it is necessary to increase overheads and to have specialist staff, and to use independent consultants who have skills in recognizing the need for changes, in planning for them, and in introducing changes.

Due to these and other factors, for a business to remain competitive and profitable it is inevitable that overhead costs should continue to rise. Some managers and some accountants I meet sigh nostalgically for the past when their life was simpler and overhead costs lower. But even if we could turn the clock back we could only go back to the 'pick and shovel' era by going back to the lower standards of living of those times. These trends, however, should not be used as an excuse for waste and inefficiency in overhead expenditure. As Sir Ewart Smith has said, 'High overheads are inevitable in an efficient business, but high overheads are not necessarily a sign of efficiency'.

Control Technique

Waste and inefficiency in overhead expenditure can creep into a business slowly and almost imperceptibly and systems of overhead control should be based on a clear understanding of this. I would put in a strong

plea for fairly highly developed methods of budgetary control of overheads. The accountancy methods should be so designed as to make this possible. We need appropriate information about overhead costs and we need it frequently and promptly.

The total overhead costs of a business can be considered as a cube. If we slice the cube in one direction we get the overhead costs analysed as between the sources of overheads – as between indirect wages, salaries, electricity and so on. If we slice the cube in another direction we see how the overheads relate to the various departments and functions of the business. For overhead control to be effective, particularly in the larger companies, some delegation of control is essential and this second 'slicing' is an aid to this. If we slice the cube in the third direction we see an assessment of the overhead costs of the various products. Management accounting should be so planned that overhead costs can be dissected in these three ways, but it is of great importance that those who are responsible for organizing the management accounting should realize that they are 'living in a glass house'. The main purpose of management accounting is to stimulate other departments to greater efficiency. So, it is important for the management accounting department to set a good example and not only provide an adequate service but also adopt efficient methods in its own office.

Setting and Challenging Overhead Budgets

Flexible budgetary control has much to commend it. Under this system a basic overhead budget is set for, say, a year in advance. This basic budget is related to the anticipated volume of sales and production for the year. The budget plan also includes provision for adjusting the overhead budget, up or down, if the actual level of activity is higher or lower than the level on which the basic budget was set. The application of this pattern of thinking must be made with judgment. The degree of adjustment required in the budget will vary from item to item. Salaries, for example, would be less affected than indirect material by a change in volume.

Regular reports are then issued to various levels of management. These show the actual overheads and may compare them with

(*a*) past periods;
(*b*) basic budget;
(*c*) adjusted budget;
(*d*) lowest previous costs.

Successful use of control methods of this type demands that the line managers should fully understand the information which is fed to them and should be cost conscious in the true sense of the term. This is primarily a matter of developing the right attitude of mind amongst these people; a determination to spend money wisely.

One of the essentials of an effective overhead control system is the comparison of the cost of each overhead item with a budget of what that cost ought to be.

Sometimes a sensible and usable budget can be set by relatively simple methods. The underlying pattern of thinking can be illustrated quite easily. I have, on a number of occasions, referred to what I call 'the wash-leather test'. Anyone who has used a wash-leather in washing a motor-car will appreciate that it can be used many times before it needs to be replaced. Relatively simple tests will show that one leather should be able to be used for, say, forty times before it needs to be replaced. Any company with a fleet of vehicles can, from this information, set a simple budget for the usage of wash-leathers. If it has fifty cars which are each washed on average forty times a year, it should use about fifty wash-leathers a year. I suggest you apply this 'wash-leather test' in your own companies. You are probably in for a shock. Wash-leathers are useful for other things apart from washing the company's cars! Men are not likely to be so careful with the company's wash-leathers as with those they have bought for their own use at home! If this simple test suggests, for example, that the annual expenditure on wash-leathers could be cut by over 50 per cent, what scope for economy exists in the remainder of the overheads?

The extension of this pattern of thinking into other overhead items can, however, be a very much more complicated affair. What, for example, should the budget be for the cost of the grinding wheels used in an engineering business? Here we run into the study of a whole range of variables. The size, shape, grit and grade of the grinding wheels to be used; the supervision, selection and training of grinding machine operators; the selection of the optimum running speed; the determination of the optimum frequency for 'dressing' the wheel; the planning of production in such a way that grinding wheels do not have to be removed from the grinding machines until their useful life has been exhausted; the decision as to how much metal to remove by grinding and how much to remove in earlier operations. Indeed, the range of variables may be so great, and the technical problems so complex, that it may be highly profitable to use both a skilled production engineer and a statistician to discover the scope for economy, to advise on the optimum methods of operating, and to set an appropriate budget.

But it is clearly undesirable to apply continuously to all overhead items a programme of study to this depth to discover the optimum expenditure. Some items in the overhead budget are more appropriately set by more rule of thumb methods. I see no objection to some budget items being set on the basis, 'Let us try to reduce this item by 10 per cent next year. At the end of the year, let us review our experience and decide whether to set budgets for future years on a somewhat more scientific basis'.

I do, however, favour a 'moving spotlight' method of approach to the study of overheads. For some period of time, say six to twelve months, special study may be given to indirect labour costs. The line

managers, the work study department and the management accounting department may, for this period of special study, devote an abnormally high proportion of their time to examining indirect labour costs, discovering scope for economy, and revising the overhead budgets in the light of their fresh knowledge and experience. The 'moving spotlight' may then move on to some other item such as, for example, the cost of scrap and waste. All or most of the items in the overhead budget should be probed and challenged in turn in that way.

Work for a Study Group

Particularly in a large, complex organization, this task of probing and challenging items in the overhead budget may be beyond the capacity of any one man or even any one department. Sometimes there is much to be said for setting up a special study group to deal with some aspect of the problem. The study of indirect labour costs may, for example, lead into a number of different fields – factory layout, material handling methods, methods of recruiting, training and paying indirect labour, and even perhaps into the field of product design and rationalization. A study group established to probe into indirect labour costs should, therefore, be given appropriate terms of reference – not so narrow as to miss the opportunities for economy which may only come from big thinking, and not so wide that the study group fails to make effective progress.

It is of great importance that the control of overheads should not be blind or clumsy. I have, unfortunately, seen many cases where overhead control has been applied badly on a 'penny wise and pound foolish' basis. This is very likely to happen when the people responsible for the details of the overhead control system are unaware of some important aspect of company policy or do not appreciate its significance.

True economy is not merely a narrow-minded refusal to spend money. It involves not only the avoidance of waste but also imaginative and creative expenditure on services which add to a company's long-term prosperity. This in turn requires that the control of overhead costs should be based on, and geared to, company policy.

A company may have evolved at board level a bold plan for expanding total output and increasing the company's share of the total market. This plan may involve increasing aggregate sales at a compound rate exceeding 30 per cent a year. Production and marketing arrangements may have been co-ordinated to this overall objective but its achievement may be prevented or delayed if the people responsible for the control of overheads do not appreciate that the purse strings must be temporarily loosened to enable this rapid expansion to take place. Abnormally high training costs may have to be incurred to train the additional labour; the marketing budget, both as a cost per year and as a cost per unit of sale, may have to be greatly increased; and these increases in training and marketing costs may be a small price to pay for the increase in total profits which the plan will yield. Sound control, then, requires that it be geared to the overall policy. It also requires an appreciation that on some occasions the cost of achieving something, although abnormally high, may be less than the cost of failing to achieve it.

It does not necessarily follow that the items which form the largest proportion of total cost should be given the lion's share of management's attention. For example, I know companies where direct material costs loom very large and yet the scope for economy through material substitution, better buying and better material utilization is not very great. It has been my experience, however, that most companies find it profitable to give even more attention to the study and control of overheads than would appear desirable from the proportion which overheads bear to total costs. Even, for example, in a business where material costs are over 80 per cent of total costs and overheads only 15 per cent, it may still be desirable to give more attention to the control of overheads than to the control of material.

But as overheads tend to form a bigger and bigger proportion of our total costs – and the general trend is towards reducing direct labour costs and increasing overheads – then the study and control of overheads which is already important will become even more important.

SEVENTY-FIVE YEARS AGO

FROM The Accountant OF FEBRUARY 26TH, 1887

Extract from a paper entitled 'Defalcations, and how to prevent them', by F. R. Goddard, F.C.A.

The great desideratum to be aimed at both by principals and clerks is to obtain all the information requisite to make an audit thorough and complete, and at the same time to obtain this information in such a manner as not to fret or irritate those with whom they are brought into contact. They should also endeavour so to go about their work as not to leave on the minds of the persons whose accounts they are examining the feeling that they are in any way pariahs or suspects. In fact, an Auditor's clerk, if he will but recognise the fact, ought to be a diplomatist.

In taking a retrospective view of cases where losses and troubles have arisen, I think it could be proved that in nine cases out of ten it has been solely the carelessness and want of accuracy of clerks engaged upon the work, which have afforded the loophole to fraud. In many cases, clerks to my knowledge have allowed to pass, on the most trivial explanation, transactions which bore on the face of them the evidence either of fraud or of deceit.

If the younger and rising members of our profession will take these remarks seriously to heart, they will find that not only will it benefit them from a financial or salaried point of view, but what is more important still, it will add materially to their advancement and promotion in the profession. . . .

Weekly Notes

COST ACCOUNTANTS' EXAMINATIONS

IN the December 1961 examinations of The Institute of Cost and Works Accountants, a total of 1,923 candidates sat for the whole or part of the Final examination. Of these, 339 successfully completed the examination; 66 passed Part A only, and 338 passed Part B only.

Mr G. C. W. Klage, of London, gained First Place and was awarded the S. Laurence Gill Prize. The Leverhulme Prize for Advanced Cost Accountancy was won by Mr Donald Warboys, of Leeds, and the Donald L. Moran Prize for Management (Factory and Distribution) was won by Mr William Spicer, of Gourock, Renfrewshire.

In the Intermediate examination there were 3,182 candidates, of whom 74 passed Parts I and II; 408 completed their Intermediate by passing Part II, and 637 passed Part I only. The First Place and George Russell Memorial Prize were won by Mr P. N. Wickranasuriya, of London.

The names of the successful candidates who completed the Final examination, together with a full summary of results, appear elsewhere in this issue.

SIZE AND EFFICIENCY

A REPORT was published this week called 'Efficiency Comparisons within Large Organizations' under the joint auspices of the British Institute of Management and the Centre for Interfirm Comparison.[1] The report is the result of the setting up by seven large companies of a special research study group which met under B.I.M. auspices. The companies were as follows: Distillers Co Ltd; Shell Petroleum Co Ltd; Tube Investments Ltd; Metal Box Co Ltd; The Bowater Paper Corporation Ltd; Imperial Chemical Industries Ltd; and Courtaulds Ltd. There is a faint touch of irony at present in the appearance of both Courtaulds and I.C.I. in a research undertaking calling for mutual co-operation.

The object of the group was to discover a means of encouraging each section of large companies to adopt new ideas and improved techniques which had proved their value in other sections of the company. The conclusion of the report is that the 'use of efficiency comparisons' between the operating units of a large concern is a most effective way of doing this. The idea is clearly a development of a conception of interfirm comparisons which has received so much attention in the last year or two.

The report suggests that efficiency comparisons should cover returns on capital, profits, costs, use of assets, productivity and the factors affecting these different headings. The booklet gives a detailed analysis of these factors and indicates the corresponding 'control' figures which should be compared. The report goes on to say that as well as providing an efficiency control scheme for big companies, the techniques can be used for relatively small ones.

The basic idea is to apply the ratio techniques already widely acceptable by forward-looking managements to help in defining and measuring the 'concept of efficiency'. There is clearly a need for standardization of definitions within the organizations adopting such comparative techniques and the booklet deals with these problems as well.

ADVICE FROM THE PROFESSIONS

A PROPOSAL for the overhaul of Government structure to give professional men a direct voice in government was advocated this week by Mr A. M. Holbein, chairman of the Educational Policy Committee of the City and Guilds of London Institute. He was giving the first of three Cantor lectures on the influence of the professions on economic life before the Royal Society of Arts.

He said that practitioners of science and technology should take part in the preparation of such policy. It was not sufficient to have only a few advisors attached to Government departments. He thought that a supra-organization of professional bodies able to impress upon the Government and the public alike the collective views of the professions should be established.

Mr Holbein was speaking mainly in terms of the engineer but the idea will have some appeal in all professions since it gives particular weight to the influence of the expert.

The idea is a somewhat revolutionary one. It presupposes not only that all professional men and organizations have the time, inclination or capacity to formulate opinions on matters of high policy but that they can formulate a view to which all of the bodies concerned can subscribe. This in itself would be no mean attainment. The amount of time and committee work involved would, however, be enormous. Beyond the problem of getting a common viewpoint from all professions, is the problem of persuading those in power that an expert can take a broad and balanced view because he is an expert. This proposition is by no means self-evident. While there would be agreement in all professions that specialized and expert knowledge and experience provide a basis in giving a professional view, most professional men would agree that their professional background is only an essential starting point, intellectual discipline or body of knowledge which helps them to acquire a broader view when they reach the higher echelons of professional and management work.

The second of the three Cantor lectures is to be given today (Saturday) on 'The scientific professions', and the third on 'The Commercial

professions' will be delivered by Mr A. H. Ensor, a director of Lloyds Bank, on March 5th. Tickets of admission may be obtained from the Secretary of the Royal Society of Arts.

SHIPPING AND THE COMMON MARKET

THE possibility of concerted action against flag discrimination is ventilated in the annual report of the United Kingdom Chamber of Shipping published this week. Having lost any hopes it had of the United Kingdom Government being able to make an effective protest alone, it sees some hope of success in the European Common Market.

If Scandinavia were to come into the E.C.M. along with Britain (bringing with them the substantial mercantile marine of Sweden, Norway and Denmark) the Chamber thinks an effective protest could be organized. Altogether this would bring in thirteen maritime nations to speak with one voice on the subject.

In a debate in the House of Commons last week, the Minister of Transport said that proposals had been worked out for combined action by European shipping nations against United States Governmental interference with foreign shipping operations. The United States practises flag discrimination while refusing to allow other countries to apply discrimination against United States shipping. The proposals for concerted European action are to be placed before a conference in London on March 7th of the maritime powers concerned.

LOSING CONFIDENCE MORE SLOWLY

THE latest inquiry on business sentiment published last week by the Federation of British Industries showed that those replying to the questionnaire were less optimistic about the business situation than they were four months ago, though they felt less strongly about this on balance than on the last occasion. For the first time since October 1958 more firms reported a fall in output than an increase and consistent with this has been a further increase in the number of firms reporting that they are working below full capacity with an easier labour supply. On the other hand there are signs of an improvement both in performance and prospects of the export trade.

A continued fall in investment intentions is showed by replies to questions on authorizations of expenditure on buildings and on plant and machinery. Of those reporting a change in investment intentions there was a balance of 28 per cent in the case of buildings saying that they expected to authorize less expenditure in the next twelve months than in the previous year. In the case of machinery there was a balance of 16 per cent in the same direction. For the first time since the middle of 1959 industrial stocks are being run down. Twenty-nine per cent of firms report that stocks of raw materials have dropped over the past four months and 21 per cent that they have increased. The same trend is apparent in work in progress but stocks of finished goods appear to have continued to increase.

There is continuing evidence that costs have continued to rise and 54 per cent of the replies report that profit margins are lower. In general, shortages of orders or sales are now the main hindrance to an expansion in output. Despite the rise in costs more firms report a fall rather than an increase in the level of prices at which export orders have been booked in the past four months but prices compared with those of competitors abroad continue to be the main factor limiting export business. The continental markets appear to be more buoyant than other export markets.

WIDER E.C.G.D. COVER

IT was announced on Monday that an additional facility is being offered by the Export Credits Guarantee Department to policyholders selling on three or more years' credit.

The percentage of the price covered by E.C.G.D. has been progressively raised to the present level of between 85 and 95 per cent, and already compares favourably with that offered by any credit insurer overseas. In future this percentage may be increased to the full 100 per cent on insured transactions involving three or more years' credit once they have run satisfactorily for two years from date of acceptance. This will apply to existing or future contracts, whether covered under comprehensive or specific policies.

No charge will be made for the extra cover, and the endorsements extending the cover will be issued at E.C.G.D.'s discretion at the two-year point. It is intended to provide the facility – to be known as the Full Percentage Facility – wherever E.C.G.D.'s experience is satisfactory up to that point, both in the relations between buyer and seller and in the Department's general experience in the market concerned. In such cases the exporter will be sure of receiving payment in full, provided that he plays his part in any necessary recovery action if things do go wrong. Markets for which E.C.G.D. is withholding cover on new business or is operating a specially-reduced percentage of cover will be excluded.

It is anticipated that this new facility will be of assistance to exporters obliged to sell on lengthy credit terms, more particularly if they are somewhat pressed for finance. Its application in a particular case will depend, of course, on the form of the arrangements between the individual exporter and his bank for the finance of such business.

CUT IN B.E.A. SERVICES

BRITISH EUROPEAN AIRWAYS anticipate losses on certain routes owing to the increased competition from British independent airlines.

Services to Budapest, Belgrade and Corsica will be affected. On internal lines the frequency of certain

Scottish routes will be reduced, though this will not mean a fall in the capacity available. Orkney, Shetland and North of Scotland will be the main areas affected.

There is a certain time lag in all this. The independent services cannot start until April 1st, 1963, and they are in any case subject to appeal by B.E.A. If B.E.A.'s appeal against the licences given to independent airlines is successful, it will be prepared to reconsider its decision but this reconsideration cannot take effect during the summer of 1962.

If these subsidized services in Scotland are reduced the Corporation will be writing off an investment of about £3 million. There is bound to be an outcry about the cut in the frequency of services in the Highlands, but it may be more to the point in the long run that competition between the public corporation and independent lines may offer a better and cheaper air service between industrial centres in this country and between these centres and corresponding centres on the Continent. The Toothill report on the economic development of Scotland laid great stress on the need to improve communications between the industrial areas of Scotland and those in England and the Continent.

This is My Life . . .

by An Industrious Accountant

CHAPTER 112

MY old friend George came to my office last week. George, it may be remembered, was the able chief accountant who at the ripe age of 47 found himself summarily sacked from his post because he and the new chairman were temperamentally incompatible. It happens more often than is commonly supposed. Most experienced chief accountants are at least as able and keen as their job requires, and are rarely faulted under this heading. They run a far greater risk of disaster due to personality friction. In this case, George's quick reactions and alert energy fell foul of a slow-minded, jealousy-prone introvert. The axe fell ruthlessly; he was out at almost a moment's notice. The chairman probably didn't realize how murderous a sudden dismissal can prove.

George had it tough. The cheque in lieu covered his financial worries fairly adequately; it was the mental strain that wore him down. He first called round to talk to his business friends, and they encouraged him breezily: 'Nothing quite in your line just at the moment, of course; don't find top-level jobs growing on every tree, you know, but it shouldn't be long.' They all promised they'd keep their eyes skinned for him, make inquiries, pass the word around. 'Best of luck now, old chap, good hunting.' His morale had been shaken somewhat; the encouragement was fine; he was to need it as time went on.

He studied the advertisements, too. The leading Sunday newspapers had impressive vacancies, though sales and production types took priority; however, there were a few financial controllers and accountants wanted. *The Accountant*, too, had several pages of vacancies; he wrote hopefully. An epitome of the imposing record of his career was appended to each letter; his achievements were undoubted; he looked a good bet. The trouble was that 'date of birth' item. Should he put it in early and perhaps torpedo his chances right away? Or later, having made a preliminary good impression? You see, most of these adverts said 'age 35–40 preferred', some even mentioned 43 as the upper limit; none looked for a senile 47. . . .

The days went by. Many of his applications were acknowledged with courteous regrets, some few went unanswered; the age figure was the stumbling block. His friends contacted him with suggestions about rumours of various impending vacancies; none of these materialized. In each case a good understudy had been trained up already. George's grin was becoming a little haggard.

The weeks went by. He had interviews where he was promised consideration later, but which led nowhere. The postman's daily delivery became an ordeal as he sifted the letters under his wife's gaze. She smiled bravely, but her face looked strained . . . 'No, darling, nothing this time.' He didn't seem to see a lot of his old associates these days. Some of them didn't stop when they met, either, they just waved; they found it easier that way. He stopped less often himself; it wasn't very pleasant. . . .

I brought him in to talk to our own personnel director, but there was no easy answer. There was simply no vacancy at anything like his level. True, he had received some low-grade offers; but George wasn't keen on taking too junior a post; as he said, it was hardly fair to employers when he fully intended to leave for something better soon . . . or fairly soon. He mightn't have much option before long. Money was getting tight. Being completely out of a job was a disastrous handicap; it carried a stigma in strangers' eyes and every week made it worse. 'Pension complications, you know, old chap . . . not quite fair to our present staff . . . nearly 48, eh? H'm.' Two senior interviewers I know told me bluntly that if George was appointed he'd be a potential rival for their own jobs; self-preservation was the first law of nature. Soon he was looking more than his age; hope deferred maketh the heart sick.

Now, however, things have changed, he told me, and he's more cheerful. He's landed a good job at last. Though, as he said, it's a pity it had to be so far abroad; but 48, he remarked philosophically, is apparently too old to start again at home.

Finance and Commerce

A.B.E.

THIS week's reprint is from the first accounts of Associated British Engineering Ltd to be issued since the appointment to the board on June 5th, 1961, of Mr S. R. Hogg, D.S.O., M.C., F.C.A., who was at once made chairman. The accounts, it will be noted, are to March 31st, 1961, the annual meeting at which they were presented being held on February 14th, last. The board regrets the delay which, Mr Hogg explains, was occasioned entirely by the need to deal with a number of complicated matters arising from the reorganization.

'It will be understood', he says, 'that to present accounts in which many matters still required to be adjusted and finalized to march in line with the actual current position would have been of little value and might well have, in fact, been misleading.' The delays and the reasons for them have been reported by the company's solicitors to the Board of Trade.

An idea of the difficulties is conveyed by one of Mr Hogg's references to Free Piston Engine Co Ltd, a member of the A.B.E. Group. The financial position of A.B.E. was complicated by an unagreed current account with Free Piston for work done, partly unpaid. This has now been taken care of in the reorganization and as regards the amount of the items in dispute, both companies have agreed to accept Mr Hogg's decision. 'I am accordingly engaged in an arbitration,' Mr Hogg says.

Minimum of Loss

Apart from the general reorganization of the group, Mr Hogg's particular concern is to 'extricate the Free Piston Engine Co from the present unsatisfactory position with a minimum of loss'. Free Piston holds patent rights under a licence granted by a United Kingdom company which, in turn, holds them from a French company. But, says Mr Hogg, 'the way of the pioneer is always hard'. There were neither the resources, technical skill nor experienced staff to cope with early troubles.

Free Piston's principal outstanding business is a contract, approaching £2 million, involving the supply of a 36-megawatt electricity generating plant for a Singapore power station – the largest free piston installation in the world. 'Technical difficulties have become immense' and it is from this position that Mr Hogg is endeavouring to extricate the company.

Losses 'taken care of', he points out, amount to £248,748. 'These losses really arise because the acquisition of manufacturing and installation techniques has proved more costly than was anticipated, and design changes have seriously delayed the completion of the contract.' What the final loss will be must, of course, await events.

Reorganization

Action in the reorganization has included the recent sale of the company's holding of 200,000 7 per cent preference shares in Henry Meadows Ltd for £40,000 cash. These shares stood in the accounts at *nil* but 'in order that the balance sheet may be as up to date as possible, credit has been taken by revaluing the investment at £40,000, since converted into cash'.

Further action to keep the company afloat was the recent public offer of the preference and ordinary shares of The Bergius-Kelvin Co Ltd, 'in every respect a sound and profitable undertaking' – with priority for Associated British shareholders in the allotment. This brought £300,000 into the coffers of the parent company and the money has provided working capital for other subsidiaries or has enabled them to meet liabilities which had to be paid to keep them in business. It has also provided a reserve for interest and parent day-to-day running.

What of the future? 'As I see it,' says Mr Hogg, 'in about eight months' time, when some assessment can be made as to the profits which may be expected for 1962–63 onward, in total, from the group, and in detail as to dividends which could be paid to the parent company by the subsidiaries, it is contemplated that there should be a scheme of arrangement, writing down the ordinary capital from 5*s* units to, say, 2*s* or 2*s* 6*d* units, this being the only way in which the issued share capital can be brought into line with the capital actually employed in the group.'

Woolworth Turnover

'TURNOVER for the year proved to be a new record in the history of the company', states Mr F. I. Chaplin, new chairman of F. W. Woolworth & Co Ltd. What the figure was, however, is not stated. This defect gave one of the national dailies its main City column headline for the day. Comparison was made with other leading companies that do provide a sales figure and, not least, with the American Woolworth parent.

It does look rather curious to see the president and executive vice-president of the American Woolworth on this board giving approval to accounts which in their own country positively would not do. Maybe it is a case of when in Britain, doing as Britain does. Many British companies, however, are taking the initiative in publishing sales figures, among them, Marks & Spencer. It ill becomes Woolworth to be out of the running.

Mr Chaplin remarks on the presentation of the consolidated profit and loss account this year in columnar form. He hopes that 'this more simple way of showing the various figures will appeal to you'. The first consideration in company reporting is the extent of the information provided and there is now not the slightest doubt that the public mind in the world of investment expects a turnover figure. As with other accounting advances which this journal has encouraged and recorded, the commonplace publication of turnover figures will come.

Statement 1

CONSOLIDATED PROFIT AND LOSS ACCOUNT

for the year ended 31st March, 1961

CONSOLIDATED APROPRIATION ACCOUNT

for the year ended 31st March, 1961

Statement 2

NOTES ON THE ACCOUNTS

Annexed as a Statement to be read in conjunction with the Accounts.

1. CAPITAL RESERVE (Statements 2, 3 and 4)

The movements during the year have been as follows:—

	Group £	*Holding Company* £
Balances as at 1st April, 1960	86,034	86,034
Add: Surplus on sale of fixed assets	15,939	—
Surplus on revaluation of unquoted Trade Investment	40,000	40,000
	141,973	126,034
Less: Provision to cover anticipated losses on realisation of fixed assets	12,558	12,558
	129,415	113,476
Less: Transfer to Profit and Loss Account	129,415	113,476
Balances as at 31st March, 1961	—	—

2. CAPITAL COMMITMENTS (Statement 3)

At 31st March, 1961, there were contracts outstanding of a capital nature amounting to approximately £12,500 (*1960: £21,500*) for which no provisions have been made in these Accounts.

3. PREFERENCE DIVIDEND (Statements 2, 3 and 4)

The dividend on the Preference shares for the half-year to 31st March, 1961, amounting to £15,000 (gross) was in arrears at 31st March, 1961.

4. CONTINGENT LIABILITIES (Statements 3 and 4)

(a) The contingent liabilities at 31st March, 1961, were as follows:—

(i) Group £86,710 (*1960: £75,117*), in respect of bills discounted and bank guarantees.

(ii) Holding Company £132,848 (*1960: £80,144*), mainly covering guarantees given on behalf of subsidiary companies in respect of bank overdraft facilities and commercial contracts.

(iii) Since 31st March, 1961, a guarantee up to £85,000 has been given by the Holding Company to the City Council of Singapore in respect of the completion of a contract by Free Piston Engine Company Ltd.

(b) No provision was considered necessary for the contingent liability of a subsidiary company under a substantial contract which is not yet completed.

5. DOMINION CURRENCY (Statements 1, 2, 3 and 5)

The rates of exchange for the Canadian Company and for the African Companies have been taken at the rates ruling at the date of acquisition of the fixed assets, and at the rates ruling on 31st March, 1961, for current assets.

6. These Accounts cover trading for 52 weeks (*1960: 53 weeks*).

CITY NOTES

AGAINST a none too impressive background of economic, industrial and political developments the stock markets continue to hold up reasonably well. The Federation of British Industries' none too optimistic industrial survey and the news of sharply reduced earnings by a number of big-name industrial companies have been virtually brushed aside by an equity market which investors consider has discounted the worst.

It is even becoming fashionable to compare the current pitch of markets with that ruling in 1957 with the comforting reminder that 1957 was followed by recovery in 1958 and boom in 1959. The 1959 boom was politically influenced by the General Election and there is a tendency to look for a repetition of 1958 and 1959 this year and next, or the year after.

History, however, rarely repeats itself accurately in stock markets and underlying conditions now are rather different from those ruling in 1957. The ordinary investor, all the same, is rarely a seller. He prefers to hold on optimistically even though on the face of things optimism seems hard to justify.

This investment stoicism combined with steady buying by unit trusts, which continue to pull in small investment funds on an impressive scale, provide the combination which tends to keep the equity markets on a relatively even keel.

This side of the Budget the development of any firm trend one way or the other seems unlikely. A continued equity mark-time is probable over the next few weeks.

The Training of Accountants

SIR, – Whatever improvements are made by the Council of the Institute, it is highly probable that the major ones will be long-term. Would it not be a good thing to set up as soon as possible an *Education* Committee replacing the presentation Examinations Committee? The latter has a somewhat narrow and specialized implication.

Such an Education Committee could formulate a policy or programme of advance for implementation as circumstances allowed. Its outlook would not be restricted to half a year at a time as, with the best will in the world, must largely be the case at the moment. And it could be broadly based to include, by co-option, educationists and others as well as Council members.

Yours faithfully,

DONALD COUSINS.

Solihull, Warwicks.

SIR, – I was very interested in the article reproduced in your issue of February 10th, with regard to the training of accountants, and your suggestion elsewhere in your issue that readers may like to comment on this.

I, no doubt along with many other practising accountants, feel that the existing arrangements for the training of accountants are quite inadequate and out of date, and fresh thinking is urgently required.

However, there is one point which I would particularly like to draw attention to; in the article which you printed appears the sentence:

> 'Higher education was becoming no longer the preserve of money and privilege, but the right of all those who could benefit from it, and State aid was available for those who wanted to stay on to the sixth form and to go to university'.

I think a great disservice would be done if it were to be indicated to hundreds of students that they had the opportunity of a university training as part of their training for the career of accountant. At the present time the universities are able to accept only about one-fifth of the applications for places, although the majority of the applicants are well qualified for university life.

It should therefore be made perfectly clear that whilst this is a very desirable ultimate aim, at the present time it is not a practicable possibility.

Yours faithfully,

J. G. MEDCALF, F.C.A.

Peterborough.

SIR, – I am now 75 years of age and having retired I hope I shall not be accused of advertising or of grinding a personal axe. When I first completed the manuscript of *Higher Control* in 1934 and sent it to the publishers, their manager came over to my office to discuss it. He said, 'This is a very interesting book, Mr Rose, but I cannot quite make out what it is supposed to be about.' To remedy this somewhat drastic criticism, I wrote the chapter on the discussion between Mr Thomas, a fictitious consultant, and Mr Robinson, his client, in which Mr Thomas took Mr Robinson's normal accounts to pieces and rearranged them on the control basis, so that the latter could see what was going on. This satisfied the publishing manager and the chapter has been a feature of the book all through its six editions.

When I started to revise the text for the seventh edition, I wondered whether this imaginary interview was not now out of date, and I took the advice of a number of friends as to whether it should be dropped. One or two suggested putting it into an appendix, but the general opinion was that it should be kept in. Whilst I was making up my mind, however, I received a letter from the owner-manager of a small business in a university town in the Midlands, saying that he was in difficulties and asking for advice. He enclosed his previous year's accounts, audited by a local firm of accountants. On examining these, I found that apart from the actual figures – naturally – they were identical in every respect in their lay-out with the original accounts of 'Mr Robinson' twenty-seven years ago. The same combinations which had to be sorted out, the same block assembly of expenses with no reference to categories, the same 'set-offs', the same item of 'wages' with direct, indirect and supervision all lumped together, in fact, everything upon which 'Mr Thomas' had commented unfavourably to 'Mr Robinson'. This is just one example from my experience.

What is the reason for this extraordinarily stubborn conservatism in the accountancy profession? Other callings progress – they search for new and better methods in their services and pride themselves on using the most up-to-date equipment and methods. What would one think of a doctor or a production engineer who still clung to the practices of thirty years ago? Yet the accountant, in whose hands lie the most important findings of the state of health of a business, still receives his training and is examined on the old stereotyped lines of a generation or two ago.

I know that efforts have been made to overcome this – as witness *Design of Accounts*, by F. Sewell Bray and H. L. Sheasby, which was published in 1943. I know that many of the larger firms using modern management methods have accounts which are admirably presented; but the point is that 89·4 per cent of the industrial undertakings in this country employ less than 250 people, and this vast reservoir of national prosperity is fed with accountants who have taken their qualifications with their training based upon methods of presentation of thirty or more years ago. It is fantastic.

It is not enough to point to the beautiful accounts which receive *The Accountant* Annual Awards; the companies concerned have developed their better methods on their own. It is on the basic training of the young accountant of today that the blame lies, and until the examinations for students of accountancy are completely overhauled and brought up to the requirements of modern industry and commerce there will never be any improvement.

It is a matter which ought to be faced for the honour of the profession. We talk glibly of improving industrial efficiency, but the profession which can do most to promote that efficiency apparently remains aloof and uninterested.

No matter how sound the basic principles of the system of accountancy training may be, they do not include at present any modern methods of presenting the final results to the managing director who urgently needs them for his general management policies. There must be at least fifteen young accountants who pass into industry or commerce for every one who joins a private auditing firm. Yet these young men have had no training in modern methods of presentation or the inferences to be drawn from what the figures show.

When will the accounting profession wake up to its responsibilities?

Yours faithfully,

T. G. ROSE.

Canterbury.

MORE HIGH QUALITY RECRUITS NEEDED

Lord Piercy's Comments at Cardiff Dinner

The South Wales and Monmouthshire Society of Chartered Accountants held their annual dinner at the Park Hotel, Cardiff, on February 16th and among the guests were the Rt Hon. Lord Piercy, C.B.E., Chairman, Industrial Finance Corporation Ltd; Mr P. F. Granger, F.C.A., President of The Institute of Chartered Accountants in England and Wales; the Lord Mayor of Cardiff, Alderman E. Ewart Pearce, M.B.E., F.C.A., J.P., and the Archbishop of Wales, Dr A. E. Morris. Mr Edgar T. Shepherd, F.C.A., President of the Society, was in the chair.

Lord Piercy proposed the toast of 'The Institute of Chartered Accountants in England and Wales', and stressed the need for more high quality recruits in the accountancy profession. 'With the profession being of such importance to the public and business life of the nation today, recruitment is a very important matter', he said.

What was essential was that the profession should have at least its fair share of men of intellect and confidence. Accountancy was not an overcrowded profession and men of the right type were scarce.

Recalling the history of the Institute, Lord Piercy said that men of the profession today had to be something of experts on company law and taxes. In the 1880s came the limited liability company and this brought into the work of the accountant a public aspect which was of the greatest importance. It was then that the accountant became the auditor, Lord Piercy added.

'Members at the Heart of Things'

Replying, Mr Granger referred to the modern world, where the pace of life had quickened and where the boundaries of knowledge were expanding every day.

It was the fortune of members of the Institute he said, to be at the heart of things, whether they were in practice in a large or small way, or employed in a large or small firm.

'Ultimately most business and professional activities end up in some sort of record of value. One of the problems besetting us today is that the symbols of value remain the same but the value tends to depreciate year by year; and of such is inflation.

'One of the queerest and most human aspects of inflation lies in the desire of almost all of us for more, even though when we get more we are no better off. The number of pound notes is vital but what they buy less important. It is a pity we cannot put this into reverse.'

The job today of members of the Institute, he declared, wherever they were and whatever they did, was to ensure the accuracy of the records. 'We are, if I may say so, dedicated to the true and fair view of the activities from which the records spring.'

This meant that, in preparing or auditing accounts for the shareholder or for the Revenue those accounts must be as accurate as they could be made, and must also give a proper view or impression in the mind of the reader.

Mr Granger suggested that this approach also applied to the many members of the Institute in industry. It was their job in whatever capacity they were serving to ensure that records, whether for boards of directors or for costing departments, were as accurate and correct as possible.

'There are certain items, such as stock valuation and so on, on which there can be wide differences of opinion about the proper valuation and treatment.

'There is also the underlying effect of inflation. I am stressing these matters because the increasing complexity of the affairs of this life, and the possibility of the Common Market, make it essential that we should know what we are doing and where we are going.'

The Parker Report

In recent months, said Mr Granger, there had been excitements at the Institute, and included among them had been the report on education and training for the profession, commonly known after its distinguished chairman as the Parker Report.

Mr Granger said the committee sat for some time and consulted many people before coming to its conclusions, some of which contained contentious matters. He went on:

'The report is now being considered and I cannot anticipate the conclusions of the Council, but speaking in my personal capacity I will say that there is in my own opinion no real substance in the view that we as a profession do not welcome university graduates.

'We want as many of the able young men and women from or through the universities as we can get. Obviously a profession as important as ours needs a constant recruitment of the best; and it must be remembered that when we recruit, we are not only producing members for practice but also in very large numbers for industry.

'We have recently appointed a committee to consider our relations and so on with the universities, and I have great hopes that good will come from its activities.'

Mr Granger said the various district societies were now sending in their reports on the small practitioner inquiry, and the report of the South Wales and Monmouthshire Society was included.

He thanked Mr Edgar T. Shepherd and his team, including in particular Mr Wilfred Jones, of Swansea, for all the care and trouble they had taken. He could not yet say anything about the findings but details would come in due course. The President added:

'All I can say is how grateful I am to the district societies for all the trouble that has been taken. I think that whatever happens as a result of the inquiry we shall all have learnt a lot about each other, and we shall have a better idea of each other's problems.'

Mr Shepherd proposed the toast of 'The Guests', and this was replied to by the Lord Mayor of Cardiff, Alderman E. Ewart Pearce.

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

President's Luncheon

The President of the Institute, Mr Paul F. Granger, F.C.A., and the Vice-President, Mr Percy F. Carpenter, F.C.A., gave a luncheon party on Thursday, February 15th, at the Dorchester Hotel. The guests were: Mr F. J. Erroll, M.P., Mr Arthur J. Driver, Mr V. C. Ellison, Mr Peter S. Noble, Sir Thomas Padmore, Mr C. R. Sopwith, Mr Charles Peat, Sir Harold Gillett, Mr Guy Densem and Mr Alan S. MacIver.

PROFESSIONAL NOTICES

MESSRS H. F. ADAMS & Co, Chartered Accountants, of Dilworth House, 190 Broad Street, Birmingham 15, announce that Mr D. C. BENNETT, A.C.A., and Mr A. I. SECKER, A.C.A., both of whom have been with the firm for some time have been admitted into partnership as from November 1st, 1961. The firm's name will remain unchanged.

MR C. P. PERRIAM, A.C.A., announces that he is continuing the practice of A. L. & S. HONEY, Chartered Accountants, of 3 Palace Gate, Exeter, previously carried on by the late MR W. N. HOYTE, F.C.A. The style of the firm will remain unchanged.

MESSRS E. WOOLLEY & Co, Chartered Accountants, of Dilworth House, 190 Broad Street, Birmingham 15, announce that Mr D. C. BENNETT, A.C.A., and Mr A. I. SECKER, A.C.A., both of whom have been with the firm for some time, have been admitted into partnership as from November 1st, 1961. The firm's name will remain unchanged.

Appointments

Sir Harold Gillett, Bt, M.C., F.C.A., has been appointed a director and chairman of the Clydesdale Supply Co Ltd, with effect from January 26th, 1962.

Mr John C. Burgess, M.A., F.C.A., has been elected chairman of David Bridge & Co Ltd.

Mr J. R. Charlton, F.C.A., A.C.W.A., has been appointed a director of Vickers Sperry Rand Ltd, while retaining his position as secretary and controller of the company.

Mr Eric Holt, F.A.C.C.A., A.C.I.S., has been appointed to the main board of Dunlop Rubber Co Ltd.

Mr K. R. Kemp, F.C.A., secretary of Smith & Nephew Associated Companies Ltd, has been appointed to the board of the company.

Mr E. G. Padmore, F.C.A., secretary of Pool, Lorrimer & Tabberer Ltd, has been appointed a director of the company.

Mr W. G. A. Russell, F.C.A., has been appointed deputy chairman of Harris & Sheldon (Holdings) Ltd.

Mr John W. Tidswell, F.C.A., has been appointed a director of George Bray & Co Ltd.

Mr K. T. Roberts, A.C.A., secretary of Eugene Ltd, has been appointed a director of the company.

IN PARLIAMENT

Trustee Investments Act: section 15

Mr STRATTON MILLS asked the Chancellor of the Exchequer what action he proposes to take following the two recent judicial interpretations of section 15 of the Trustee Investments Act, in the cases of *In re Kolb's Will Trusts* and *In re Porritt's Will Trusts* on the subject of investment, to clarify the position.

Sir E. BOYLE: I understand that an appeal is being made in one of these cases. It would, therefore, be premature for me to comment.

Mr STRATTON MILLS: Does not the Chancellor consider that the judgment of the judges in both these cases, in spite of what my right hon. and learned friend has said, have taken a rather limited view of the Variation of Trusts Act, 1958, despite the assurance given in Committee on the Trustees Investment Bill by the former Solicitor-General?

Sir E. BOYLE: I know that a great deal of concern is felt about this matter. I think that at the present time it would be premature for me to comment, as I have said.

Hansard, Feb. 13th, 1962. Oral Answers, col. 1101.

Schedule A

Mr W. CLARK asked the Chancellor of the Exchequer what has been the product of Schedule A income tax on owner-occupiers for the last five years.

Mr BARBER: The yield of Schedule A on owner-occupiers for the five years 1956–57 to 1960–61 is now estimated as £49 million, £51 million, £52 million, £50 million and £52 million respectively. These figures include surtax.

Mr W. CLARK asked the Chancellor of the Exchequer if the first £15 of net annual value for owner-occupiers had been exempted, by what amount the product of Schedule A would have been reduced for each of the past five years.

Mr BARBER: About £20–£25 million in each year.

Mr W. CLARK asked the Chancellor of the Exchequer if the statutory repairs allowance for owner-occupiers had been double, by what amount the product of Schedule A would have been reduced for each of the past five years.

Mr BARBER: About £12 million each year.

Hansard, Feb. 13th, 1962. Written Answers, col. 1253.

ASSISTANT OFFICIAL RECEIVER APPOINTMENT

The Board of Trade announce that Mr Dennis Eric Dolman has been appointed an Assistant Official Receiver for the Bankruptcy District of the County Courts of Cardiff and Barry, Blackwood, Tredegar and Abertillery, Newport (Mon.), Pontypridd and Ystrady-fodwg and the Bankruptcy District of the County Courts of Swansea, Aberdare, Aberystwyth, Bridgend, Carmarthen, Haverfordwest, Merthyr Tidfyl, Neath and Port Talbot. The appointment took effect on February 1st, 1962.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

List of Members

The newly published *List of Members* of The Association of Certified and Corporate Accountants shows that membership of the Association at November 30th, 1961, numbered 11,006.

In addition to the usual alphabetical and topographical lists of members the new edition, which extends to 657 pages, contains a supplementary section which gives full particulars of members admitted to the Association in October and November 1961. The names of the Council and committees are also given, together with information about the district societies and student societies, and particulars of objects, examinations, membership, etc., of the Association.

LIVERPOOL SOCIETY OF CHARTERED ACCOUNTANTS

Intermediate Prize

The Committee of the Liverpool Society of Chartered Accountants announces that its Intermediate Prize will be awarded to the candidate who, being a member of the Liverpool Chartered Accountant Students' Association or any one of its constituent branches, gains the highest place in the Institute's Intermediate examination held in November last. The prize will take the form of a book to be chosen by the President of the Society.

It is the responsibility of the student to apply for the prize. Applications should state the position gained in the examination and should be sent to the Hon. Secretary, The Liverpool Society of Chartered Accountants, B22 The Temple, Dale Street, Liverpool 2, within two calendar months after the announcement of the results of the examination.

READING AND DISTRICT GROUP OF CHARTERED ACCOUNTANTS

Luncheon Meeting

The annual luncheon of the Reading and District Group of Chartered Accountants is to be held on March 20th, at the Caversham Bridge Hotel at 1 p.m. The guest of honour will be the Deputy Lieutenant of the Royal County of Berkshire, Lieut-Gen. Sir Miles Dempsey, G.B.E., K.C.B., D.S.O., M.C., who will reply to the toast of 'The Guests'.

The Hon. Secretary of the group is Mr D. J. L. Cook, A.C.A., 2 Waverley Court, Southcote Road, Reading.

BELFAST SOCIETY OF CHARTERED ACCOUNTANTS

At a recent meeting of the Students' Group of the Belfast Society of Chartered Accountants, Dr William McComish, PH.D., M.SC.(ECON.), B.COMM., Senior Lecturer in the Department of Industrial Administration and Work Study of the Belfast College of Technology, spoke on the subject 'Work study and the accountant'.

NEW HIGHER AWARD IN BUSINESS STUDIES

New advanced full-time and sandwich courses for young people aiming at a business career are to be introduced in colleges of commerce and other technical colleges next September.

In an administrative memorandum issued on Friday of last week, the Minister of Education gave details of a Higher National Diploma in Business Studies to be awarded for the successful completion of a two-year full-time or three-year sandwich course; the decision to introduce the new diploma was announced by the Minister last July. The courses are intended for young men and women of 18 or over who already hold an Ordinary National Certificate or Diploma in the subject, or who have left school with the G.C.E. at advanced level. The standard reached at the end of the courses will approach that of a university pass degree.

The arrangements now announced allow colleges wide freedom in framing their schemes for the courses. They can make the course a general business one if local needs would be better served in that way, but they are also free to make a particular branch or aspect of business the main theme of the course.

The courses can be arranged so as to allow ample time for the study of commercially useful foreign languages, a point of particular importance for the export trade. It is also hoped that business firms with overseas branches or other overseas connections will make it possible for their student employees taking the course to acquire some of their associated practical experience with organizations abroad.

The announcement of these new courses means that a wide range of part-time, full-time and sandwich courses leading to ordinary and higher national awards is now available. The other courses within the range were introduced in the colleges last September, and there has been an encouraging response to them. Figures for actual enrolments are not yet available, but 128 Higher National Certificate courses, 308 Ordinary National Certificate courses, and 110 Ordinary National Diploma courses were offered by 220 colleges during the session.

Many leading professional bodies have signified their willingness to grant exemption from certain of their own examination requirements to holders of the

new awards. At present, The Association of Certified and Corporate Accountants, The Institute of Cost and Works Accountants and The Chartered Institute of Secretaries are among the bodies granting exemption for certain Intermediate examination subjects for holders of Ordinary National Certificates or Ordinary National Diplomas.

THE BRITISH COUNCIL
Annual Report

The annual report of The British Council contains a comprehensive account of the Council's work during 1960–61. Total expenditure amounted to £6,372,500 compared with £5,868,000 in 1959–60.

An analysis of the Council's estimates and accounts shows that gross expenditure on overseas regional services totalled £2,968,768 (£2,478,591), home regional services £940,546 (£846,789), and educational services £498,285 (£482,921). During the year under review, the Council administered the expenditure of £977,000 on behalf of trainees under the Colombo Plan and other technical assistance schemes.

Under the United States Third Country Training Scheme, for which the Council is the national supervising agency, 253 overseas visitors came to the United Kingdom from twenty-three countries including four teams sent by the Indian Productivity Council, to study cost accounting (*The Accountant*, October 8th, 1960). The Council's specialist courses, the report states, continue to remain popular in subjects such as taxation and the City of London.

THE BRITISH COMPUTER SOCIETY

The next two meetings of The British Computer Society will be held on February 27th and March 21st. The first meeting has been designed to illustrate and discuss the activities of the Society's study groups and reports will be made on 'Study groups in general'; 'Input and output'; 'Production control' and 'Advanced programming'. At the meeting on March 21st, Dr D. J. Howarth, of Ferranti Ltd, will give an address on 'The Atlas supervisor' which will be an account of an improved type of master programme.

A two-day conference organized jointly with The Northampton College of Advanced Technology on 'Automation programming languages: current experiences and future prospects' will be held from April 17th–18th. Further particulars may be obtained from the secretary, The British Computer Society, Finsbury Court, Finsbury Pavement, London EC2.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

Results of Examinations held in December 1961

FINAL EXAMINATION

PARTS A and B

First Place (S. Laurence Gill Prize): Klage, G. C. W., London

Aiyar, V. P. A., Hayes, Middx
Cartwright, D. B., Castle Bromwich
Chadha, S. N., Birmingham
Dempster, J. H., Stoke-on-Trent
Fortes, H. J., Cape Town
Hayward, R. F., Pinner, Middx
Holroyd, J., Pinner, Middx

Essentials of Exporting

WHENEVER Britain's export performance comes up for its perennial public airing, there is almost certain to be a host of voices raised in favour of special export incentives as the only sure remedy for improving the country's share of world trade in manufactures. Manufacturers and traders often complain that under conditions of high taxation at home and intense competition abroad there is little commercial inducement to brave markets in other countries in face of the complications and hazards inseparable from export trade.

Indeed, most of the arguments in favour of subsidies in Britain arise from a belief that British exporters are already at a substantial disadvantage, *vis-à-vis* other countries, when it comes to fiscal incentives, specially favourable credit facilities or other kindred encouragements. The question remains, therefore, whether this is a true picture of the situation today and whether the sort of export incentives employed overseas are so lacking in Britain as to defeat all but the most single-minded and altruistic of manufacturers?

It is comforting to learn from a recent report published by the Federation of British Industries[1], that most of these allegations are either completely out of date or exaggerate the real facts.

The working party which produced the report was set up in October 1961, under the chairmanship of SIR ARCHIBALD FORBES, G.B.E., C.A., together with nineteen other members representative of a wide range of industrial and commercial activity (among them two other chartered accountants, MR C. D. HELLYAR, F.C.A., and MR N. G LANCASTER, F.C.A.) to consider the whole question of 'special' incentives to exporters. In their considered view:

> 'the primary solution to this country's export problem lies in the pursuit of sound and stable policies for the economy as a whole'.

The agitation for special incentives to export would lose much of its force if trade in general could be carried on in a climate where the conduct of commerce was less subject to constant and disturbing alterations of policy in regard to the extent of capital investment and the level of home demand, quite apart from the imposition of a high rate of taxation and high interest rates. Each time the country runs into balance of payments difficulties, resort is made to measures designed to restrict internal investment and consumption – measures which must inevitably react to the detriment of exports by curtailing the necessary base of domestic trade and increasing the cost of exports. It is far more important to create the right climate in which commerce as a whole can flourish than to give marginal inducements specifically directed at exports.

[1] *Export Incentives.* F.B.I., 21 Tothill Street, London SW1. Price 10s.

Nevertheless, the question does arise whether incentives directed at the expansion of exports (as opposed to those aimed only at increasing export margins) would be feasible, either as a temporary palliative or long-term solution. Although there is something to be said in favour of this course, the weight of argument against is far too strong. Moreover, there remains the overriding consideration that subsidies invite retaliation, and in a competitive race of this sort Britain has more to lose than the majority of her competitors because the proportion of exports to the gross national product is unusually high.

When in 1952, against a similar background to that prevailing today, the F.B.I. set up a working party to consider the use of special export incentives in international trade, the policy of the Government was to seek the abolition of these practices. By 1961, the campaign had achieved a wide measure of success and the array of such practices which faced British exporters in 1952 had greatly diminished. The original G.A.T.T. agreements grew out of negotiations between the F.B.I. and the industrial bodies of other countries. Now, the F.B.I. again intend to approach their European counterparts with a view to limiting or abolishing the few isolated cases of Government financed export incentives in use overseas.

Nowadays, the real problem concerns the type of 'incentives' which are not banned by international agreement; these arise mainly in the spheres of credit facilities and indirect taxation. In the field of credit, the working party felt that recent improvements in the availability and rate of medium- and long-term credit has left the British exporter as well off as his competitors, except in Japan and Italy, where exporters benefit from a Government subsidized rate. As far as short-term credit is concerned, however, where the rate is still tied closely to Bank rate, British exporters may be at some disadvantage.

As for taxation, it is very difficult to judge the relative position of British and foreign exporters owing to the wide variation in the fiscal systems operating in different countries, but so far as the working party could judge:

> 'no country which is a party to the main G.A.T.T. declaration gives any subsidy by way of a remission of direct taxes or social charges calculated in relation to exports'.

On the other hand, nearly every country (including the United Kingdom) does grant exemption from, or allows a refund of certain indirect taxes in relation to exports. It is therefore necessary to consider both the ratio of direct to indirect taxation and the relative extent of exemption or remission of the latter. It is possible that the form and range of the indirect taxes in force here may react to the detriment of British exporters and the working party recommends an urgent study of the fiscal system at Government level, having due regard to the question of the harmonization of the United Kingdom tax system with those of the Common Market countries.

One other important tax anomaly concerns the treatment of foreign earnings through a branch or subsidiary. If the overseas profits of United Kingdom companies were given comparable treatment with those earned by companies domiciled elsewhere, there would be an incentive to remit these profits; the balance of payments would be improved and the opportunities for profitable reinvestment would be increased. Although the formation of an overseas trade corporation can overcome some of these disadvantages, such a company must fulfill a number of stringent requirements, and the working party comments:

> 'In any event a United Kingdom parent company trading overseas through non-resident subsidiaries cannot qualify as an O.T.C. As modern trading conditions often require that overseas trading should be conducted by subsidiaries formed under the law of the country concerned, the O.T.C. legislation tends to encourage an obsolete form of organization.'

There is obviously room for some urgent re-examination of the position in case British exporters are being positively impeded in their efforts to open up foreign markets.

It is often true that profitability is lower in the export field, but as SIR NORMAN KIPPING observed recently to members of the F.B.I. in Scotland:

> '. . . industrialists have to look at their profitability over the whole field, home and export. An outcry for export incentives is really a call for artificial means of making the export trade more profitable or, if you like, easier'.

So long as British traders are evenly matched with their competitors overseas, then export business must be sought and cultivated for its own sake instead of being treated as a temporary substitute for an otherwise buoyant home market.

The Distribution of Capital Profits

by M. J. GREENER, B.A., A.C.A.
Lecturer in Accounting, Staffordshire College of Commerce

IT has for some time been the textbook opinion within the accountancy profession that a surplus arising within a company from a revaluation of fixed assets could not be distributed as a profit unless:

(*a*) the articles of the company permitted;

(*b*) the surplus remained after the proper revaluation of all assets; and

(*c*) the surplus was realized.

This opinion was founded on the series of cases including *Lubbock v. British Bank of South America Ltd* (1892) and leading up to *Foster v. The New Trinidad Lake Asphalte Co Ltd* (1900) in which case Mr Justice Byrne said:

> 'It is clear I think that an appreciation in total value of capital assets, if duly realized by sale or getting in of some portion of such assets, may in a proper case be treated as available for purposes of dividend. Accretions to capital may be realized and turned into money which may be divided among the shareholders.'

Distribution of 'Surplus'

Now the *Trinidad* case concerned a surplus which had in fact been realized. It was a matter of whether the company could distribute that surplus among its shareholders. The Court decided that it could. The question that naturally arises is this: suppose the surplus, being a genuine surplus, had not in fact been realized, but suppose that the company found itself in possession of liquid funds in excess of its immediate requirements, could it then distribute those funds in reduction of the capital surplus?

The accountant, prudently interpreting Byrne, J.'s, judgment in its broadest sense, has hitherto answered, 'No'. This attitude was given support in the Scottish case of *Westburn Sugar Refineries Ltd v. C.I.R.* (39 A.T.C. 128; 39 T.C. 4) when the Lord President (Lord Clyde) said:

> '. . . particularly in the case of an appreciation which is neither realized nor immediately realizable it would be illegal to distribute the surplus . . .'

and Lord Sorn:

> '. . . in my view capital profits are not distributable until they are realized . . .'.

Such statements seem to forbid further discussion. However, the company in this case was not proposing to distribute an unrealized surplus in the form of a cash dividend and so, to that extent, the particular issue did not arise. Be that as it may, a certain note of doubt as to the precise legal position has recently insinuated itself into the more important textbooks. In the tenth edition of *Ranking & Spicer's Company Law* (on which accountancy students seem so much to rely) we find that condition (*b*) in the first paragraph of this article has been amended to read:

> '. . . it is actually realized in cash or (semble) is readily realizable'.

No reason is given for this shift in emphasis though it may have been introduced as a result of the qualification added by Lord Clyde as stated above. In any event it is in line with the views expressed in the twentieth edition of *Palmer's Company Law*, pages 645 – 646.

> 'accretions to capital not realized but immediately realizable and proved to exist can apparently be brought in as profits but this seems never to have been expressly authorized and is subject to the risk of the revaluation being mistaken . . . (and, in practice) . . . the transfer of the net surplus to the "profit and loss" account will be admissible only in extreme cases and that, even then, it is highly undesirable.'

This seems to suggest that were a company, with liquid assets available, to revalue its assets and thereby disclose a surplus being an accretion to capital, then it could use those funds to distribute the surplus provided the surplus itself was 'immediately realizable'.

Meaning of 'Immediately Realizable'

Much seems to turn on the meaning of the phrase 'immediately realizable'. It is a strange phrase and the more it is examined the more transparent it becomes. Do we assume that the assets in question must be surplus to present needs and therefore theoretically available for immediate realization, or, on the other hand, do we argue that any asset for which a market exists is, to that extent, 'immediately realizable', whether or not the company can afford to release

it from its present use. Until we can answer this question satisfactorily the views contained in *Palmer*, although interesting, cannot be considered altogether helpful.

It is worth noting that the editors of *Palmer*, even in suggesting the legality of a cash dividend, did add that it would be 'highly undesirable'. They went further, saying that:

> '. . . only in most exceptional cases in which no doubt exists on the permanent character of the accretion . . . would the transfer of the net surplus to the profit and loss account and its distribution as dividend appear to be admissible, although, even in these cases, it would be an undesirable course to adopt'.

Buckley, J., in the *Dimbula Valley* case, to which we shall presently refer, was similarly to invoke commercial wisdom. Such warnings are welcome, but from the point of view of the accountant, they are not always relevant for in the role of company auditor, he is concerned with what is legal far more than with what is wise.

New Opinion

Expressed in this way the position seemed far from satisfactory. Then came the case of *Dimbula Valley (Ceylon) Tea Co Ltd v. Laurie* ([1961] 1 All E.R. 769) and a wealth of new opinion. The facts of the case are briefly these. The company, having revalued its assets, proposed to capitalize the resultant surplus and issue bonus shares to the ordinary shareholders. The question was whether they could properly do this in view of the fact that the preference shareholders had a right to participate in surplus assets on a winding-up. The Court ruled that they could. The grounds for the decision were various but turned partly on the argument that the capitalization was an alternative to a dividend, and as the dividend would have been paid only to ordinary shareholders, so only they were entitled to receive the bonus shares.

Now here again the Court was not called upon to decide specifically whether an unrealized surplus on revaluation of assets could be distributed in cash. Nevertheless, in the course of his judgment, Buckley, J., made certain observations which, inevitably, seem to have a fairly general application. In referring to the *Westburn* case he tated:

> '. . . if the Court of Session was right in holding that a reserve fund constituted as a result of a revaluation of unrealized fixed assets could not legally be distributed it would seem to me that it could not legally be capitalized . . .'.

Lest it be assumed that this remark might be taken (quite reasonably) as bearing on the *Dimbula Valley* case only, his lordship goes on to posit a general rule, that, with certain named exceptions (share premiums and capital redemption reserve):

> '. . . only that which could be distributed in dividends could be capitalized'. . . .

It seems to follow from this that if a fund can be capitalized, then it can also be distributed as a dividend. Inasmuch then that it has generally been accepted that an unrealized surplus on a proper revaluation can (provided the rights of the various classes of shareholders *inter se* are respected) be capitalized one must conclude that it can also be distributed. Further and, as it were, in answer to our original question as to whether any available liquid funds can be used for the purpose of such a distribution, Buckley, J., said:

> 'Moreover if a company has fluid assets available for payment of a dividend I can see nothing wrong in its using those assets for payment of a dividend and at the same time, as a matter of account, treating that dividend as paid out of a capital surplus resulting from an appreciation of unrealized fixed assets . . . .'

Now it is true that the Court in the *Dimbula Valley* case was not asked to decide specifically whether an unrealized surplus could be distributed in cash. Nor was this so in the cases on which the learned judge seems principally to have relied, namely, *R. A. Hill & Others v. Permanent Trustee Co of New South Wales* (1930) and *C.I.R. v. Thornton, Kelley & Co* (1957). In all these cases the question revolved around the capitalization of a surplus. Nevertheless, Buckley, J.'s, remarks can only be taken to mean that the law, as it stands, would permit a cash distribution of an unrealized surplus.

Logic and the Law

In *Candler v. Crane Christmas & Co* (1951), Asquith, L.J., is reported as saying:

> '. . . I am not concerned with defending the present state of the law or contending that it is strictly logical – it clearly is not. I am merely recording what I think it is . . . .'

It is possible that Buckley, J., would subscribe to this view in connection with the case we are now considering. Indeed, an accountant may be forgiven for hoping so, for the law as stated seems both illogical and commercially dangerous.

The danger lies, firstly, in the manner in which the law will permit, in effect, the repayment of real capital (in the form of inflationary surpluses)

while insisting on the retention of nominal capital and, secondly, in the new facilities offered for the arbitrary milking of companies.

It may be worth now examining the logic which the law applies to the payment of dividends out of 'non-trading' surpluses. In the first place it is instructive to examine a particular passage in the *Dimbula Valley* judgment. This passage reads:

> '. . . a capitalization of [capital profits] is in essence the declaration of a dividend combined with the application of that dividend, on behalf of the shareholders entitled to participate in it, in paying up shares . . .'.

Now this may have clarified the position in the particular case but if it is intended (as is likely) to be taken as a general rule then, with respect to the Court, it is most difficult to accept for apart from anything else, it blurs the important and real difference between what may be called the facts of capitalization and the facts of distribution. After all, one is equally entitled to claim that the declaration of a dividend is, in essence, the capitalization of profits coupled with a simultaneous and equal reduction of capital and that consequently a dividend can never be paid except with the sanction of a special resolution under section 66 and the approval of the Court. This may appear absurd but it follows from the original premise.

What Can be 'Capitalized'?

At this point it may be useful to examine the chain of reasoning by which the law possibly arrived at its present position. It is patent that the interest of shareholders in a company lies in two funds: the fund of capital and the fund of profits. By 'capital' here is meant that part of the assets of the business which can only normally be returned to members on a winding-up. It includes not only subscribed capital as such, but also those surpluses which statute law insists be put aside and treated as additions to that capital.

It would naturally be absurd to speak of the capitalization of capital. The issue of bonus shares in place of a share premium or capital redemption reserve fund is merely a recognition of the capital nature of that fund. Consequently the only true 'capitalization' is the voluntary putting aside out of reserved profit of a sum which is considered to be needed permanently in the business.

If then, as it appears, capitalization can only strictly be effected out of reserved profits and as reserved profits are, by definition, available for distribution, then it follows that capitalization can only be out of profits which are available for distribution. Finally, and as a corollary – if a fund can be capitalized then, equally, it can be distributed in dividend.

So must run the legal argument and it would be a most reasonable argument did it not, in its application, beg two most important questions:

(1) Is it true to say that all stated reserves are in fact reserved profits?

(2) Is it true to say that the phrases 'are available for distribution' and 'may be distributed' should be interchangeable?

The first question has particular relevance in the present context for it is obvious that a revaluation of assets is most likely to take place during an inflationary period. Now to suggest that a 'surplus' brought into being by an increase in the nominal value of assets represents a profit is absurd. Such a surplus is no more than a measure of capital depreciation and should it be capitalized, then the company is doing no more than to recognize this fact. Distribution of such a surplus, realized or not, would be effectively a return of capital.

The second question puts forward a distinction which though delicate is of fundamental importance. It is this. To say that a fund is 'available for distribution in dividend' is to make a general statement of little practical value. It takes no account of the fact that no distribution can be made from a fund unless there is something to distribute. In the matter of revenue profits the distinction is less important. There is still, of course, a certain time lag between 'availability' and 'distributability' measured by the process of realization, but revenue profits generally are not represented by *particular* assets and any available liquid resources can be used in distributing them. When we come to consider capital profits, particularly those with which we are here concerned, namely, surpluses arising on the revaluation of fixed assets, the picture changes considerably. The reserve so created is not the same *type* of reserve as that arising out of revenue profits.

Double-entry Confusion

The issue is noticeably confused by the very nature of double entry book-keeping. We are in danger of becoming mesmerized by the very techniques which we use. Now when assets are revalued, the asset accounts are debited and a reserve account credited. This does not create *two* funds, but one, and that one is represented by the

unrealized increase in the asset values. The heading 'Reserve on revaluation of fixed assets' is merely the other side of the asset coin. It cannot be distributed simply because there is nothing to distribute, and there will not be unless and until the assets, or part of them, are actually sold. It is in acknowledgement of this and of the further fact that no sale is in most cases intended that the reserve is often frozen by the issue of bonus shares in its place. It is therefore illogical to say that such a fund cannot be capitalized unless it can be distributed when it is the very fact that it cannot be distributed that promotes the capitalization.

It will be objected that while the particular assets which gave birth to the reserve cannot (except in isolated cases) be distributed, there may be idle funds within the business which could be distributed in their place. Support for this objection was in fact contained in the *Dimbula Valley* judgment. It is, indeed, a very reasonable objection, but it overlooks one point. Those liquid funds were not brought into being by the revaluation; they must have been there beforehand, and if it was not reasonable to distribute them previously, it is difficult to appreciate how has it suddenly become reasonable to distribute them now. On the other hand, if they were distributable previously why now make the pretence that they are represented by the revaluation reserve. We have surely come to a strange pass if a journal entry of itself has power to release funds.

Real Nature of the Surplus

Consider a simple example. A company has a machine which it uses for the purpose of earning profit. It revalues the machine and proposes to distribute the resultant surplus using cash that is idle in the business. But this surplus is by definition part of the machine and the machine must be retained for use. How then can one speak of distributing the surplus? To talk of idle funds being available is interesting but irrelevant. If the funds are already available there should be no logical need to revalue the machine in order to release them.

It is because the asset must be retained that the surplus cannot be distributed. *The surplus has no existence apart from the asset.* This fact is recognized by capitalization; it is denied by distribution. It appeared to have been recognized by Mr Justice Byrne in the *Trinidad* case; it appears to have been denied by Mr Justice Buckley in the more recent *Dimbula Valley* case. And there, apparently, the law now stands.

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

GERMANY

Consolidated Accounting Problems

THE need to clarify underlying principles governing consolidated accounting was the burden of an article in a recent issue of *Die Wirtschaftsprüfung*. For example, it is usually agreed that a 51 per cent majority is sufficient to justify consolidating, but this case may produce accounts which are more deceptive than ordinary holding company accounts. The consolidation will show a liability to minority shareholders of 49 per cent of the capital and reserves of the subsidiary which, in an extreme case, can represent almost half the total assets of the group. Nor can it be argued that this lower limit ensures that the incidence of control is revealed in all cases, as full economic control can only be exercised by means of a two-thirds majority. Further, *de facto* control is frequently obtained with less than a 51 per cent shareholding, particularly where a shareholder makes substantial loans to the company in the form of debentures.

On the other hand, the exercise of a different trade from that of the holding company is no excuse for non-consolidation, any more than is the existence of different operating divisions a reason for not preparing accounts for a business as a whole. The sole criterion relevant in this connection, states the article, is the existence of a permanent and voluntary shareholding; thus, if a bank holds the majority of the shares of another business as a result of foreclosure and in order to realize its security, there is a strong reason for not consolidating that other business with the bank. Foreign subsidiaries should be treated on all fours with domestic subsidiaries wherever full convertibility applies.

Although inter-company profits are to be eliminated by valuing stocks in the hands of the buyer at cost to the seller, no clear rules exist where the asset is fixed and not current. Where, for example, one subsidiary has invoiced machinery to another at the market price, complicated adjustments would be required for as long as the machinery remained on the books of the buying company. The practical

problems here, states the author, do not appear to have been faced. For example, suppose that a steel erecting company is the subsidiary of its largest customer, a mining company, then a large part of the former's profits are unrealized from the standpoint of the group. Again, what is the position of the minority shareholders in such cases? Montgomery's *Auditing* (1949, page 486) states that minority shareholders have rights only to 'realized' profits, whereas Finney and Miller's *Principles of Accounting* (1953, page 393) states that the consolidated accounts are no concern of the minority shareholders, whose claims extend to all the profit shown in the company's accounts.

One of the fundamental defects encountered in all legislation, says the author, is permission to consolidate accounts prepared at different dates. There is little present-day significance in non-calendar year balance sheet dates to justify this provision, in spite of the convenience factor which applies to seasonal businesses.

SOUTH AFRICA

New Tax Proposals

THE Commissioner for Inland Revenue has followed a somewhat unusual course by inviting taxpayers to give their opinion on new proposals he has made. These proposals, which take the form of draft amendments to the Income Tax Act, have been published 'to give interested persons the opportunity for suggesting any alterations or additions which would improve the scheme or remove anomalies'.

They provide for the introduction of a pay-as-you-earn system of tax collection, to apply both to individuals and to companies, and for changes in the year of assessment for both. The P.A.Y.E. year of assessment for employees would start on March 1st, 1963, deductions for tax being made monthly on the basis of tables issued by the Department of Inland Revenue. The year of assessment for companies would be changed to the year ending on the date the company closed its accounts, instead of the present year to June 30th. Tax would be assessed on the estimated annual income of the company, and would be payable as to one-quarter at the end of each of the fourth and seventh months and the balance at the end of the year of assessment. The fiscal year would then close at the end of February instead of March 31st.

Since a change from payment of tax in arrears to payment on current earnings would otherwise cause hardship to most taxpayers, provision has been made for various exemptions and rebates to be made to cover the period July 1st, 1962, to February 28th, 1963.

It is emphasized that at the present stage these are no more than proposals; the Government has not yet accepted the principle of P.A.Y.E., and the draft amendments to the Act are still to be considered by a select committee. Even if the principle is approved, it is by no means certain that the scheme can be in operation as early as next March. But it seems clear that the Government intends to make some such change, and that it is likely to come within the next two years.

UNITED STATES

Mergers of Accounting Firms

MR LOUIS H. PENNEY, C.P.A., a Past President of the American Institute, reporting on his extensive investigation, by personal interviews and correspondence with partners, of the growing practice of mergers between local or sectional firms and the larger national firms, quotes, as evidence of the accelerating trend, the fifty mergers reported for 1946–55 as against 113 in the last five years.

On the subject of referrals, Mr Penney says a great deal of work is at present being referred, chiefly from New York and Chicago and such industrial and financial centres, to accountants in smaller or less industrialized cities. Some mergers have been arranged to eliminate referrals but, in proper circumstances, referrals have been successful in avoiding the necessity for merger.

Concluding his report, Mr Penney says the mergers of local firms with large firms seem to benefit partners, staffs, clients, practices and public and to bring no harm to the profession. The trend will probably continue. Some local firms will always be necessary to serve the small and medium-sized clients. He thinks some action is needed to bring to clients of the local firms the specialized management services available only from the large firms.

CANADA

International Accounting Research

THE Canadian Institute's 1961 annual meeting was aimed at drawing attention to the international responsibilities of the accounting profession. Mr Carman Blough, C.P.A., Director of Research of the American Institute, raised the question of internationally accepted standards. He pointed out that, in most countries, the time and effort given to research has been barely enough to cope with pressing domestic problems, so that little thought has been given to international problems. He doubts whether any steps towards development of such standards on a formal basis are near. But he said that the greater interchange of ideas between professional bodies in different countries, in recent years, is slowly bringing about a standard of international acceptance. Mr Blough pointed out the part played by the large international firms of accountants in bringing the standards of acceptance in the more backward countries up to those in the United States, Canada and Great Britain.

The Scope of Management Accounting

by J. P. WILSON, F.C.W.A., F.C.I.S.

MANAGEMENT accounting can be defined as the use of the accounts of the business to provide information as the basis of management action. There is nothing new in this when we consider, for example, that for centuries the accounts of customers have been used as the basis of action to collect debts. What is new is the increase in the *extent* to which accounts are used for this purpose and the development of accounting techniques to this end. Costing, as generally understood, is one part of management accounting.

The accounts of a business can provide information for different purposes and it should be recognized that one set of figures may not hold good for all purposes. A significant distinction can be drawn between the provision of information for management which can be termed 'management accounting'; and the provision of figures for submission to shareholders, or owners of a business, which can be termed 'stewardship accounting'. For example, the value of stock at the end of the year may be £200,000 for the purpose of management decisions on manufacturing and trading operations, but in the annual accounts presented to shareholders all fears and contingencies are taken into account and prudence might dictate to the management that it should err on the side of conservative finance and show stock at £180,000. It is fair to say that invariably such conservative stock valuations are employed consistently from year to year.

The failure to recognize this distinction between management accounting and stewardship accounting and the attempt to use, in monthly financial statements for management purposes, figures on the same basis as for annual accounts, can make nonsense of such monthly financial results.

Decision and Control

Management requires information as the basis for its actions which fall roughly into two categories – decision and control. In designing any system of management accounting it may be well to consider the particular problems for which information may be necessary.

Information may be required for major decisions or for day-to-day decisions. Major decisions may be:

(1) manufacturing and trading policy for the year, including policies on inventory levels, material supplies, sales and capital expenditure;
(2) whether, and by what means, to expand the business;
(3) whether, and by what means, to contract the business;
(4) selling policy as regards selling prices, intensity of selling effort, advertising, etc.;
(5) disposition of capital resources as, for example, between fixed assets and working capital.

Day-to-day decisions to be taken by management may, among others, include the following:

(1) fixing selling prices;
(2) selection of the most profitable work;
(3) methods of working;
(4) decision to make or buy out.

It is not suggested that all the information used as the basis for decision will be provided by the management accounts. Other functions of the business, as for example the production control department, may provide such information. The feature of information from management accounts is that it is normally expressed in the useful common denominator of £ *s d*. Also, it is not suggested that the management accounts will invariably give the answer to the problem. Frequently the management accounts will provide the data, but the decision can only be made by the exercise of judgment utilizing such data.

Control Procedures

It is not sufficient for management merely to make decisions; it must ensure that they are implemented. This is done by the incorporation of control procedures in the management accounts. If the decisions are embodied in budgets, the control exercised through budgetary control and standard costing can be very effective. Such measures of control may cover:

(1) Sales performance and the analysis of the variance between budget and actual to its causes such as volume of sales, pattern of sales and selling prices.
(2) Profit margins analysed to sources in markets, product groups, areas, etc.
(3) Costs of production such as material prices, material usage, wage rates, labour efficiency, plant operating efficiency, capacity employed and spending on overhead expenses.
(4) Cost and progress of capital expenditure projects.
(5) Financial savings achieved by capital expenditure projects.
(6) Disposition of capital resources to ensure that adequate working capital is available to carry on the business, that stocks are properly controlled, that customers' accounts outstanding

A paper presented and discussed at a joint meeting of the Coventry Area Branch of the Birmingham and District Society of Chartered Accountants and the Coventry and District Branch of The Institute of Cost and Works Accountants last Wednesday.

do not get out of hand, and that cash is available to meet all requirements.

The provision of such extensive information for decision and control is no mean task and calls for skill and imagination on the part of the management accountant, not only in the devising of the system to provide the basic information, but also in the selection of the appropriate data and their presentation as the information apposite to the purpose for which it is required. In considering the means of providing information two guiding principles may be expressed in the following catch-phrases:

(1) *There is no such thing as an absolute cos* . For example, the product cost required as the basis for fixing a long-term selling price to a major customer in the home market may be very different from that required for fixing a cut selling price in the export market during a trade recession.

(2) *One cannot have all the information on tap all the time.* This is impossible because of the range of the information required. Consequently continuous accounts will be kept of those matters of the greatest importance, and of those about which information is required continuously, for example, control information. Other information, such as that required for once-and-for-all decisions will be obtained by *ad hoc* investigation. *Ad hoc* investigation may entail abstracts from the continuous accounts, keeping temporary records and even physical studies such as time-study or weighings.

Concepts of Accounting

In addition to the use of different means of recording, management accounting is composed of different concepts of accounting and costing. The three major concepts in common use are (*a*) historical accounting, (*b*) budgetary control and standard costing, (*c*) marginal costing. These are distinct but not mutually exclusive.

(*a*) *Historical accounting* is essentially the analysis of actual income and expenditure under the headings required. By virtue of its fundamental importance it permeates the whole of management accounting. It may be employed wholly or in part in the preparation of a profit and loss account; it is the major concept underlying an orthodox system of actual job costs, and it is employed in budgetary control and standard costing to establish the actual costs directly incurred by each department.

(*b*) *Budgetary control and standard costing* is essentially a technique in which emphasis is laid upon the planned revenue and expenditure. This is compared with the actual revenue or expenditure, *but only to the extent of the significant detail*, to show the variation from plan. This variation is then analysed to its causes. An illustration of two principles of budgetary control and standard costing is given in Figure 1 of a very simplified operating account of a production department for an accounting period.

Figure 1

Wage rates	50	
Spending on overheads	100	
Capacity employment	80	
	530	
Less Cost saving on labour efficiency	230	
		300
		£3,500

The two principles illustrated are:

(1) The total actual cost of the department is compared with the total standard cost of the work produced, and the comparison does not extend to each separate product. An analysis of actual costs to products is not made, firstly, because the so-called actual costs of products may not be significant, and secondly, because it may be neither practicable nor economic.

(2) The variance is analysed to its causes, and indeed excess costs and cost savings arise from causes general to the department rather than from the particular products manufactured. Therefore an analysis of variance to causes is more significant information.

There are two stages in budgetary control and standard costing. The first stage is the 'study and planning' stage when the plans are drawn up expressed in budgets, performance standards and standard costs. The study of the operations of the business necessary to establish the plans frequently reveals economies that can be made immediately. The second stage is the 'control' stage when for every accounting period

the planned results are compared with the actual results to reveal the excess costs or cost savings and their causes. It is then necessary to reach behind the figures of particular significance to establish the action to be taken.

(*c*) *Marginal costing*. Whereas budgetary control and standard costing has a particular value in the provision of information for control purposes, the third major concept – marginal costing – has a particular value in the provision of information for decision, especially short-term decisions. Marginal cost is defined as 'the amount by which aggregate costs are changed if the volume of output is increased or decreased by one unit'. This is illustrated in Figure 2.

This illustration shows that if a certain course of action is taken certain costs, which tend to be variable, will be affected; but other costs, which tend to be fixed, will be unchanged. Marginal costing is the provision of information which takes this distinction into account and presents the marginal cost applicable to the action under consideration. As the classifications of cost do not fall clearly into the categories of variable and fixed, but the variability of each element depends upon the particular circumstances of the course of action being considered, it is normally not advisable to incorporate the presentation of marginal costs in the continuous cost accounts. It is preferable to ascertain marginal costs by *ad hoc* investigation when the particular circumstances of each matter can be taken fully into account.

In the provision of the appropriate information to management, the accountant must be prepared to use, as necessary, all the concepts of management accounting and all the various recording means. Furthermore, the information necessary may not be confined to what has happened or what had been planned to happen; the accountant may be required to give information on what is likely to happen, perhaps even under conditions not previously experienced. In doing so he may find it helpful, and indeed necessary, to draw upon the knowledge of the technical, marketing and other branches of the business. Cost information, for example, may be an amalgam of past costs and estimates for the future.

Types of Information

The information provided to management will take an infinite number of forms, dependent upon the purpose for which the information is required and the technique of management accounting employed. The forms of established financial statements such as the balance sheet and the profit and loss account have been influenced by the development of management accounting.

Balance Sheets

The development in the form of the balance sheet is illustrated in Figure 3 showing a traditional balance sheet and Figure 4 showing a modern form of balance sheet for management purposes. The modern form is more logical in its arrangement. For example, it shows clearly the significant figures of working capital, the net worth of the business and the value of the ordinary shareholders' interest. Furthermore, it shows trade investments and stock at their real values with the corresponding reassessment of the reserves of the business.

Profit and Loss Statements

Alternative statements of profit and loss are illustrated in simplified form in Figures 5 and 6. The traditional profit and loss account shows a profit after tax of £49,000, giving details of the expenditure and income by classifications of their nature. Such information is relatively simple to present, but is of little value to management in any other than a small business. The modern form of profit and loss account also shows a profit after tax of £49,000, but it conveys information that is of value to management. It shows that the true profit before tax applicable to the period is not £106,000, but is £114,000, as £8,000 represents only an adjustment of the stock reserve created for stewardship accounting purposes. It shows that sales have been appreciably less than those planned, mainly due to volume and a failure to achieve the planned level of selling prices. Actual costs of production have exceeded standard costs by £4,250, in spite of a fall in material prices of £5,000 and a gain in operating efficiency of £9,000. A supplementary statement to the profit and loss account will show the departments in which these cost savings or excess costs arise. Another supplementary statement will show the sales, standard cost of sales and standard profit analysed to its origins by product groups, markets, areas or end uses. The presentation of such a form is dependent upon the operation of a system of budgetary control and standard costing.

Source and Disposition of Funds

The disposition of the capital resources of the business can be based upon information shown in the statement of the source and disposition of funds as

Figure 3 **TRADITIONAL FORM OF BALANCE SHEET**

illustrated in Figure 7. This statement is based upon the balance sheet totals at the beginning and end of the period under review, which should preferably be the month and also the year to date. Its purpose is to depict the trends in the movement of resources in order to achieve a proper balance between fixed capital and working capital, and between the constituent elements of working capital. For example, in the business illustrated, cash has been heavily run down by £223,312. £135,000 has been spent on additional fixed assets, stocks are up by £80,000 and accounts receivable by as much as £150,000 or 78 per cent.

Financial Ratios

It is not claimed that the study and control of the assets and liabilities of a business are something which has been developed as a part of management accounting. Indeed it has been practised for a very long time, frequently as a matter of grim necessity. Management accounting now embraces, as a matter of regular routine, the study of these figures which was previously carried out informally and frequently too late. A further development of management accounting is to extend the study of the profit and loss figures and the balance sheet figures, not only separately but in relation to the other set of figures. 'Financial ratios' is the name given to this development and the following are a small number of such ratios in fairly common use:

(1) Profit : capital employed (£119,750 : £1,210,000 =9·9 per cent)

(2) Profit : sales (£105,750 : £900,000=11·7 per cent).

(3) Sales : capital employed (£900,000 : (£1,210,000 −£310,000)=1·0).
(This is sometimes known as the rate of capital turnover.)

(4) Accounts receivable : sales (£340,000 : (£900,000 ÷12)=4·5 months).

(5) Stock : cost of sales (£280,000 : (£790,000÷12) =4·2 months).

A ratio does not of itself tell very much, but when a ratio is ascertained at regular intervals the trend can be very significant. If the ratios of a business can be compared with those of other concerns in the same group of companies or industry their value is considerably enhanced.

Departmental Operating Statements

A feature of the concept of budgetary control and standard costing is the emphasis upon the department as the point at which performance is measured and controlled. The departmental manager has a very large influence upon the setting of the budgets for his department and he is presented at frequent intervals, normally monthly, with a departmental operating statement setting out the actual cost of his department, the standard cost and the variance between them analysed to its causes.

An example of a departmental operating statement is shown in Figure 8. John Smith, the manager of this department, has spent £59,870 to achieve a production of 1,900 tons of a standard cost value of £57,800. The net excess cost of £2,070 is shown analysed to its causes. The value of this statement does not lie wholly in the information which it conveys to the departmental manager – and indeed he should generally be aware of the factors which are causing variance from the planned result, even if he does not know their monetary importance – but it lies also in the incentive to the departmental manager to control his department keenly in anticipation of the publication of his monthly results.

Cost of Products

The cost of products is another form of information which is of considerable importance to management. Figure 9 illustrates a 'Product standard cost form', in which provision is made for the calculation of the marginal cost if and when required. The advantage of the standard cost of a product is that it represents the intrinsic value of the product. A feature of the preparation of product standard costs is that in any but the simple types of production, the management accountant cannot prepare such costs without technical assistance. It is necessary first to have a technical specification of the material content, the conversion operations and the value in work units of each operation before the management accountant can apply his money values in the form of material prices and conversion cost rates.

In the orthodox systems of budgetary control and standard costing the product standard cost is the maid of all work. It is used either in total or in part for the valuation of departmental production, production delivered into finished stock, goods dispatched to customers, work in progress and finished stock,

Figure 6

MODERN FORM OF PROFIT AND LOSS ACCOUNT

(Based on the use of standard costing)

	£	£
Budgeted sales		1,000,000
Less Gain (+) or Loss (−) due to:

Working Capital	£510,762	£500,000	− £10,762

and scrapped work. It is widely used as the basis for fixing or assessing selling prices, although for this purpose the product standard cost may be adjusted to provide the information pertinent to the particular circumstances. For example, it may be adjusted by the elimination of fixed costs to provide a marginal cost; or it may be adjusted in respect of some of the current variances.

Capital Expenditure Statement.

A capital expenditure statement is commonly presented at monthly intervals to enable management to control this important sector of the business. The normal procedure is that capital expenditure projects are sanctioned by the management at specific estimated costs. The cost of each project is normally ascertained by historical accounting methods and a monthly statement presented listing the current projects and showing in respect of each one:

the amount of money sanctioned	A
expenditure for the current month	B
expenditure to date	C
commitments in addition to expenditure to date	D
balance uncommitted	E=A−(C+D)
over- or under-spending	

The last item presents some difficulty. Frequently the over- or under-spending is not known until the termination of the project. If, however, the project is split into stages and separate amounts sanctioned for each stage, or indeed for the major elements of each stage, the variation from sanction is made known as the work proceeds.

	C	1,000	22·8	22,800
		1,900		£57,800

Personnel Statistics

Personnel statistics, which indeed may be provided by the personnel department and not by the management accountant, are valuable information for management. It has been said with some truth that labour costs are controlled at the engagement stage and if a man once gets on the payroll there will always be some work which he can do. It is probably more true to say that there will always be some work in which he can share. Therefore a tight control should be kept on labour engagement and, in addition, a weekly or monthly statement prepared showing in respect of each department the numbers employed, left, engaged or transferred in or out of the department. Such statistics need only be simple and could be largely extracted from the wages and salary payrolls.

Statistics of Orders

While the convention is that orders do not enter into the accounts of a business until they become dispatches of goods, nevertheless statistics of orders are vital information for management. The management accountant will frequently be concerned with the preparation of an analysis of orders, parallel with the analysis of sales, to categories such as markets, areas product groups or end uses. It may also be necessary to maintain records of the balance of orders under the same categories.

Ad hoc *Statements*

Apart from the major statements of information to management which have been described, there will be an infinite variety of *ad hoc* cost statements varying with the nature of the business and the purpose for

Figure 9

				Less Fixed Cost		1·135		
				Marginal Cost		£3·170		

which the information is required. In the submission of such reports it is particularly necessary to ensure that the information is apposite to the problem presented and that the information is properly interpreted.

Figure 10 is an illustration of information with regard to the problem of guiding the sales department in the selection of the most profitable work when customer demand is high. If rule-of-thumb procedures were followed the management would probably be presented with comparative figures of total cost, selling price, profit and profit per cent of selling price. As product B showed the greatest profit percentage at 16·1 per cent, the decision would probably be made that the sales department should push product B. In this case, however, the fixed overheads of the business will not be affected and the criterion of profitability should be the difference between the marginal cost of each product and its selling price. This difference is termed 'contribution', because it is the contribution that each product or product group makes to a fund out of which the fixed overheads of the business are met, leaving the balance as profit. Furthermore, the most desirable product is that which makes the greatest contribution in relation to the factor which limits the production of the business. In this case, if material was in short supply it would be necessary to use this material to the best advantage, and therefore product C. would be the most profitable product as it yielded the greatest contribution (£.50) per £1 of direct material. If, however, direct labour was the limiting factor, the sales department should be directed to push product A. as yielding the greatest contribution (£4·00) per £1 of direct labour.

Figure 10

ASSESSMENT OF THE SHORT-TERM PROFITABILITY OF PRODUCTS

	Cost Element	Product A	Product B	Product C
A	Direct material	£5·00	2·25	1·00

Conclusion

The presentation of information to management calls for the exercise of judgment. There can be inflation of paper-work as well as of money, and the more documents are published the less value each document has. There is a physical limit upon the quantity of information which a manager can read; and the amount he can digest and act upon is much less. Care should be taken that significant information is not buried in a mass of relatively unimportant details.

As the directors and executives of a business are concerned with the longer view it is normally sufficient to provide them with the regular information monthly. More junior executives, such as departmental foremen, will usually require weekly figures of such items as wages, labour efficiency, material usage efficiency, etc. Daily figures may be provided by the prime records in the department, as for example of output, but only in exceptional cases should it be necessary or advisable for the management accountant to feed back daily figures to a department.

It is necessary that information for management purposes should be presented promptly. This is not difficult. It is a matter of clerical organization with this definite aim in view and the common-sense avoidance of straining after over-meticulous accuracy. It is also necessary that the information should be clearly and simply presented, with some regard for the attitudes and habits of the recipients. If a particular member of the management is frightened by a column of figures but has a liking for graphs, it would be well to convey information to him in that form.

Management accounting is of little avail if the information is not used. Once it is established that the information is absolutely relevant and reasonably concise, the first necessity is for the management to study the information. In this connection it should be recognized that it is almost impossible to present management accounting figures on fairly complex issues in such a form that the complete novice can understand them; and it is necessary for all members of general management to acquire some understanding of the financial aspects of management, particularly in relation to their own business.

One means of promoting effective use of information is by its consideration at formal meetings attended by all levels of management concerned. Proper minutes should be kept of such meetings, recording the decisions taken and indicating clearly the persons responsible for the necessary action.

Management accounting is one part of the whole of management procedures. If management accounting is to be realistic and economic it must be integrated in the general scheme of procedures of the concern. Likewise, in the sphere of human relations there is an inter-dependence between the management accounting department and the other departments which make up the organic structure of a business.

Weekly Notes

RECEIPT STAMP DUTY

THE Institute of Municipal Treasurers and Accountants has suggested to the Chancellor that receipt stamp duty should be abolished, basing its representations on the administrative economy that would result.

According to Inland Revenue estimates the annual yield from receipt stamp duty has declined from £5 million in 1956–57 to £1·6 million in 1960–61, a yield which, in the opinion of the Institute, is too trivial to justify the time and effort involved in purchasing, affixing and cancelling many millions of 2*d* stamps each year (192 million 2*d* stamps in 1960–61). It is apparent that the decline in yield must very largely be attributable to the effect of the Cheques Act, 1957, and to the mistaken belief that this Act altered the law relating to the issue and stamping of receipts: it seems likely that the growing popularity of payment by cheque and credit transfer will result in a further decline.

The Institute thinks that a disproportionate share of the duty is paid by local and public authorities: it is estimated that as much as one-quarter or one-third of the total yield comes from the stamping of receipts for gas and electricity accounts and for general and water rates.

The Institute says that abolition of the tedious and empty formality of stamping receipts would make a small but useful contribution towards the Government's aim of securing higher productivity and faster economic growth.

HIGHER STEEL PRICES

THIS week the price of steel in the United Kingdom market was raised by an average of 25*s* a ton or 2½ per cent. The increases represent the results of the periodic review by the Iron and Steel Board of the industry's prices. These reviews take place at two-and-a-half-year intervals and the new review was due about April of this year. The announcement two months in advance is a measure of the pressure from the industry to have its price structure raised at a time when costs have increased and the industry is expected to run at about 75 per cent of capacity for at least the first half of 1962. Steel chairmen have been somewhat forceful in their annual reviews to shareholders about the disparity between the trend of steel prices and costs in the last year or so.

The biggest increases have been granted where British home prices are well below continental levels; thus the price of sheet steel goes up by 5½ per cent and tin plate by 4½ per cent. Billets and re-rolled products go up by only 1 per cent. The general effect of the increases will be to leave the level of steel prices in this country very similar to those in the European Common Market.

STEEL COMPANY'S RATE ASSESSMENT

THE Steel Company of Wales has appealed at a local valuation court in South Wales against the present rateable value on its integrated steel works. The company consider that the present assessment is excessive and propose that the net annual value assessment of £2·08 million (rateable value £1·04 million) should be reduced to £1·65 million (rateable value £0·83 million). The sum involved is very large indeed, representing a difference in net annual value of almost £600,000. The company has indicated that it will be making a further application for a reduction in the near future. Meanwhile, investigations have brought to light that the net annual value of the works represents 15·8 per cent of the whole industrial value of Wales and 35 per cent of the total value of Glamorgan including the County Boroughs of Cardiff and Swansea.

A counter-application has been lodged by the Inland Revenue that the company's present net annual value assessment should be raised to £2·24 million (rateable value £1·12 million) on the grounds that structural alterations have been made and that the present assessment is, therefore, incorrect.

OPTIMISM ON WORLD TRADE

THE latest issue of the Bulletin for Industry put out by the Treasury has come out with a strong forecast that the recovery in Western Germany, already apparent in the last quarter of 1961, will continue into 1962. It expects that the Italian economy's rapid rate of growth will continue this year and that in France there will also be a continuation of the recent rate of growth. Adding to this the generally expected rise in activity in the United States and Japan, the Bulletin comes to the conclusion that the prospects for world trade in 1962 are exceedingly promising and are better than last year.

The interest in the forecast is in the confident tone of the outlook for Western Europe. Opinion elsewhere has been cautious, saying no more than that the recent high rate of growth in Western Europe (excluding the United Kingdom) would be likely to level off. If, however, the Treasury forecast is right the prospect for British exports in 1962 is definitely good. It remains to be seen whether the optimistic forecast of officials at the Treasury is re-echoed in the Budget statement which is due in four or six weeks.

SOUTH AFRICA'S DECIMALIZATION SUCCESS

PROFESSOR W. J. FAIRBAIRN, C.A.(S.A.), F.S.A.A., Professor of Accounting at Natal University, addressed a luncheon meeting of the London and District Society of Chartered Accountants last Monday, on the decimalization of the South African coinage.

Professor Fairbairn said that despite all the problems involved, the transition had gone through very smoothly. They had plumped for the ten shilling cent version of the two decimal system of coinage, thereby giving them a major unit of not too high a value and with their minor unit being roughly equivalent to a penny.

In introducing the system there had been a two year preparatory period and the new system came into effect on February 14th, 1961. Professor Fairbairn stressed that the whole conversion had been completed and every accounting machine in the country had now been converted to deal with the new coinage.

After giving a few details of the problems involved, Professor Fairbairn said that there were benefits still to come from decimalization in South Africa; they had not seen the end of them yet and all told the process had been highly successful and it had been welcomed by the vast majority of people in South Africa no matter what their political feelings about the whole thing had been.

One thing that still remains to be proved, it appears, is the amount of time that will be saved in the education of the average schoolboy. It had been estimated that at least six months of a youngster's life was spent in learning how to decimalize pounds, shillings and pence, and turn them back again.

NORTHERN IRELAND DEVELOPMENT

AN illustrated booklet recently issued by the Northern Ireland Development Council gives some interesting details of the comprehensive factory building programme of the Government of Northern Ireland[1]. Under the scheme, factories of standard type are erected on carefully chosen sites with full services laid on and ample labour available. Built in advance of demand, they are suitable for a wide range of manufacturing processes. The booklet describes a number of such advance factories.

Rents range from *1s 6d* to *2s 3d* per sq. ft depending on situation and size; these charges compare very favourably with factory rents in England. The factories, all of modern design, are let to sound industrial projects which will diversify the economy and create work for men – since Northern Ireland's present unemployment problem is essentially that of a surplus of male labour. In addition to factories, outright financial grants are available annually towards the cost of machinery and equipment.

In the past fifteen years the Northern Ireland Ministry of Commerce has built more than eighty factories or ancillary premises, plus twenty-nine factory extensions, which, together with those at present under construction, will represent a total of more than 8 million sq. ft. Fourteen factories, it is stated, are at present available or nearing completion.

[1] *Specification of A Northern Ireland Government-built Advance Standard Factory.* Obtainable, free, from the Northern Ireland Development Council, 13 Lower Regent Street, London SW1.

BRITISH EXHIBITION IN STOCKHOLM

THE largest British exhibition ever held overseas will be staged this year in Stockholm from May 18th until June 3rd. More space has been taken for industrial exhibits than at any previous British trade fair.

This full-scale effort indicates the importance of the Swedish and other Scandinavian markets to British industry. The Scandinavian countries and Finland together are now Britain's biggest export market. They took nearly 10 per cent of British exports in 1961 as against the U.S.A.'s 7·5 per cent.

Some 500 British firms will occupy over 200,000 sq. ft of exhibition space, displaying a wide cross-section of the most up-to-date products which Britain has to offer Scandinavia, ranging from heavy capital equipment to light consumer goods.

Danish, Norwegian and Finnish days will be held during the Fair to attract buyers from these countries. Groups of leading business men, travelling by charter plane flights, are being invited from these countries to visit Stockholm and tour the Exhibition.

INVESTMENT CLUB PROGRESS

NOW in its fourth year, The National Association of Investment Clubs has made rapid progress and it is interesting to record that with the recent affiliation of the Peak Investment Club, of Sheffield, the number of affiliated clubs now totals 500.

These clubs represent over 12,000 private investors, of which 1,500 are women. The average monthly investment is over £4, and the total annual investment is in excess of £600,000.

The first copy of the Association's *Investment Clubs* leaflet came into distribution last week and 5,500 copies have been sent to members of the British Junior Chambers of Commerce. The Association's address is 40/41 St Andrew's Hill, London EC4.

END OF A VENTURE

IT was announced this week in the House of Commons by the Minister of Aviation that the Rotodyne airliner project is to be abandoned. This highly promising and technically revolutionary aircraft first flew in 1957. The idea of a sixty seat helicopter-airliner was exceedingly attractive at the time and it is thought that between £14 million and £15 million has been spent on its development.

The Government has decided that the operational

advantages offered by this aircraft in its military capacity must be abandoned because of the cost. The pronouncement in the House indicated that British European Airways has come to a similar conclusion in the civil field quite independently of the Government's final view. The Corporation was at one time exceedingly interested in the Rotodyne but has now decided that the commercial outlook for the aircraft is not sufficiently assured to justify the heavy liabilities involved in placing an initial production order. The Corporation has, of course, had a difficult financial year and like all the international airlines it has a big undertaking in operating profitably its jet fleet. It is, therefore, necessarily sensitive about the risk of initiating a new and expensive revolutionary idea on its commercial routes while it is still absorbing the problems of the jet age.

B.E.A. have transferred their favour to the American Boeing-Vertol 107 which is a transport helicopter usable on inter-city routes. Time may show that the Rotodyne was overtaken by the rapid rate of technical change in aircraft. It has become a commercial or military proposition between the inauguration of the jet age and the arrival of vertical take-off and in consequence it may, therefore, have arrived five or ten years too late.

This is My Life . . .

by An Industrious Accountant

CHAPTER 113

OUR fussy old senior clerk is retiring at last. I went down to his room for a last chat before the more formal farewells at the presentation to him, planned for the end of the afternoon.

Poor old Fussy is nearly 70, a lean little man with thin white hair combed over his balding dome, and with an old-fashioned pince-nez on his beaky nose. He's been with the firm for over fifty years. In that time he has quarrelled violently, frequently and needlessly with everyone possible, including myself. Normally able and benevolent accountants have raised hopeless eyes to heaven when Fussy came to report involved discrepancies; veteran directors of toughened fibre have blanched when he came clamorously to denounce the delinquencies of the rising generation. His waspish tongue has driven juniors up the wall for decades . . . now it's time for him to go.

* * *

I fell out with him early. He resisted every innovation on principle, unless he had initiated it first himself. In his youth he had been a favourite of Mr Henry who was secretary during the First World War; he has never quite reconciled himself to having reached his somewhat modest plateau in the management hierarchy in later years; he vented his frustration in acidity. He objected to our posting direct from invoices and dropping the ancient journals; he was indignant when the signing of cheques was delegated down the line by the directors; he fought tooth and nail the appointment of an internal auditor. Mostly, I'm afraid, he fought with me, as the instigator of the changes.

But over the last year, with retirement in sight, he has mellowed noticeably; now we met rather sadly. He was clearing out his antique desk – a relic of Edwardian days. Into the wastepaper basket went old rubbers, pencils, diaries, pads, a cracked plastic hold-all; he tore up the contents of several files; he came to a bundle of faded photographs. He fingered them wistfully, one by one. An old football team bristling with droopy moustaches ('only two others still alive today') . . . Fussy shaking hands with Mr Henry ('a grand man, God rest him') . . . laughing office groups at parties and celebrations . . . Fussy in khaki in 1915 ('got a blighty one on the Somme') . . . past directors, dignified in watch-chains and spats . . . long-gone, long-forgotten faces.

It was pathetic to see him hesitating over them – the people who had meant so much to him once – as he sorted them carefully into a shabby attaché case. There was one of himself as an air-raid warden in 1940. He reminded me of the White Knight in *Alice through the Looking-glass*. I felt a rush of sympathy; after all, he had never faltered and perhaps we had neglected him somewhat. If he had been over-zealous, there were others on our staff who had been lax. He had been devoted to the firm and retirement would be hard on him.

* * *

I searched for words to tell him that we understood and forgave his pig-headedness and his nagging, that we appreciated his loyalty, that he would be remembered and respected. He must not go feeling himself a failure. Before I could speak, he put his hand on my arm and spoke slowly.

'You know, my boy, you've improved a lot over the past months,' he said benevolently. 'You've got over your early tactlessness. How poor Mr Henry used to shake his head over brash youngsters . . . but you'll make a good secretary some day, never fear. I know; I've watched you.'

For a moment there peered out from his tired eyes, generations of sage and kindly missionaries who spent themselves freely to civilize tree-dwelling aboriginals, to teach charity and justice to brutish pagans . . . to educate over-hasty accountants in moderation and discretion.

The gleam faded. He shuffled off fussily to receive his presentation.

Current Law

Wife's Interest in Matrimonial Home

IN *Allen v. Allen* ([1961] 3 All E.R. 385) the plaintiff appealed against the dismissal, by the judge of the Poole County Court, of the plaintiff's claim against his former wife for possession of the dwelling-house which had been their matrimonial home. The learned judge had accepted the former wife's evidence that she had gone out to work and out of her earnings contributed to the expenses of the matrimonial home, and decided that she had made out a case for some beneficial interest in it so that the plaintiff's claim for possession must fail.

In the Court of Appeal, Lord Evershed, M.R., rejected a submission that, just because a husband looked to his wife to provide some money to help with the living expenses it should, as a matter of law, be concluded that the matrimonial home was acquired jointly. The rights in the house depended, in the absence of agreement between the parties, on the intention established by the evidence. The case was remitted to the learned judge in order that he might inform the Court of Appeal whether he intended to find that the parties were putting all they earned into some joint pool, out of which the expenses of the house, including the mortgage instalments, were paid, or whether he intended to find no more than that, the husband having to pay for the house, the wife was asked herself to earn money towards other expenses. The Court of Appeal would then state what in their lordships' view was the correct conclusion in law; and Lord Evershed indicated that in the former case that view would be that the house was a joint venture (in which case the plaintiff's claim would fail), while in the latter case that view would be that it was not (in which case the plaintiff would succeed.)

Repayment of Advance Commission

THE defendant in *Bronester Ltd v. Priddle* ([1961] 3 All E.R. 471) was employed by the plaintiff company, first as a sales representative and later as sales manager. It was agreed that he should receive, in addition to a salary, a commission limited to deliveries made during his employment, and there was provision for the payment of half commission in advance; also for repayment of commission if, for example, an order was cancelled. There was no provision for the repayment of half commission on the termination of the defendant's employment, although other provisions regarding termination of employment were made. The defendant's employment was terminated by agreement, and the plaintiff claimed repayment of the half commission paid to him in respect of orders on which delivery was not made until after his employment had ended.

In the Court of Appeal, Holroyd Pearce and Willmer, L.JJ. (Pearson, L.J., dissenting), held that the plaintiff was entitled to succeed. The majority of the Court founded their decision on the fact that the advances were discretionary and were admittedly repayable in the sense that they had to be set against the commission when it became due. They were merely paid as a commercial convenience so that the defendant would not have to wait for the money which it was anticipated he would earn. Pearson, L.J., however, based his dissenting judgment on the fact that if an employer advanced commission to an employee and told him that it was commission due and taxable earnings, and did not tell him that in a certain event he would have to repay it, the employee could reasonably understand that he was intended to have and keep the money.

Invalid Gift to Institutions

THE testatrix in *Re Harpur's Will Trusts, Haller and Another v. Attorney-General and Others* ([1961] 3 All E.R. 588) directed her trustees to divide her residuary estate 'between such institutions and associations having for their main object the assistance and care of soldiers, sailors, airmen, and other members of His Majesty's Forces who have been wounded or incapacitated during the recent world wars in such manner' as her trustees should select. In the Court of Appeal it was conceded that the class of institutions referred to was not one which was presently ascertainable, and that, although the assistance and care of wounded and incapacitated members of the Forces would be a charitable purpose, nevertheless the words used by the testatrix were not apt to confine the institutions to those which were exclusively devoted to charitable purposes. It followed that the gift must fail for uncertainty unless the Charitable Trusts (Validation) Act, 1954, could be invoked to save it.

The Court of Appeal (affirming the decision of Cross, J. ([1960] 3 All E.R. 237), held that it could not. The Solicitor-General, seeking to uphold the validity of the gift, argued that a gift to institutions was the same thing as a gift for purposes. If he had succeeded in this argument, the gift would have been validated by the process of confining its application to such of the purposes of the institutions referred to as were charitable, and the uncertainty could have been cured; so, where there is a gift for purposes charitable and non-charitable in such terms that the gift could be applied wholly for the charitable purposes, any invalidity is, under the Act, cured by striking out the non-charitable purposes. The Court came to the conclusion, however, that the language of the Act could not be so stretched as to bring within its validating provisions institutions as well as purposes, so that the gift in the instant case was not an 'imperfect trust provision' within section 1 (1).

Finance and Commerce

Ranged on the Right

THE accounts of Alenco Ltd for the year ended September 30th, 1961, which are the subject of this week's reprint, provide another example of the 'ranged on the right' form of presentation. 'Ranged on the right', as previously explained, is the printer's term for lining up the type forming the narrative to the right-hand side, with the uneven line endings on the left, instead of the normal reverse procedure. This is, of course, a modern gimmick and like most things new – at least in company accounts – it takes a little getting used to. In any event, we hardly think this style is likely to be generally adopted.

One further point that will be noted in these accounts is the rounding off to the nearest thousand. Another company which does this, whose name comes readily to mind, is Unilever; but Unilever, whose figures run into the hundreds of millions, omit the last three digits altogether, and indicate at the top of the columns that the figures are in thousands. Nevertheless, Alenco's rounding off keeps one's attention on that part of the figures which matters most.

Included in our reprint is 'Salient Features' where the lead-off is from the sales total of £4,502,000, bringing in the 2·4 times dividend-cover; and dividend-cover is one of those important facts that might well be included in all company reporting.

Bright and Useful

Most of these salient facts also appear in four-year Group Comparative Statistics (not reproduced), which also include net profit as a percentage of sales – 15 for the year under review – and as a percentage of capital employed – 18; the latter being based on estimated capital employed for the foreign subsidiaries where the profits included in the statistics are for only part of a year. One further point is the basing of figures for the year to September 1959 on internal accounts to provide a yearly comparison.

Among other items in the statistical material is the statement of current assets as a percentage of current liabilities and as a percentage of fixed assets – 200 per cent and 221 per cent, respectively, for the year of these accounts. All in all, the report and accounts are full of what might be called 'bright' and 'useful' ideas.

Alenco's name is closely coupled with Ermeto tubes and fittings. One subsidiary has introduced a fitting to join nylon tubing; another for joining high-density plastic tube. The company is well placed Common Market-wise, although group profits were not up to expectations because of foreign subsidiaries'

The notes referred to above appear on page [267.]

reduced margins. At the time of the rights issue last July, the directors viewed profits as running at the rate of £850,000 a year. It was also explained that the next accounts would include only nine months' profits from the French and five months' from the Dutch Ermeto groups. But, it is stated, 'if the results of the overseas companies are grossed up to give a twelve months' equivalent, we obtain a notional figure of £810,000 for a full year'.

Times-covered

THE point about getting a right perspective on the rate of ordinary dividend is also dealt with in the accounts of The British Oxygen Co Ltd. Here, we see it in the 'Comparison of Results' covering 1952 to 1961. This, by the way, raises an incidental matter: What is the best way to present yearly columns of figures? Is it better to read left to right from the earliest year onwards? Or is it more helpful to start with the latest figures reading 'backwards' to the earliest? British Oxygen adopt the former procedure; Alenco the latter.

The British Oxygen comparison of results contains a summary of profits and their disposal, and then the statement of capital employed. The percentage return on average capital employed is worked out on the basis of profit before tax, after adjusting for loan and service charges. Then comes the amount of the issued ordinary capital, the dividend rate paid, followed by the equivalent rate of ordinary shareholders' average capital employed. 'Times-covered' would be a very worth-while extra – it is in fact one of the 'vital statistics' of company information.

Touch of Spring

R. & G. CUTHBERT LTD, the horticulturists, in their latest report and accounts strike a gay note with the promise of warm sun, spring flowers and garden scents. The outside cover of the company's 1961 report and accounts illustrates in natural colour a bunch of cottage garden flowers. It is a simple but highly attractive picture, giving beauty and colour to a normally prosaic business document.

In presenting their report in this way, Cuthberts are, of course, following a modern trend of using the annual report to publicize the business. Cuthbert – a group which includes, Dobies, Laxtons, Bunyards, Wood & Ingram, Fidlers, and Ryders – became a stock exchange quoted company in May 1960 and these are its first accounts for a full year as a public concern.

Ryder & Son, of St Albans, was brought into the group by share exchange in the year of these accounts and, incidentally, it holds a particular memory for golfers: the late Sam Ryder, the founder of the business, was the donor of the Ryder Cup.

ALENCO LIMITED AND SUBSIDIARY COMPANIES

NOTES ON THE ACCOUNTS

1. Since 30th September, 1960, Alenco Limited has acquired the share capital of the French and Dutch Ermeto groups of companies comprising two French (Ermeto S.A. and Arelco, S.A.R.L.) and one Swiss (Patex S.A.); and two Dutch companies (Ermeto Productie Mij. N.V. and P. L. W. de Ridder & Co. N.V.).
The consolidated profit and loss account deals with the profits of the French and Dutch Ermeto groups earned since acquisition for periods of nine months and five months respectively.
Foreign currencies have been converted into sterling at the rate of exchange ruling at 30th September, 1961.

2. The following changes in the issued ordinary share capital have taken place during the year:—

As at 30th September, 1960	1,320,000	Ordinary shares of 2/6 each, fully paid	£165,000
24th February, 1961		Capitalisation of revenue reserves	495,000
	2,640,000	Ordinary shares of 5/- each, fully paid	660,000
31st July, 1961	880,000	Ordinary shares of 5/- each, fully paid allotted by way of rights issue	220,000
As at 30th September, 1961	3,520,000	Ordinary shares of 5/- each, fully paid	£880,000

3. The trading profit of the group is stated after charging the following:—

	1961		*1960*	
Depreciation of fixed assets		£128,000		*£79,000*
Remuneration of parent company's auditors		4,000		*3,000*
Emoluments of the directors of Alenco Limited:—				
As directors	1,000		*1,000*	
As executives	53,000		*17,000*	
		£54,000		*£18,000*

4. The taxation charge is reduced by £20,000 (*1960, £8,000*) because of investment allowances.

5. The interim dividend of 10% was declared on 26th June, 1961, on 2,640,000 Ordinary shares of 5/- each.

6. The movements in capital reserves are:—

	Alenco Ltd.	*Group*
At 30th September, 1960		43,000
Less: Amounts arising on previous acquisitions now set-off against goodwill (*note 9*)		39,000
Leaving profit on sale of land		4,000
Add: Further profit on sale of land		13,000
		17,000
Premium on ordinary shares issued on 31st July 1961, less expenses of issue (£7,000)	1,093,000	1,093,000
	£1,093,000	£1,110,000

7. The movements in revenue reserves are:—

	Alenco Ltd.	*Group*
At 30th September, 1960	£720,000	£720,000
Less: Amount capitalised by the issue of ordinary shares	495,000	495,000
	225,000	225,000
Add: Balance of profit for the year	117,000	202,000
	£342,000	£427,000

8. Details of fixed assets are:—

	1961		*1960*	
	Land and Buildings	*Plant, etc.*	*Land and Buildings*	*Plant, etc.*
Cost or valuation	£759,000	£1,385,000	*£340,000*	*£777,000*
Accumulated depreciation	96,000	681,000	*44,000*	*405,000*
	£663,000	£704,000	*£296,000*	*£372,000*

The assets included above at valuation, relate entirely to certain foreign subsidiaries which were revalued for fiscal purposes.

9. Goodwill is made up of:—

Amount arising on consolidation being the excess of cost of shares in foreign subsidiaries acquired during the year over the book value of their net assets excluding patents at the dates of acquisition	£285,000
Less: Transferred from capital reserve (*note 6*)	39,000
	£246,000

10. The overdraft of a foreign subsidiary is secured to the extent of £51,000. In addition Alenco Limited has given guarantees in respect of bank overdrafts of £56,000 for other foreign subsidiaries.

11. Commitments for capital expenditure not provided in the consolidated accounts at 30th September, 1961, amounted to £685,000 (*1960, £106,000*).

12. There were contingent liabilities at 30th September, 1961, in respect of bills discounted by foreign subsidiaries amounting to £275,000.

EXPLANATORY CONSOLIDATED PROFIT STATEMENT

	£	1961 £	1960 £
SALES FOR THE YEAR		4,502,000	2,467,000
COST OF GOODS SOLD			
Materials			
The cost of all materials used in producing the finished products and charges by sub-contractors	1,636,000		816,000
Wages and Salaries			
The total wages, salaries and bonuses including the cost of the company's pension scheme, agents' commission and directors' remuneration	1,347,000		714,000
Supplies, Services and General Expenses			
The cost of materials used other than in producing the finished product (e.g. consumable tools), electricity, gas and water services and all other expenses (e.g. rent, rates, insurance, telephones and advertising)	651,000		347,000
Depreciation			
The amount by which the book values of the buildings, plant, machinery, furniture, fixtures, equipment and vehicles have been written down	128,000		79,000
		3,762,000	1,956,000
Trading Profit		740,000	511,000
Deduct: Interest on loans and bank overdrafts		61,000	3,000
PROFIT			
Net profit before tax		679,000	508,000
The charge for tax in this financial year and adjustments in respect of previous years amounts to		323,000	261,000
Leaving net profit after tax of		£356,000	£247,000
THIS PROFIT IS BEING USED AS FOLLOWS			
To pay dividends			
The amount payable to our shareholders on the money invested by them:			
On preference shares	6,000		6,000
On ordinary shares	148,000		101,000
		154,000	107,000
To reinvest in the Company			
The remainder of the profits after allowing for tax and paying dividends is added to the revenue reserves		202,000	140,000
		£356,000	£247,000

EXPLANATORY CONSOLIDATED BALANCE SHEET

	1961 £	£	1960 £
CURRENT ASSETS			
These comprise the following items which are readily realisable in the course of business:—			
Stocks of materials, finished parts and work in progress	1,595,000		866,000
Amounts owed to us for goods supplied and sundry items paid in advance (e.g. rates and insurances)	1,184,000		483,000
Cash at bank and in hand for sundry disbursements	267,000		1,000
		3,046,000	1,350,000
CURRENT LIABILITIES			
We owe the following items:—			
Amounts due for materials supplied and expenses incurred	981,000		274,000
Taxes on profits currently payable	320,000		273,000
Money lent to us by the banks by way of overdraft	107,000		82,000
Final dividend recommended by the directors	108,000		66,000
		1,516,000	695,000
Our net current assets are therefore		1,530,000	655,000
FIXED ASSETS			
These are not readily realisable but are necessary to the running of the business.			
The values shown are at cost or valuation in the case of certain foreign subsidiaries, less adequate amounts provided by way of depreciation:—			
Land and buildings	663,000		296,000
Plant, machinery, furniture, fixtures, equipment and vehicles	704,000		372,000
	1,367,000		668,000
Investments in associated companies	13,000		6,000
		1,380,000	674,000
GOODWILL			
This arose on the purchase of foreign subsidiary companies		246,000	—
Our total net assets, therefore, amount to		£3,156,000	£1,329,000
SHAREHOLDERS' FUNDS			
Our total net assets are represented by shareholders' funds as below:—			
Preference shareholders	165,000		165,000
Ordinary shareholders	880,000		165,000
		1,045,000	330,000
Reserves—Capital	1,110,000		43,000
Revenue	427,000		720,000
		1,537,000	763,000
Taxes on the profits to date, not currently payable	224,000		201,000
Taxation equalisation account which is created in order to spread the effect of tax allowances which would otherwise distort the taxation charge on the profits for the year	26,000		35,000
		250,000	236,000
		2,832,000	1,329,000
LOAN CAPITAL			
Money borrowed on short term to assist in financing expansion of the business		324,000	—
		£3,156,000	£1,329,000

CITY NOTES

STOCK-MARKET business has continued to be selective in character with company news the main influence on prices. The City seems to be getting more disappointments than pleasant surprises at the present time, but in the main, forecasts by the City are not over optimistic. Cut profit margins continue to be the main factor, and many a company chairman reports higher turnover only to show that this increased activity has resulted in lower available profits.

Basically, any real upward movement in equity markets is now likely to await the Budget which is probably only about six weeks away. The authorities are faced with some dilemma here in that if current curbs are released too soon it could be taken as a 'green light' with the danger of a runaway all over again. On the other hand, some indication of an expanding economic policy is needed and the City urgently requires another Bank rate reduction, in order that industrial financing can be undertaken on less expensive lines.

In such conditions markets are likely to remain 'itemized' for a while, although it has to be admitted that the undertone is satisfactory enough. Any real indication that the economy was on the upgrade would undoubtedly find willing buyers and stock by no means plentiful at current prices.

Reviews

Income Tax

by J. LEIGH MELLOR, LL.B., Barrister-at-law. (Sir Isaac Pitman & Sons Ltd, London. 30*s* net).

Of books on income tax there is no end and it seems that new ones are constantly being added to the old favourites. This one is by a lawyer but it is addressed to accountancy, secretarial and banking students, as well as to law students. Nevertheless, he does not forbear to warn that while knowledge of accountancy and experience of business are helpful in understanding the facts of particular cases, such attributes may be a disadvantage in solving legal problems, because the approach of an accountant or business man to a legal problem is not necessarily that of a lawyer'.

Mr Mellor goes on to lay stress on the fact that before one deals with the income tax aspects of a transaction or situation, one should first be sure what is the position in general law, independent of the income tax acts. In this connection the author says that the Court will disregard 'mere nomenclature and sham documents, etc.'. One of the constantly recurring problems in income tax is to decide whether a document is indeed a 'sham' and there seems to be no general answer.

Another telling point made by the author is the one against an advocate who cites a string of *dicta* (often out of context) in support of an argument but who does not analyse the cases from which he quotes.

Advanced Accounting – An Organizational Approach

by NORTON M. BEDFORD, PH.D., C.P.A., KENNETH W. PERRY, PH.D., C.P.A., and ARTHUR R. WYATT, PH.D., C.P.A. (John Wiley & Sons Ltd, London. 75*s* net.)

In one of the stately half-crown homes of England may be seen a mammoth decanter which, when charged for its function of dispensing sherry, needed three muscular menials to lift and operate it. It would scarcely be fair to compare *Advanced Accounting* (physically weighty though the book is) with this

absurdity but at least it took three men to write it and, on closer inspection, the reviewer is not surprised.

The authors present the material not as it is usually purveyed in textbooks but in an evolutionary manner – that is, they take the life cycle of a normal business and deal in turn with formation, maintenance, expansion, contraction and, finally, liquidation. This arrangement has the advantage of giving the text a logical sequence which holds the reader's attention and enables him to understand the operational problems in the order in which they are likely to arise.

As well as covering all the conventional situations, the authors have attempted to break new ground by stressing the accounting implications of price-level fluctuations and indicating, at some length, what accounting data should be available to management about to begin an expansionist phase. These and other features are, in the main, novel to the great majority of advanced accounting textbooks.

The sturdy but slowly diminishing band of members of the Scottish Institute who qualified when actuarial science was a required subject, may care to revive nostalgic or nightmarish memories on consulting the appendix to the book which lightly runs through the basic principles of that diaphoretic examination torture and which begins with the provocative sentence:

> 'An understanding of the basic ideas involved in actuarial science as applied to accounting is essential if the accountant is to perform with maximum effectiveness in his profession.'

Even if they do not now comprehend a single word of the appendix, they can at least drink a toast to themselves as the young mathematical giants of yesteryears. Pass that decanter.

How to Read Statistics

by I. R. Vesselo, M.ED., B.SC. (George G. Harrap & Co Ltd. 12*s* 6*d*).

Use and Abuse of Statistics

by W. J. Reichmann. (Methuen & Co Ltd. 22*s* 6*d*).

Most people, it has been said, use statistics like a drunken man uses a lamp-post, more for support than for illumination. For this reason statistics have a bad name and it is gratifying to see professional statisticians trying to explain in simple terms how statistical data should be interpreted. Both of these books stress this aspect; indeed, Mr Reichmann's study is entirely devoted to illustrating the nature and bases of statistics. It is, however, substantially free of mathematics since he makes no effort to explain the *modus operandi* of statistical calculation. It is a book to be read and its lessons digested, but the reader will find it a quite substantial meal in parts.

Mr Vesselo's slimmer study will serve primarily as a textbook for students taking elementary statistics as an examination subject. The exposition of methods is good but the reviewer at least believes that the discussion of probability is too condensed for the type of reader who will profit from the rest of the book. The inclusion of scaling is clearly aimed at the education student rather than the general reader, but many teachers will welcome this book for revision purposes, if not as an introductory text. Certainly the accountant who likes figures and is interested in statistical method and its potential link with business management will find this book quite interesting and helpful. On the other hand, for the accountant who wishes to understand how statisticians think and approach their problems, Mr Reichmann's book can be recommended.

Palmer's Private Companies (*Forty-second edition*) Palmer's Company Guide (*Thirty-seventh edition*)

(Stevens & Sons Ltd, London. 15*s* net and 21*s* net respectively.)

Somewhat ominously, the lady with the sword and scales who dominates the pinnacle of the Central Criminal Court building in Old Bailey is used as an illustration on the jacket of these books, both of which are in the publisher's *This is the Law* series. Accountants and others, however, who study their contents – thoroughly revised in both cases – need have no fear that they will fall foul of her. *Palmer's Private Companies* was first published in 1877 and this is its forty-second edition. The companion volume has run through thirty-seven editions in about double that number of years. No further confirmation of their reliability and continuing usefulness is necessary.

The present editor, Mr T. E. Cain, M.A.(OXON.), carries on the work of his predecessors with due respect for tradition but does not hesitate to remove, rewrite or add sections as required. The effect of this pruning and grafting is to give better balance to the texts. For example, in *Palmer's Company Law* most of the forms set out in the previous edition have been eliminated as these may readily be consulted in one of the larger volumes of precedents and, in *Palmer's Private Companies*, the number of cross-references and footnotes has been greatly increased.

In a world where constant change is inevitable, it is reassuring to see that this excellent series of manuals continue to lay down the current law quietly and effectively as if nothing much had happened since they first appeared in the now far-off Victorian era.

Underhill's Law Relating to Trusts and Trustees

Second Cumulative Supplement to eleventh edition by M. M. WELLS, M.A., Barrister-at-law. (Butterworth & Co (Publishers) Ltd, London. 12*s* 6*d* net)

This is a more than usually important supplement because in addition to the noter-up which brings the text up to September 1st, 1961, there is an introduction to the very important Trustee Investments Act,

1961, the text of the Act itself, and seven practical examples of the application of the new Act, prepared by Mr A. W. Nelson, A.A.C.C.A., A.T.I.I.

Even if one does not possess a copy of the main textbook, this is a cheap and convenient vade-mecum through the new Act not otherwise available. Those concerned are to be congratulated on this thorough and painstaking approach to some new law which is of the utmost importance to trustees and beneficiaries alike.

Staples on Back Duty

Eighth edition by PERCY F. HUGHES. (Gee & Co (Publishers) Limited. London. 30*s* net).

The passing of Part III of the Finance Act, 1960, has completely revolutionized the law relating to back duty and has necessitated a complete recasting of this well-known work; a recasting which Mr Hughes has carried out with the vigour and thoroughness which one would expect of him. Not only has he dealt extensively with the new legislation but also with such important new cases as *Amis v. Colls; Hinchy v. C.I.R.;* and *Pierson v. Belcher.*

New departures in this edition are the verbatim reproduction of the relevant legislation and of the relevant parts of the 1955 report of the Royal Commission on Taxation. At the same time the paper, the printing and the binding have all been considerably improved.

Part III of the 1960 Act is not the sort of drafting which leaves the reader without any doubt; only litigation can finally reveal the precise meaning of some of the more obscure provisions. In the meantime Mr Hughes provides some very useful guidance.

Lexique U.E.C. Lexicon

(Verlagsbuchhandlung des Instituts der Wirtschaftsprüfer GMBH, Düsseldorf. 62 DM.)

One of the chief barriers to international communication in most spheres of human activity is the lack of a universal language and this applies in particular to a science like accounting where so often special meanings are given to quite ordinary words. Even where the basic language used is common to two countries – as in the case of the United Kingdom and the United States – differences in terminology are frequent and this absence of uniformity confuses not only the British and the Americans but also 'foreigners' inexpert in the so-called common language.

In an attempt to lower the language barrier, the Union Européenne des Experts Comptables, Economiques et Financiers (U.E.C.) has devoted many years to preparing a multilingual accounting dictionary and the first edition which has just appeared sets out definitions of accounting terms in five languages – French, German, English-American, Spanish and Dutch. In the next edition, it is hoped to add Italian and Portuguese sections as well as one on 'phraseology peculiar to British usage' (as opposed, presumably, to American usage).

The value of such a compilation cannot be assessed on publication and it will ultimately establish itself only if there is a sufficient need for it and if the quality of its text is satisfactory. Prima facie, the climate for both conditions being fulfilled is promising. On the first count, the emergence of a European Common Market should create a demand for the dictionary and a test check of the present contents confirms that the number (about 1,000) of the entries and the standard of the definitions are high enough to form an ample working nucleus although modifications and enlargements will no doubt be features of subsequent editions. With pleasing humility, the publishers have issued a suggestions form (in five languages) on which 'alterations' and 'complements' may be noted for future incorporation.

A word of praise is immediately due for the admirable layout of the necessarily complicated text, the good quality of the paper and binding and the clarity of the printing, all of which make for quick and easy reference.

Aids to Office Efficiency

AT NEXT WEEK'S BUSINESS EFFICIENCY EXHIBITION AT LEEDS

NEW MACHINES are seldom launched at provincial business efficiency exhibitions, and this tends to make people who visit the main event believe that subsidiary exhibitions hold little or no interest for them. In fact, this could only be true for those who were able thoroughly to examine and evaluate all the new items shown at Olympia – and how many of us can claim to have done this?

At the Leeds Business Efficiency Exhibition, to be held in Queen's Hall from March 5th to 9th inclusive, there are no less than eighty-five exhibitors. This large number clearly indicates that a representative cross-section of the industry will be taking part and, at the same time, emphasizes the growing importance placed both by exhibitors and the public on out-of-London shows. We therefore make no apology for pre-viewing at some length some of the newer equipment to be seen at Leeds. For intending visitors it will, we hope, usefully spotlight some of the most recent developments; for others it may perhaps be of some value as a brief reminder.

To make reading easier, machines are grouped under headings and the full names and addresses of companies mentioned in the text are listed at the end of each of these sections.

Accounting and Book-keeping Machines

THE stands of Burroughs and National Cash will undoubtedly attract not only those with a direct interest in large-scale accounting machines but the many who enjoy seeking the spectacular capabilities and performances of the latest models.

Both these companies are publicly demonstrating electronic multiplying machines for the first time outside London. National's *Compu-Tronic* has instant electronic multiplication in decimals or in £ *s d*, this function being performed by a unit neatly tucked away in the machine's pedestal. In other respects, the *Compu-Tronic* resembles a *Class 31* direct entry accounting machine. Jobs like invoice extensions (quantity × unit cost) and payroll calculations (hours × hourly rate) are quickly and completely done in one operation. The machine also calculates items like percentages and trade discounts, either on a manual selection basis or via an interchangeable programme bar. It can, without modification, be coupled to an automatic paper tape or card punch.

Burroughs' *F.2000* is described as 'a low-cost computer which includes multiplier, multiplicand and product accumulator storage, with up to eighteen memory units'. Electronic multiplication greatly speeds up tasks such as stores recording, order control, material and labour costing, payroll and invoicing. This machine, too, can be coupled to an automatic card or tape punch.

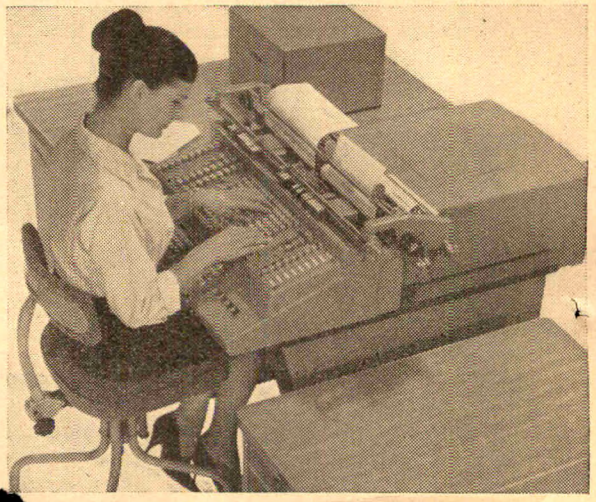
Fast, highly automated [illegible]nt-ing machines by th[illegible]s' *F.5500 Sensimatic* wi[illegible]nd an analysis mac[illegible] vides twenty-[illegible] 27-pocket s[illegible] *Class 33* [illegible] ters. S[illegible]

information entered on the keyboard can be simultaneously analysed under up to seventeen different heads. Its interchangeable control programme bar can perform nearly one hundred different automatic functions.

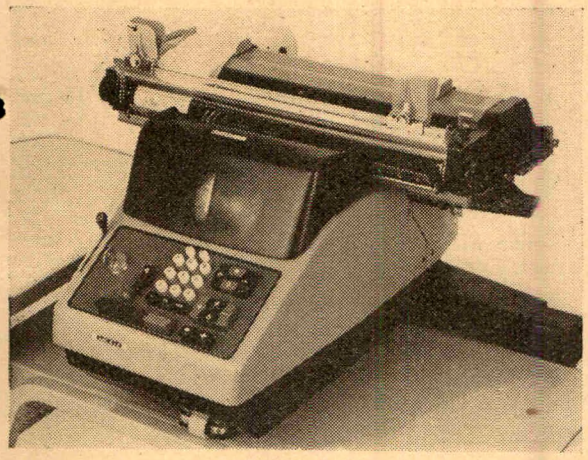
For really large-scale analysis and other accounting functions there is the *Logabax* (produced by the company of the same name) with its 200-odd registers and optional tape punch. This machine has recently been re-styled.

There will also be a considerable range of smaller accounting and book-keeping machines, to which there have been several recent additions. Olivetti's *Audit* series includes machines with simplified numerical keyboard with or without typewriter. Monroe's *President* series has a full-figure keyboard and there are models with from one to four registers. Demonstrations will include ledger posting and pay-roll, and visitors will be encouraged to try these very simple machines for themselves.

The *Odhner* book-keeping machine (Block & Anderson) has a simplified keyboard, two full registers



National Sterling Compu-Tronic



Olivetti Audit

(both accumulating cross-footers), and a memory unit which extends applications beyond the normal range of a two-register machine. Addo are making a special feature of a ledger system using an *Addo-X 7447/80* accounting machine and a dyeline photocopier. The accounting machine is the latest in this class and its features include automatic feed device for insertion and alignment of documents and a switchable control bar which embodies four separate programmes. Another Addo machine will be shown linked to an IBM card punch.

The frequent linking of accounting and other office machines to tape or card punches shows a growing appreciation of these 'by-product' media which can be further processed in a domestic installation or at a computer or punched-card service bureau. An interesting item in this connection is I.C.T.'s tape-to-card punch for 8-channel tape being shown for the first time ever at Leeds. Previous converters could only accept the less versatile 5-channel paper tape.

Companies' addresses:

Burroughs Machines Ltd, 356/366 Oxford Street, London W1.

National Cash Register Co Ltd, 206/216 Marylebone Road, London NW1.

Logabax Ltd, 21 Buckingham Palace Road, London SW1.

British Olivetti Ltd, 30 Berkeley Square, London W1.

Monroe Calculating Machine Co Ltd, Bush House, Aldwych, London WC2.

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6.

Addo Ltd, 47/51 Worship Street, London EC2.

I.C.T. Ltd, 149 Park Lane, London W1.

Desk Calculators and Adding Machines

THE latest addition to the *Diehl* range, the *VSR* calculator, has direct transfer between storage register and keyboard, thus eliminating much figure copying. Since one authority has stated that transposition from one register to another is one of the commonest causes for error in calculating, this machine should considerably help production of accurate results. It is equally suitable for commercial, technical or scientific applications.

A printing calculator, the *Addo-X 3541E* is said to be of special interest to technical and commercial education bodies. The machine's features include short-cut and negative multiplication, constant factor lock, mark-up and discount keys, and an accumulating register.

A feature of the *Facit* hand-operated calculator is its back transfer facility from quotient dials to keyboard. Capacity is $11 \times 9 \times 16$ and it has ten keys. A recent addition to the *Marchant* range is the *TR 10 FA* which, at the touch of a key, transfers from product dial to keyboard. Exceptionally fast (1,300 revs./min.), this machine, like others in the series, has an automatic decimal pointing system. Block & Anderson show both these makes.

Underwood's *200* add-lister will be shown for the first time anywhere. Light-weight, hand-operated, it also subtracts; operates in sterling; has an 11-digit totalling capacity; a 15-key board. A recent addition to Burroughs' range is an electric 12-key add-lister with subtraction, which works in £ *s d* or whole numbers.

Companies' addresses:

Archimedes Diehl Machine Co Ltd, Chandos House, Buckingham Gate, London SW1.

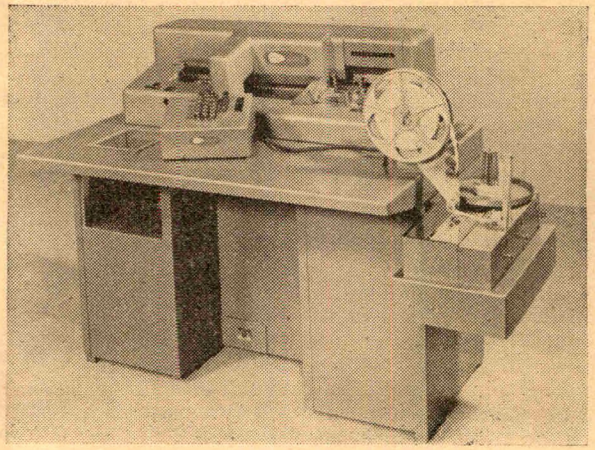
Addo Ltd, 47/51 Worship Street, London EC2.

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6.

Underwood Business Machines Ltd, 4–12 New Oxford Street, London WC1.

Duplicating and Photocopying

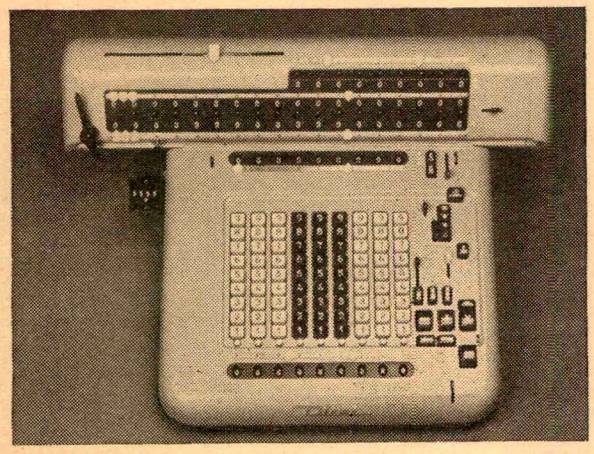
ROTAPRINT'S newest small offset duplicator is the *R.70 Quick Change* which has automatic plate clamping, fixative application, paper feed and blanket washing; simplified controls and a speed of 5,000 copies per hour. Particularly suitable for short runs, when used with low-cost paper masters, it also accepts metal plates and produces work of standard *R.70* quality. A. B. Dick's *356* and *366* small offset machines are for automatic imprinting of personalized cheques, deposit



I.C.T. Tape-to-Card Punch

slips, etc. Both run at high speed; collate as well as imprint; are self-programming to ensure delivery of the right number of documents.

Photocopiers to watch out for include Ilford's *Azoflex 155* first shown at Olympia last October. A dyeline machine, chiefly for business systems work, it makes 3,000 foolscap-size copies per hour and can handle originals up to 13×16 inches. Completely automatic, it delivers finished prints to a stacking tray



Diehl VSR Calculator

or to a 25-compartment paddle-wheel collator which can be provided as an extra, as can an automatic pre-feed stacker.

Three machines which accept brief-size work will be of particular interest to accountants. Kodak are showing for the first time a new *Verifax* model, *A3 Witness*, which makes copies up to 14×18 inches, and can produce up to five from one matrix. The makers stress the permanency of copies made by the *Verifax* process. An exceptionally slim rotary diffusion transfer machine from A. B. Dick is the *115*, which has a 15¼-inch feed width and takes originals of any length. Its features include a swinging paper guide designed to ensure accurate registration between original and copy paper. Office Mechanization's *Speed-O-Print 50*, which takes originals up to 15 inches wide by any length, is a console-type machine which, provided with its own cabinet, has ample storage space for materials. It is filled with ready-mixed developer which is supplied in plastic sacs.

Minnesota Mining's latest *Thermofax* is *Secretary 44* which not only produces dry copies on opaque or translucent material but can also laminate a protective transparent film on to documents. Remington's *Autospeed* (diffusion transfer process) is said to copy faster than ever before, since exposure and development are telescoped into a one-stage process. It is also very economical with developer and needs minimal maintenance. Also diffusion transfer is the Anson *S.K-B40*, features of which include a new, higher-powered light source and a timing device. Exposure can be completed within two seconds and there is a wider time latitude than before. This factor makes the copier easier to use and minimizes waste of materials through incorrect exposure. A brief-size version is also available.

Companies' addresses:

Rotaprint Ltd, Rotaprint House, Honeypot Lane, London NW9.

A. B. Dick Co of G.B. Ltd, Cavendish House, 57–59 Uxbridge Road, London W5.

Ilford Ltd, Ilford, Essex.

Kodak Ltd, Recordak Division, 246 High Holborn, London WC1.

Office Mechanization Ltd, Ofrex House, Stephen Street, London W1.

Minnesota Mining & Mfg. Co Ltd, 3M House, Wigmore Street, London W1.

Remington Rand Ltd, Remington House, 61 Holborn Viaduct, London EC4.

George Anson & Co Ltd, 75 Southwark Street, London SE1.

Collators

HIGH-SPEED reproduction demands fast collating methods, otherwise distribution is hopelessly slowed. Two companies are showing collators recently introduced to this country. Gordon & Gotch have the 12-station *Gathermatic* in the well-known *Thomas* series which is American in origin. The machine, which accommodates sheets varying from 3×5 inches to 11¼×14¼ inches, collates up to 6,000 per hour. Detector devices stop it running if a double is fed or a sheet missed. A stapler attachment can also be used independently. In conjunction with *Gathermatic* it works at the same speed and inserts one or two staples into sets which the machine has automatically jogged. Far less automated, but a great deal faster and less laborious than hand collating, is the *Collax* (Archimedes Diehl) which is alternatively operated by a hand or foot control attached to either side of its small stand. Made with six, eight, ten or twelve compartments for various sheet sizes, it is probably unique in being capable, with the addition of a simple auxiliary device, of handling twice as many half-size sheets as there are compartments.

Verifax A3 Witness Copier

Companies' addresses:

Gordon & Gotch Ltd, 8/12 St Bride Street, London EC4.

Archimedes-Diehl Machine Co Ltd, Chandos House, Buckingham Gate, London SW1.

Typewriters

BLOCK & ANDERSON'S electric *Facit* has two independently-functioning tabulator systems, one of which can act as a memory, being permanently set in any desired pattern, leaving the other free for day-to-day changes. Quietness in action is a feature emphasized. IBM will be showing two versions of the revolutionary *72* electric (no moving carriage, no type-bars) which created so much interest at Olympia. Underwood's recent electric, *Raphael*, is notable for proportional letter-spacing and its exceptionally elegant type face. Characteristics of Remington's latest electric include visible margin settings, a fractional back-spacer, end-of-page positioning scale and two ribbons.

Companies' addresses:

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6.

IBM United Kingdom Ltd, 101 Wigmore Street, London W1.

Underwood Business Machines Ltd, 4–12 New Oxford Street, London WC1.

Remington Rand Ltd, Remington House, Holborn Viaduct, London EC4.

Cash and Cheque Handling

AMONG new and recently-launched machines in this category are a series by Acral which includes devices for writing and/or signing individual or continuous cheque forms. There are electric and hand-powered versions. An unusual signature machine,

New Remington Electric Typewriter

suitable for many documents besides cheques, is the *Autograph* (British Equipment Co) which uses an ordinary fountain pen and therefore reproduces an exceptionally authentic-looking signature from a 'master'. There are two models, one for single documents, the other for continuous forms. *Bandacheck* (Block & Anderson) is an inexpensive bank-note counting machine which can cope with a mixture of old and new notes at a speed of one hundred per seven seconds.

Companies' addresses:

Acral Ltd, Sentinel House, Southampton Row, London WC1.

British Equipment Co Ltd, Ixworth House, Ixworth Place, London SW3.

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6.

Correspondence

The Editor does not necessarily agree with, or hold himself responsible for, the opinions expressed. Letters must be authenticated by the name and address of the writer, not necessarily for publication.

The Training of Accountants

SIR, – Your correspondents' strictures on professional training may well be justified elsewhere in the country but are much less applicable to the Midlands.

Here at the Staffordshire College of Commerce a month's introductory course for articled clerks has been held twice yearly since Mr Parker first suggested it four years ago. Numbers have already risen to thirty, and staffing arrangements assume one hundred for next September and January combined, as common sense and conscience force more and more firms between Coventry and Shrewsbury to send us their articled clerks. There are still principals who refuse point blank, but the largest Birmingham firms already realize that the articled clerk we give back to them is a very different young man from the one we took at the beginning of the month, and the claim that four weeks with us places him on a par with others his senior by twelve months can confidently be maintained.

Recent articles in *The Accountant* have resulted in requests from several articled clerks for a further short course for Intermediate students a year from now, and we also have Final A.C.A. classes on Monday mornings and afternoons attended by Wolverhampton articled clerks, whilst our Intermediate and Final revision classes last November had a total of thirty-nine students.

Yours faithfully,

E. COCKSON-JONES,

B.COM., B.SC.ECON., F.C.A.

Staffordshire College of Commerce,
Wednesbury.

SIR, – The Taverners are a group of London chartered accountant students formed in 1959 to provide cultural and social facilities for articled clerks. At our second annual general meeting in October 1961 a sub-committee was set up to report on articled clerks' status and education. This report is now in process of being submitted to The Taverners in general meeting, but we feel your readers will be interested in some of the more important points contained in it, in view of the current controversy regarding the recommendations in the Parker Report.

It is considered that the Institute should take a more direct interest in the training of its future members

(*a*) by ensuring that principals can offer an adequate range of practical experience before they first take articled pupils;

(*b*) by being a third party to the articles of clerkship, entering actively into the clerk's service through a minimum of two interviews of the articled clerk during his service by a local committee;

(*c*) by declaring the first six months of articles to be a period of probation, determinable by either side with the permission of the Institute;

(*d*) by establishing an accountancy school to undertake both lecture courses and correspondence courses.

The accountancy school should have a permanent director of studies and a trained tutorial staff – the existing tutorial organizations might provide a basis for this – and should be set up in close co-operation with the students' societies. It is envisaged that two compulsory courses be provided, each of one month. The first should be soon after the probationary six months of articles, the second in the year preceding the Final examination. While it is recognized that the bulk of the theoretical training must continue to be obtained by means of correspondence courses, there is the very great drawback of an almost complete lack of personal contact between tutor and pupil. Every attempt must be made by the Institute to provide this relationship. The school and the courses will go some way towards improving the situation.

The cost of running the school should be borne by the articled clerk, who will pay a fee comparable to that being charged by the present tutorial organizations. The Parker Committee recommended that a fee of about £25 be levied on articled clerks on the registration of their articles in addition to the present fees they pay to tutorial organizations, to constitute an education fund which would provide the whole of the Institute's expenditure on students' activities. We are very doubtful whether it could be demonstrated that this is not excessive: if it is to be implemented, it should be in conjunction with a comprehensive scheme for the full professional education of articled clerks.

The committee feels strongly that the Institute have a moral obligation to provide their own training for their own profession.

The adoption by the school of all educational facilities would leave student societies' funds free to be used more widely than at present – for instance, The Taverners would like to see lectures on subjects other than those purely concerned with accountancy, so as to broaden the outlook of articled clerks, particularly those who have not had the benefit of university education.

In the meantime, articled clerks should be required to pay an annual subscription of £1 1*s* to their students' society in addition to the present subscription paid by their principals. We feel strongly that students should contribute to their own students' society, particularly now that salaries are generally paid to articled clerks. This will help to combat the general apathy which prevails at the moment.

An example of the importance of students' own ideas about their needs is illustrated in the history of the Students' Club now firmly established in the centre of London. The Taverners found the premises but the Students' Society rejected them on the grounds that this was not within its objects. The Taverners then made other arrangements without any outside financial support. The figure for membership, which totals nearly 1,700 after only seven months in existence, tells its own story. The club is open to all members of students' societies on payment of a 10*s* annual subscription, and representatives of each London social group are members of its general committee.

We have tried to show that students are prepared to contribute to their society so as to receive a general broadening of their education. The majority of articled clerks come straight into business from the narrow confines of school. Articles should far more closely parallel a university education than they do at the moment, and the great guiding light of all students' societies should be that ambition.

It is to the realization of that ambition that the report was dedicated.

Yours faithfully,

G. R. FRESHFIELD, *Chairman*,
THE TAVERNERS.

London E11.

SIR, – As a result of Professor Baxter's article in your issue of January 20th, many useful opinions on future training of chartered accountants have been given.

I am at present engaged in university research on this subject and would appreciate your help by allowing me to use your correspondence columns to ask any readers if they would be kind enough to send me any suggestions they may have for methods of training or post-qualification specialization. All letters received will be acknowledged.

Yours faithfully,

S. A. MARSHALL,
B.A.(COM.), F.R.ECON.S., A.C.A.

7 Meadow Drive,
Keyworth, Notts.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND

MEETINGS OF THE COUNCIL

Special and ordinary meetings of the Council of The Institute of Chartered Accountants in Ireland were held in Dublin on Friday, February 16th, 1962.

Attendance

The President, Mr A. E. Dawson, was in the chair and there were also present:

Messrs R. E. McClure, *Vice-President*, John Eacon, A. S. Boyd, G. E. Cameron, Frank Cleland, N. V. Hogan, John Love, R. J. Neely, W. H. O'Donnell, H. W. Robinson and D. McC. Watson, with the *Secretary* and the *Assistant Secretary*.

Apologies for absence were submitted from Messrs G. A. P. Bryan, M. M. Connor, J. F. Dempsey, James Graham, R. P. F. Olden, James Walker and the Joint Secretary and Treasurer.

Deaths

The deaths of the following members were reported and noted with regret:

Brandon, William Harold, A.C.A. (Lisburn, Co. Antrim).
McGarry, Henry, A.C.A. (Dublin).

Resignations

The following resignations from membership were accepted:

Jackson, Maurice, F.C.A. (Belfast).
O'Beirne, Thomas Joseph, A.C.A. (Dublin).

Fellowship

The following Associates were elected to Fellowship of the Institute:

Hynes, Eamonn L. (Galway).
McCay, Henry (Londonderry).
Mills, Robert McNeill (Ballymena).
Poole, Robert Tinsley (Dublin).
Vaughan, Albert (Portadown).

Practice

The following members were admitted to practice:

Belton, Denis John (Dacca, East Pakistan).
Dempsey, Robert Augustine (Dublin).
Hunt, Kenneth (London).
Phelan, Thomas Patrick (Dublin).
Phillips, Manfred Henry (Bombay, India).
Strickland, James Augustine (Dublin).

It was reported that the following members had ceased to practise:

Graham, Thomas Saunders, F.C.A. (Belfast).
Mullen, John Oliver Plunkett, A.C.A. (Dublin).

Membership

The following candidates, who were successful at the Final examinations held in November–December 1961, were admitted to membership:

(1) INSTITUTE FINAL

As Associates in Practice

Crowley, Laurence G. (Dublin); Kearney, Leo C. (Newry, Co. Down).

As Associates not in Practice

Beatty, Eric D. J. (Dublin); Bourke, John O. P. (Dublin); Boyd-Barrett, David J. R. (Dublin); Browne, William P. (Longford); Byrne, Patrick B. (Drogheda, Co. Louth); Claffey, Patrick J. B. (Ballymahon, Co. Longford); Clarke, James A. (Belfast); Coen, Francis O. (Athlone, Co. Westmeath); Cooley, Samuel A. G. (Craigavad, Co. Down); Cox, Patrick A. (Dublin); Delaney, Daniel (Dublin); Dowie, George (Belfast); Foo, Yee Yuan (Dublin); Fox, Joseph D. (London); Grealy, Thomas J. (Tralee, Co. Kerry); Hally, Desmond L. (Dublin); Hargaden, Michael F. (Dublin); Hayes, John J. (Dublin); Jackson, Edward S. (Belfast); Jeffers, Alan T. (Kildare); Kennedy, John J. (Dublin); Leonard, Eamon P. (Dublin); McAvoy, James D. (Belfast); McGovern, Peter F. (Dublin); McKenna, Patrick D. (Dublin); Moulton, Raymond A. (Dublin); Moynihan, Martin A. (Dublin); Murnaghan, Peter G. (Dublin); O'Sullivan, Patrick K. (Dublin); Pedlow, Thomas K. (Lurgan, Co. Armagh); Phelan, John A. (Bandon, Co. Cork); Plunkett, Miss Olive A. (Dublin); Rafferty, Hugh H. (Belfast); Sheehan, Finbar M. (Dublin); Spain, James P. (Dublin); Stakelum, John J. (Dublin); Veale, Thomas M. (Dublin); Walsh, Patrick C. (Dublin); White, Desmond M. C. (Dublin); Woods, John K. (Dublin).

(2) SOCIETY FINAL

As Associates not in Practice

Barrett, Donald J. (Dublin); Grant, Vincent D. (Belfast); Jackson, Ronald A. (Dublin); Kennedy, Mel P. (Dublin); Waddell, Robert J. (Bangor, Co. Down); Webb, John A. (Dublin).

An application by a former member for re-admission to membership of the Institute was considered and was refused.

Committees

Reports were received from the Finance and General Purposes, Premises, Taxation, Policy, Education and Training and Examination Committees.

Examinations

It was reported that arrangements had been made to hold Parts II and IV of the Institute examination from May 8th to 11th and Parts I, III and V from May 18th to 22nd, and it was noted that provisional arrangements had been made to hold all the Parts from November 6th to 13th, both dates inclusive.

JOHN FOORD & COMPANY

Notes and Notices

PROFESSIONAL NOTICES

MESSRS DELOITTE, PLENDER, HASKINS & SELLS announce that as from March 1st, 1962, the address of their Zürich office will be Genferstrasse 6, Zürich 2.

MESSRS GRAY, STAINFORTH & Co, Chartered Accountants, announce that Mr T. L. MOOYAART, F.C.A., who has been with the firm for thirty-seven years and senior partner for the past ten years, retired as a partner on February 28th, 1962. He is being retained by the continuing partners as consultant in their offices at 85 New Cavendish Street, London W1, which will remain his address for business purposes. The firm also announces the retirement on the same date of Mr A. E. WEBSTER, who has been a member of their staff since April 13th, 1908.

MESSRS NEWTON, ARMSTRONG & Co, Chartered Accountants, announce that the address of their London office is now 11 Grocers' Hall Court, Poultry, London EC2. The telephone number, Monarch 6231, remains unchanged.

MESSRS PANNELL, CREWDSON & HARDY, Chartered Accountants, announce that after the destruction of their offices in the hurricane at British Honduras, they have secured new offices at 111 North Front Street, Belize, British Honduras, Central America (P.O. Box 197).

Appointments

Mr F. W. Barnes, A.A.C.C.A., A.I.M.T.A., and Mr G. P. Woodall, A.A.C.C.A., have been appointed accountants to the sub-areas of East Sussex and South-west Kent, and Mid-Sussex, respectively, of the South Eastern Electricity Board.

Mr J. V. Bigley, A.C.A., has been appointed secretary of Johnsons of Hendon Ltd.

Mr H. B. Floyd, F.C.A., has been appointed an additional director of Lewis & Burrows Ltd.

Mr James Graham, A.C.A., has been appointed secretary and administrative and financial executive director of James A. Jobling & Co Ltd.

Mr B. M. Lindsay-Finn, B.COM., F.C.A., has been appointed chairman of John White Footwear Holdings Ltd, and Mr C. L. Metcalfe, F.C.A., has been appointed deputy managing director, while continuing as secretary of the company. Mr Metcalfe has also been appointed joint managing director of John White Footwear Ltd. The appointments follow the resignation of Mr John White from his offices and directorships and will be effective from April 1st.

OBITUARY

George Robert Lowe, F.C.A.

It is with regret we record the death on February 11th, at the age of 71, at his home in Welwyn Garden City, of Mr George Robert Lowe, F.C.A.

Educated at Manchester Grammar School, he was articled to the late R. N. Carter, and awarded honours in the Intermediate and Final examinations and the Robert Fletcher Prize. He was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1913.

After service in the First World War in the Finance Branch of the Ministry of Munitions, he became a partner in Bullimore & Co, of Norwich. In 1930, he moved to London as resident partner of that firm, which in 1931 joined with the practice of Mr S. R. Hogg, D.S.O., M.C., F.C.A., to found the firm of Hogg, Bullimore & Co, now of City Gate House, London EC2. He retired just over a year ago.

Apart from his many active business responsibilities, Mr Lowe gave much of his time to public and social work. For some years he was a member of Welwyn Garden City Urban District Council, being chairman in 1948. He was appointed a member of the boards of Welwyn Garden City and Hatfield Development Corporations on their formation in June 1948, and continued a member until 1956.

A prominent freemason, Mr Lowe was a Past Provincial Grand Warden of Hertfordshire.

IN PARLIAMENT

Shareholders: Information

Sir C. OSBORNE asked the President of the Board of Trade, in view of the large amount of information which has been given to both Imperial Chemical Industries and Courtaulds' shareholders as a consequence of the take-over bid which was not previously available to them, if he will set up an official committee to investigate and report how much more information directors should be compelled to give annually to their shareholders; and if he will make a statement.

Mr ERROLL: No. The need to keep shareholders adequately informed is a matter already under consideration by the Jenkins Company Law Committee.

Hansard, Feb. 22nd, 1962. Written Answers. Col. 68.

Decimal Currency

Mr DU CANN asked the Chancellor of the Exchequer what progress is being made in establishing the committee of inquiry into a decimal currency; and when the report of the committee will be available.

Sir E. BOYLE: The committee, under the chairmanship of Lord Halsbury, has already held several meetings. I hope that its report will be available early in 1963.

Hansard, Feb. 22nd, 1962. Written Answers. Col. 73.

Giro System

Mr W. R. WILLIAMS asked the Postmaster-General why a decision regarding the introduction of the Giro system into the Post Office has been so long delayed; and whether he will regard the matter as one of urgency.

Mr BEVINS: This subject requires careful consideration from many angles, but I will make a statement as soon as I can.

Hansard, Feb. 20th, 1962. Written Answers. Col. 34.

MONOPOLIES AND RESTRICTIVE PRACTICES

Review of 1956 Legislation

The President of the Board of Trade recently announced that a comprehensive review of the Government's present policy on monopolies and restrictive practices is being undertaken. The stage had now been reached in this inquiry, he stated, when it would be helpful to receive the views of trade, of both sides of industry, and of consumers on any subjects covered by the review. The Board of Trade therefore invites the submission of statements on the subject and these should be addressed to the Assistant Secretary, Industries and Manufactures Department (Division 2), Board of Trade, Horse Guards Avenue, London SW1.

Readers will recall that Part I of the Restrictive Trade Practices Act, 1956, requires restrictive agreements relating to the production, supply or processing of goods to be registered with the Registrar of Restrictive Trading Agreements. The agreements are presumed to be against the public interest unless they can be justified in terms of section 21 of the Act.

Part II of the Act prohibited the collective enforcement of resale price maintenance but made specific provision for individual enforcement by legal proceedings. Resale price maintenance has already been the subject of a separate Board of Trade inquiry.

Part III amended the Monopolies and Restrictive Practices (Inquiry and Control) Act, 1948, so as to confine the activities of the Monopolies Commission principally to consideration of single firm monopolies and export agreements. References made to the Commission since 1956 have related to fertilizers, cigarettes and cigarette machinery, electrical equipment for motor-cars, solus petrol sites and wallpaper.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

Residential Course at Oxford

A week-end residential course for members of The Institute of Cost and Works Accountants will be held at Worcester College, Oxford, from Friday evening, April 13th, to Sunday afternoon, April 15th. The theme will be 'The effective use of capital'.

On the first evening, Mr Ian T. Morrow, C.A., F.C.W.A., a Past President of the Institute, will speak on 'The expanding field for the management accountant'. The President of the Institute, Mr Francis M. W. Hird, F.C.A., F.C.W.A., will address the members after dinner on the Saturday evening.

The subjects of the course will cover 'The sources and provision of capital'; 'The preparation of capital expenditure budgets'; 'Economic studies to determine pay-back periods and profitability'; and 'Authorization and control of projects'. Two further subjects will be 'The use of return on investment ratios' and 'The effective control of current assets'.

Speakers taking part will include: Mr J. Borsay, F.C.W.A., a Past President of the Institute, Mr S. J. Careless, F.C.A., F.C.W.A., Mr A. D. MacKay, B.COM., C.A., F.C.W.A., Mr L. N. Norton, F.C.W.A., and Mr G. C. Stone, F.C.W.A., a Past President of the Institute.

The course is being organized by the No. 1 Area Co-ordinating Committee of the Institute, and inquiries should be addressed to Mr S. G. H. Freeman, A.C.W.A., 12 Meadow Road, Wokingham, Berks.

Students' Study Course

A study course for students of The Institute of Cost and Works Accountants is being held at The Queen's College, Oxford, from April 6th to 8th.

There will be three series of lectures; at the first, the subjects will include 'Labour and methods of remuneration'; 'Costing of materials and material control'; and 'Production methods and services'. The second series will include lectures on 'Mechanized accountancy'; 'Budgetary control and standard costing'; 'Marginal costing'; and 'Factory management'; and the third series will be one in which the subjects are entirely devoted to costing.

The course is being organized by the No. 1 Area Co-ordinating Committee of the Institute and will be presided over by Mr A. W. Field, F.C.W.A., chairman of the committee.

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Dinner and Dance

The annual dinner and dance of the London and District Society of Chartered Accountants will take place at Grosvenor House, Park Lane, London W1, on March 16th. Tickets, price £2 2s each, may be obtained from the secretary of the Society, Mr J. W. G. Cocke, T.D., M.A., F.C.A., 2 Norfolk Street, London WC2.

MANCHESTER STUDENTS' RESIDENTIAL COURSE

The Joint Tuition Committee of the Manchester Society of Chartered Accountants and the Manchester Chartered Accountants Students' Society has arranged to hold a fourth residential revision course for students at Lyme Hall, near Stockport, from March 19th to 23rd.

The primary object of the course is to assist students in their pre-examination revision and for this reason priority will be given to candidates in the Institute's examinations to be held in May 1962. Priority will also be given to students who live too far away from Manchester and Preston to attend Saturday morning lectures. Remaining places will be allotted by ballot and although a ballot was not necessary at the previous

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

three courses, the growing popularity of the course leads the committee to believe that there will not be places available for late applicants.

A separate series of lectures is given for Intermediate and Final candidates and in addition there will be opportunities for discussion with the lecturers. A resident tutor will be available throughout the course. Further particulars are obtainable from the hon. secretary, Mr A. J. Burden, A.C.A., 46 Fountain Street, Manchester 2.

SW. LONDON DISCUSSION GROUP

The next meeting of the South-West London Chartered Accountants' Discussion Group will be held at the Kingston Hotel, Kingston upon Thames, on Monday next at 6.45 p.m. for 7 p.m., when there will be an open forum on 'Taxation'.

The hon. secretary of the Group is Mr T. C. Backshell, F.C.A., Charter House, Claremont Road, Surbiton, Surrey. Telephone: Elmbridge 4052.

INSTITUTE OF INTERNAL AUDITORS

London Chapter

The meeting of the London Chapter of The Institute of Internal Auditors to be held next Wednesday, at 12.30 p.m., at the Kingsley Hotel, Bloomsbury Way, London WC1, will be addressed by Mr H. H. Longman, of Unilever Ltd, on 'More work study in the office'.

Birmingham Chapter

The next meeting of the Birmingham Chapter will be held at the Chartered Auctioneers' and Estate Agents' Institute, Regent House, St Philip's Place, Colmore Row, Birmingham 3, next Thursday, at 6.30 p.m., when Mr S. Cuttell, A.A.C.C.A., will speak on 'Techniques of audit sampling'.

Anyone interested will be welcome at the meeting. Inquiries regarding the Chapter should be addressed to the hon. secretary, Mr R. C. J. Lucas, West Midlands Gas Board, 39/41 Hagley Road, Birmingham 16.

THE INSTITUTE OF TAXATION

Thesis Competition

'New alternative methods of taxation' will be the subject of a thesis competition to be held this year by The Institute of Taxation. There will be a prize of one hundred guineas for the winning paper.

Theses will be judged by content rather than length and should not exceed 25,000 words. The closing date for entries, which may either be in typescript or manuscript form, is October 31st. They should be addressed to the Secretary of the Institute, Clifford's Inn, London EC4. All competitors will be advised of the judges' decision, by post, on a date to be fixed by the Council of the Institute.

THE INSTITUTE OF OFFICE MANAGEMENT

London Branch Annual Conference

Sir Halford Reddish, F.C.A., chairman and managing director of Rugby Portland Cement Co Ltd, will be the guest speaker at luncheon at the annual conference of the London Branch of The Institute of Office Management to be held on March 8th at the Kensington Palace Hotel, London W8.

Sir Halford, whose address will be based upon his own experience within his own companies, will examine the impending impact of the changing economic and social structure in Europe upon office staff in the United Kingdom. The conference, which will be opened by Mr Brian A. Maynard, M.A., F.C.A., A.C.W.A., partner in the firm of Cooper Brothers & Co, Chartered Accountants, will include papers on 'A new look at banking', by Mr D. S. Travers, A.I.B., general managers' assistant, Barclays Bank Ltd; 'Pruning paperwork in the public service', by Mr C. R. Smith, O.B.E., central organization and methods branch, G.P.O., and 'Eliminating paperwork in hire-purchase', by Mr H. Simpson Cook, LL.B., F.C.I.S., manager, United Dominion Trust Ltd.

Further details regarding the conference are obtainable from the conference secretary, Mr J. C. Durnin, F.C.A., Messrs Clark, Battams & Co, 32 Victoria Street, London SW1.

CHARTERED ACCOUNTANTS' HOCKEY CLUB

In a match played at Surbiton on February 14th, the Chartered Accountants' Hockey Club drew with Oxford University Occasionals, neither side scoring.

It was greatly to the credit of both goalkeepers that there were no goals, although both sides had their opportunities. Bingham, for the Accountants, was under great pressure and played a fine game. He was well supported by Sturges and Cornfield, while Davis held the fort admirably in the middle.

The Occasionals' defence, Ellis and Padfield in particular, marked very well and gave the Accountants few opportunities. On both sides, however, thrusts were made but the finishing touch was lacking.

Trading in 'Know-how'

THE House of Lords has dismissed the appeal of Rolls-Royce Ltd from the decision of the Court of Appeal in *Jeffery v. Rolls-Royce Ltd* (*The Accountant*, March 6th, 1961, p. 351; 40 A.T.C. 56) and thereby established that 'lump sums' received by the company under a number of licence agreements fell to be included as trading receipts in the computation of the company's profits for the purposes of income tax. Both the Special Commissioners and MR JUSTICE PENNYCUICK had allowed the company's appeal. The learned judge relied on the House of Lords' own decision in *Moriarty v. Evans Medical Supplies Ltd* (36 A.T.C. 277).

The House of Lords is of course bound by its own decisions and no doubt of any kind is thrown upon its decision in the *Evans Medical* case, notwithstanding that only LORD SIMONDS took part in both cases. What its latest decision emphasizes is the fact that the law applied to both cases is precisely the same; the law remains unchanged, but different facts naturally produce different legal results. The decision also emphasizes the danger of a too facile assumption that mere similarities between two sets of facts will produce like legal results. In the *Rolls-Royce* case, the appeal of the Crown from the Special Commissioners' decision produced a stated case covering no less than thirty-seven pages of the not over-large print of the *Annotated Tax Cases*, while to that stated case were annexed a large number of documents. The like appeal of *Evans Medical Supplies Ltd* produced a stated case of only four pages, with a much smaller number of annexed documents. It is only when one has read the two stated cases, as well as the judgments, that one can safely comment on the decisions. Another lesson from the two decisions is that an income tax case is lost or won when the relevant agreements are drafted; and mere labels like 'lump sum' or 'capital sum' inserted by the draftsman with one eye on the Inland Revenue, and in the hope that such labels change the essential nature of a sum, are not enough. Finally the decisions again emphasize the danger of repeating a profitable transaction too often, or even more than once.

The *Evans Medical* litigation arose out of one single agreement. The company was carrying on a trade which had been begun in 1809 and which consisted of the manufacture and sale of medicines, drugs and the like. One of the territories in which it operated was Burma, where the Government in 1953 decided to carry on such manufacture itself. Faced with the inevitable loss of its business there, the company entered into an agreement with the Burmese Government to assist the latter to set up the new industry. The

agreement was in several parts, with different consideration attached to different parts. In Part I the company agreed to provide the knowledge which would make possible the large-scale manufacture of medical products in Burma. The consideration for this was 'a capital sum of £100,000'. In another part of the agreement the company undertook to provide services for which the consideration was an annual fee of £25,000 as to which there was no argument; the company agreed from the outset to treat it as a trading receipt. The dispute was thus confined to the £100,000 and neither side sought to split it up between capital and income, both argued on an 'all or nothing' basis. In deciding that the whole of the £100,000 was a taxable trading receipt, the Special Commissioners read the agreement as a whole, that is they ignored the specific allocations of consideration. Moreover they found that the company had not sold anything and that the £100,000 was wholly for services. MR JUSTICE UPJOHN (who was also a member of the Court of Appeal in the *Rolls-Royce* case) held that there was no evidence to support this determination of the Commissioners.

The Court of Appeal allowed the Crown's appeal, to the extent of remitting the case to the Special Commissioners to split up the £100,000 between capital and income, but the company successfully appealed to the House of Lords against this decision, with the result that the judgment of UPJOHN, J., was upheld. It is certainly true that some of the services rendered in return for the global £100,000 payment were services which, if separately remunerated, would attract income tax. The interesting question arises as to how far (if the draftsman is astute to allocate the total consideration among the different matters for which it is paid, and in such manner that the lion's share is attributed to capital) the appeal tribunal can of its own motion reallocate the consideration so as to increase the tax liability. A good deal could be written on this topic, but it did not arise in these two cases.

The trade of Rolls-Royce Ltd was set up in 1906 and was originally that of motor-car manufacturers only, until the First World War, when the manufacture of aircraft engines was begun. This was continued in the inter-war period and has grown enormously. Owing to the pronounced military aspect of this trade, and the natural anxiety of Governments to power their aircraft with engines from sources over which they have control, the element of trading abroad which was so important in the *Evans Medical* case was not so strong. After the end of the Second World War Rolls-Royce Ltd embarked on the practice of entering into licence agreements relating to the manufacture of its engines in territories where it did not already trade. The element of sale of goodwill, in the sense of handing over existing business, was therefore absent.

The first agreement was made with the Chinese Nationalist Government in February 1946, and although it seems to have been the only comparable agreement entered into in that year it was followed in the subsequent seven years by a number of similar agreements, agreements which followed extensive travelling by the company's staff in search of such agreements, the expenses of which were charged and allowed as revenue expenses for tax purposes. As in the *Evans Medical* case, the consideration payable to the company was of two kinds – capital sums (but often payable in instalments) and recurring sums as to which no dispute arose. But these two kinds of consideration were not separately allocated and perhaps this is the most important difference. Most of the services rendered were of a non-capital nature and the only substantial capital element, if any, was the sale of 'know-how'.

The Special Commissioners, after setting out the facts in the stated case at very great length, couched their decision in a single sentence without giving any reasons: 'We are of the opinion that the case for the [company] succeeds and the appeal must be allowed.' MR JUSTICE PENNYCUICK upheld them. The Court of Appeal unanimously reversed his decision and the House of Lords has upheld that reversal.

LORD RADCLIFFE saw no difficulty in describing 'know-how' as an asset. It was intangible; but so was goodwill. It did not follow that 'know-how' was necessarily a capital asset. It could not easily be compared with factory buildings or patents. It was an ambience pervading a highly-specialized production organization and the analogy with fixed assets of a more ordinary kind was likely to break down; it was not so much a single entity as a fluid in store which could be pumped down several channels. Words like 'capital' and 'lump sum' contributed nothing to the problem. The company had undertaken for reward, in various places, to impart their expertise.

Annual Payment or Trade Receipt?

ON Thursday of last week when the House of Lords gave its decision in the *Rolls-Royce* case, the Court of Appeal was also delivering judgments which emphasize the fact that not all documents which are drafted with one eye (or perhaps two) on the Inland Revenue, necessarily achieve their object; and the danger of relying on judicial dicta divorced from their context. The Court dismissed an appeal from the decision of MR JUSTICE PLOWMAN in *British Commonwealth International Newsfilm Agency Ltd v. Mahany* (*The Accountant*, July 29th, 1961, p. 151; 40 A.T.C. 255).

The appellant company was set up in 1957 by the Rank Organisation Ltd and the British Broadcasting Corporation for the purpose of supplying to subscribers visual news on a world-wide scale, of ensuring that the company should remain under British control, and of preventing the supply of visual news material from being dominated by American interests. It was expected that the company would trade at a loss initially and the two promoters agreed to pay additional subscriptions, each equal to half the loss. By March 1958 it was apparent that additional subscriptions would be payable for the accounting period ending on March 31st, 1958. As Rank (as distinct from its subsidiaries) had had no commercial dealings with the company, Rank's tax advisers feared that the additional subscription might not be allowed as a business expense. Consequently, in order to improve the tax position, the two promoters entered into a deed of covenant with the company, in the hope that if the additional subscriptions were paid pursuant to the deed, they would constitute 'annual payments'. Thus the company would be able (it was thought) to set its loss against the annual payments and recover the tax which had been deducted.

Under the deed each promoter covenanted to pay to the company in each of seven tax years 'a sum equal to one-half of the deficit'. The 'deficit' was defined as:

> In relation to each covenant year, the amount (if any) by which the cost of operating the company's service of providing visual news items to television stations, newsreel makers and other subscribers exceeds the moneys paid or payable to the company by way of subscriptions by the subscribers to the service'

in the company's accounting year ended in the covenant year.

The trading and profit and loss account of the company for the period ended March 31st, 1958, showed a loss of £125,180 so that its receipts under the deed of covenant were £62,590 from Ranks and £62,590 from the B.B.C., these being the gross amounts. The company claimed that having made a trading loss in 1957–58 it was entitled to claim repayment of the tax deducted from the above payments, by setting the loss against them under section 341 of the Income Tax Act, 1952. It is to be observed that it was a *sine qua non* of the company's claim that, in providing the service, it was carrying on a bona fide trade. It was also essential for the company to continue to provide the service if anything was to be paid under the covenant. Moreover, there was a finding of fact that without these subventions the company could not continue to trade.

It is perhaps not surprising that in these circumstances the Inland Revenue resisted the claim and that the Special Commissioners found in the Revenue's favour. Confirming their decision in a judgment of admirable brevity and lucidity, MR JUSTICE PLOWMAN held that there was ample authority to show that a payment which is a trading receipt in the hands of the recipient cannot at the same time be an annual payment (*Smart v. Lincolnshire Sugar Co Ltd* (16 A.T.C. 7); *Ostime v. Pontypridd and Rhondda Joint Water Board* (25 A.T.C. 90). He resisted the argument that *C.I.R. v. Corporation of London* (32 A.T.C. 211) constrained him to decide the other way: that case concerned a payment to a charity which was not carrying on any trade. The company had fastened on some *dicta* of LORD NORMAND in the latter case as to the payment having been received 'without conditions or counter-stipulations' but his lordship rejected the argument that this was the ratio of the decision.

In the Court of Appeal the company's appeal was unanimously rejected on the same grounds.

Stock Valuation Reconsidered

by GEORGE J. STAUBUS, Ph.D., C.P.A.
Associate Professor of Accounting,
University of California

THE Institute of Chartered Accountants in England and Wales' Recommendation on Accounting Principles, No. 22, *Treatment of Stock-in-trade and Work in Progress in Financial Accounts* has recently come to my attention. At the risk of doing irreparable damage to Anglo-American relations, I wish to take exception to several of the points made in that statement. Let it be understood at the outset, however, that my comments are not meant to single out the accounting profession in the United Kingdom for criticism; American accountants are equally guilty of these practices which I consider reprehensible. I choose this occasion to present my views on stock measurement because of the open invitation represented by Recommendation No. 22, and in the hope that a Britisher will be sufficiently incensed to review critically some of the accounting literature emanating from the American branch of the profession. Perhaps this sort of cross criticism will be more effective than criticism by our countrymen.

The specific statements in Recommendation No. 22 which I consider unacceptable on theoretical grounds are:

(1) 'The basis normally used for the determination of the amount to be carried forward for stock is its cost less any part thereof which properly needs to be written off at the balance sheet date.

(2) 'In businesses which are highly competitive or have a sensitive market for their products, overhead expenditures may properly be omitted in order to avoid carrying forward expenditure which may prove irrecoverable.

(3) 'In businesses which mature large stocks over long periods (for example, whiskey, wine, timber) it is usual to exclude fixed overheads in order to avoid carrying forward large and increasing amounts of time-expired expenditure the recovery of which in the ultimate selling price is uncertain.

(4) 'In some businesses where selling prices are based on or reflect current replacement prices it may be considered that the trading results of a subsequent period will be prejudiced if they are burdened with any amount for stock which exceeds its replacement price; where this view is taken it is regarded as important in reporting the results of the activities of a period, as compared with those of its successor or predecessor, that the period in which a reduction in buying prices occurs should bear the diminution in profit rather than the period of disposal whose realizations will be adversely affected by the events of the previous period.'

The Objective of Stock Measurement

Rather than discuss each of the four offending statements in order, I shall present my case in a more positive fashion. First, let us consider why we assign monetary amounts to stocks of commodities held at the date of the financial statements. Surely we are more likely to agree on measurement methods if we agree on the major purpose of our measurements. Indeed, it is my opinion that failure to give explicit consideration to the objectives of accounting is the most important single cause of disagreements among accountants. So let us make some effort to establish a major premise from which our argument may proceed.

Financial Accounting

The term 'financial accounting' is used to mean the gathering, processing, and reporting of quantitative economic information for use by present and prospective creditors and owners in making investment decisions. For the moment, let us consider only this particular branch of accounting.

Investment decisions are based upon predictions of the firm's future capacity to pay investors – almost always in cash. Even the investor who is relying on a rise in the market price of the security must depend on other security buyers' views as to probable future cash transfers from the company to the securities holder. Such cash transfers require that the firm have cash in the future, and the firm's future cash balance depends upon its present cash balance *plus* receipts and *minus* disbursements in the interim.

A firm's assets are significant to investors to the extent that they will contribute to a future cash balance. Liabilities are a negative influence on the firm's future cash balance. The excess of assets over liabilities, preferred shares being included in the latter, is the equity of the residual claimants. This residual equity is crucial to all other investors, because they depend upon it as a buffer in case of adversity. Its significance to residual equity-holders – partners, a sole proprietor, or ordinary shareholders – must be obvious. Both the amount of the residual equity at any one time and changes in it, such as income, are of vital concern to all investors – and to the financial accountant.

The residual equity, being an excess of assets over

liabilities, can only be measured by measuring assets and liabilities. Similarly, changes in the residual equity, such as income, can only be ascertained by measuring changes in assets and liabilities. Assets are of interest to investors because they represent potential contributions to the concern's future cash balance. *The measurement of assets, then, must be done by methods that take future cash flows into consideration as much as possible.* Past cash movements are of interest only as they provide evidence of the future. The problem of stock measurement must be approached from this point of view.[1]

Managerial Accounting

What aspect of stocks does management want measured for inclusion in total assets? Managers are interested in the potential contributions assets can make to the achievement of their objectives. Owner-managers are primarily concerned with maximizing the return to owners. Hired managers who are controlled by owners must be working toward this same objective. Even those entrenched managers who look at stockholders as outsiders who can be treated in much the same way as employees, must still be concerned with maximizing the total return to owners, managers, and the company via the retained earnings account. All of these managers must be vitally concerned with the contribution stocks can make to the firm's cash position. There is no evidence whatsoever that managers should differ from investors with respect to their view of the money measurement of stocks of commodities, or any other asset, for inclusion in a statement of assets and equities.[2]

Measurement Techniques: Forms of Evidence

When the accountant chooses a measurement technique to apply to any asset, he is selecting the type of evidence that he considers most useful in the circumstances. The appropriate tests are *relevance* to the measurement objective and *availability* of reliable evidence of the type in question. As an example, consider the problem of measuring securities held as temporary investments. *Direct valuation*, by ascertaining the times and amounts of future cash receipts that will be enjoyed, selecting a discount rate, and calculating the sum of the discounted values of those cash flows, is the measurement technique that would most clearly disclose the current value of the asset's future contributions to the firm's cash position.

The basic evidence used, times and amounts of future cash receipts, is of unquestionable relevance to investors. The availability of this evidence may be poor, however, as would be the case if the assets to be measured were common shares. Lack of availability may force the accountant to choose another form of evidence, such as a market quotation, and he may use this evidence together with a brokerage commission schedule in measuring the *net realizable value* of the securities.

While net realizable value is not as relevant to the measurement objective of showing the effect the asset will have on the firm's cash position (since the actual cash flow at some future date may vary substantially from its current net realizable value), it may still be the best measurement technique to use in the circumstances. If the security is a common share without a currently quoted market value, the accountant may have to turn to a still less relevant technique – *historical cost.*

Now let us turn to the circumstances affecting the measurement of stock-in-trade. Stocks of goods that are deliberately held, are held to avoid the necessity for perfect matching of physical inflows and outflows. Perfect matching would require more expensive methods of obtaining and distributing goods and, in cases of goods held for direct sale, often would result in a loss of sales due to the impatience of customers. However, in many instances the quantity of the item held is greater than is necessary for filling orders. The absence of these units may not result in a loss of sales, but might add to future purchases. Perhaps the possibilities may be itemized as follows:

(1) The absence of the goods in question would reduce future sales but would not affect future acquisitions. Two types of cases may be mentioned: (*a*) obsolete goods that have some value; (*b*) a minimum level of inventory that is needed to avoid losing sales.

(2) The absence of the goods in question would require greater acquisitions in the future but would not affect future sales. Quantities in excess of immediate requirements fit this category.

Current Forms of Evidence – Net Realizable Value and Replacement Cost

The selection of the appropriate measurement technique to apply to a given stock of goods requires consideration of the differences between having the goods in question and not having them. The difference that is of greatest interest to investors and managers is in the future cash position. To select a measurement technique, we must ascertain how future transactions of the firm would differ depending upon the presence or absence of the item being measured. To apply the chosen measurement

[1] A more detailed exposition of the argument of this section may be found in George J. Staubus, *A Theory of Accounting to Investors* (Berkeley: University of California Press, 1961), Chapters I, II.

[2] This interest of managers in maximizing the return to the group consisting of owners, managers, and the corporation is entirely consistent with the observation that some managers are greatly concerned with such intangibles as power, prestige, position of the firm in the industry, or management compensation. These considerations surely do not invalidate the proposition that the *monetary significance* of inventories of goods must derive from their potential contribution to the firm's cash position.

technique, the amounts of the alternative transactions must be compared.

(1) If the circumstances of the case suggest that absence of the goods in question would not affect future acquisitions but would eliminate future sales, such goods can be expected to contribute approximately their net realizable value to the firm's cash position.

(2) If the absence of the goods in question would be offset by greater future acquisitions and not by any difference in sales, such goods can be said to contribute to the firm's cash position by obviating an outflow. This value can be measured by determining the cost of replacing these goods.

This line of reasoning suggests that either *net realizable value* or *replacement cost* is the most relevant type of evidence for use in measuring stocks of goods, the choice between them depending upon the circumstances as listed above. However, unavailability of the most relevant evidence may require a substitution. One type of substitution would be replacement cost where net realizable value would be better if available; or the reverse substitution may be made. Either of these shifts can be supported by the expectation that net realizable value and replacement cost are logically related, under equilibrium conditions, through the bridging concept of a normal profit margin. A different type of substitution requires the use of a third type of evidence.

Older Forms of Evidence of Commodity Values

If the accountant is unable to ascertain the net realizable value or replacement cost of goods on hand, he must utilize some less relevant evidence of their future contribution to the firm's cash position. Typically this will be a market price quotation at an earlier date, such as when the goods were purchased, or production cost when the goods were produced. Such a cost figure may be used without taking into account the change in the measuring unit between the date of the earlier quotation and the report date, or it could be adjusted for the change in the measuring unit. The former may be referred to as *original money cost*; the latter, *adjusted historical cost.*

The accountant who is applying the original money cost basis of valuation to goods must always remember that it is acceptable only on the grounds that it is related to replacement cost and net realizable value; if there were no relationship between cost and the future cash flow produced by the goods, the cost of an asset would be of no informational value to the decision-maker who is reading the financial statements. This means that the accountant who is struggling with problems involving the meaning and content of cost must strive to develop a cost concept that is closely related to the asset's future contribution to the firm's cash balance. For example, carrying charges on stocks of ageing goods, such as tobacco and whiskey, should be included in the cost of the finished product, because these costs normally can be expected to be covered by the sale value of the product. If this were not the case, production would cease.

Another problem of cost interpretation arises when several different old cost figures for the item in question are available. In this case, surely the accountant should choose the most recent cost in the absence of specific evidence that future replacement cost will be substantially different. Rarely would the accountant be justified in choosing the oldest of several old costs. If only those prices actually paid by this firm are considered sufficiently objective to be acceptable for use in informing investors of the probable future cash effect of the goods held, then the most recent price shown on any invoice should be applied to all units of that commodity held.[1] That price should be used for measuring both the units on hand and those moving out.

Any system which attempts to use several old prices at the same time is bound to be subject to criticism. The reader favouring the balance sheet will insist on having the most recent prices attached to the units on hand; the analyst who emphasizes the income statement will be critical if the most recent prices have not been assigned to the outflow of goods reported on that statement, and even if they are he may still object to the failure to report an obvious price change gain or loss. It is not surprising that all of the popular cost flow assumptions – last-in, first-out; first-in, first-out; and weighted average – are roundly criticized; none is relevant to the problems confronting readers of financial statements.[2]

Fixed Costs in Inventory Values

The idea that all, or the fixed portion of, overhead costs may properly be omitted from stock values should be discarded. The most common argument heard in the United States on this subject asserts

[1] One of the most puzzling positions taken in the stock valuation argument is that which suggests that the physical flow of goods is somehow relevant to the choice between LIFO, FIFO, etc. If any reader can explain how the physical flow of non-perishable, fungible goods affects their service potential, please write to the author. A related practice that smacks of witchcraft is the division of an inventory of fungible goods into segments, each of which is viewed as having a different service potential, per physical unit held. This sort of foresight must require either an exceedingly cloudy concept of objectivity or an extraordinarily clear crystal ball.

[2] The tendency of accountants to excuse their inflexibility by reference to income tax laws does not seem justifiable, at least not in the United States. Not only have American accountants failed to make a concerted effort to improve the law in this respect, but they have not even shown much interest in the best practice consistent with the extant law. Why not use the first-in, first-out assumption for measuring the asset to appear on the balance sheet, adopt the last-in, first-out assumption for determining cost of goods sold, and report the difference as a price change gain or loss somewhere on the combined income and retained earnings statement? The tax return could be based on the FIFO

that only future variable costs of production are avoided by the presence of the given stock of goods; therefore the value of these goods (replacement cost) can be roughly measured by variable historical costs. This method of calculating production costs is frequently called 'direct costing'.

The basic weakness in this view lies in the assumption of fixed costs. The major area of costs that are said not to change because of changes in production volume, is costs of providing capacity to produce. The clearest example of a variable cost of providing capacity to produce is depreciation on equipment that deteriorates on the basis of use rather than on a calendar basis. We know there are many such cases and we clearly recognize that the units-of-production or hours-in-use method of depreciation should be applied, thus showing a variable depreciation cost.

The service potential of many plant assets, however, expires on a calendar basis regardless of the extent of their use. This means that once the asset has been acquired the cost of using it in any period is *nil*; it depreciates whether used or not. Clearly, then, the depreciation cost related to the entire life of that asset, along with the fixed property taxes, insurance, and maintenance costs, are incurred by the decision to acquire it. If the asset will serve for ten years, the decision to acquire it results in ten years' depreciation, ten years' insurance, ten years' property taxes.

These costs of providing capacity to produce are caused by the decision to provide capacity, not by the use of that capacity. The decision to provide capacity to produce is made on the basis of estimated future production. Future production, in turn, is partly dependent upon the current level of stocks. (We are all familiar with the budgetary calculation: next period's sales, *plus* desired ending stocks, *less* beginning (current) stocks, *equals* next period's production.) Hence, current stocks affect future production, future productive capacity needed, and future costs of providing productive capacity. Accordingly, I find it difficult to accept the notion that current stocks save no future costs of providing capacity to produce.

True, in the majority of the producing departments in a concern the stocks may save nothing in the way of 'fixed' costs because of the existence of idle capacity, but in a minority of departments the existence of stocks of finished goods may save the equivalent of several years' fixed costs. On the average, the addition of the existing stocks to future production schedules could be expected to add costs of providing capacity to produce in an amount similar to the costs allocated to the goods by the traditional full absorption costing method. We must recognize that costs of providing capacity to produce, when measured at the point of cost inception, do vary as output varies.

Another view of the variability of costs of providing capacity to produce is the macro-economic view. The principle of magnification of derived demand (acceleration principle) tells us that commitments to fixed facilities fluctuate more violently as industrial production fluctuates than does the output from these productive facilities. This theoretical interpretation is supported by statistics from the United States economy during the last decade. Again I insist that costs of providing capacity to produce fluctuate at least as much as do the so-called variable costs of production. Any costing method which is based on a contrary assumption is unacceptable.

Conclusions

The major point of this paper can be stated simply. To the extent that accountants aim to provide information useful in making investment and management decisions, the use of the historical cost (original money cost) basis of stock valuation should be considered inferior to net realizable value and replacement cost; the latter provide better measures of the service potential of goods held and one of them should be used if feasible.

If the above statement is correct, it follows that carrying charges on stocks held over long periods should be included in historical cost in order to obtain a type of cost figure which is most closely related to replacement cost and/or net realizable value.

Furthermore, the traditional view that replacement cost is less informative than original money cost if the latter is lower, but is more informative if original money cost is higher has no logical basis. Likewise, the idea that different units of identical goods on hand at any one time have different values is rarely defensible.

Finally, the notion that some overhead costs, particularly those that are allocated to operations on a calendar basis, should be excluded when computing a cost to show as the value of goods on a financial statement is inconsistent with the first conclusion above. Full cost of production is not only likely to be nearer to replacement cost than is direct cost, but can also be expected to approximate more closely the goods' future contribution to the firm's cash position. The average firm sells its products at prices high enough to cover their full cost.

---

method, i.e. the LIFO cost of the goods sold *plus* or *minus* the price change loss or gain would be deducted in the computation of taxable income. For financial reporting, both the balance sheet and the operating section of the income statement would make use of relatively current prices. This technique should be acceptable to tax conscious business men if they assume price movements in the future similar to those of the last decade. Raw commodity prices, while fluctuating widely, definitely have not displayed the upward trend that once contributed to the popularity of LIFO. Many of the manufactured goods that embody steadily rising labour costs are of less concern in this connection because (1) frequent model changes allow an occasional up-dating of their valuations as inventories of old models are depleted; (2) specific identification is common; and (3) their prices fluctuate less than raw material prices.

Decimalization in South Africa

by W. J. FAIRBAIRN, C.A.(S.A.), F.S.A.A.
Professor of Accounting, University of Natal

IN South Africa we adopted a two-decimal system for our coinage. There are, of course, many different ways of applying a two-decimal system. We actually plumped for the ten shilling/cent version. The reasons for that are many but the main reason is that the ten shilling/cent system gives you a major unit of a comparatively high value but not too high a value. The pound was considered to be too high a value for a major unit; and if you have a coin the equivalent of ten shillings as your major unit then obviously your minor unit, dividing by one hundred, is going to be roughly equivalent to one penny. It is for that reason – to get a unit closely allied to the old penny – that we plumped for the ten shilling/cent version of decimalization.

Now we had to find a new name for our major unit – and our Government finally selected the name of Rand – spelt with a capital 'R', please. The Afrikaans pronunciation of 'Rand' is used – 'Rant' as in the word 'grant' – and we English-speaking people accepted that pronunciation of the word for the sake of unity. Our Afrikaan friends, on the other hand, have given way in the spelling of the word 'cent'. In Afrikaans 'cent' is spelt 'sent' and that would mean using an 's' as the abbreviated denotation of the coin; as that would be awkward – it would be mixed up with shillings – they said, 'Well, if you call it a 'Rand' with a 't' we will spell cent with a 'c'. So 'Rand' Afrikaans, and 'cent' English is our coinage now.

Two-year Preparatory Period

In introducing the system we had a two-year preparatory period. That was all that was considered necessary in spite of the fact that nine-tenths of our population is virtually illiterate – the natives – and we thought it would take a comparatively long period in which to teach them. In the event, it turned out that they were teaching us something about conversion and not us whites teaching them; for the native knows that he has got ten fingers on his hands and ten toes on his feet and he is quite used to counting in tens; he never has liked counting in twelves as we made him do anyway. That is one thing you must anticipate if you decimalize here in the United Kingdom. You must bargain on a lengthy preparatory period. The longer the better, so far as organization is concerned.

'D-Day' – our Decimalization Day – was February 14th, 1961, just over one year ago, and I can tell you that so far as we are concerned in South Africa, the whole conversion operation is complete. Every accounting machine in the country has now been converted and is operating – except, I have been told, for one business man in Grahamstown who said, 'No, you fixed some date in May 1962 for converting my machines and I cannot convert them before then. I have planned everything for that date in May, and that is that.' He is the only one with machines that have not been converted; he is the only one still operating his books in pounds, shillings and pence.

Simple Conversion

Now, one of the disadvantages that was claimed for the fixing of ten shillings as the value of the major unit was the fact that it necessarily meant the abandonment of the pound. It was pointed out that this would involve a laborious recalculation of financial and accounting statistics generally. But as there are two ten-shillings in a pound, the conversion of pounds to Rands in whole numbers is a comparatively simple matter. All it needs is a knowledge of the twice times table and it was an easy process that everybody has just taken in their stride. For example, the 1961 accounts of practically every company that is quoted on the South African Stock Exchange gave their ten-year statistical review and their past year's comparative figures all converted into Rands. Therefore, you might say we are now 'Rand-minded' in South Africa.

It was also feared – quite needlessly in the event – that the simultaneous change of both the major and minor units, particularly where the illiterate part of our population was concerned, would have a disruptive effect. However, although many of the natives can neither read nor write, most of them can count quite well, and they do make very good pump attendants in petrol filling stations. Now, when we decided that February 14th, 1961, was to be 'D-Day' one type of machine that had to be converted was all the pumps in petrol stations. Lots of the petrol companies found that many of the pumps were not worth converting; they were so worn that the best thing to do was to rip them out and put new up-to-date ones in. The only new ones they had were ones that measure the cost of petrol served in Rands and cents. So, we had the feature in South Africa, four and five months before 'D-Day', of many pumps in petrol stations recording the price of petrol in Rands and cents. Now, the average buyer had not started to think what Rands and cents were or how to convert them into pounds, shillings and pence. Indeed, I was guilty myself, for the first time I got petrol at a Rand/cent pump, I said to the boy, 'Well,

An address given at the luncheon meeting of the London and District Society of Chartered Accountants on February 26th.

what is that in £ *s d*?' The boy quite happily said to me, 'That is 28*s* master; £1 8*s*'. He had to do what most of us have not had to do, and that was to learn to convert Rands and cents back to £ *s d*. So, on the whole, the natives did not do too badly.

There were, of course, pockets of resistance throughout the country; the resistance was mainly in regard to the cent. They did not understand why the cent was a different colour from the penny. It is a different colour. That is the only difference, but you get ten cents for a shilling where you got twelve pennies for a shilling. Many natives could not understand for a couple of weeks just what had happened to the odd two pennies. But, that has been almost completely overcome by now and we are having no trouble at all with them.

It was the bronze coin which gave us the most difficulty. There was no change where our paper money was concerned. The design of the South African £5 note is almost identical with the 10-Rand note. They are the same value and the only difference between the two is that one is marked £5 and the other is marked 10 Rand. Similarly with our coins; the 5 shillings becomes the 50-cent piece; no difference; the half-crown we decided was too confusing – it has been for years; particularly to natives – and we are no longer coining the equivalent of the half-crown, the 25-cent piece. Two shillings became 20 cents; one shilling is 10 cents; and sixpence is five cents. The difference is in the penny which is replaced by cents at 10 to the shilling.

Shortage of Coins

One of our big troubles on decimalization day was the shortage of bronze coins. The shortage was such that it seriously upset the planning that had gone on for many months in anticipation of 'D-Day'. It was most annoying, for instance, for people in charge of wages offices who for months had been educating their staffs, particularly natives. They had been giving them schooling in the lunch-hour and had been talking to them and teaching them the difference between 10 cents to the shilling and 12 pennies to the shilling. Many concerns, for example, months before 'D-Day', had started paying in shillings and pence rather than in £ *s d* – they had handed out notes and coins – but in recording the pay on pay envelopes the amount was stated in shillings and pence so that the workmen would get used to the idea of thinking in shillings and not in pounds any longer.

To digress for a minute. You will realize that although you in the United Kingdom are a pounds, shillings and pence community, you nevertheless are strongly wedded to the shilling as a measure of value. All your share quotations are in shillings and pence. Most of the price tickets in your shop windows are in shillings and pence. And, of course, converting pounds, shillings and pence to Rands and cents is a comparatively simple matter. You merely state your pounds and shillings in shillings, move your decimal point one place, refine your pence to cents and that is your answer in Rands and cents.

There was no difficulty where the Africans were concerned, but they were very concerned about the loss of the two pennies and it has taken them quite some time to get used to that feature. We found that it was necessary to introduce three different conversion tables. Firstly, we had the legal table, as it was called – the comprehensive table – which was strictly in accordance with our Decimalization Act. The Act laid down that our bronze coins in future would be cents which would have a value of twelve-tenths of their equivalent in pennies. In other words, the cent was to be twelve-tenths of a penny; the half-cent twelve-tenths of a halfpenny. (Fortunately, our Government decided when dropping the half-crown, they would also drop the farthing.) So we had the comprehensive table which went to three places of decimals of a cent for ordinary conversions in the wage tariffs and tariffs of various sorts.

'Decimal Dan'

In the main, however, we relied on what we call the popular table – for converting pence. It was published in twelve different vernacular languages plus English and Afrikaans. Children were taught it *ad nauseum* in school; and finally we had it in both the official languages plus all the vernaculars over the radio morning, noon and night. Everybody in South Africa got heartily sick and tired of 'Decimal Dan, the Rand/cent Man'.

The trouble with ten cents instead of twelve pennies was in shopping, where prices generally finish up somewhere in pence. Now, threepence is a quarter of a shilling and it is two and a half cents. It is an exact equivalent. Sixpence is an exact equivalent and so is ninepence. But the penny, twopence, fourpence, fivepence and so on have no exact equivalent in cents and we had to compromise. So the popular table laid down that one is one; two is two; three is two and a half. Four is three; five is four and six is five, and so on right through, nine becoming seven and a half cents.

That was alright for shops and cash transactions where it was possible to have a stock of half-cents, but the banks did not want to start recording in half-cents; nor did we. To start recording half-cents in books of account virtually means that you might as well have gone on with £ *s d*. So, as we did not want the half-cent in book-keeping or accounting, a third table was introduced known as the bankers' and accountants' table and there we got over the half-cent – the two and a half cent and the seven and a half cent – the equivalent of threepence and ninepence by rounding down on the threepence and rounding up on the ninepence. In other words, the bankers' and accountants' table goes this way: one is one; two is two; three is two; four is three; five is four; six is five; seven is six; eight is seven; nine is seven; ten is eight and eleven is nine and twelve is ten.

That method of rounding off shillings and pence was used universally in converting all books from

£ *s d* to Rands and cents. Picking the second Tuesday in February 1961 as our 'D-Day' we did deliberately so that we could have a long bank holiday week-end. The Saturday was declared a bank holiday; likewise the Monday; so that the banks had from Friday afternoon when they closed their doors till Tuesday morning in which to get their machines converted and get their balances converted. And in actual fact that is just what happened. By good organization the machine companies were able to convert all the banks' machines that week-end. They also managed to include the accounting machines of nearly all local authorities, as well as nearly all building societies, insurance companies, the railways administration and various other big users of accounting machines. The machine companies did a wonderful job in converting machines, and in that week-end the banks also had to get busy and convert their balances to Rands and cents. The experience of my own bankers in Durban is typical. The regional manager, when I asked him what it had involved, said, 'You know, we could have done without the Monday as a bank holiday. The whole thing went like clockwork in all of my branches in Durban. We actually finished converting all balances in the bank by the Sunday morning at 11 o'clock, and we were able to let the whole of our staff go home and have a real holiday on the Monday.' I said, 'And your loss on conversion?' And he replied, 'The total difference written off to general expenses in this section of the bank was 72 cents.' I think the experience of all banks was much the same.

Ahead of Schedule

In conclusion, I want to touch on one last thing; that is the problem involved in converting machines generally. All told we had an estimated total of 178,000 machines of different sorts in operation in South Africa on 'D-Day'. These included 13,100 accounting machines, 62,500 adding machines, 44,000 cash registers plus a few other types of machines, and the whole programme was completed almost eight months ahead of schedule. The whole job was done by our machine companies within the short space of February to November; about nine and a half or ten months.

In South Africa the decimalization of our coinage has been highly successful and has been accepted by everybody as being the right thing to have done. We have no regrets that we have decimalized, and I think that if you do that too you will reap the benefits in no time. One thing that still remains to be proved, for example, in South Africa, is the amount of time that will be saved in the life of the average schoolboy. It has been estimated that at least six months of a youngster's life is spent in learning how to decimalize pounds, shillings and pence and turn them back again.

There are benefits still to be reaped by decimalization in South Africa. I do not think we have seen the end of them yet, but all told I think it has been a highly successful process and one that has been greatly welcomed by all people in South Africa no matter what their political feelings about the whole thing have been.

Weekly Notes

BUDGET DAY

BUDGET DAY, it was announced in the House of Commons last week, is to be Monday, April 9th. It will be Mr Selwyn Lloyd's second Budget and there can be little hope of its being anything of a Pandora's Box of munificence. No doubt the chief item of interest this year will be Mr Lloyd's proposals for imposing his promised tax on short-term capital gains, to which reference is made in the note below.

We shall discuss the Budget and its implications in our issue of April 14th.

CAPITAL GAINS FEARS

A RECENT report in *The Times* hints that the Government's proposals for taxing short-term capital gains may prove to be more severe than many commentators have been led to expect. The Council of the London Stock Exchange in their memorandum of December 14th, 1961, made representations to the Chancellor on the undesirable effects such a tax could exert on the efficiency of the share markets as well as upon the new issue market, which would be affected by the generally expected tax on profits from 'stagging'.

In an article in last Friday's issue of *The Statist* the chairman of the Council of the Stock Exchange repeated these warnings. Lord Ritchie is particularly concerned with the impact of the probable tax on speculative market dealing which can greatly help the diminishing number of jobbers with reduced financial resources to make a fluid market free from violent price fluctuations. Such speculative activity, given the shortage of stock which everywhere is evident in the market, is most important.

Lord Ritchie is especially perturbed by the fact that a tax on short-term gains seems to be aimed primarily at stock-market profits. As he rightly observes, on grounds of equity any tax of this kind should be imposed upon profits from all similar dealing in other markets as well as share markets. He is also concerned that adequate provision should be made for giving relief in respect of losses, and he

repeats the point made in the Council's memorandum that much depends on the definition of 'short term'. In his opinion 'at the very worst the length of the short term should not be more than a month or two', unless the Chancellor is prepared to see 'serious damage done to the London market'. This wish seems extremely optimistic for such a tax would, as Mr Edward du Cann, M.P., pointed out in an earlier article in *The Statist*, become merely an optional tax.

Whatever the case for and against a tax on short-term capital gains, the plain fact of the matter is that public opinion has virtually forced Mr Selwyn Lloyd into the present promise; and it is difficult to believe that it would be satisfied with a tax which the chairman of the London Stock Exchange would apparently be prepared to accept in the present circumstances.

THE F.B.I. AND THE BUDGET

THE Federation of British Industries has indicated to the Chancellor that he ought to reduce all taxes which have the effect of increasing industrial costs, and make up the loss by selective increases in charges for social services and also by a broadening of the base of indirect taxation. Duties on heavy oil and commercial stationery come under severe attack from the Federation, which also calls for a reversal of the increases in profits tax rates and for increased income tax personal allowances in respect of wives and children. Companies required to incur capital expenditure to secure disposal of effluents or freedom from air pollution ought to be allowed to write off the whole expenditure at once. Depletion allowances should be accorded to companies working United Kingdom minerals.

On the more technical side of the F.B.I. memorandum are some old favourites: liberalization of Schedule E expenses, overseas trade corporation status for subsidiaries resident overseas, an extension of the relief for indirect United Kingdom tax, current year basis for Cases IV and V of Schedule D, and double tax relief in respect of overseas taxation of 'capital'. Section 17 of the Finance Act, 1954, provides for 'continuing basis' where the whole of a trade passes to a company controlled by the old owners of the trade. The F.B.I. points out that the section should apply also to a case where only part of the trade is disposed of; otherwise there is in effect double taxation of the dispossessed part. A very minor recommendation is made about stamp duty. In 1958 certain agreements concerned with the sale or hire of goods, the supply of electricity, or the execution of building works were exempted from any duty which they might otherwise attract in respect of periodical payments, under the head 'Bond, covenant', etc. The F.B.I. suggests that the exemption be extended to agreements for research or development or for the supply of gas.

THE ASSOCIATION'S EXAMINATION RESULTS

THERE were 2,360 candidates for the December 1961 examinations of The Association of Certified and Corporate Accountants, and the results, now announced, show that 780 were successful.

In Section I of the Final there were 464 candidates of whom 116 (25 per cent) passed, the First Place being won by Mr J. E. Pinchen, of Long Ditton. The Second Place was won by Mr J. J. Kenyon, of London, and the Third Place, jointly, by Mr B. Clough, of Oldham, and Mr A. N. Monckton, of Pembury. In Section II, a total of 397 candidates sat of whom 103 (26 per cent) were successful. The First Place was won by Mr D. Reynard, of Leeds; the Second Place by Major T. H. Pearce, British Army, and the Third Place by Mr A. J. Gregory, of London.

There were 915 candidates for Section I of the Intermediate examination of whom 342 (37 per cent) were successful, the First Place being won by Mr F. A. Holley, of Guildford. In Section II, there were 487 candidates of whom 191 (39 per cent) passed, the First Place being won by Mr W. G. F. Brooks, of South Ockendon.

In the Preliminary examination, 29 candidates (31 per cent) out of 97 were successful.

The names of the successful candidates in Sections I and II of the Final and in Section II of the Intermediate appear elsewhere in this issue.

A CAUSE TO SUPPORT

UNFORTUNATELY, the number of cases requiring help from The Chartered Accountants' Benevolent Association and the *quantum* of assistance which has to be given to make it realistic in relation to current living costs continue to increase. The consequence is that the cost of allowances and donations made in the two years ended February 28th, 1961, exceeded the revenue available by some £3,500.

In an attempt to augment its income, the Association has circulated a letter from its President, Sir William Carrington, F.C.A., to all members of the Institute urging them strongly to support this truly worthy cause. At present, only one-tenth of the members of the Institute are members of the Association. With the President's appeal is a letter from the President and Vice-President of The Society of Incorporated Accountants at the time of integration, commending the activities of the Association to all former members of the Society who are now members of the Institute. As a result of the integration scheme, the Association is about to take over the assets of The Incorporated Accountants' Benevolent Fund but it is also assuming responsibility for twenty-three cases previously looked after by the administrators of that Fund. This makes a current total of 125 and a glance at the particulars of those or similar cases given in the annual reports of the Association is sufficient to make every Institute member realize how fully deserving of support is this latest appeal.

A NATIONAL STOCK EXCHANGE

SPEAKING to representatives of the Associated Stock Exchanges and the Provincial Brokers' Stock Exchange last week, Lord Ritchie, chairman of the London Stock Exchange, said that 'we all feel in London' that the time has come for stock exchanges throughout the country to get closer together. He said that there were a number of reasons for this. The London Stock Exchange is being pressed to allow its members to establish branch offices in connection with the European Common Market. He thought that although the Common Market itself would be likely to change the whole picture of the security industry in Britain, nevertheless the British stock exchanges could cope with any outside competition.

There have been indications, notably in the successful efforts of one large American firm to trade in United States securities in Britain, for members of the stock exchange to experience increased foreign competition. Rudimentary as the capital market in most countries of the European Common Market may be, it is likely that there will be increased competition to deal in continental securities in London by foreign organizations without using members of the stock exchange. What happens in London tomorrow might occur in provincial centres the day after.

Lord Ritchie emphasized that what was proposed was in no sense a 'take-over bid' but a proposal for a willing merger and that such a step ought to be taken now. The immediate reaction outside London has been reasonably favourable to the idea in principle but this is one of those proposals where the actual terms of arrangement are likely to be the critical issue.

CRITICISM OF CIVIL AIR ESTIMATES

IN their report published this week[1] the Estimates Committee of the House of Commons have examined selected items from the Spring Supplementary Estimates. These increased the original estimates for the fiscal year 1961–62 by £104 million.

An immediate review is recommended of the system of ordering aircraft for the Air Ministry. In evidence given before them it was said that in the current fiscal year the Ministry allowed for a gap of £100 million between the production target for air-frames and aero engines on the one hand and likely deliveries on the other. The Committee say that this striking discrepancy between production and deliveries has persisted for a number of years and they also noted a serious under-estimating for the supply of air-frames over the past three years. The Committee say that they are concerned not only about persistent inaccurate estimating but also at the implications of a system which authorizes manufacturers to base their preparations and subcontracts on much larger quantities than those for which the House of Commons authorizes the departments concerned to pay.

The Committee say that they see how unexpected difficulties may arise but they do not understand how these alone should lead to consistent under-estimating. They therefore demand an immediate review of the system by which the estimates are framed. At present the Ministry of Aviation. in consultation with manufacturers, decides on a production target for air-frames for the incoming fiscal year and on the basis of this target the aircraft industry tools up and prepares its production programme. The Ministry of Aviation and the Air Ministry recognize that this target is optimistic and they proceed to draw up a delivery programme, the financial value of which is less than half the production target.

It is likely, however, that the system criticized by the Committee involves more than improving the accuracy of estimating. It is probable that there is scope for improved project control and progress chasing in many aircraft contracts.

[1] *Spring Supplementary Estimates – Third Report from the Estimates Committee.* (H.M.S.O. 8*s* 6*d* net.)

PRICES COUNCIL DISBANDED

FOLLOWING the establishment of the National Economic Development Council, it was announced earlier this week by the Chancellor of the Exchequer that the Government had decided to disband the Economic Planning Board and the Council on Prices, Productivity and Incomes.

As to the new Council's relation to the existing advisory bodies, the Chancellor said that the National Joint Advisory Council would continue as at present and that he was examining the composition and functions of the National Production Advisory Council on Industry in order to supplement the work of the Council.

INFLUENCE OF THE COMMERCIAL PROFESSIONS

GIVING the third of the Cantor Lectures on the subject of 'The influence of the professions on economic life' this week, Mr A. H. Ensor, vice-chairman of Lloyds Bank Ltd, dealt with the commercial professions. He considered mainly the influence of bankers, merchant bankers, insurance companies, building societies, economists and accountants.

Speaking of the influence of accountants, he pointed out that the number of qualified accountants in the principal institutes in 1961 was 46,235, an increase of the order of 50 per cent in ten years. He said: 'In these competitive days, cost accounting and efficient organization are not only of infinite value, but essential if industry is to be prosperous and progressive.' He said that it would be true to say

that the influence of accountants had grown considerably from the 1920s onwards and that while in the 1920s and 1930s their services were called upon frequently when industry was depressed, their function was now more towards improving companies' organization and production costs rather than to the 'mere routine audit of accounts'. He thought that the revolution now taking place in industry and commerce following electronic developments and the introduction of automation in factories, emphasized how wide a field was open to the accountants.

CHANGES COMING IN HIRE-PURCHASE

THERE were distinct signs in January of an improvement in hire-purchase business. New credit advanced by finance houses increased by about 25 per cent on December, an advance described by the Board of Trade as 'rather more than seasonal'. The improvement in hire-purchase figures does in fact reflect an improvement in new and second-hand car business.

This change for the better has been accompanied by a move to tighten up hire-purchase car contracts and to reduce the number of repossessions. A finance company chairman recently estimated that repossessions in the past two or three years were of the order of 500,000 and total finance company losses at between £40 million and £60 million.

The changes recommended by the Finance Houses Association do not involve significant changes in the terms offered to car purchasers. Neither will the rates of interest, deposits or repayment periods be affected.

Under pressure from the United Dominions Trust Ltd, the members of the Association are abandoning the present limit on commission rates to dealers, a move which is not popular with most members and which is causing a split on policy within the motor hire-purchase trade.

SHARE DEALER MUST PAY TAX ON CAPITAL DIVIDENDS

IT is well established that the ordinary investor who receives a capital profit dividend from a United Kingdom company is not chargeable to either income tax or surtax on it. It is equally well established that if the company is resident abroad, so that the shares are a 'foreign possession', the ordinary investor's share of a capital profits dividend is chargeable to British tax on it under Case V.

It is going a long way from this to argue that where the investor is actually dealing in shares, by way of trade, a capital profits dividend from a United Kingdom company is exempt from inclusion in the dealer's trading receipts, notwithstanding the fact that the proceeds of an outright sale of such shares would automatically be included in the trading receipts. At first blush one wonders how such an argument could possibly be got on to its legs. Nevertheless it found favour with Mr Justice Cross (*Cenlon Finance Co Ltd v. Ellwood* (39 A.T.C. 201)), and its proponents, although they did not convince any member of the Court of Appeal or the House of Lords, did at least obtain leave to appeal to the final tribunal.

The company argued that since it was already established that the effect of section 184 of the Income Tax Act, 1952, was to prevent United Kingdom company capital dividends from being charged to tax as dividends, therefore section 184 exempted these dividends from tax, and therefore to include them as trading receipts was forbidden. The answer, in the words of Lord Simonds (according to *The Financial Times* of March 2nd), is that section 184 would be searched in vain for any suggestion that where a dividend had been paid out of capital it was to be exempt in the hands of the shareholders.

The House also rejected the company's argument that a mere change of mind by the Inland Revenue did not constitute a 'discovery' for the purpose of raising an additional assessment. The point is covered by *Commercial Structures Ltd v. Briggs* (27 A.T.C. 308).

DOUBTFUL DIAGNOSTICS

IN an article in *The Sunday Express* last Sunday, Mr Michael Webster endeavours to explain the dire risks run by companies who have too many chartered accountants on their boards. He instances one concern where the technical directors resigned in a body after a policy dispute and, asks Mr Webster, who took their places? 'The pals of those that were left. Another gang of professional company directors, most of them accountants.' The reconstructed board now consists of eight members – five chartered accountants, two lawyers and one other. The company is doing badly and the group profits are going down rapidly.

In the light of even this 'isolated case', Mr Webster 'would not be surprised to find that this strange form of company sickness . . . is on the increase' and supports his thesis as follows:

> 'Already, according to the Institute of Directors, 46 per cent of all company directors hold more than one boardroom appointment, and most of these hold considerably more than two each. Most of these gentlemen are "financial experts" of one kind or another – economists, accountants, actuaries, or statisticians.'

He concludes:

> 'So it will pay to keep an eye on the boardroom temperature of your investments. And if you see symptoms of "chartered accountantitis" developing – beware!'

Now Mr Webster may be right or wrong in his

diagnosis but he should argue fairly and openly. What the statistics collected by the Institute of Directors[1] did show was that the 46 per cent sample of company directors who held more than one directorship was made up of 18 per cent holding two, 11 per cent three, 15 per cent four to eight and only 2 per cent more than nine. The Institute remarked that 'very few really hold multiple board seats'. Further, 64 per cent of all directors included in the survey had no academic or professional qualification, only 14 per cent had university degrees, and of the distinct minority with professional or technical qualifications only 10 per cent were accountants. Making allowances for dual qualifications and other factors, it is reasonable to assume that about two or three directors in every hundred are accountants, a ratio much nearer to reality than the board mentioned by Mr Webster where five out of eight are members of that profession.

Perhaps if Mr Webster cares to come out in the open and name the company concerned, his particular accusation might not bear any closer scrutiny than do the statistics he gives in support of his airy generalizations.

[1] *Who's on the Board?* Institute of Directors, London. 3*s* net.

This is My Life . . .

by An Industrious Accountant

CHAPTER 114

AN envelope arrived marked 'Strictly confidential'. I opened it rather nervously . . . the sack? . . . an offer of a directorship? . . . an advice that I'd won the Irish Sweep? . . . I have invariably a premonitory shiver about these impressive hush-hush messages. The memo-slip inside read 'Please see me at 11 a.m. about attached,' in the managing director's precise script. It sounded ominous for a moment.

However, perusal of the 'attached' clarified things. It was an anonymous letter, scurrilous, vicious, about our hardworking young internal auditor. Such venom I'd never experienced before: 'sticking his nose into other people's business . . . insulting honest decent men . . . smearing our caracters [*sic*] . . . what will happen to him if he goes on like this . . . break his neck . . . lightning strike . . . we won't stand for it'. I've omitted the lurid adjectives and expressions.

The unsigned scrawl had been sent to our director personally; no wonder he'd like an explanation. The I.A. has been looking into the system of crediting returned empties in our dispatch section where he had spotted, smartly enough, some looseness in allocating the rebates. Unidentified returns provide a profitable perquisite when suitably appropriated, so to speak. Obviously a guilty conscience was reacting violently and I didn't like the prospects ahead.

Still, I had my strategy planned carefully when I sat down before our M.D. at 11 a.m. He had his usual imperturbable smile, though his quiet eyes missed nothing. After some preliminary chit-chat, he asked casually what I thought about the missive. I put on the old contemplative act for a moment, finger-tips together, brooding expression (my favourite pose when I can get away with it).

'I don't attach the least significance to that sort of anonymous muck-raking; I suggest we ignore it completely,' I said loftily at length. 'I've complete confidence in our internal auditor; he's well-schooled in the diplomatic approach; his style is tactful and non-committal.' Another question and answer. 'No, not for a moment. I wouldn't insult him by even mentioning it to him.' The M.D. wondered what the dispatch manager thought of the letter; had I discussed it with him at all?

'Wouldn't dream of doing such a thing,' I assured him. 'But I just happened to meet him – accidently – this morning and asked him how the I.A. was getting on in his section. He was obviously quite unconcerned; gave our man a great write-up. So the letter is just a bottle of smoke.' My inquisitor, with a detached irony, murmured something about the undesirability of labour troubles, enough headaches already without stepping on the corns of our dispatch people unnecessarily, what? I pondered silently for a moment; this finger-tip stuff was clearly effective.

'Not really likely, sir,' I demurred. 'The shop steward there is quick off the mark and the dispatch men are old hands; they'd have kicked long before now if there was anything out of line.' After a few more queries, the M.D. leaned back slowly and conceded the match. 'All right, handle it your own way,' he agreed. 'If you've confidence in the internal auditor, I'm quite happy.'

So I tore the offending letter to shreds there and then, and dropped it melodramatically in his basket. I think we both enjoyed the gesture. He still smiled, though I couln't quite interpret his quizzical expression. Maybe he was suspending judgement for the moment, maybe he was just giving me enough rope; maybe he knew more than he said.

But I smiled too. After all, I've a photostat copy of the letter in my desk; if I can identify the disguised writing, considering the help provided by all the dockets written daily in the dispatch section, I'll square the account with interest. Nobody insults my staff with impunity; we'll catch Mr Poison-pen redhanded sooner or later.

Contractors' Profits

SIR, – Mr Peter D. Taylor's excellent summary, in your issue of February 17th, of the thorny problems of valuing contracting work in progress did not specifically cover various possible treatments of a particular loss situation which may occur during the course of a contract.

I have in mind a case where known non-recurring causes have inflated costs to the extent that at an intermediate stage in a contract their comparison with measured value of work done shows up as a loss. The causes have been removed (in this case there is no contingency allowance which might be charged) and the contractor is confident of completing the contract to show an overall profit, albeit less than that originally estimated. At this intermediate stage should (*c*) the loss be taken, (*b*) no profit or loss be taken (i.e. value at cost), or (*c*) some proportion of the ultimate reduced profit be taken?

The answer is probably that any one of these is in order, provided that it is applied on a consistent basis from year to year, and is also consistent with the basis adopted for valuing work in progress on contracts where the measured value indicates a *profit* at a similar intermediate stage.

It would be interesting to have Mr Taylor's views and those of your readers upon, firstly, the permissibility of the three choices outlined and, secondly, upon the proper relationship of each to the various methods of valuation set out in his article.

Yours faithfully,

PETERKIN.

[Mr Taylor writes: In this case, there is a reduction in gross profit rather than a loss, and therefore method (*a*) is not really applicable. The use of methods (*b*) or (*c*) would depend on the method of valuing work in progress and as stated the important thing is to be consistent. Method (*c*) is to be preferred if possible, and if the cost control is reliable.]

The Scope of Management Accounting

SIR, – I have read with interest the article by Mr J. P. Wilson published in your issue dated March 3rd. However, I must take issue with him on his example of the modern form of a balance sheet – his Figure 4.

The balance sheet illustrated is indeed 'more logical in its arrangement' than the traditional. However, the 'Net worth of business', being the net assets of the company, are shown to be represented by share capital and reserves. Surely the correct approach when presenting accounts to shareholders is to show in the first place the share capital and reserves and then describe *this* amount as being represented by the various assets less liabilities. In other words the investment of the shareholders, plus any attaching reserves and balances, is represented by working assets less liabilities, from which the profits of the company are earned.

Yours faithfully,

PAUL R. RAWSON,
A.C.A.

Altrincham, Cheshire.

Interest Formula

SIR, – Shortly after the passing of the Moneylenders Act, 1927, one of your readers submitted a formula (shown below) for working out the actual rate of interest where money is repaid by periodic instalments.

We believe that this may still be used by, e.g., hire-purchase and similar companies and wonder if any of your readers can confirm that the formula is correct.

Formula

$$\text{Rate per cent} = 2 \times \frac{\text{Total repayments} - \text{loan}}{\text{loan}} \times \frac{\text{No. of repayments in year}}{\text{Total No. of repayments} + 1} \times 100$$

Yours faithfully,

London SW1. PIPER SMITH & PIPER.

P.A.Y.E. Simplification?

SIR, – In his strenuous efforts to secure economies in Government expenditure, the Chancellor of the Exchequer should not overlook cost reductions which could be achieved by a simplification of our P.A.Y.E. system. Under the existing system two sets of tables are required. Table A shows the earned income relief corresponding to the individual's earned income as from the beginning of the income tax year to date, plus the proportion of the individual's allowances less untaxed unearned income as from the beginning of the income tax year to date. The sum of allowances less untaxed unearned income plus earned income relief derived from Table A is regarded as 'free pay' and is then deducted from the individual's earned income in order to show the individual's 'taxable income'. The tax appropriate to the 'taxable income' will be ascertained by reference to Table B.

In fact, in order to ascertain the tax appropriate to a given earned income and to a given allowance less

untaxed unearned income, only one set of tables is needed. The formulae for the different levels of income are as follows:

Let E be earned income as from the beginning of the income tax year to date. Let AU be allowances less untaxed unearned income for the whole year. Let m be the number of months as from the beginning of the income tax year to date.

$\frac{7}{9}E-\frac{m}{12}AU$	*Tax Deducted*
Less than o	Nil
$o-\frac{m}{12}60$	$\frac{7}{80}\left(\frac{7}{9}E-\frac{m}{12}AU\right)$
$\frac{m}{12}60-\frac{m}{12}210$	$\frac{17}{80}\left(\frac{7}{9}E-\frac{m}{12}AU\right)-\frac{m}{12}$ 7/10/–
$\frac{m}{12}210-\frac{m}{12}360$	$\frac{25}{80}\left(\frac{7}{9}E-\frac{m}{12}AU\right)-\frac{m}{12}$ 28/10/–
$\frac{m}{12}360-\frac{m}{12}4{,}005$ (E)	$\frac{31}{80}\left(\frac{7}{9}E-\frac{m}{12}AU\right)-\frac{m}{12}$ 55/10/–
E	
$\frac{m}{12}4{,}005-\frac{m}{12}9{,}945$	$\frac{31}{80}\left(\frac{8}{9}E-\frac{m}{12}AU\right)-\frac{m}{12}312$
$\frac{m}{12}9{,}945$ upwards	$\frac{31}{80}\left(E-\frac{m}{12}AU\right)-\frac{m}{12}656$

Yours faithfully,

London W1. P. L. GRIFFITHS.

Unrealistic Taxation

SIR, – The rigidity with which Schedule A tax on property is being maintained is remarkable – in spite of it being described over and over again as an 'iniquitous tax'. Even politicians are in agreement with its being abolished, because in application it is grossly unrealistic to the facts and unethical.

Just as remarkable is the rigid application of the law in dealing with the expenses of employed persons under Schedule E. This is especially so in view of the words of Lord Evershed, M.R., in *Brown v. Bullock:*

> 'But I would point once again to the distinction between the two Schedules D and E which I regard as somewhat regrettable; as something which tends to bring the law into a measure of disrepute and to make the income tax obligations of the taxpayer a game of ingenuity divorced from principle or ethical or other common-sense considerations.'

Those words of analytical wisdom are surely intended to imply agreement with the Royal Commission's recommendation that 'all expenses reasonably incurred for the appropriate performance of the office or employment should be deducted'.

Yours faithfully,

Birmingham. FRANCIS B. WILLMOTT.

The Training of Accountants

SIR, – With regard to recent correspondence in your columns concerning the training of accountants, I would submit that a university education whilst being an admirable and desirable thing in itself, is no adequate substitute for the experience gained during five years' service under articles in a professional accountant's office.

Yours faithfully,

London W2. K. I. JEWETT, F.C.A.

SIR, – I read with considerable interest your leading article of November 25th and the correspondence which it stimulated. Your readers may be interested to know of developments in university education in accounting in Australia.

There are at present five departments of accounting having professorial heads in Australian universities; there are approximately fifty full-time teachers in the seven universities which offer three or more courses in accounting. The standard reached is, at a minimum, that required by the official and professional bodies related to the profession. In some centres the business community and the accountancy profession were responsible for financial support on the original creation of the appropriate chairs, but apart from this the universities have themselves accepted the subject as an appropriate field of university study and inquiry and have assumed the financial obligations this entails.

The accounting departments in the universities have generally tended to extend their courses beyond the limits set by the syllabuses of local and British examining bodies. For example, in the University of Sydney the three-year sequence in accounting includes besides the usual subject-matter of financial accounting, studies in auditing, costing, investment planning and budgeting, and governmental accounting. In addition, the competent and interested candidate may read for honours in the accounting school; he is required to undertake additional work covering the theory of accounting; the history of accounting techniques, institutions and ideas; significant areas of business finance; and controversial questions such as the 'price-level' and 'marginal costing' problems – all in considerable detail.

Although the universities are thus extending their curricula, and although there seems to be the possibility of conflict between them and the professional organizations, the professional and teaching groups enjoy the best of good relationships. They may often disagree in point of view, but in my experience the teachers have generally been most welcome partici-

pants in the conventions and other discussions organized by professional bodies – no matter how provocative and controversial the views of the teachers may be. For their part the universities have been happy to accept offers from official and professional bodies to make available some of their members to give regular or occasional lectures (unpaid) to groups of university students.

In brief, the universities take seriously their obligation to do their utmost both by research and teaching to raise the level of knowledge and the standard of competence of those who wish to study accounting. They perceive their role as teaching institutions to embrace a wider range of aspects and facets of accounting than the legal and technical aspects which are the preoccupation of other teaching organizations. They seek to make the study of accounting an experience as liberal and humane as the study of any of the so-called liberal arts. In these respects their potential contribution is acknowledged and, in not a few directions, actively encouraged by the professional organizations.

Yours faithfully,

R. J. CHAMBERS,
Professor of Accounting.

University of Sydney, Australia.

Cut in B.E.A. Services

SIR, – I note that on page 231 of *The Accountant* for February 24th, in the 'Weekly Note' headed 'Cut in B.E.A. Services', reference is made to 'subsidized services in Scotland'.

A subsidy is generally understood as being a subvention from Government sources, and I must draw your attention to the fact that no such subvention is received by B.E.A. We have, in fact, operated profitably for a number of years and during this period losses incurred on some routes, including those operated in Scotland, have been made good out of the profits earned on other routes. If our ability to earn profits is now to be restricted by the incursion of British independent airlines, we shall, of course, have to take steps to reduce our losses on the unremunerative routes.

Yours faithfully,

R. L. WEIR,
Financial Controller,
Ruislip, Middx. BRITISH EUROPEAN AIRWAYS.

[In our 'Weekly Note' commenting on the losses incurred by B.E.A. on certain routes, particularly in the North of Scotland, we were of course referring to the setting-off of losses on those routes from profits on the more remunerative ones. – Editor.]

Finance and Commerce

Turner & Newall

REPRINT limitations do not permit full justice being done to the accounts of Turner & Newall Ltd which are the subject of review this week. It is not possible, for instance, to show the green background to figures which makes all the difference in readability in a dual balance sheet which gives the parent and consolidated position against a narrative common to both. The use of italic figures in the comparison and of heavier type for the group totals in the 1961 columns is an added advantage. Thoughtfulness in these matters can save published accounts from becoming a maze of figures

The original also includes ten-year summaries (not reproduced) of consolidated results and balance sheets with the figures in £ million and decimals – a fair, easily-read and space-saving method for a company whose consolidated balance sheet now adds up to £108,151,633.

Two pages of the report are given to a description of the principal operating companies in the United Kingdom and abroad, with the names of their principal executives. The group, of course, is very much concerned in asbestos from the actual mining of the raw material. One member, Ferodo Ltd, with its brake linings, is almost a household word. This year also sees British Industrial Plastics Ltd a full member of the group.

Take-over Treatment

During the year under review, Turner & Newall made an offer for all the ordinary capital of B.I.P. not already owned and obtained a full acceptance. The offer, particulars of which were sent to Turner & Newall stockholders, involved the issue of 4,068,994 ordinary shares and a cash payment. There was also a fully-accepted offer for the B.I.P. 10 per cent free of tax 2*s* cumulative preference shares on the basis of 10*s* a share in cash.

Counsel's opinion was sought as to the correct method of dealing with the acquisition of the B.I.P. ordinary capital in the Turner & Newall books, and

as to the treatment of B.I.P. profits since September 30th, 1960.

Although the Turner & Newall ordinary stock was quoted on the London Stock Exchange at a substantial premium over par value at the date of the offer, counsel advised that the Turner & Newall directors were entitled to treat the cost of the shares acquired under the offer as being the amount of the cash part of the consideration paid, plus the nominal amount of the T. & N. shares issued.

With regard to profits accruing since September 30th, 1960, the advice was that if and when distributed by way of dividend, such profits would be received by the company as revenue and could be treated as forming part of its own distributable profits.

Going Concern

This advice was acted upon and the effect of the acquisition on the present accounts is set out in a note on the accounts. Fixed assets of B.I.P. and its subsidiaries have been brought into account at values established on a 'going concern' basis as certified by professional valuers following a recent revaluation.

The note on the accounts shows that B.I.P. is now fully-owned, gives the detail of the offer made, and brings out the fact that the B.I.P. shares are capitalized at the nominal amount of the T. & N. shares issued plus the cash consideration (including the cost of the shares already held) and stamp duty. In the consolidation, the excess of £3,472,763 of the cost arrived at on that basis over the B.I.P. group net tangible assets on September 30th, 1960 (including fixed assets at valuation), has been adjusted on capital reserves.

An interesting point for those engaged in share registration work is the passing over of the work of the company's own registration department to the District Bank Ltd. A departmental reorganization,

The notes on pages [300–2]

it is pointed out, in the report of the directors, would have been necessary to cope with the extra volume of work arising from the increase in the number of stockholders in recent years and which now approaches 53,000, and the registration work has therefore been passed over to an organization specializing in it.

Which Season?

THERE is an understandable feeling of frustration with a company report that gives no indication of the nature of the business. A case in point is Adams (Durham) Ltd for whose report and accounts for the year to August 31st, 1961, we are indebted to a reader. The Stock Exchange Official Intelligence and the agencies statistical services can, of course, assist in filling the gap but such information is not always readily available, particularly to the ordinary investor.

The report refers to 'considerable technical difficulties in connection with the accounts' due to two major changes – a capital reduction conformed on March 27th, 1961, followed immediately by a take-over of the Somportex Group. And Somportex is doing well to the extent that 'the overall results of the trade for the Christmas 1961 season have broken all previous records'.

The directors now 'wish to remove the incidence of seasonal fluctuations from the accounts' and consider that April 30th would be a suitable date, but a change in the Somportex accounting date is undesirable for taxation reasons. However, in response to the directors' request, the Board of Trade has issued directions for interim audited accounts of that company to be included in group accounts made up to April 30th next which it is hoped to present to members in July.

No information whatever is given as to what Somportex is or does and therefore to what extent its trade is seasonal.

GENERAL NOTES ON ACCOUNTS

1. ACQUISITION OF BRITISH INDUSTRIAL PLASTICS LTD.

During the year Turner & Newall Ltd. acquired the whole of the issued ordinary and preference shares of British Industrial Plastics Ltd. not already owned, on the basis of one Turner & Newall Ltd. share of £1 and cash of 28/– for every seven ordinary shares of 2/– each and cash of 10/– per share for each of the 10% free of tax cumulative preference shares of 2/– each. The acquisition involved the issue of 4,068,994 £1 ordinary shares of Turner & Newall Ltd. The Directors have been advised by Counsel that they are entitled to regard the cost of the British Industrial Plastics Ltd. shares as being the aggregate of (i) the nominal value of the Turner & Newall Ltd. shares issued and (ii) the cash portion of the consideration. The Directors have acted on this advice and the effect on the present accounts is as follows:—

Parent Company Balance Sheet:—

The shares in British Industrial Plastics Ltd. are capitalised at the nominal amount of the Turner & Newall Ltd. shares issued plus the cash consideration (including the cost of shares already held), and stamp duty.

Consolidated Balance Sheet:—

The excess of £3,472,763 of the cost arrived at as above over the net tangible assets of the British Industrial Plastics Ltd. Group at 30th September, 1960 (including fixed assets at valuation) is adjusted on Capital Reserves (Note 2 on page [301]).

2. OUTSTANDING COMMITMENTS

Estimated outstanding commitments for capital expenditure, not provided for in the books of the Company and its subsidiaries, amount to £4,000,000 (*1960—£1,700,000*).

3. RATES OF EXCHANGE

Assets and liabilities in Canadian and U.S.A. dollars have been converted into sterling at $2.80 to £1 and other Dominions and foreign currencies have been converted at the rates ruling at 31st March, 1961, or 30th September, 1961, i.e. the dates of the balance sheets of the subsidiaries.

4. FINANCIAL YEARS OF SUBSIDIARIES

Note pursuant to paragraph 22 of the Eighth Schedule to the Companies Act, 1948:—

The consolidated accounts incorporate the accounts of Turner & Newall Ltd. and its principal operating subsidiaries in the United Kingdom and two small subsidiaries operating overseas for the year ended 30th September, 1961, and those of its other subsidiaries trading overseas and one recently acquired group in the United Kingdom for the year to 31st March, 1961. It is not proposed to change the accounting dates to ensure that all overseas subsidiaries' financial years end with that of the Company as (a) the difference in accounting dates is of considerable advantage in facilitating the proper examination of the accounts of the subsidiaries concerned and enables the consolidated accounts of the Group to be prepared within a reasonable time after the end of the financial year of the Company, and (b) local circumstances overseas, particularly in relation to taxation matters, make a change undesirable.

5. CONTINGENT LIABILITIES

There is a contingent liability in respect of the Company's (secured) guarantee, up to a sum of $700,000, of bonds issued by a Canadian subsidiary, Turner & Newall (Overseas) Ltd. In addition there are contingent liabilities totalling £97,500 for uncalled capital in respect of trade investments.

CITY NOTES

THE culmination of the I.C.I.-Courtaulds battle has absorbed the City's attention this week but not to the extent that other broader influences have been entirely ignored. The approaching Budget is obviously now influencing investment operations, with the defensive investment attitude of recent weeks becoming increasingly marked.

Clearly the Budget can hardly be anything but tough. Government spending has overshot the target by a considerable margin and there is little consolation to be gained from the official view that the margin would have been greater still but for the policies of restraint and restriction.

Restraint – or 'the pause' – has operated to a reasonable degree and has not led to the development of large-scale labour unrest as it was expected to do in more pessimistic quarters. The establishment of the N.E.D.C. takes over where 'the pause' leaves off but it remains to be seen whether the N.E.D.C. becomes a constructive body. The fear is that it will become a sharply divided talking shop.

Meanwhile the strength of sterling has allowed a further repayment against last July's International Monetary Fund borrowings. The fact that the reserves last month rose £5 million despite a £75 million I.M.F. repayment, however, is more a reflection of high United Kingdom interest rates and uncertainty concerning the dollar than any indication of a decided and definite turn for the better in this country's balance of payments and overseas earnings position.

Courses and Conferences

THE highlight of 1962 for the accountancy profession will, of course, be in the autumn when the Eighth International Congress takes place in New York from September 23rd to 27th. Notwithstanding the Congress, however, a considerable number of courses and conferences have been arranged by the professional bodies in the United Kingdom, some details of which are given below.

March 30th–April 1st

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

Week-end School

A WEEK-END school is to be held by The Association of Certified and Corporate Accountants from March 30th–April 1st at St John's College, Cambridge. The school will be opened by the President of the Association, Mr G. L. Barker, F.A.C.C.A.

Four papers are to be presented as follows:

'The accountant and the Common Market', by Mr H. Shearing, A.A.C.C.A., Senior Lecturer, Ealing Technical College.

'Some aspects of management and statutory auditing', by Mr L. A. Hill, A.A.C.C.A., Manager, Methods and Procedures Division, Shell International Petroleum Co Ltd.

'The relationship of the professional man to the Inspector of Taxes', by Mr A. W. Nelson, A.A.C.C.A.

'Education and training for the accountancy profession', by Mr E. C. D. Evans, B.SC.(ECON.), F.A.C.C.A., Principal Lecturer, Slough College of Further Education.

There will be discussion in groups following each paper and at the end of each day the author, assisted by a panel, will answer questions.

A guest night dinner in Hall will be held on the Friday evening of the school when members will entertain university and other guests.

THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

Week-end Conference

DURING the same the week-end, The Institute of Municipal Treasurers and Accountants will also be holding a conference at Cambridge but at Caius College. The conference will be under the chairmanship of Sir Charles Cunningham, K.B.E., C.B., C.V.O., Permanent Under-Secretary of State, Home Office, and members will discuss some current problems of public finance. The principal speakers will be:

Mr G. Edney, B.COM., F.S.A.A., F.I.M.T.A., General Manager, Port of Bristol Authority.

Mr G. B. Esslemont, C.B.E., M.A., B.COM., LL.B., C.A., F.I.M.T.A., J.P., City Chamberlain, Glasgow.

Dr D. S. Lees, PH.D., B.SC.(ECON.), Lecturer in Economics, University College of North Staffordshire.

Mr Ian T. Morrow, C.A., F.C.W.A., a member of Council and a Past President of The Institute of Cost and Works Accountants.

Mr H. Tetley, C.B., M.A., Government Actuary.

The topics will include a survey of problems associated with public pensions administration and policy, financial management in the public services in the light of recent Government pronouncements, and the relationship of various current problems to the national economy.

April 12th–14th

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Conference on Information for Management

AS announced in *The Accountant* of January 27th, the Committee of the London and District Society of Chartered Accountants have arranged a residential conference on information for management to be held at New College, Oxford, from April 12th–14th, under the chairmanship of Mr Brian A. Maynard, M.A., F.C.A. The conference will be opened by Mr P. F. Carpenter, F.C.A., Vice-President of The Institute of Chartered Accountants in England and Wales.

Two papers are to be presented, the first by Mr N. R. Bellwood, F.C.A., of the British Transport Commission, will be entitled 'Improving management accounting in the small business', and the second, by Professor A. Goudeket, Chief Internal Auditor of the Philips' Group, Holland, on 'Long-term planning'. There will be group discussion following both the papers.

A feature of the course will be a management decision game and on the morning of the final day of the course members will travel to London to continue the game with the use of IBM 7090 and 1401 computer systems at the IBM Data Centre.

May 10th–12th

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

National Cost Conference and Annual Meeting

THE thirty-third National Cost Conference of The Institute of Cost and Works Accountants will take place at the Old Swan Hotel, Harrogate, on May 10th and 11th, to be followed by the annual general meeting of the Institute on May 12th.

Two papers will be presented as follows:

'When figures become people', by Mr C. E. Sutton, F.C.A., F.C.W.A.

'The cost of quality', by Mr K. S. Ayres, F.C.W.A.

In addition, Professor M. G. Kendall, M.A., SC.D., Managing Director, C.E.I.R. (U.K.) Ltd, will address members. On the Friday morning, the President of the Institute, Mr F. M. W. Hird, F.C.A., F.C.W.A., will deliver his presidential address.

The social functions will include a reception and dance given by the Mayor and Mayoress of Harrogate, Mr F. W. Allum, F.C.A., F.C.W.A., J.P., and Mrs Allum; the President's reception and the annual banquet and dance. A special ladies' programme has been arranged.

May 29th–June 1st

THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

Annual Meeting and Conference

THE annual meeting and conference of The Institute of Municipal Treasurers and Accountants will be held on May 29th, 30th and 31st and June 1st in Edinburgh.

The provisional programme for the conference includes, in addition to the presidential address of Mr A. L. Imrie, C.B.E., F.I.M.T.A., C.A., an address by the Rt Hon. Henry Brooke, M.P., Chief Secretary to the Treasury and Paymaster-General, and papers by the Rt Hon. Lord James of Rusholme, Vice-Chancellor, University of York, and Mr Kenneth Hyde, F.S.A.A., F.I.M.T.A., County Treasurer of Cornwall. The conference will open with an address on the Wednesday morning by the Rt Hon. The Lord Craigton, C.B.E., Minister of State for Scotland.

The Rt Hon. Lord Clyde, Lord Justice General of Scotland, has accepted an invitation to attend the annual dinner and dance as guest of honour at the Assembly Rooms on May 30th.

July 18th–22nd

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Summer Course at Cambridge

THE first of the two summer courses of The Institute of Chartered Accountants in England and Wales will take place at Emmanuel and Sidney Sussex Colleges, Cambridge, from July 18th–22nd (the course at Oxford is from September 13th–18th). The subjects and speakers at the Cambridge course will be:

'Taxation aspects of amalgamations and reconstructions', by Mr D. O. Bailey, F.C.A.

'Service to management', by Mr R. D. S. Shrimpton, F.C.A.

'Insurance and the accountant', by Mr D. Williamson, F.C.A.

Group discussions will follow each paper, and the programme will also provide for recreational and social activities including a guest night dinner in Hall.

August 31st–September 4th

THE INSTITUTE OF CHARTERED ACCOUNTANTS OF SCOTLAND

Summer School at St Andrews

THE tenth summer school of The Institute of Chartered Accountants of Scotland is to be held at the University of St Andrews from August 31st–September 4th.

Three papers will be presented as follows:

'A critical review of recognized accounting conventions', by Mr Robert M. Morison, M.A., C.A.

'The young chartered accountant looks forward', by Mr J. C. Shaw, C.A., and Mr A. C. Stewart, C.A., M.O.M.A.

'Financial controls in industry', by Mr W. L. Spalding, B.SC., C.A., F.C.W.A., F.C.I.S.

In addition, an address will be given by Professor D. J. Robertson, M.A., of the Chair of Applied Economics in the University of Glasgow.

September 13th–18th

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Summer Course at Oxford

THE Oxford summer course of The Institute of Chartered Accountants in England and Wales will be held at Christ Church and Pembroke College, from September 13th–18th. The subjects and speakers at the course will be:

'The training of accountants for industrial responsibility', by Mr G. W. Searle, D.F.C., F.C.A.

'The problems of the smaller practice', by Mr R. W. Smith, O.B.E., T.D., F.C.A.

'Investment in stocks and shares', by Mr A. G. Touche, F.C.A.

Each paper will be followed by discussion in groups. Other activities will include industrial tours, a golf competition, and a guest night dinner in Hall.

October 10th–12th

THE INSTITUTE OF INTERNAL AUDITORS

Third European Regional Conference

THE Institute of Internal Auditors is holding its third European Regional Conference at the Hotel Metropole, Brighton, from October 10th–12th. The theme of the conference will be 'Developing the right internal audit perspective' and the speakers will be Mr Bradford Cadmus, managing director, The Institute of Internal Auditors; Mr D. W. Hooper, M.A., F.C.A., chief organizing accountant, National Coal Board; Mr C. S. Deverall M.A., B.SC.(ECON.), B.COM., F.C.I.S., Head of Department of Commerce and Management Studies, Brighton Technical College, and Mr J. E. Wall, managing director, Electric and Musical Industries Ltd. It is hoped also to arrange a ladies' programme.

October 19th–22nd

National Taxation Conference

THE twelfth National Taxation Conference is to be held in Scarborough from October 19th–22nd. under the chairmanship of Mr Percy F. Hughes, Editor of *Taxation*.

The speakers will include Mr E. H. Gordon, B.A., taxation consultant, Slaughter & May (formerly Principal Inspector of Taxes, Board of Inland Revenue); Mr P. H. Sée, C.B., Parliamentary Counsel; Mr A. Dale, F.A.C.C.A.; Mr Geoffrey Stevens, M.P., F.C.A., and Dr A. S. Silke, M.COM., PH.D.(CAPE TOWN), C.A.(S.A.). A feature of the conference will be a Brains Trust under the chairmanship of Mr J. S. Heaton, F.C.A.

Social functions will include a civic reception and dance, a reception and cocktail party given by the Editor of *Taxation*, a golf competition for the *Taxation* Challenge Cup, and a ladies' programme.

November 22nd–24th

THE LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Taxation Conference

THE Committee of The London and District Society of Chartered Accountants are arranging to hold a taxation conference for members from November 22nd–24th at Brighton. The subjects and speakers are to be announced.

Accountants and the Common Market

Chartered Accountants' Dinner in Sheffield

The entry of Britain into the Common Market and the part accountants could play was stressed by speakers at the annual dinner of the Sheffield and District Society of Chartered Accountants, held at the Cutlers' Hall, Sheffield, on Thursday of last week. There was more than 400 members and guests, with Mr A. G. Thomas, F.C.A., President of the Society in the Chair.

Proposing the toast of 'The Institute of Chartered Accountants in England and Wales', Sir R. Mark C. Turner, managing director, Kleinwort Benson, the London merchant bankers, said he felt particularly honoured to be there, as he had learned that it was the accountancy societies of Sheffield, Manchester, Liverpool and London which in 1880 had got together and formed the Institute which performed a service which was now so notable in this country.

In America, the lawyer had pride of place in the field of company advisers which was enjoyed in Britain by the chartered accountant. While he disagreed with the American system, he cast no aspersions on the legal system – indeed the very reverse. But he thought the great thing about the association between law and business in this country was the non-involvement of law in business.

Change in Society

During the last fifteen years, however, there had been a great change in society. He supposed it had been brought about partly as the result of the shocks to the economic system caused by the war; partly by the very heavy taxation which was borne by the public companies; partly by the take-over bids, which had kept managements and boards of management on their toes; and partly by the anomalies created by the compulsory merger system, which had brought a greater scientific approach to industry. There had been very considerable differences in the approach of industry towards its own problems, said Sir Mark who continued:

'I am glad to see that on the boards of many companies there are financial directors who have been drawn from the chartered accountants' profession. In the larger companies, indeed, they have financial controllers who are chartered accountants.

'There has been another equally important development, which is the relationship between the practising accountant and his clients. It has undergone a fundamental change. It has gone beyond seeing that books are correct; it is the recognition that sharing problems can bring a solution to the benefits of business, which would not be possible if they were to keep their minds on petty details.

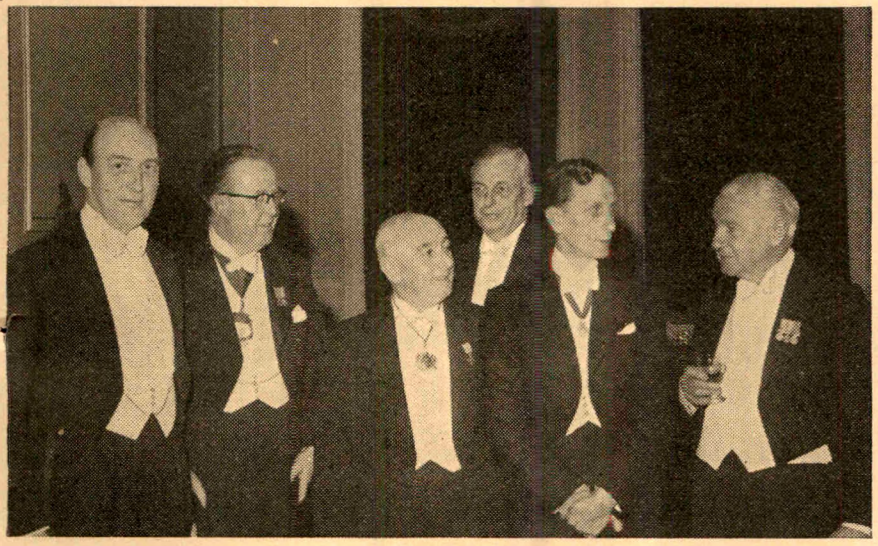
Passing on to the Common Market, he said he felt Britain's entry in this community was vital to its future. They had been in an unfortunate position for quite a time of really not knowing whether they were to be in or out, and not knowing whether to plan for inclusion or exclusion. He hoped they would go into the Common Market, and he had no doubts at all of the success which entry would bring.

But they would face great problems; one was that in a large area of western Europe there was no accounting system as we knew it. Fortunately, many accounting firms in the United Kingdom had offices in Europe which, when they began to build the bridge, would enable our methods to tie in with European methods.

Responding to the toast, Mr P. F. Granger, F.C.A., President of the Institute said they had heard a remarkable speech from Sir Mark Turner. He hoped due notice and attention would be had by members to his remarks.

The World their Oyster

He said the Institute had been going on for more than eighty years and its members had become known for integrity and fair dealing. That was what the older generation had contributed. But life had got more and more complicated, and if they had any sons or



At the dinner (*left to right*): Sir Mark Turner; Mr P. F. Granger, F.C.A., President of the Institute; Alderman J. W. Sterland, Lord Mayor of Sheffield; Mr Philip H. Shirley, F.C.A.(Aust.), a member of the British Transport Commission; Mr A. G. Thomas, F.C.A., President of the Sheffield and District Society, and Dr L. du Garde Peach.

daughters coming along he would remind them they needed in the Institute the best they could get. There was an opportunity today for suitable young men and women to become members of the Institute which he did not think had ever happened before, and he could see that it would continue for quite a long time. In fact, the 'world was their oyster' if they passed their examinations.

Proposing the toast of 'The City and Trades of Sheffield' Mr Philip H. Shirley, F.C.A.(AUST), a member of the British Transport Commission, who was previously chairman of Batchelors Foods in Sheffield, said the city had made tremendous strides with new markets, and he felt that to some extent it was an injustice to concentrate on the steel side. It had many allied industries.

Mr Shirley said they could not talk about industry without talking about people who made them efficient; and in every analysis there was the skills, enthusiasms and loyalties of those employed in the industries from the floor to the top – operators and management. Unfortunately, they had never found a way, as accountants, of expressing those assets in the balance sheets. But as accountants they recognized that people were as important as industries, and that was absolutely essential in the days to come.

Responding, Alderman J. W. Sterland, M.B.E., J.P., Lord Mayor of Sheffield, said he believed the country was about to enter the Common Market and he did not think they need be afraid of the future. It should be regarded as a great challenge.

Mr A. G. Thomas, President of the Sheffield Society proposed the toast of 'The Guests', to which Dr L. du Garde Peach, M.A., responded.

Students' Dinner at Manchester

Mr J. K. Elliot, M.SC., Manchester's Chief Education Officer, said at the annual dinner of The Manchester Chartered Accountants' Students' Society on March 1st that it was heartening to see a professional body so concerned about the training of its future members.

Proposing the toast of 'The Institute of Chartered Accountants in England and Wales', Mr Elliot said he learned from the Institute's general information booklet that candidates for membership should have reasoning power, an aptitude for figures, a sound knowledge of elementary mathematics, the ability to be concise and lucid, and a thorough knowledge of the English language.

They should also have patience and concentration, powers of observation and deduction; be quick at grasping facts, and be ready and able to accept responsibility and act on their own initiative. They should possess tact, the power to inspire confidence and the ability to supervise the work of others.

Concern

Mr Elliot said he had read with great interest the 1961 report of the Institute's Committee on Education and Training, and it was heartening to see a professional body so concerned about the training of its future members; he detected more than the usual professional concern in the frequent references to the upbringing of students. There was increasing competition for able young men and women, and he had noticed in the report that between 1952 and 1959 the percentage entry with 'O' level qualifications fell from 73 per cent to 69 per cent whilst those with 'A' level rose from 12 per cent to 17 per cent.

Mr W. L. Barrows, LL.D., F.C.A., a Past-President of the Institute, responding to the toast, said the younger people always had the tendency to feel that the older people did not appreciate their problems. But he assured students that more time was spent by the Council in connection with the younger people than on any other single subject.

He said that while perhaps relations with educational authorities had not always been of the best, there was a growing awareness throughout the country that a closer link with the universities was vital in the future of the profession.

Common Sense

One thing was very important and that was the use of common sense. When he last spoke to the Society, in 1951, he said that students should not rely entirely on their correspondence courses, but should broaden their outlook with social and sports activities in their students' society. He was glad that the Manchester Society's social and sports side was as strong as it always had been.

Mr P. G. Mason, M.B.E., M.A., High Master at Manchester Grammar School, proposing the toast to 'The Manchester Chartered Accountants Students' Society' recalled a trip he had had behind the Iron Curtain including East Berlin, and said that compared with the Germany before the war there had been a great revolution. There were special schools in each region, where children were forced to maintain their athletic standards or they were put out of the school. Mr Mason said he felt that the maintenance of a free society depended above all things on the freedom in educational institutions and freedom in professional organizations.

Character

Responding to the toast, Mr A. H. Walton, F.C.A., President of the Society, said while education and training was, of course, the basis on which students acquired their accountancy qualification, another important factor was character.

He said the activities of the Manchester Students' Society had never been so broad and varied; even the development of bowling alleys had not passed them by and they were going to compete in that field very shortly.

Mr J. Townsley, B.COM., a member of the Committee, proposed the toast of 'The Guests' and Miss S. Chalmers, Vice-President of the University of Manchester Union, responded.

Scottish Institute's 'International Basis'

President's Comments at Birmingham Dinner

The international basis of The Institute of Chartered Accountants of Scotland was stressed by the President of the Institute, Mr Graham A. Usher, M.B.E., T.D., C.A., speaking at the dinner of the Association of Scottish Chartered Accountants in the Midlands at the Queen's Hotel, Birmingham, on March 2nd.

Bouncing Babies of Birmingham

Mr Usher, responding to the toast of the Institute coupled with that of the Association of Scottish Chartered Accountants in the Midlands, was speaking to 181 members and guests of the Association, in an atmosphere as Scottish as the haggis, duly addressed, a piper and, of course, the national 'beverage' could make it. He described the Midlands Association, one of the youngest offspring of the Institute, as 'our bouncing babies in Birmingham', and wished them many happy and prosperous years in the worlds of finance and commerce.

He said that the Scottish Institute always tried to operate on an international basis, paying no attention to national boundaries and domestic politics. There were some 700 places out of Scotland, including 500 abroad, where members of the Scottish Institute were diligently working.

The Scottish Institute had been in touch with the Continent for many years, and he pointed out that the first accountant in Scotland, George Watson, served his apprenticeship 300 years ago in Antwerp. In 1963, the Institute will welcome the leading accountancy bodies of all the countries of Europe outside the Iron Curtain at the European Congress of Accountants to be held in Edinburgh under the auspices of the Institute.

Commenting on the Common Market, Mr Usher said:

> 'For years we have quietly been going about our business, taking such steps as we can to see that our freedom to practise throughout the world is not unduly restricted. Almost anybody from abroad can come and practise in this country, provided they satisfy the Board of Trade.'

There were over 500 people with overseas qualifications practising in this country, although none of them, as far as he knew, were in Scotland – but precious few Englishmen had dared to practise up there, he added, humorously.

In their endeavour to keep up their standards of accountancy and to keep as up to date as possible, the Scottish Institute had recently overhauled their training methods, demanding that all trainees should spend a period at a Scottish university. In the past, said Mr Usher, a man could become a member of the Scottish Institute and never have set foot in Scotland. Now, at little expense to himself, a man can at last have some direct Scottish connection.

Community's High Regard for the Profession

Sir Milner Holland, C.B.E., Q.C., in proposing the toast, said that the community had a very high regard for the profession of accountancy. It was a profession which had set itself very high standards, and therefore enjoyed a correspondingly high standing in the community. The reason for this was that, like any other serious-minded profession, they had set their standards far ahead of what the mere law required.

In the nineteenth century it was said that auditors were 'watchdogs' and not 'bloodhounds', but Sir Milner thought that was a rather low standard to take. The general public wanted to feel that the auditors made very careful checks before signing a company's books.

Of accountants in general he said, 'The community accepts that they not only render very valuable services as professional practitioners, but that they occupy a most important position in executive, managerial and boardroom posts.'

Describing the Midlands Association as 'migrants', he pointed out that in 1954 only 52 per cent of Scottish Chartered Accountants had remained in Scotland, with 30 per cent in the southern half of the United Kingdom.

The toast of 'The City of Birmingham' was proposed by the Bishop of Birmingham, the Rt Rev. John Leonard Wilson, C.M.G., M.A., D.D., who revealed that he had started his working life as an articled clerk with a Newcastle upon Tyne firm of chartered accountants.

Talking of the great cities of the past, Athens, Rome and Jerusalem, he said that no people more than the Scots had taken up the idea of home, religion and history.

He emphasized the amount of voluntary work done in the city, and said that the only thing that would make Birmingham really great would be the moral and spiritual quality of its citizens, shown by how far they cared for one another.

Alderman Donald Johnstone, J.P., Deputy Mayor of Birmingham, replied on behalf of the city.

The Association's Contribution

Mr W. A. Nicol, C.A., F.C.C.S., Chairman of the Midlands Association, and administrative director of Guest, Keen & Nettlefolds Ltd, who suggested the formation of the Association, was presiding at the dinner on the fifth occasion.

He said that the Association hoped to make some contribution to the financial, industrial and commercial life of the country. The Midlands Association was a small but happy one, and he was sure that it would continue to make a contribution to the ideals and achievements of the Scottish Institute.

Expressing the wish that haggis might become an established delicacy in England, he gave the invitation 'Haste ye beck' to the many guests from Scotland and elsewhere.

Mr Arthur Dickson Wright, M.S., M.B., F.R.C.S., the eminent surgeon, was on top of his form, in a witty, humorous response.

The vote of thanks to the Chairman was proposed by Mr P. F. Carpenter, F.C.A., Vice-President of The Institute of Chartered Accountants in England and Wales.

Notes and Notices

THE INSTITUTE'S SUMMER COURSES

Closing Date for Applications

Members of The Institute of Chartered Accountants in England and Wales are reminded that the closing date for applications to attend the summer courses to be held next July and September, details of which are given on page 304 of this issue, is Friday, March 16th.

PROFESSIONAL NOTICES

MR PAUL BADDELEY, F.C.A., the sole principal of PAUL BADDELEY & CO, Chartered Accountants, since the firm's commencement in 1931, announces that as from March 1st, 1962, Mr ROGER JACKSON CLARK, M.A., A.C.A., has joined him as a partner. The style of the new partnership will be PAUL BADDELEY & CO, and the practice will be conducted primarily from 9 & 10 Fenchurch Street, London EC3, as at present. Mr CLARK is now, and will continue to be, a partner in BROWN, PEET & TILLY, Chartered Accountants, of 62 London Wall, EC2. It is intended that the new partnership, PAUL BADDELEY & CO, will establish a professional association with BROWN, PEET & TILLY, although the two firms will remain separate.

MESSRS JOHN C. DAWSON & CO, Chartered Accountants, of The Red House, Duncombe Place, York, announce that as from March 1st, 1962, they have taken into partnership Mr Brian Waddington, A.C.A., who has been a member of the staff since March 1960. The name of the firm is unchanged.

MESSRS JOHNSON, MURKETT & HURST, Chartered Accountants, of Rawdon House, Rawdon Terrace, Ashby de la Zouch, announce that they are taking into partnership with effect from April 1st, 1962, Mr IAN WILLIAM GOODRUM, A.C.A., who has been a member of their staff for the last eight years. The name of the firm will remain unchanged.

MESSRS TURQUAND, YOUNGS & CO announce that their North Borneo firm opened an office at P.O. Box 648, Jalan Tiga, Sandakan on March 1st, 1962. The office will be under the management of Mr D. G. W. HABEN, A.C.A., and under the general supervision of their Jesselton office.

Appointments

Mr A. G. B. Burney, O.B.E., B.A., F.C.A., has been appointed to the board of Stone-Platt Industries Ltd.

Mr James T. Dowling, C.A., has been elected chairman of the Great Northern Investment Trust Ltd.

Mr F. W. Harper, F.C.A., has been appointed chairman of Golden Hope Rubber Estate Ltd and Straits Plantations Ltd.

Mr John Sands, C.A., has been appointed chairman of London Asiatic Rubber & Produce Co Ltd.

Mr E. W. Tavener, F.C.A., secretary of Millars' Timber and Trading Co Ltd, has been appointed to the board of Millars' Machinery Co Ltd.

Mr Eric Turner, F.C.A., has been appointed to the board of the Iron Trades Insurance Companies.

OBITUARY

William Morrison May, P.C., F.C.A.

We have learned with regret of the death on March 2nd at the age of 52 of the Rt Hon. William Morrison May, P.C. (Northern Ireland), F.C.A., Minister of Education, Northern Ireland.

Educated at Methodist College, Belfast, Mr May was admitted to membership of The Institute of Chartered Accountants in Ireland in 1931 and four years later became a partner in the firm of Quin, Knox & Co, Chartered Accountants (now Stewart Blacker Quin, Knox & Co), of Belfast and Dublin.

Mr May was elected Unionist M.P. for Ards in 1949 and was re-elected in 1953. He was appointed Minister of Education in 1957 and under his guidance a number of changes were introduced, notably new regulations on eligibility for university scholarships which produced a large increase in the number of students. He was also responsible for the Youth Welfare Act which became law in the past year and provides principally for an increase in grants for youth club leaders serving on a full-time basis. He was always an advocate of the need for increasing the skill of the rising generation.

During the Second World War he served with the Royal Air Force, attaining the rank of Wing-Commander.

IN PARLIAMENT

P.A.Y.E. Tables: Travel Allowances

Mr A. LEWIS asked the Chancellor of the Exchequer what estimate he has made of the cost to the Treasury of adjusting the Pay As You Earn tax tables to include an automatic 10s per week allowance for travelling to and from work to all workers in the wage and salary range up to £1,500 per annum.

Mr BARBER: About £125 million in a full year.

Hansard, Mar. 1st, 1962. Written Answers. Col. 168.

Take-over Bids: Jenkins Committee

Mr STRATTON MILLS asked the President of the Board of Trade if he will make a statement on those aspects of take-over bids which the Jenkins Committee has been asked to consider.

Mr ERROLL: The Committee has been asked to consider, in relation to take-over bids, the duties of directors and the rights of shareholders. Thus it is concerned to see whether existing legislation ensures fair dealing between the parties to such transactions. The broader economic and social questions which have been raised in relation to some recent bids are not within the Committee's terms of reference.

Hansard, March 5th, 1962. Written Answers. Col. 16.

CENSUS OF DISTRIBUTION FOR 1961

Returns due by March 31st

Retailers who have not yet completed Census of Distribution forms are reminded that these forms should be completed in full and returned by March 31st, unless the return relates to a business year ending later than December 31st, 1961; in that case, the form

should be completed and returned as soon as possible after the end of the business year.

Further copies of the census forms, or other information relating to the census, may be obtained from the Board of Trade, Census Office, Eastcote, Ruislip, Middlesex. (Telephone: Pinner 8771, Ext. 227.)

THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

Spring Residential Course

A week-end course for articled clerks who have not yet sat for the Intermediate examination is to be held by The Chartered Accountant Students' Society of London at Corpus Christi and Pembroke Colleges, Cambridge, from April 12th to 15th.

Five lectures are to be given and each will be followed by group discussion and by a final meeting with the lecturer at the end of the day. Subjects and speakers will be:

'Every day justice', by Mr Harold F. R. Sturge (Metropolitan Magistrate).

'What it is like to be a principal', by Mr S. J. D. Corsan, F.C.A.

'Professional ethics and all that', by Mr Donald V. House, F.C.A. (a Past President and a member of the Council of the Institute).

'Shapes . . . and sizes (the world of the architect in creating shapes and sizes out of facts and figures)', by Mr Peter Darvall, B.A., A.R.I.B.A.

'Britain and the European trade', by Mr A. R. Ilersic, M.SC.(ECON.), B.COM.

CITY DISCUSSION GROUP

The next meeting of the City Discussion Group of the London and District Society of Chartered Accountants will take place on March 14th, at the Tiger Tavern, 1 Tower Hill, London EC3, at 6 for 6.30 p.m. The topic for discussion will be: 'How misleading can your accounts be?', introduced by Mr D. Napper, F.C.A.

The hon. secretary of the group is Mr D. S. Lewis, F.C.A., A.A.C.C.A., c/o Alex. Parkes, Westmacott & Co, 3 Copthall Buildings, Copthall Avenue, London EC2.

CAMBRIDGE COURSE FOR MANAGERS

The tenth residential course for managers in industry organized by the Cambridge Board of Extra-Mural Studies is to be held at Madingley Hall, from July 2nd to 28th.

The course is intended for managers under 40 years of age who have had some years of industrial experience. Preference will be given to applicants whose ability and promise make them likely candidates for promotion. Candidates must be nominated by their employers who are required to report fully on the applicants' suitability for the course. The course will be concerned primarily with the role of the manager and his responsibilities in modern society. It will deal, not with management techniques, but with the political, economic, social and human background against which specific problems should be seen.

Copies of the prospectus and application forms are available from the secretary of the Board, Stuart House, Cambridge.

DOUBLE TAXATION: ISRAEL

Discussions were held from February 19th to 27th between representatives of the Board of Inland Revenue and representatives of the Government of Israel to negotiate a new agreement for the avoidance of double taxation between the two countries. Agreement was reached at the official level, and a draft embodying the terms of the new arrangements was initialed on February 27th. The draft Agreement will now be submitted to the two Governments for approval.

INSTITUTE OF INTERNAL AUDITORS

Manchester Chapter

The Manchester Chapter of The Institute of Internal Auditors is holding its next meeting on Tuesday, March 20th, in The Chartered Accountants' Hall, 46 Fountain Street, Manchester 2, when Mr A. Stevens, internal auditor, Associated Electrical Industries (Manchester) Ltd, will speak on 'Internal auditing in practice – the scope of my job'.

A cordial invitation is extended to all interested, and further information regarding the activities of the Chapter may be obtained from the secretary, Mr K. Bradley, assistant internal auditor, The Associated Octel Co Ltd, Northwich, Cheshire.

LOCAL GOVERNMENT SERVICES

Rising costs are shown in two statistical returns giving details of local government services in respect of children and local health services for 1960–61 issued jointly by The Institute of Municipal Treasurers and Accountants and The Society of County Treasurers[1].

The twelfth annual return on children services contains information about expenditure and costs in residential homes and nurseries provided by local authorities in England and Wales and shows for each county borough and county the net expenditure and grants per 1,000 population. The number of children in care at March 31st, 1961, was 61,033 an increase of 638 on the preceding year, and the average cost for caring for each child amounted to £5 11*s* 8*d* a week as against £5 7*s* the year previously. Net expenditure totalled £22,615,824 compared with £21,156,675 in 1959–60.

The return dealing with health services shows expenditure per 1,000 population for each part of the service, i.e. day nurseries, ambulance services, etc., and unit costs are given in some of the more important sections of the service. Total net expenditure met from rates and grants rose from £62,165,943 in 1959–60 to £66,220,894 in 1960–61. Expressed as a rate in the £ this represented 22·15*d* and 22·90*d* respectively. Expansion in mental health services following the 1959 Act, increased the cost per thousand from £77·13 to £95·2.

NEW BUSINESS NAMES REGISTERED IN 1961

During the year ended December 31st, 1961, there were 39,007 new registrations under the Registration

[1] *Children Services Statistics 1960–61, Local Health Services Statistics, 1960–61.* Price 5*s* each post free. The Institute of Municipal Treasurers and Accountants, 1 Buckingham Place, London SW1.

of Business Names Act, 1916 (as amended by the Companies Act, 1947), and 11,026 names were removed from the registers. The total remaining on the registers at December 31st, 1961, was 851,325.

Three prosecutions were instituted during the year for non-compliance with the Act. A conviction was obtained in each case.

ECONOMIC CONDITIONS IN DENMARK

A further booklet in the 1962 series dealing with economic conditions in member and associated countries of the Organization for Economic Co-operation and Development has recently been issued covering Denmark. Copies of the booklet are obtainable from H.M. Stationery Office, price 3*s*.

Riddle of the Rates

THE recent flurry of public interest in the local rate arises from a combination of two developments. The first is the succession of increases in rate poundages proposed by local authorities throughout the country. The effect of such increases will be to raise the average rate charge borne by householders, commercial and industrial ratepayers by nearly 10 per cent; in a few cases the prospective increase is nearly double that figure. Superimposed upon these widely publicized additional charges is the speculation over the consequences for the domestic householder of the revaluation which will take effect from April 1st, 1963.

Last week's statement in the House of Commons by THE MINISTER OF HOUSING AND LOCAL GOVERNMENT seems to have allayed, temporarily at least, the householder's concern about the revaluation. Optimism as to the future rate burden, however, may in our view prove to be premature. Meanwhile, the nature of the problem should be clearly understood.

Rateable value in England and Wales on April 1st, 1961, totalled £720 million, so that with an average rate poundage for the country as a whole of 20*s* 9*d*, the total revenue raised from rates in 1961–62 is estimated at about £730 million. Table I on the next page shows the distribution of rateable value for a number of years, the first column showing the distribution before the last revaluation in 1956 and the other columns for a number of years since. The effect of the 1956 valuation is immediately apparent. While the aggregate rateable values for each class of hereditament increased, e.g. domestic property from £219 million to £308 million, the relative share of that particular class in the total rateable value declined from 59·8 to under 50 per cent. At the same time, owing to the larger rate poundage available to local authorities, their needs could be met by a rate poundage in the first year of the revaluation (1956–57) of only 15*s* 8*d* compared with the previous year's figure of 22*s* 10*d*. The effect of these changes was to leave the domestic ratepayers, *as a class*, contributing almost no more in actual rates paid than before the 1956 revaluation. The increases were felt in the main by shops and commercial properties, and to a lesser extent by industry.

The reason for this happy outcome of the 1956 revaluation, for the domestic ratepayer, was the basis adopted for valuing domestic property as opposed to commercial and industrial hereditaments. Whereas the latter were valued on the basis of their current 1956 rentals, domestic property was valued on the basis of the 1939 rentals. The reasons for this discrimination were, of course, political; just as was the reason for the

delay in making the first post-war revaluation.

When at the end of 1960 the then Minister of Housing and Local Government, MR HENRY BROOKE, decided to legislate for the next revaluation in April 1963, he announced that all rateable values would then be based upon 1963 rentals. In the case of houses which were still rent-controlled, the market rental would be assumed by reference to comparable non-controlled properties. Clearly, since by 1963 domestic rentals would be twenty-four years out of date, quite apart from the depreciation of the currency that had taken place in the intervening period, and since commercial and industrial hereditaments would be valued on rentals only seven years out of date, it was a reasonable assumption that some redistribution of rateable value between the main classes of hereditament as set out in Table I would take place.

There can be no doubt that this was the expectation of MR HENRY BROOKE when he was piloting the Rating and Valuation Bill through Parliament. He referred to the fact that domestic ratepayers could least stand a 'severe upward jolt' in their rates and for that reason section 2 of the Act endowed him with powers to vary, at his discretion, the increased valuation for householders in any area where he considered the increase was excessive. This was the background to a variety of estimates made by people inside and outside local government circles which, like the recent much publicized estimates prepared by MR A. R. ILERSIC, B.COM., M.SC.(ECON.), all came to much the same conclusion: i.e. domestic ratepayers as a class would pay substantially more rates than in recent years.

When, therefore, DR CHARLES HILL announced in the House on March 6th that the share of the domestic ratepayer in the total rate burden would not rise in consequence of the revaluation, there was considerable surprise. *The Times* in a leading article suggested that 'presumably no one is more surprised . . . than his predecessor in that department, MR BROOKE'. The MINISTER admitted that there would be considerable variation in the charges in different parts of the country, to meet which situation his discretionary powers of abatement had been provided.

An important factor in mitigating the prospective burden for the domestic ratepayer is the new and increased statutory repairs allowance, which presumably will lower the gross values to the net figure proportionately more than at present. Furthermore, there could be substantial changes in the distribution of central aid through the rate deficiency grants. The latter is a form of general grant paid to those authorities whose rateable value per head of the resident population falls below the national average; the latter figure being taken as a measure of the financial resources of the local authority. In a paper read to the annual conference of the Rating and Valuation Association last September, MR ILERSIC drew attention to both these possibilities, arguing, as MR BROOKE had implied earlier, that increased statutory allowances could not prevent the need for a measure of abatement.

Changes in the rate deficiency grants will, however, produce repercussions among the affected local authorities. Since there seems little prospect that the total of such grant aid will be increased, this means that there will probably be some redistribution between local authorities of the total amount of central grants. The use of the

discretionary powers of abatement will be restricted to particular areas where domestic valuations have risen more than elsewhere. The implications of these powers are more serious. Where the Minister abates the domestic ratepayers' share, this must entail shifting the charge on to the commercial and industrial ratepayers in that area. Such discrimination could cause considerable concern among the affected groups, although the extent to which the MINISTER will have to exercise his powers of abatement will not be known until publication of the White Paper he has promised. His carefully phrased statement to the House has left some members unconvinced.

However welcome the MINISTER's reassurance to householders may be, it would be unwise to assume that substantial rate increases will be avoided. The basic problem of local authority finance is the ever-increasing cost of the quasi-national services which are administered by local authorities on behalf of the central government. Over the past five years, rate financed expenditure has been rising at about 9 per cent per annum. If we take 1960–61 as the base, when rate income for England and Wales was £675 million, an annual growth of only 5 per cent would by the end of the quinquennium have increased the rate charge to £858 million. If the annual increment remains at 9 per cent over the same period the total expenditure to be met from rates in 1965–66 will be £1,050 million. To the extent that new building of offices, factories and houses, increases the total of rateable value from which this rate revenue can be raised, the increase in rate poundages will be less than proportionate. Too much hope should not be attached to this aspect, however. Even with substantial building, in 1956–57 the average rate in the £ levied was 15*s* 8*d*, only five years later in 1961–62 the comparable figure is 20*s* 9*d*. Table II below indicates the recent trend.

As a result of the greater total rateable value after April 1963, local authorities will be able to reduce substantially the rate poundages. It would be the height of optimism, however, to believe that a trebling of existing rateable value would be matched by a reduction in rate poundages to one-third of the current figure. Furthermore, the public will tend to overlook the fact that when such reduction in poundages has been made, an increase of 4*d* in any year is equivalent to 1*s* at the present time on the basis of the current rateable values. Nevertheless, it will come as a shock to most domestic ratepayers to be told that they are paying a smaller proportion of their personal incomes in rates today than they did in 1938. In fact, to bring the proportion up to its pre-war level would require a 50 per cent increase.

TABLE II

Year	Rateable Value £ million	Rate Poundage	Rate Revenues £ million	Government Grants £ million
1943–44	317	13*s* 9*d*	204	233
1953–54	347	22*s* 2*d*	377	434
1956–57	623	15*s* 8*d*	495	578
1959–60	688	19*s* 0*d*	650	723
1961–62	720	20*s* 9*d*	728	*

* Not available.

One of the troubles of the present system is that the impact upon the householder of the annual rate demand is exacerbated by the widely adopted half-yearly system of payment. For many householders who pay the demand half-yearly, this must represent the largest single tax payment made, and some system of P.A.Y.E. collection would be helpful.

To the extent that earlier expectations regarding the re-distribution of rateable value consequent upon the 1963 revaluation will not be fulfilled, industry – not least because it loses its 50 per cent de-rating, while commercial properties generally lose the 20 per cent relief granted in 1957 – will find the rate burden larger than expected. Furthermore, to the extent that the MINISTER uses his powers of abatement in particular rating areas, the burden on industry will be increased still more.

The key to the pace at which rate demands will rise in the next quinquennium is to be found in the willingness of the central government to continue increasing its grants in aid to local authorities. In the past decade such grants have risen from nearly 8 to 11 per cent of the growing Budget revenues and it is common knowledge that the CHANCELLOR would like to see the local authorities meet a larger part of their outlays from their own resources. At present, the sum of grants in aid is greater than the total rate revenue; if there were to be any revision of the grant structure, more especially a reduction in the proportion of total cost met by Whitehall, the impact upon the local rates could be

severe. Following the reduction of the de-rating of industry from 75 to 50 per cent, Whitehall adjusted the grants so that about two-thirds of the potential increase in rate revenue was diverted back to the Treasury. In fact, in the present circumstances this is likely to be a very gradual and almost imperceptible process.

As with the mounting expenditure of the central government, so the continuous increase in rate poundages provokes an intermittent public demand for economy. In most local authorities no doubt there is scope for economy in administration as well as in the standard of the services provided. On the first point, however, it can be asserted that the same is true of any large-scale organization, hence the prospect of savings in this respect is not likely to be significant. More substantial savings could be achieved by giving local authorities a greater degree of freedom in determining the minimum standard of service they provide in connection with the national services, e.g. education, police and fire, but it is debatable whether it is in the public interest that quasi-national services should be provided on a scale determined solely by local councils.

There is no doubt considerable truth in the assertion that the average ratepayer gets good value for his money in terms of the vital services the local authority administers. Even if the efficiency of the administration is sometimes questioned, it is unlikely that the same services could be provided by some alternative administrative body any more cheaply. For example, it has been suggested that education should become the full responsibility of the central government and removed from local control. Other considerations apart, the central government would have then to create an administrative body on a regional basis and the resultant net saving to the community of taxpayers and ratepayers as a whole would surely be negligible.

The rating problem, it should never be forgotten, is not merely a fiscal or economic issue. It is a political issue concerning the devolution of certain functions of central government among a multitude of lessor authorities. As long as these functions are delegated to the existing structure of local government and their cost only partially met from central funds, the need for a source of independent income for local government remains. The rate has its defects and weaknesses but nobody has yet suggested a better alternative, or even a supplementary source worth tapping. In short, it is not so much the local rate that needs examination, as the system of local government. The one goes with the other.

Price Fixing in Industry

CONTRIBUTED

MOST major industries have powerful trade associations which have been able until recently to control and fix price levels for the industry in connection with the supply and retailing of its goods and services. Quite frequently these prices were fixed at such a level as to enable even the least efficient producer to supply his goods at a profit, and to prevent any excessive price competition. Manufacturers who were members of the association and who contravened its policy by price cutting, or by breaching the conditions on which all goods were to be sold, were liable to be called before a private 'trade court' and fined, or put on a stop list, when no one would deal with them. The depression of the early thirties encouraged these trade associations to sponsor restrictive agreements as a protection against falling prices and intensive price-cutting.

In 1955, however, in response to a reference by the Board of Trade, the Monopolies Commission produced their report on collective discrimination, in which many of the abuses of unfair trading practices and stop lists were brought to light and criticized. Subsequently section 24 of the Restrictive Trade Practices Act of 1956 made illegal any agreement between manufacturers or suppliers to take collective enforcement action against any dealer who resold goods in breach of any condition as to price. In other words, trade boycotts against dealers who cut prices were prohibited.

Has the Act Succeeded?

The Act also provided for the registration of agreements between the manufacturers which contained restrictions on the matter of price,

conditions of sale, and the quantities of goods to be sold. It is this type of agreement which is referred to the Restrictive Practices Court for scrutiny, and of the 2,350 agreements which had been placed on the register by June 1961, over half of these have been either abandoned or varied to the satisfaction of the Registrar.

The Restrictive Practices Court has been functioning for several years now, and the President of the Board of Trade has recently instituted an inquiry into the adequacy of the 1956 Act, and the working of the Court. One of the main questions which must be asked is whether and to what extent the Act has succeeded in its object of outlawing price-fixing agreements and allowing the economics of free competition to be asserted.

Keen Price Competition

Some pointers to the answer are provided in the recently published report of the Registrar of Restrictive Trade Practices, for the period January 1960 to June 1961 (Cmnd. 1603). In some industries, says the Registrar, the ending of price fixing or other restrictive agreements have brought keen competition in price, and stimulus has been given to more economic production by keener buying of materials and parts needed by the industry. In the past year or two there have been price wars in the cable and non-ferrous metal industries, and reductions in the price of some refrigerators, motor-cars and electrical appliances, but it is not clear to what extent these price changes have been brought about by the ending of restrictive agreements rather than other economic considerations.

The overall impression has been, however, that price levels have failed to respond to the abrogation of price-fixing agreements, and one is entitled to ask why. There seem to be three main reasons for the present situation: (*a*) inertia and the fear of a disastrous price war in an industry; (*b*) price leadership practices; and (*c*) the use of 'information' agreements.

The effect of forces of inertia are particularly noticeable in stable or slowly expanding industries. Where for many years there may have been uniformity of prices and practice, the sudden ending of a restrictive agreement does not necessarily mean that unfettered competition will break loose. Old-established firms with long connections or a recognized corner in a particular class of goods may be reluctant to disturb the equilibrium of the market. Boards of management where, perhaps, the majority of directors are ageing and conservative in outlook, may have no desire to plunge into new competitive fields which might appear as a challenge to younger and more vigorous executives. Any particular manufacturer may be afraid to depart from the existing price structure for fear that cut-throat competition may immediately follow from others.

Even when changes in price become inevitable, although the old price agreement may be just a memory, it may unconsciously lead the manufacturers to a common approach. The use of particular formulae related to material, production or wage costs may result in a new price being uniformly reached by all the manufacturers through independent decisions.

The inertia of the market may affect distributors as well as manufacturers. The distributor is probably more concerned with uniformity and stability of prices rather than the actual level of the prices themselves, and any increase in price is simply passed on to the customer. Price fluctuations merely mean administrative inconvenience for the distributor, involving recalculation of profit margins and the circulation of the new prices to all customers, and possibly loss of profit on current stocks purchased at the old price.

The result is that the only real stimulus to a revival of price competition comes from the buyers themselves, and indeed only from those whose share in the market is sufficiently large to impress the manufacturers with the importance of keeping their order. Market inertia may again play a part here, for price competition infers willingness to buy from other manufacturers at a lower price, and many retailers have a long-standing trading friendship with their suppliers which they would be reluctant to disturb for a minimal price advantage which might prove to be short lived.

Subject for Study

The comparative failure of the abrogation of price agreements to overcome market inertia and promote price competition between manufacturers seems to be a subject worthy of more prolonged study by economists.

Another way in which an industry can nullify the effect of the ending of a price-fixing agreement is by adopting the practice of price leadership. In this case, the largest manufacturer in the industry sets his own prices, but at a level which will allow smaller and less efficient firms also to make a profit. The smaller firms then set their

prices in accordance with his, and this is not illegal provided that there is no agreement to do so. This practice may be adopted with considerable ease in an industry where a price-fixing agreement has previously been operated through a trade association dominated by one particularly large manufacturer who will obviously and readily take over the role of price leader.

Problem of Information Agreements

But the biggest problem for the Registrar in future is likely to be the growing use of the information agreement. Under this type of agreement, known in the United States where it originated as an 'open price agreement', the members of a trade association send their price lists and other information to a central agency. This information is distributed by circular to all the members of the association and it may give details of the prices at which recent contracts have been obtained, the persons or classes of purchaser to whom the goods have been sold, the discounts that are allowed and the class of purchaser entitled to receive them, as well as any other important terms or conditions attached to the sale of the goods.

So long as the obligations in the information agreement are merely to send information regarding prices, they do not require to be registered with the Registrar under the 1956 Act. But, in fact, there are already about thirty such agreements on the register and the Registrar is officially aware of their existence and contents. This has come about because a number of agreements which contained restrictions which the Registrar considered objectionable were subsequently amended by deleting those restrictions and substituting an information agreement.

There are probably a good deal more than the thirty known information agreements in existence. The Registrar may learn informally of others, either by second-hand report, by close scrutiny of trade journals, or by intelligent guess-work.

Legality not yet Tested

It is important to realize that the Restrictive Practices Court has not yet been called upon in any case to determine the legality of an information agreement. The dividing line between a simple exchange of price information, and an agreement to follow only the prices quoted in the circular, is a very narrow one.

In the United States, where open-price agreements have been familiar features for over fifty years, the main issue in determining the legality of an agreement under anti-trust law is whether it restricts competition or not. In an industry where a price agreement has formerly operated for a long time, an information agreement might well hinder competition, and the operation of an information agreement could provide the framework upon which understandings about prices and allocation of contracts could arise. For example, members operating an information agreement might find it necessary to have frequent meetings to discuss market conditions and these meetings could provide an excellent forum for them to come to an 'understanding' about making equal tenders for forthcoming contracts.

Other factors which may determine whether an information agreement is bona fide or is merely a cloak to conceal a price-fixing arrangement, are the frequency with which the information is circulated, whether the information circulated merely quotes the prices at which business has been done or whether the buyers and sellers are themselves identified, and whether the information is available to anyone other than the parties directly concerned.

Should the Act be Amended?

It seems probable that many information agreements are already operating in the United Kingdom and that such agreements are a major factor in keeping prices up after the Restrictive Practices Court has declared invalid a restrictive agreement in the industry concerned. If that is so it seems essential that, as a preliminary step, all such information agreements should fall to be registered under the Act. This is not the case at present but could be achieved quite simply by amending section 6 of the Act to include information agreements among the agreements which are registerable. It would then follow that certain criteria would have to be laid down for determining whether the agreement was contrary to the public interest. Prima facie, an information agreement should be deemed contrary to the public interest if its operation tended to lead to restraint on price competition or tended to provide a basis upon which an unwritten understanding about prices could be reached.

These are matters for reform of the law which might perhaps be considered by the President of the Board of Trade during the course of his inquiry into the working of the 1956 Act. If reforms of this type are not carried out, it seems clear that decisions of the Restrictive Practices Court will continue to have little or no effect on price levels.

Taxation and the Professional Man – I

by D. S. MORPETH, B.Com., A.C.A.

Definition of 'Profession'

WHAT is a profession? To find the answer to this question, I turned first of all to the *Oxford Dictionary* and found the following:

'(1) The occupation which one professes to be skilled in and to follow; *or*

(2) Any calling or occupation by which a person habitually earns his living'.

These being rather vague and general, I was prompted to look at the definition of 'trade' in the same dictionary and found this:

> 'The practice of some occupation, business or profession habitually carried on especially when practised as a means of livelihood.'

A comparison of these definitions, as you can gather, rather takes us down a peg or two. Some time ago, however, I found in an American book a definition which I think we can safely adopt and still retain some of our professional ego. This is as follows:

> 'The occupation hierarchy progresses by slow steps from the completely unskilled labourer to the specialist who has spent a considerable part of his life preparing for his work. Each step merges into the next and overlaps it. Somewhere towards the upper end of the hierarchy is a group of occupations that we designate professional. These require prolonged and specialized training, and involve work that has something of an academic and intellectual flavour.'

It is interesting to see how the Courts from time to time have attempted to define a profession, but to dwell on further quotations would, I feel, be rather monotonous. There have been, however, a number of cases decided in the Courts dealing with what, for tax purposes, is assessable as a profession, as a result of which, the activities carried on by the following have been held to be professional activities: architects, accountants, lawyers, journalists, the headmaster of a preparatory school, patent agents, quantity surveyors, opticians, jockeys, average adjustors, chartered secretaries, consulting engineers, fire assessors, the owner of a nursing home and a private hospital, which provided medical or nursing facilities. A bookmaker has been held to be carrying on a vocation.

It should be noted that the activities carried on in these cases were carried on as a full-time occupation and not as an employment as we look on that term today. Membership of a professional body is not conclusive evidence that a person is carrying on a profession, since his activities might not be within the scope of the organization of which he is a member.

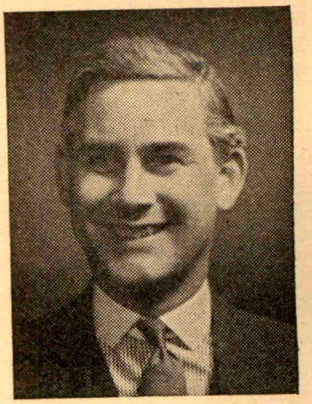
You can appreciate, I hope, how wide a subject I have been given in preparing this paper, if I am to include in it something of the problems of all those mentioned. It took me some months before I could decide what and whose problems to discuss, during which time I began to feel more and more like Aesop's ass, which starved to death through its inability to make a simple choice between two morsels of equal succulence and distance away. At last it dawned upon me that I would be addressing not jockeys, average adjustors or private hospitals, but mainly practitioners in the tax field, and of course, after that a decision was easy. My professional man for the purposes of this paper, therefore, will be an accountant or lawyer in professional practice.

I have, as you can see, ended with rather a narrow definition. Not only have I cut out many legally defined professionals in practice, but also all those who are engaged in professional activities through employments. However, despite my limited definition of a professional man, I have still left myself more than I can possibly deal with in the scope of a comparatively short paper, and I hope, therefore, that I shall be forgiven if I omit reference to many possible subjects.

Tax Implications of Professional Practice

As professional men of my definition, one of the aspects of our practice is to deal with the tax problems of our clients. These problems seem to become each

---



Mr D. S. MORPETH, B.Com., A.C.A., the author of this paper, is a partner in the firm of Touche, Ross, Bailey & Smart, Chartered Accountants. He qualified as a member of the English Institute in 1952. The paper was presented at the Eleventh National Taxation Conference in Bournemouth

year more complicated, and to take up more and more of our time. Our clients are learning rapidly to take no step without first discussing the tax implications. How many of us do the same with our own problems and our own practices? How far can we, or should we, plan for minimum tax liabilities and indulge in ingenious schemes of avoidance? No paper on my subject would be complete without some reference to this thorny problem, and yet it would be a bold man indeed who would attempt to draw a line. On the one hand, we have judicial guidance in the words of Lord Tomlinson in *C.I.R. v. Westminster*:

> 'Every man is entitled if he can to order his affairs, so that the tax attaching under the appropriate Acts is less than it otherwise would be . . .'

but on the other, we have public opinion and Government opinion heavily against the 'dividend stripper', even if he is only a trading company using the accumulated *taxed* profits of a newly-acquired company to obtain relief for a current trading loss.

Tax rates on the individual since the war have been so high as to amount at the top of the scale almost to confiscation. Tax is being used as a weapon of politics, rather than in its proper function, which is to provide for the cost of administering the country. The tenets of Adam Smith have gone overboard with the result that many people feel justified in increasing their net income by any possible means.

The word 'avoidance' in the Courts has come to mean a legal means, and 'evasion' an illegal means, of reducing tax liabilities: but, if we look again at the *Oxford Dictionary* we will find 'avoidance' defined as the 'action of avoiding something unwelcome' and 'to avoid' as 'to evade'. 'To evade' is similarly defined as 'to avoid', which left me confused; but 'evasion', however, is defined as 'avoidance by artifice or prevarication' and so we can safely, I feel, sum up as evasion, rather than 'avoiding something unwelcome', the actions of the man who wrote:

> She was Betty when in Brighton,
> Priscilla across in Poole,
> Belinda when in Bournemouth
> (A girl you cannot fool),
> She was Cathy when in Cambridge
> (The best of all the bunch),
> But on my P.11D,
> She was 'petrol, oil and lunch'.

As tax advisers, we are not tax gatherers. Our job is to see fair play between the demands of the Revenue who are well acquainted with the law and the taxpayer who is not, and to ensure that our client does not pay more than the law says he must pay. Our actions to ensure this cannot be called more than avoidance, providing that they do not depend for their success on non-disclosure of any of the relevant facts. How far in this respect we can go must, I feel, depend on the individual conscience, but if you will recall my American definition of a profession, you will remember that the word embraced a group of occupations at the upper end of the hierarchy. As such, therefore, I feel it is our duty to set an example and to demonstrate that we give evasion of any sort a wide berth.

Can a company carry on a profession? The answer to this question is somewhat vague. It has been held for the special circumstances of the excess profits duty that a company cannot do so on the grounds that it cannot have personal qualifications. In general, most professional bodies discourage their members, if not actively prohibit them, from carrying out their professional activities through the medium of a company, whether of limited or unlimited liability. It is normally possible, however, under some conditions and restrictions to carry on certain activities, including the provision of office and administrative services, through a company. I shall refer to service companies later, but in the main our professional activities are carried on by ourselves as individuals or as members of a partnership rather than through a corporate body. I do not believe, however, that we suffer unduly because of this.

A company would be taxed on its profits at a fixed rate of 53·75 per cent on profits over £12,000, with some reduction for profits less than that, until at £2,000 the exemption limit for profits tax, the rate would become 38·75 per cent. As, however, such a company would almost invariably be within the scope of section 245 of the 1952 Act, distributions by way of dividend must normally be made to shareholders to avoid a surtax direction of the whole of the net profit. Such distributions would be included at the gross equivalent in the total income of the recipient for surtax purposes, unless, of course, such recipients were trustees of a valid discretionary trust.

A partner in a partnership or an individual in sole practice, on the other hand, is subject to both income tax and surtax at progressive rates on the whole of his taxable share of profit each year. Since the surtax rates rise to 10*s* in the £, it would seem at first sight as if a company might be the better bet, even at fairly low income levels such as £4,000 to £5,000. However, the increase in the earned income relief given in the 1957 Finance Act and the application of this, plus the earnings allowance, to surtax in the 1961 Act have altered the position considerably. A partner's share of profits would have to be over £10,000 before there would be any tax advantage from carrying on the profession through a corporate body. Even at £11,000 the saving would be marginal on the figures which I have worked out. When we also take account of the other marginal factors, such as the stricter expenses rule for directors of companies, the possible complications under section 28, Finance Act, 1960, when a partner tries to extract his savings out of the company, and the fact that no possible advantage can be taken

as a company from fluctuating profits on a partnership change, we must agree that we have little to grumble at so far as taxation on income is concerned.

Assessment of Profits

The profits of a professional practice are assessed to income tax under Case II of Schedule D the basis of assessment normally being the profits of the accounting period ending within the preceding fiscal year. The assessment is made on the partnership, but the liability is computed by reference to the allowances and reliefs of the individual partners and is apportioned amongst them accordingly. Tax payable is levied in two instalments, on January 1st and July 1st. Surtax, although a deferred instalment of income, is assessed not on the partnership but directly on the individual partners. This basis of assessment gives rise to a considerable number of problems, particularly when coupled with the fact that for tax purposes, the assessable profit of the fiscal year is divided amongst the partners in the proportion in which profits are shared during that year, which may not necessarily be in the proportion in which the base year profits were shared. This can, of course, give rise to inequities between partners in relation to fluctuating profits, unless provision is made to counteract them:

(*a*) when new partners are introduced;
(*b*) when old partners retire;
(*c*) when profit-sharing ratios are changed.

Because of the high rates of taxation on individuals, it is unusual to find in partnership accounts a provision for tax on profits up to date, as is now the accepted custom for companies. It is recognized by most partnerships that some provision should be made, not only to ensure that junior partners do not get into difficulties, but also to provide some additional working capital. The extent to which provision is made varies considerably, but a common method is to provide for tax on the so-called legal basis. Thus a firm whose year end is December 31st, 1961, would provide out of these profits, income tax on one-quarter of the 1960–61 liability and three-quarters of the 1961–62. Since these assessments are based on the 1959 and 1960 profits, no provision is made for tax on one-quarter of the 1960 profits or any of the 1961 profits. A variation of this is to provide for all liabilities up to 1961–62 leaving only tax on the 1961 profits not provided for. Some firms in calculating the provisions do not take account of the allowances and reliefs of the partners until the assessments are actually agreed and paid.

A new partner coming into a firm, say, on January 1st, 1962, will immediately be liable to his proportion from that date of the 1961–62 liability and will, out of his 1962 share, have in addition to provide tax on three-quarters of the 1962–63 liabilities, or if the second alternative is adopted, the whole of the 1962–63 liability. If 1962 is not such a good profit year as 1960 or 1961, he is immediately suffering some disadvantage. Similarly, where junior partners are given a higher share of profits at the start of a bad year, they are saddled with their increased share of tax on the previous year's high profits, which must be provided for out of the current lower profits.

Retiring partners who retire at the end of a record year, receive their share of the profits subject only to tax liabilities on much lower profits.

Some legal remedy is available to counteract inequities on changes of partnership, in that where there has been a change, the Finance Act, 1953, states that the profession shall be treated as having permanently ceased, and a new profession as set up and commenced at the date of change. The old partners are assessed to the date of change on a cessation basis, and the new partners on the new business basis. The old partners are thus assessed on the actual profits of the fiscal year to the date of change, and the Revenue have the right, if it is to their advantage, to assess the actual profits of the penultimate year in lieu of the existing assessments. One year's profits usually fall out of assessment altogether.

Losses belong to the partners individually, so that on the retirement of a partner, his loss is not available to the other partners. He is entitled to make, however, providing there is no election as described below, a terminal loss claim for the three preceding years, even if those years include a period before a previous discontinuance. The continuing partners cannot make such a claim because they can carry forward their share of losses to the extent that they have not been used against other income under section 341, Income Tax Act, 1952.

Cessation *v.* Continuation Basis

Where one partner, at least, of the old partnership is continuing in the new partnership, an election is available to all the partners to have the profession treated as if it had not been discontinued. An election thus avoids the cessation adjustments on the old partners and new business treatment on the new. Such election, however, has to be signed by all the partners or their executors, both before and after the change, and be made within twelve months of the change. There is usually, therefore, some activity before the twelve months are up, to calculate whether a cessation or continuation would be best. A good deal depends on the relationship between the year's profits which would fall out of assessment on cessation, and the first year's profits of the new partnership which may be assessed twice. There is often considerable scope for timing the partnership change to achieve the best tax treatment.

The accounting date also plays its part, but to decide on whether an election should be made depends on many facts, and the question should be carefully examined in the light of the individual circumstances.

Such an election, although it acts to the benefit of the partnership as a whole, may not be to the advantage of a retiring or incoming partner, and should such an individual or his executor refuse to sign the election, it will be ineffective. It is advisable, therefore, to have a clause in the partnership agreement requiring all partners, retired or not, to sign an election under section 19 (5), Finance Act, 1953, if requested by a majority of the continuing partners. In such a case it would seem fair also to include a clause allowing for equitable adjustment of any tax disadvantage arising from the signature of such an election.

Other circumstances might give rise to the necessity for equitable adjustment, such as:

(*a*) Where in a year of low profits a senior partner is prepared to accept a loss, so that his junior partners receive a larger income. For tax purposes of course, that loss is set off against the profits of the junior partners to leave the actual net profit assessable. The senior partner thus has suffered a gross loss in his current account, while the junior partners are paying tax on much less than they have actually received.

(*b*) Where a partner retires at a time when a loss has been made, for which he would not get relief in any way, that loss cannot, as I have said, be carried forward. It may be possible, however, to change the profit-sharing ratios, so that the continuing partners receive the bulk of this loss and obtain relief for it.

To adjust profit-sharing ratios from year to year, it is necessary to have provision in the agreement permitting such alteration. Such a clause might read:

> 'The partners shall share profits each year as they agree amongst themselves, but failing agreement in the following proportions.'

Such a clause can, of course, present difficulties in cases where profit-sharing is intended to be in proportion to capital introduced.

Computing Assessable Profits

So far I have been talking about the assessment of profits. The next step is to discuss how the assessable profits are arrived at. I am sure you do not need me to discuss what expenses are deductible in arriving at the profit of a partnership or sole practitioner – particularly regarding sums for the use of home telephones, accommodation at home for use as an office, and the employment of one's wife as secretary – points in which you are as versed as I, if not more so. There are, however, one or two fundamental problems which I would like to discuss.

The *earnings basis* is widely used in arriving at the profits of a professional practice. This involves the bringing into profit of all bills received, debtors, a valuation of work in progress, and provision being made for accrued expenses. In contrast to this is the *cash basis*, which brings to profit cash received and deducts cash paid during the year (on income account, of course). Debtors are not brought in and no valuation is made of work in progress. In between are various compromises.

Earnings basis

The earnings basis is more complicated than the cash basis, in that it involves an evaluation each year of debtors and work in progress. It also suffers from the disadvantage that it results in the payment of tax, or the making of a provision for tax, on profits which have not been received in cash and so perhaps not available for distribution to partners. In a time of expansion of the practice, this can lead to accentuation of the problem of shortage of working capital, and in many cases complicated sums have to be done each year to determine what restriction is to be put on partners' drawings.

The valuation of professional work in progress is not without its complications, particularly after the *Duple Motor Bodies* case (40 A.T.C. 21). Work in progress can either be valued at nil as in the cash basis, or at the lower of cost or market value. This latter is a long-established principle which leaves only for argument the meaning of cost and the meaning of market value.

What is cost has long been a thorny problem. So far as professional practice is concerned, the ingredients may comprise the basic salary cost including national insurance, lunch voucher scheme, and pension fund contributions, plus an addition for overheads. The *Duple* case has shown us that the Revenue cannot insist on the addition of overheads where it has not been the practice in the past, nor can they insist, it is thought, in the case of a new firm or company. In addition to this, partners' time cannot be said to have cost anything, and I believe that the Revenue would not succeed in a claim that a value should be placed on partners' time. Where a firm has been in the habit of valuing work in progress including a value both for overheads and partners' time, and a change in the partnership occurs, the new firm could succeed in my opinion in establishing a value for tax purposes excluding these elements.

What I have said so far, of course, depends upon the maintenance of adequate time records. Where these are not kept, any value placed on work in progress must be an estimate.

The meaning of 'market value' has caused considerable arguments in the past, and The Institute of Chartered Accountants in England and Wales has substituted the terms 'net realizable value' and 'replacement price'. This latter, of course, has little meaning to a professional office, but in isolated circumstances the former may unfortunately have to be considered. Where the net realizable value has to

be calculated, a deduction should be made for the salary costs of staff yet to be incurred, plus an element for the overheads to be incurred.

Cash basis

The cash basis can be much simpler to operate and has the advantage that the cash accounts can be drawn up very rapidly after the end of the accounting year, enabling partners to draw their balance of profits quickly.

In periods of expansion, tax is only payable on the cash received from clients less, of course, expenses paid, so that the problem of the supply of capital is not aggravated. It has, however, the disadvantage that the cash profit and loss account may not necessarily give the true picture of the level of activity in the firm since the cash profit might well rise in a year of lower activity than the previous year and fall if the activity rises again the following year.

Whereas a firm assessed on the earnings basis might well be required to keep memorandum accounts on the cash basis to arrive at the permissible drawings of the partners, a firm assessed on the cash basis might well wish to keep memorandum accounts on the earnings basis, where this is possible, in order to give the right picture of the firm's level of activity.

I say 'memorandum accounts' because the Revenue would not accept accounts for tax purposes which were not used as the basis for profit-sharing amongst the partners.

The cash basis is carefully preserved by those firms assessed on it, and in particular it is thought essential always to make an election for continuance on a change in partners. Some of the normal flexibility of partnerships is, of course, thereby lost.

Effect of Failure to Elect for Continuation Basis

It would be interesting to trace what would happen if such a firm failed to elect for continuance on a partnership change.

Old firm

Firstly, in respect of the old firm, the Revenue appear to have the right to assess the closing years on the earnings basis as a result of the decision in *C.I.R. v. Rankine* (31 A.T.C. 20; 32 T.C. 520). This case, however, limited their right to assessments which had not finally been determined. An assessment on the earnings basis would require a valuation of debtors and work in progress both at the commencement of the open years as well as at the date of cessation. It is simple arithmetic, therefore, to realize that there would be no advantage to the Revenue, subject of course to changing tax rates, to apply the earnings basis where the closing valuations were the same as or lower than the opening valuations.

If cessation takes place, therefore, and the earnings basis is not applied, are the receipts after the date of cessation taxable? To find the answer to this we must turn to the Finance Act, 1960. Section 34 of this Act deals with a profession which is treated under section 19, Finance Act, 1953, as permanently discontinued after a change, and says that sections 32 and 33 shall apply, unless the right to receive any sums covered by section 32 is transferred to the new partnership. In such a case the new partnership will be assessed on these sums for the period they are received, subject to allowances for bad debts.

Section 32 taxes under Case VI of Schedule D sums received after the discontinuance if they fall within the net described below:

(*a*) if profits are computed on the earnings basis, all sums not brought into accounts in periods up to the discontinuance;

(*b*) if profits are not computed on the earnings basis, sums which would not have been brought in if the profits had been computed on the earnings basis.

Clearly, debtors would have been brought in if profits were assessed on the earnings basis and, therefore, escape tax if received after a discontinuance on the cash basis.

Work in progress is dealt with in section 35, which section appears to be complementary to section 143, Income Tax Act, 1952, which deals with work in progress on the discontinuance of a trade only. Section 35 starts with the words 'Where in computing for any income tax purpose the profits or gains of a profession or vocation which has been discontinued, a valuation is taken of the work in progress, that work shall be valued as follows', etc.

Clearly on the cash basis no valuation is taken, so that this section does not apply to the cash basis.

New partnership

The old partnership in either event will sell or transfer the work in progress to the new partnership and the Revenue will insist on assessing the new partnership on the earnings basis certainly during the opening years. If the work in progress and debtors have remained steady during the years affected by the change, no hardship has resulted at this stage; but the question now arises, will the Revenue accept a reversion to the cash basis after the opening years? I have said 'will they accept', because clearly they are under no obligation to do so, and if they insisted on the firm staying on the earnings basis, the only remedy would be to go to appeal before the Commissioners who would most likely decide in favour of the Revenue.

I understand, however, that in some cases the Revenue do accept a reversion to the cash basis, but on condition that there is regular billing of clients and no attempt to hoard potential cash profits, and they will not make any adjustment for the double assessment of profits which results in the year of change.

(*To be concluded.*)

Weekly Notes

INSTITUTE'S NEW COUNCIL MEMBER

MR ALFRED GORDON THOMAS, F.C.A., a partner in the firms of Camm Metcalfe, Best & Co, Chartered Accountants, and Kenneth West & Co, Chartered Accountants, of Sheffield, was elected a member of the Council of The Institute of Chartered Accountants in England and Wales at a meeting of the Council held on March 7th (reported elsewhere in this issue).

Born in 1912, Mr Thomas was educated at King Edward VII School, Sheffield, and served his articles with Camm Metcalfe & Co, in which firm his father, Mr J. B. Thomas, F.C.A., was the senior partner. He was admitted an Associate of the Institute in 1934 and after serving for a year at the London office of Peat, Marwick, Mitchell & Co became a partner in Camm Metcalfe & Co (now Camm Metcalfe, Best & Co).

Mr Thomas is President of the Sheffield & District Society of Chartered Accountants. He was a member of the Committee of the District Society from 1946–48 and has again been a member since 1960. He has served on the regional Taxation and Research Committee since 1947 and has represented the Society on the Institute's Taxation and Research Committee since 1949.

THE P. D. LEAKE TRUST ACCOUNTS

THE ninth report of the Council of The Institute of Chartered Accountants in England and Wales as Trustee of The P. D. Leake Trust, which accompanies the audited accounts for the year ended October 31st, 1961, is not a very communicative document for the simple reason that financially there is little to communicate. The disposable income for the year was £16,161 (as compared with £11,653 for the previous year) and of this sum £6,598 was disposed of in the form of grants, the creation of a new Research Fellowship at London University being mainly responsible for the increase of £2,006 over last year's disbursements of £4,592. The undistributed balance of £9,563 has been transferred to Income Account which now stands at £71,119. Net profits from realization of investments has added £2,104 to the Capital Account which is now £218,114. The Capital and Income accounts together are thus £289,233, represented by solid investments (mainly quoted) temporary deposits and bank balances. If the middle market values of the quoted investments were substituted for the book values (which are as valued at May 18th, 1960, or cost, less repayments), the combined assets would be hoisted a further £26,341 to £315,574.

The current report of the P. D. Leake Committee, comprising five members of the Council of the Institute assisted by an advisory committee made up of representatives from the Universities of Oxford, Cambridge, London and Birmingham, also accompanies the accounts. It states that Professor Richard Stone, who occupies the P. D. Leake Chair of Finance and Accounting at Cambridge, and his colleagues are making progress with their study of the problem of economic growth and that the availability of the EDSAC computer is helping them to reach tentative conclusions from the information being analysed. The committee states, too, that Mr T. W. McRae, C.A., A.C.W.A., the new Research Fellow at London University, is considering 'the effect of electronic computing techniques on the future of accounting'.

LEGACIES OF A LOST BID

IT might be said at the end of the 'take-over' battle between Imperial Chemical Industries Ltd and Courtaulds Ltd, that the result was a caucus race in reverse – everyone has run and no one has earned a prize. I.C.I. have created an impression of a hasty and wrong policy decision and are left with a need to remove the impression that certain aspects of both their technical and commercial policy-making need reorganizing. They come out of the battle with their reputation as a private concern with the highest standards of public responsibility hardly enhanced.

Courtaulds come out of the fray as nominal victors but the price paid has been a high one. They have had to reverse their policy on public relations, publicly hand over the direction of the battle to a second generation of senior executives, admit errors of judgment on dividend policy and saddle their future trading account and their financial and commercial management with heavy liabilities to their shareholders.

I.C.I. are left with just over 37 per cent of Courtaulds' equity, sufficient in a normal take-over affray to ensure board representation. The heated exchanges in the recent battle and the wide difference in opinion which apparently exists between them on the future organization of the man-made fibre industry is a poor start to concord at board level if there were I.C.I. directors appointed to the board of Courtaulds. Each company is already left with the problem of making their joint representation on the board of British Nylon Spinners work in continuing harmony. If there is no I.C.I. representation on Courtaulds' board it is difficult to see how the present

state of affairs can be anything but unstable. Either I.C.I. will eventually obtain control by gradually obtaining the required 13 per cent of the equity, or they will have to sell out their holding. They may decide to do so of their own accord. If they do not, the surprising precedent which the Government has set for itself in the recent decision not to force the Imperial Tobacco Company (of Great Britain and Ireland) Ltd to divest itself of its interest in Gallaghers provided the former does not interfere in the management of the latter, has taken on a new twist. With I.C.I. holding a substantial interest in Courtaulds without having a say in that company's management, it could be the tobacco situation all over again in an even less satisfactory context. The Government may yet be obliged to clarify and give teeth to its policy on the control of monopolies, especially when the Monopolies Commission offers a considered opinion about the situation in a particular industry.

G.A.T.T. TARIFF CHANGES

AN important outcome of the G.A.T.T. tariff negotiations begun in Geneva in September 1960 has been the conclusion of bilateral agreements signed by the United States with the United Kingdom, the European Common Market and other countries at the conference. It took nine months for the European Common Market agreements to be negotiated by the United States and since the summer of 1961 the United Kingdom has been negotiating with the United States and the E.E.C. Complete multilateral tariff schedules will be announced in due course. The announcement made last week on the bilateral agreements has been put out, contrary to usual G.A.T.T. practice, in advance of the complete schedules because of the importance of the bilateral arrangements.

The tariff agreement between this country and the United States is a big step towards the reduction of tariff barriers on a reciprocal basis.

Under the agreement this country reduces its duties on motor vehicles, parts and accessories from 30 to 22 per cent. The fall in duty on motor-cars into the E.E.C. will be from 29 to 22 per cent and on certain vehicle parts from 19 to 14 per cent. The duty on cars in the United States will fall from 8½ to 6½ per cent and on certain vehicle parts from 10½ to 8½ per cent.

THE WAY AHEAD

'THIS Council is not the panacea, the cure-all, for our economic troubles and diseases. We cannot perform economic conjuring tricks. It is important that people should not fall into the national fault of complacency, and of thinking that the establishment of this Council is the end of all their troubles.' No member of the National Economic Development Council could doubt the truth of these remarks from Mr Selwyn Lloyd on the occasion of the opening meeting of that body last week; whether the general public has begun to appreciate the enormity of the task which lies ahead is highly doubtful. The Chancellor made it clear to the members what he did not want from them: 'If our work together produces nothing more than a façade of co-operation, a form of window-dressing; if we are seen to do no more than exchange platitudinous generalities, we will have failed completely.' What the Chancellor does expect from the N.E.D.C. is just as clear. First, it must examine the economic performance of the nation with particular concern for plans for the future of industry in both the public and private sectors. Second, it must consider what are the main obstacles to quicker economic growth; what can be done to improve efficiency and, finally, to achieve agreement upon the best methods of improving economic performance and industrial efficiency.

Nothing, stressed the Chancellor, is to be regarded as beyond the terms of reference of the Council. It will seek advice and information from all sides and not merely from its own expert staff or the Treasury. Any person who has views on any relevant issue is invited to submit a memorandum to the Council. Yet, in the last resort, it is not lack of information or suggestions that will prevent the Council from achieving its goals. Its ultimate achievement depends on the extent to which the representatives of each sector of the economy can abandon their past sectional approach to the nation's difficulties.

It is difficult to feel sanguine about the prospects, more especially when the difficulties of bringing the Council into being are recalled. But, as Mr Lloyd so rightly observed, if the Council can give a lead, then it will find public opinion behind it. And this, as the events of the post-war years have shown, is the most important requirement of all economic planning.

STANDARDS FOR STOCK EXCHANGE MEMBERSHIP

LAST week the Stock Exchange Council announced that it proposed to introduce a period of training for future candidates for membership of the Stock Exchange. It also proposes to strengthen the rules dealing with the accounts of member firms. These changes are part of a programme to improve the standard of membership and the efficiency and capacity of member firms.

About eighteen months ago a subcommittee was appointed to look into conditions of membership, the creation and dissolution of partnerships and the preparation and submission of accounts of member firms. The proposed new rules, which give effect to the recommendations of that subcommittee, are subject to confirmation on March 26th.

Amendments include the abolition of sureties for candidates for membership. Instead, proposer and

seconder having no financial obligation in case of default will be required. The Council have wisely decided that personal knowledge and experience of candidates are more important than small financial guarantees. In addition, it is now stipulated that normally candidates must have at least two years' training with a member firm. No recommendations are made as yet for any examinations. As regards accounts, in future accountants examining them will have to state in the report any reservations they have had to make and if the Council is not satisfied with the report it may call for further information including a report from independent accountants. It may subsequently suspend the partners of the firm from trading. This is a new and powerful sanction in the hands of the Council.

Another change will require firms to maintain a balance on capital account sufficient to ensure a minimum degree of solvency. This minimum is put at not less than £10,000 for a broking firm and £15,000 for a jobbing firm, and not less than £5,000 per partner in either case.

This is My Life . . .

by An Industrious Accountant

CHAPTER 115

ACCOUNTANTS in industry find themselves faced with many completely unexpected problems never mentioned by their textbooks. Only experience can help them. That the smallest points cause the greatest trouble is axiomatic.

Some months ago our departmental accountant was preparing a longish report for the board of directors on sectional wage and salary percentages, past and anticipated, in terms of sales. We roughed it out together and interesting points emerged; it looked to be a useful contribution to management. He took it away to add some additional notes that we had discussed before having it typed and circulated.

On reading the typescript I was dismayed to find a number of blunders. There was an 8 per cent for managers' remuneration in the ladies' wear section, where it should have read 3 per cent; an abstract headed 1961 should surely have been 1960; our drapery association's title was wrong. I summoned the accountant to query it. I was annoyed; the report was below the standard expected of us.

He was more than a little offhand as he shrugged off the responsibility. He had given the draft to young Frank, one of his juniors, to complete; he certainly didn't feel it his place to check the typing afterwards. That was the typist's job; he was entitled to rely on her. In some little dudgeon he sent for Frank and the typist and peremptorily demanded their explanation. I never really followed the rest of the story; we were swamped in contradictions. As regards the association's title, the accountant had just noted it approximately, relying on Frank to check it; it apparently failed to occur to that trusting youth that his superior could be less than infallible. About the figures, said Frank in injured innocence, he had called them over to the typist but perhaps he misread that three; after all it did look a bit like an eight. At this stage, the typist reminded him stormily that they had changed over once; she had read to him. When they reversed roles, he had read back at least one page from the typed copy. Tears were brimming, contradictions were becoming heated; I got nowhere in cross-examination. In fact, I became as bewildered and annoyed as the pair of them, being conscious that I shouldn't really have been involved at all.

Meanwhile, their plump senior sat by with an expression of detached distaste. Not for him to stoop from his Olympian heights to aid lesser and frailer mortals. When the controversial figures were under fire he merely stated that they were perfectly clear to him; if his juniors were in doubt, they should have referred back to him. As he saw it, when he delegated a job down the line that was the end of it; he'd never get his more important work done if he had to follow up every detail. He didn't know which typist did the work or how Frank planned his scrutiny; if Frank had discussed the implications of the report with him, the 'Curtains' column wouldn't have been headed 'Canteen'. Anyhow, we seemed to be making a mountain out of a molehill; he'd just circulate an 'Errata' sheet and close the case. You couldn't expect to be perfect all the time; lots of reports had a page upside down similarly.

No disagreement ever shakes his composure. He just naturally knows that he's right. That type of character never appreciates that every time a disgruntled director grumbles 'another bunch of mistakes in the accounts report', our whole section gets a smear the memory of which lingers on indefinitely.

But when another report besprinkled with errors came from him last week and he blamed Frank again, I reacted differently. 'Jolly bad show, old chap,' I agreed cordially. 'Your subordinates have certainly let you down, but we can't blame you. Better do a special detailed survey of their procedure manual, with recommended revisions, and let me have up-to-date individual fitness reports, over the next fortnight. Too bad you'll have to miss that London trip we had planned to the trade display and jubilee dinner.'

I felt rather mean, but he's smart enough – he'll take the hint. *Experientia docet.*

Current Law

Tenant for Life's Leasing Powers

A TENANT for life of settled land made an agreement with a limited company, conditional on the Court's sanction being obtained, for the grant to the company of separate leases of three blocks of property. In one case the block comprised land held by the tenant for life in fee simple as well as land held upon the trusts of the settlement. In *Re Rycroft's Settlement, Rycroft v. Rycroft and Others* ([1961] 3 All E.R. 581) Wilberforce, J., held that it was not within the powers of a tenant for life to grant a lease of settled property together with property of which he was the absolute owner in a single lease, at least if, as in this case, there was no provision for apportioning the rent between the settled property and his own property. Section 42 (1) (i) of the Settled Land Act, 1925, provides that a lease (which by definition includes an agreement for a lease: ibid., section 117 (1) (x)) of settled land shall take effect in possession not less than twelve months after its date.

In the instant case the leases which were the subject of the agreement were to be granted at future dates which might be more than twelve years distant. It was argued for the tenant for life that the agreement was in this respect valid on the ground that there was a general power, under section 90 (1) (iii) of the Act, to enter into a contract to grant a lease and that the only limitation on that power was that, when the lease came to be granted, it must be in conformity with the Act; while section 117 (1) (x) related to an agreement for a lease which in effect amounted to a demise of the property (because the agreement was in equity equivalent to a lease), section 90 (1) (iii) related to an executory type of agreement to make a lease which was not equivalent to a demise. This argument Wilberforce, J., accepted, and held that the present type of transaction would be authorized under the power contained in section 90 (1) (iii). His lordship held the agreement invalid, however, because it was a term of it that the land should be leased in lots within section 44 (3) of the Act and the rent reserved was such that, contrary to the requirements of proviso (iii) of that subsection, the rent of at least one of the properties must, on an apportionment being made, exceed one-fifth of the annual value of the land comprised in the lease with the buildings thereon.

Rating of Public Park

A PARK was acquired by a local authority under section 164 of the Public Health Act, 1875, which empowers any urban authority to 'purchase or take on lease lay out plant improve and maintain lands for the purpose of being used as public walks or pleasure grounds'. The conveyances of the land to the local authority did not contain any covenants restricting the use of the land, and there had been no formal dedication of it as a public park, but in fact it had been continually so used.

In *Blake v. Hendon Corporation* ([1961] 3 All E.R. 601) the Court of Appeal held that the land was exempt from rates and rejected a contention that the corporation was in beneficial occupation of it. It was said that not only had there not been, but there could not be, dedication to the public, because section 164 of the Local Government Act, 1933, permits a local authority to let any land which it possesses, and it could not do this if the land belonged to the public and the public had the beneficial ownership of it. Dismissing this argument, the Court said that the authority's powers under section 164 of the Act of 1933 were subordinate to the main object for which the land was acquired and could be exercised only in so far as their exercise was compatible with the main object.

In connection with this case it should be observed that section 13 of the Rating and Valuation Act, 1961, provides relief from rates for parks provided or managed by local authorities and held available for free and unrestricted use by members of the public. This case may be contrasted with *Kingston upon Hull Corporation v. Clayton* ([1961] 3 All E.R. 118) (*The Accountant*, January 20th, 1962), where an art gallery in the occupation of a local authority was held liable to rates.

Servant Working at Risk to Health: Master not Liable

THE plaintiff in *Withers v. Perry Chain Co Ltd* ([1961] 3 All E.R. 676), after some five years in a job in which she was in contact with grease, contracted dermatitis due to the grease. She left her employment, but about a month later returned and asked for a job. She was given a job which was the one most free from grease which her employer had available for her, but she again developed dermatitis. She was again off work, but on return asked for her new job back, and after a further attack of dermatitis and a further absence she returned and asked for it yet again. Shortly afterwards she was, at her own request, transferred to a third job, where there was at most little contact with grease, and she was free from dermatitis for some two years. She then suffered a further attack and issued a writ against her employer alleging that her employer was negligent in permitting her to continue with the second job which she was given, knowing that she had had dermatitis, brought on by grease, and that the job in question involved some contact with a greasy substance which might cause a further outbreak of the disease.

The Court of Appeal held that there was no duty at common law requiring an employer to dismiss someone rather than to retain him or her and allow him or her to earn their wages, notwithstanding that there might be some risk. Devlin, L.J. (as he then was), said *obiter* that if the employer were to conceal the risk or fail to give the employee information which he had and which might help the employee to evaluate the risk properly, there might perhaps be a liability; or there might be a case in which an employer impliedly warranted that a job was safe for a particular employee.

Sale of Charity Land

THE plaintiff company in *Neville Estates Ltd v. Madden and Others* ([1961] 3 All E.R. 769) entered into an agreement in writing with the defendants, the trustees of a synagogue, for the purchase of two plots of vacant land, the agreement providing that the contract was subject to the consent of the Charity Commissioners 'so far as the same is required'. The Commissioners refused their consent at the sale price and the plaintiff brought an action for a declaration that the land could be sold without the Commissioners' consent and for specific performance of the agreement. The plaintiff maintained that the land was not held on charitable trusts, but that if it was so held it was exempt from the jurisdiction of the Commissioners under section 62 of the Charitable Trusts Act, 1853.

Cross, J., held that the trusts were charitable and that the exemption did not apply. The argument that the Commissioners had no jurisdiction turned on the question whether or not the charity was one 'wholly maintained by voluntary contributions', and as this test is obsolete since the Charities Act, 1960, became law, this aspect of the case is not considered here. The argument that the trust purposes were not charitable was based on the fact that they were not exclusively religious purposes because social activities were carried on by the members of the synagogue as part of its activities, and that the trust was for the benefit of its members, a private unincorporated association. Cross, J., found, however, that the social activities were merely ancillary to the religious purposes and that, as the religious purposes had the requisite element of public benefit, the trusts were charitable.

Settlor Under Incapacity by Foreign Law

IN *Re Langley's Settlement Trusts, Lloyds Bank Ltd v. Langley and Others* ([1961] 3 All E.R. 803) the Court of Appeal affirmed the decision of Buckley, J. ([1961] 1 All E.R. 78) (*The Accountant*, July 8th, 1961, where the facts are set out). Their lordships held that the Court was not bound to give effect to the status of incompetency of the settlor under the law of California, and in the circumstances that the settlor should not be deprived of the power which he had under the settlement of withdrawing money from it. The relevant order of the Californian Court had appointed the settlor's wife guardian of his estate and person, and she had executed the relevant notice of withdrawal of trust funds. The Court also held that if the Californian order was to be accepted at all it should be accepted altogether, in which case the right of withdrawal would be found to be validly exercised by the settlor's wife as guardian, and rejected a contention that, while Californian law prevented the settlor from disposing of his property, English law prevented his wife as his guardian from exercising the power on his behalf.

Direction to Invest in 'Blue Chip' Investments

THE testator in *Re Kolb's Will Trusts, Lloyds Bank Ltd v. Ullmann and Others* ([1961] 3 All E.R. 811) directed his trustees to invest his residuary estate in 'blue chip' investments and expressly declared that they were not to invest in Government, trustee or fixed interest stock or debentures. The ultimate residue was given on charitable trusts.

Cross, J., held that the direction to invest in 'blue chip' investments was void for uncertainty. Whether or not an investment came within this category depended essentially on the standards applied by the speaker and could not be regarded as an objective quality of the investment. The testator might have made his trustees the judges, but he had not done so. It followed that the prohibition against investment in trustee or fixed interest investments was also ineffective, as it had meaning only on the footing that the provision for investment in 'blue chips' was effective.

The Attorney-General objected, on behalf of charity, to the field of investment permitted by the Trustee Investments Act, 1961, being extended, and Cross, J., while observing that the Court undoubtedly

Finance and Commerce

Falkland Islands Co

THIS week's reprint presents the accounts of The Falkland Islands Co Ltd – a company incorporated by Royal Charter in December 1851 and registered under the Companies Acts in 1902. Although the accounts are those for the year ended December 31st, 1960, and were issued about June 1961, it was only recently that they have become generally available, as a result of being granted an official quotation on the London Stock Exchange. The shares have been dealt in for many years under a stock exchange rule that permits dealings subject to official permission being obtained for each separate transaction. Such business having, however, become more active in recent months, the Stock Exchange Council decided that it was about time the company became 'quoted'.

In these accounts one meets a situation which is almost out of this world. To most people, it is probably true to say, the Falkland Islands are no more than a name. But there they lie, down in the South Atlantic on the east of the southern tip of South America – about as far from the mainland as London is from Edinburgh. Their latitude south of the equator is about the same as the English Midlands north of 'the Line'.

Sheep Farming

The Falklands consist of two large and about 200 smaller islands. Total land area is about 4,600 square miles, which is about one-tenth smaller than the area of Northern Ireland. There is only one town, Port Stanley, the capital, which lies about 1,000 miles south of Uruguay, and is the home of about half the population of the Islands – some 2,200 – who are almost entirely of United Kingdom origin.

There are no roads, and no mineral deposits of economic value have been discovered. The soil is peaty and acid, producing native grasses low in nutritional value. The climate is dominated by westerly winds and the low temperature of the surrounding seas. Mean monthly temperature varies from 35·5° in winter to 49° in summer. Rainfall of twenty-seven inches is spread fairly evenly over the year.

Yet here is a more than a century old charter company which has done very well out of sheep farming, basically for the wool. Establishment was slow and, until 1864, unprofitable. But the company now farms about 1¼ million acres and shears nearly a quarter of a million sheep a year, giving a 'clip' of well over two million pounds. So its shares, now quoted, are in the commodity category with a value closely associated with the price of wool.

Development

It was in the natural order of development that the company should open retail shops and obtain agencies for Lloyd's, the Royal Insurance Co, and for shipping and air lines. Banking facilities for other sheep farmers in the colony are provided through a wholly-owned subsidiary, and the company owns the R.M.S. *Darwin* which maintains a service with Montevideo; and a chartered motor ship connects with the West India Dock, London. The London wool market, is, of course, the place where the 'clip' is sold.

What is now being sought, in these days when wool is no longer supreme, is increasing diversification. A small experimental mink farm was set up in 1959 which has possibilities. And the board, which already has experience in ship management, is now going fifty–fifty with another interest in building and operating a cargo vessel.

Basically, however, the business is sheep farming, and there is still room there for more efficient working. There is a need to develop higher quality herbage. That means fencing off sheep from land under improvement; this in turn means labour – and labour is in short supply. Very few people are willing to spend their lives in such a place.

Income Tax

For men prepared to accept the life, the company has a five-year contract scheme for those found suitable, and it is not unknown for them to leave at the end of their five years with £1,000 and more in savings. There is, of course, very little temptation in the Falklands to spend money. Some even go back for another spell of work – and the peace which is only obtainable away from civilization.

But there is a cloud in the sky: the rate of company tax which has been 3*s* 6*d* in the £1 for many years, says Mr P. D. L. Ainslie, the chairman, may be expected to 'rise substantially in the near future'. However, to the extent that profits distributed are subject to United Kingdom tax, there will be recovery by way of double taxation relief. The Falklands Islands Company itself has obtained overseas trade corporation status.

It is in the light of such circumstances that one studies the balance sheet. Sheep, for instance, are valued in United Kingdom terms at hardly more than forty cigarettes. Valuation has its own special meaning when everything else against which comparison can be made is so very remote.

Report of the Auditors to the Members of The Falkland Islands Co. Ltd.

We have audited the annexed Balance Sheet and have obtained all the information and explanations which we considered necessary. Proper books have been kept and the Balance Sheet is in agreement therewith.

We have examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account.

The returns from the Stanley Office, not visited by us, have not been audited. Subject thereto, in our opinion the Balance Sheet and Consolidated Accounts in conjunction with the relative Notes comply with the requirements of the Companies Act, 1948, and give a true and fair view of the state of affairs of the Company and of the Company and its Subsidiary, as at 31st December, 1960, and of the Profit for the year ended on that date of The Falkland Islands Co. Ltd. and its Subsidiary, so far as concerns the Members of the Company.

J. & J. SAWYER & Co.
Chartered Accountants.

NOTES ON THE ACCOUNTS

1. MOVEMENT IN RESERVES—

	The Falkland Islands Co. Ltd.	Consolidated
Contingencies Reserve—Balance from 1959	£56,624	£57,773
Add—Premiums on risks covered charged against profits	2,784	3,335
	59,408	61,108
Deduct—Claims paid	—	55
	£59,408	£61,053

2. In addition to Directors' Commissions, payment to Employees of Commissions amounting to £5,899 has been calculated on the Ordinary Dividends paid or payable for the year.

3. TAXATION

Provision has been made in these accounts for:—

(*a*) Profits Tax	£6,250
(*b*) Income Tax on the Investment Income and the distribution of Exempt Trading Income for the year of The Falkland Islands Co., Ltd., and Income Tax on the profit for the year of the Subsidiary	66,048
	72,298
Less—Double Taxation Relief	22,264
	50,034
(*c*) Colonial Income Tax	27,000
	£77,034

The Falkland Islands Company Ltd. is provisionally deemed to be an Overseas Trade Corporation and additional Income Tax would, therefore, become payable in the event of further distribution of Exempt Trading Income.

4. Contingent Liabilities in respect of Guarantees of The Falkland Islands Company Ltd. amount to £250 (*1959—£250*).

5. Contracts for capital expenditure not provided for in these accounts amount to £2,300 (*1959—£5,000*).

CITY NOTES

REDUCTION in Bank rate, I.C.I.'s defeat at the hands of Courtaulds and some new and less pessimistic thinking on Budget prospects are currently the three main City topics. Bank rate reduction is already being reflected in reduced yields and an immediate test of the new borrowing position comes in the shape of a £20 million 6¼ per cent loan at 97¾ per cent by Middlesex County Council.

The weight of the Middlesex loan is added to an already heavy weight of new issue operations in the market. The pre-Budget period is invariably a busy new issue time and this year is no exception. The bid by M. Samuel, the bankers, to stamp out 'dud cheque' applications for the Provident Clothing & Supply issue is being watched closely by other issuing houses.

The I.C.I.–Courtaulds affair finally showed the City to have been a long way out in its estimates of the likely result. I.C.I.'s financial advisers seem, in retrospect, to have overplayed their hand to a dangerous degree, particularly in the move of making I.C.I.'s bid unconditional on acceptances as early as March 1st.

On the Budget point there is now an inclination to look for a holding Budget rather than a further attempt at restriction. There are also some optimistic suggestions that the intended capital gains tax will not be a particularly onerous affair.

Whether this Budget optimism is justified remains to be seen but for the present, at least, the stock-market is not displaying 'Budget nerves'.

The Scope of Management Accounting

SIR, – If the point of criticism in Mr P. R. Rawson's letter in your issue of March 10th is that separate interests of the ordinary shareholders, preference shareholders, loan stock holders and future taxation should be shown before the assets and liabilities representing these interests, then I am inclined to agree; it would be a better arrangement.

However, a point of greater importance is that the ordinary share capital should be split away from the preference share capital and linked with the reserves to show the total ordinary shareholders' interest in the business.

Yours faithfully,
J. P. WILSON, F.C.W.A., F.C.I.S.

Kenilworth, Warwickshire.

The Training of Accountants

SIR, – In reply to Mr K. J. Hamilton (February 17th issue), as a fellow graduate I should like to take up the first point in his letter where he stated that correspondence courses are 'well planned, well presented and easy to understand, which is far more than can be said of some lectures given by university staff'. Here Mr Hamilton seems to dismiss the potentialities of 'class-room teaching', preferring instead to extol the apparent perfection of the postal tuition method.

The implication seems to be that all oral teaching in the sphere of accountancy is along the lines of abstract theorizing of university professors. In my

own experience this seems not to be the case. The four-week introductory course, for example, which is held at the Staffordshire College of Commerce, Wednesbury, is of far greater benefit and prepares the articled clerk far more effectively than does a lengthy period of postal tuition. Although all commercial colleges are perhaps not as dynamic and energetic as Wednesbury, nevertheless it seems unrealistic to dismiss the teaching of accountancy in such colleges as a complex intellectual exercise.

Yours faithfully,

Wolverhampton. R. W. LOVE.

Appointment of Auditors: Procedure

SIR, – As a shareholder, I received a copy of the Directors' Report and Statement of Accounts of a public company from which I have noted the following:

(1) The agenda for the annual meeting includes the 'Election of Auditors'.
(2) The Chairman's Review states that a firm of chartered accountants had been appointed during the year under review as joint auditors and that they were willing to continue in office.
(3) The Directors' Report states that the auditors (both firms) will be re-appointed under the provisions of section 159 (2) of the Companies Act, 1948.
(4) The firm referred to in the Chairman's Review signed the Report of the Auditors to the members (and above the signature of the firm who have been the sole auditors for many years).
(5) The auditors' remuneration is twice that for the previous year.
(6) The (sole) auditors were, of course, re-appointed under section 159 (2) at the previous annual general meeting.

I would appreciate the observations of your readers on the legal and professional aspects of these facts.

Yours faithfully,

F.C.A.

Minimizing Office Paper Work

One-day Conference in London

Accurate information – clearly presented – speedily supplied. These three points were put forward by Sir Halford Reddish, F.C.A., as essential for the adequate control of any business in a luncheon address at the recent one-day conference on 'Changing ways in paper work' organized by the London Branch of the Institute of Office Management.

Sir Halford said earlier that the value of men and women working in business depended to a large degree on the extent to which they were able and willing to work in harmony with each other. This, he said, was an essential feature of office management. He thought it would be true to say that the end-product of much of the work in office management must in one way or another be a matter of communication, and therefore it was important that the information reached the individuals for whom it was intended without delay and that the channel of communication should be clearly defined. Communication inevitably meant paper work and forms which were apt to multiply incessantly.

What was most important, therefore, said Sir Halford, was that all forms and the paperwork of an organization should be examined carefully and dispassionately at fairly frequent intervals. In his own company – Rugby Portland Cement – they tried to do this at least every year. They send to all heads of departments and works managers an instruction to examine each form *originating* from their departments, with the object of reducing the size, eliminating unnecessary detail and improving the layout. The departmental heads were also asked to examine each form *received* in their departments and to consider (1) the reason for it; (2) what was its present value to the department; and (3) how long it was retained, and why. This proved a most valuable exercise, for there was usually some form or part of a form which was out of date or no longer of use – and somebody will always continue to fill up a form as long as he is allowed to do so.

Referring to the need for efficiency in industry, Sir Halford said that whether Britain joined the European Economic Community or not, it was certain that the survival of this country depended on the efficiency of its industries and their ability to be competitive in the world outside, for, he said, it is truer than ever today that we export or die. 'Look after efficiency,' said Sir Halford, 'and the profits will usually look after themselves, and whatever may be said about profits, the fact remains that they are vital to the survival of this country, for the profits of today are the source of capital of tomorrow.'

Paper Work in the Public Service

After the opening of the conference on Thursday morning of last week by Mr Brian A. Maynard, M.A., F.C.A., a partner in the firm of Cooper Brothers & Co, Chartered Accountants, a paper on 'Improving paper work in the public service' was presented by Mr C. R. Smith, O.B.E., of the Central Organization and Methods Branch of the G.P.O.

Unfortunately, said Mr Smith, there was a tendency of the 'bigger the business, the bigger the paper work'. The human being was the key to the whole problem.

There were two lines of attack against this position, he said. The first was to get records off paper, and to eliminate the need for communication, which meant mechanization, and mechanization meant computing. There was a most important aspect of computing, namely, re-thinking and complete disregard of pre-computer methods.

Mr Smith then spoke about the cost savings obtained by mechanization and the arguments for and against the use of computers. He warned, however, that if improperly used, computers could be a costly capital investment.

Mr Smith illustrated his address with examples from Post Office computer planning, and revealed some problems with which they were faced behind the Post Office counter and in the Post Office Savings Bank scheme.

Today's Pattern of Bank Book-keeping

The next paper was presented by Mr D. S. Travers, A.I.B., general managers' assistant, Barclays Bank Ltd, on 'Today's pattern of bank book-keeping'.

Mr Travers spoke of the complete change modern accounting methods were making in the day-to-day pattern of bank book-keeping. There had been, he said, an immense post-war growth of cheque clearings. At the same time there was an increasing use of high-speed sorters. Magnetic ink markings in coded form could now be made at the bottom of cheques, with consequent reduced help needed by the human hand.

With the development of a common language in the use of electronic data processing, the centralization of branch book-keeping (with the aid of private transmission lines) was now becoming advantageous. By using computers, he said, management had easy access of control information, and there were permanent records for both the customer and the bank.

'Getting Away from it all'

After lunch, Mr M. J. Glenn, O.B.E., B.SC., T.D., personnel executive of Marks & Spencer Ltd, gave an interesting talk on the steps which had been taken in his organization not merely to reduce paper work but to eliminate it in large measure from many management procedures.

Mr Glenn said that the vast majority of staff can be trusted, and by trusting them unnecessary controls could be abolished, together with extra paper work and red tape. This was the principle which had been adopted by his organization.

Systems and methods automatically become more complex, he said. It takes constant effort to keep work simple. All saving, including the saving of paper, starts with simplification. The enemies of simplification are excessive paper work, wasteful practices and useless statistics.

The campaign against these must start from top management. Anything less was ineffective, said Mr Glenn. Every member of the staff from the board downwards must develop the seeing eye and the hearing ear and must want to question every action and every system, the fundamental question being 'Is it necessary?'

The main principles which emerged in the simplification carried out by Marks & Spencer were:

(*a*) *Shun statistics* – question the value of all statistics and records. Can they be assimilated and used productively?

(*b*) *Sensible approximation* – getting near enough for all practical purposes is often more efficient than a costly striving after perfection for its own sake.

(*c*) *Use valuable human beings properly* – an efficient and contented staff is a great asset. Make sure that people are not wasted on purposeless jobs.

(*d*) *Increase personal contact* – communicate as much as possible by word of mouth in personal contact. Go and see for yourself.

(*e*) *Never legislate for exceptions* – keep all standing instructions to the absolute minimum and leave exceptions to the experience and common sense of the people on the spot.

(*f*) *People can be trusted* – If this was accepted, many costly safeguards can be abolished. Permanent control systems can be replaced by spot checking. It usually turns out that the losses are less than the cost of control.

Applying the foregoing principles leads to savings, said Mr Glenn, but, perhaps more important, there is an unexpected dividend in that people work more purposefully, and with a greater sense of participation in the enterprise.

Eliminating Paper Work in Hire-purchase

The final paper of the conference was presented by Mr H. Simpson Cook, LL.B., F.C.I.S., manager, United Dominions Trust Ltd, on 'Eliminating paper work in hire-purchase'.

Mr Simpson Cook said that often safeguards and security measures could cost more than the loss it was intended to avoid. In this he was in full agreement with Mr Glenn.

Mr Cook's address may be summarized as follows:

Careful scrutiny of work and elimination of unnecessary processes, so that information necessary to other departments is maintained without needless 'frills'; and done with a minimum of inter-office traffic.

Proper apportionment of tasks between individuals and departments, so that work is done in proper chronological order. This eliminates unnecessary double checking of work.

Careful study of safeguards and security measures to ensure that no such measure is used when its operation would cost more than the loss which is to be avoided. In the United Dominions Trust view this was very important and they were constantly watching it.

Elimination of unnecessary correspondence and the use of printed forms and form letters, wherever practicable. Keeping letters and memoranda as brief as possible, consistent with recording of facts.

Use of mechanical systems of accounting. Some hire-purchase companies, both at home and on the Continent, are employing electronic computers to handle all accounting processes and follow ups and preparation of routine reminders.

Constant review of all organization methods and systems and study of new machines and forms, as these come on the market.

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Cenlon Finance Co Ltd *v.* Ellwood

In the House of Lords – March 1st, 1962

(Before Viscount SIMONDS, Lord REID, Lord DENNING, Lord MORRIS OF BORTH-Y-GEST and Lord GUEST)

Income tax – Dividend – Paid out of capital surplus – To share-dealing company – Whether trade receipts – Discovery – Settlement of appeals by agreement – Whether additional assessment possible on same issue – Taxes Management Act, 1880, section 57 (10) – Income Tax Act, 1952, sections 40, 41, 47, 50, 54, 184, 510.

The appellant, which carried on a share-dealing business, bought, on October 20th, 1953, all the shares in another company for £72,000. This company had sold some of its capital assets for cash, and the money it thus received was a capital receipt in its hands. On October 23rd, 1953, the subsidiary company declared a capital distribution of £25,000, and that sum was paid to the appellant on November 2nd, 1953. On December 4th, 1953, the appellant company sold its shares in the other company for £27,500.

On November 19th, 1954, Schedule D assessments were made on the appellant company for 1953–54 and 1954–55. Notice of appeal was given three days later, and the stated ground of appeal was that accounts were sent to the Inspector together with a tax computation showing £33,200 of dividends from United Kingdom companies deducted. This sum was made up of the £25,000 and a capital distribution of £8,200 received from another company, Abraville Securities Ltd. In response to his request details of the £33,200 were given to the Inspector on July 27th, 1955, and on August 8th he agreed the computation and amended the notices of assessment. On November 24th he sent a notice of assessment under Schedule D for 1955–56, which was also in accord with the agreed figure of profit.

On June 18th, 1956, a new Inspector informed the appellant company's accountants that in his view the £25,000 and the £8,200 were trading receipts, and he caused additional assessments to be made for 1953–54 to 1955–56 and a first assessment for 1956–57. After these assessments had been made, the profit of Abraville Securities Ltd, out of which the £8,200 had been paid, was assessed, and the Inspector abandoned his claim in respect of that sum.

The Special Commissioners heard appeals against the assessments on the appellant, and they decided (1) that the £25,000 should have been included in the appellant's Case I assessment; (2) that for 1953–54 to 1955–56 the new Inspector had 'discovered' for the purposes of section 41 of the Income Tax Act, 1952.

Held (affirming the decision of the Court of Appeal): the Special Commissioners' decision was correct on both points.

Rolls-Royce Ltd *v.* Jeffery

(Before Viscount SIMONDS, Lord REID, Lord RADCLIFFE, Lord MORRIS OF BORTH-Y-GEST and Lord GUEST)

In the House of Lords – March 1st, 1962

Income tax – Trade – Sales of know-how – Whether receipts taxable.

The appellant carried on the trade of manufacturing and selling motor-cars and the manufacture and sale of aircraft engines. For the purposes of the trade the company conducted metallurgical research and discovered and developed engineering techniques and secret processes and, generally, accumulated a fund of technical knowledge or know-how, only a small part of which was capable of being patented. Until after 1945 the company turned this know-how to account only in carrying on its own trade; but from 1946 to 1953 the company made a number of agreements with foreign Governments and businesses, whereby in consideration of a lump-sum payment the company undertook to supply the other party with drawings and information to enable it to manufacture some types of the company's aircraft engines. It was also a part of the contracts that the appellant would advise the other party from time to time of improvements and modifications in the manufacture and design of the engine in question, as and when the British Government permitted the appellant to do so. The agreement bound the other party to keep the drawings and the information secret; and the company would receive personnel of the other party into its works or buildings with a view to instructing them in the construction of the engines.

It was contended on behalf of the appellant that its trade was that of manufacturing motor-cars and aircraft engines, and that the sale of know-how was not a part of its trade; and that the lump-sum payments received under the agreements could not be included in the computation of the appellants' profits for tax purposes. It was contended on behalf of the respondent that these sums were receipts of a revenue nature of the respondent's trade, and should be included in computing the profits thereof. The Special Commissioners accepted the appellant's contentions and allowed the appeal.

Held (affirming the judgment of the Court of Appeal): the sums in question were receipts of the appellant's trade.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, March 7th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President; in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. Ainsworth, C.B.E., J. F. Allan, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay-Davison, W. G. Densem, S. Dixon, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, L. C. Hawkins, J. S. Heaton, D. V. House, J. A. Jackson, H. O. Johnson, W. H. Lawson, C.B.E., H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., C. U. Peat, M.C., L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, D. Steele J. E. Talbot, A. H. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, R. P. Winter, C.B.E., M.C., E. K. Wright, Sir Richard Yeabsley, C.B.E.

Election to the Council

Mr Alfred Gordon Thomas, F.C.A., Sheffield, was elected a member of the Council to fill the vacancy caused by the resignation of Mr Kenneth George Shuttleworth, F.C.A.

Statements on Auditing: 2. Stock-in-trade and Work in Progress

On the report of the Parliamentary and Law Committee, following consideration of a memorandum submitted by the Taxation and Research Committee, the Council has approved the second of the series of Statements on Auditing entitled *2. Stock-in-trade and Work in Progress*. Copies of the statement will be distributed to members on March 15th, 1962, as Supplement No. 10 to the *Members' Handbook*. Additional copies in booklet form may be purchased on application to the offices of the Institute, price one shilling per copy (remittances must accompany orders).[1]

Overseas Trade Corporations

The Council authorized the sending of a letter to the Chancellor of the Exchequer enclosing a memorandum on practical difficulties encountered in the operation of the overseas trade corporations legislation and also requesting the Chancellor to consider again the proposal made by the Council in its memorandum of December 2nd, 1959, that the legislation should be extended to embrace trading income from non-resident subsidiaries.

The Society of Incorporated Accountants (*in voluntary liquidation*) South African Special Final Examination

The Scheme of Integration between The Institute of Chartered Accountants in England and Wales and The Society of Incorporated Accountants provided that the Special Final examination of the Society held in South Africa and in Southern Rhodesia should be held until December 1967, 'if and so long as the Council of the Institute considers it necessary and practicable to do so'. The examination, which was conducted by the Society for many years in May and November annually, may be taken only by those former students of the Society who registered with the Institute as a result of the Scheme of Integration; no other person is eligible.

The Council of the Institute has decided that from May 1962, the examination will be held in May only of each year, subject to its right under the scheme to discontinue the examination before 1967.

Any former student of the Society who registered with the Institute under the Scheme of Integration and who has not received a communication incorporating the foregoing information is invited to write to the Secretary of the Institute, Moorgate Place, London EC2.

Registration of Articles

The Secretary reported the registration of 308 articles of clerkship during the last month, the total number since January 1st, 1962, being 505.

Admissions to Membership

The following was admitted to membership of the Institute:

§Thirsk, Bryan Edward, A.S.A.A., *a*1962; 28 South Road, Weston-super-Mare.

Fellowship

The Council acceded to applications from fifteen associates to become fellows under clause 6 of the supplemental Royal Charter.

Incorporated Accountant Member becoming an Associate

The Council acceded to an application from the following incorporated accountant member for election as associate under clause 6 of the scheme of integration

[1] The Statement will be reproduced in next week's issue.

a indicates the year of admission to the Institute.

aS indicates the year of admission to The Society of Incorporated Accountants.

§ Means 'incorporated accountant member'.

Firms not marked † or * are composed wholly of members of the Institute.

† against the name of a firm indicates that the firm though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

* against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

referred to in clause 34 of the supplemental Royal Charter:

Price, Philip John, A.S.A.A., *a*1959; with Butterworth, Jones & Co, 7 Castle Street, Bridgwater, Somerset.

F.S.A.A.

The Council acceded to an application from an incorporated accountant member A.S.A.A. to use the letters F.S.A.A. under clause 4 (*b*) of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Abbott, Stephen Christopher Lee, F.C.A., *a*1948; Wenn, Townsend & Co, 30 St Giles', Oxford, and at Abingdon and Cirencester.

Adam, Cyril Louis Ignatius, A.C.A., *a*1958; Edward Moore & Sons, Thames House, Queen Street Place, London EC4.

Adams, Hubert Theodore, A.C.A., *aS*1954; *Kilby, Fox & Co, Drury Chambers, Market Square, Northampton.

Ball, Thomas, A.C.A., *aS*1952; 8 Athole Grove, Southport.

Bamford, Kenneth James William, F.C.A., *a*1939; John E. Bamford & Co, New Eldon Chambers, 50 Cherry Street, Birmingham 2, and at Exmouth and Handsworth.

Bartlett, Anthony Henry Peter, B.A., A.C.A., *a*1958; H. Bartlett & Co, 49 Queen Victoria Street, London EC4.

Beaver, David William, F.C.A., *a*1951; David Beaver & Co, P.O. Box 10, Southport

Bennett, Derek Clinton, A.C.A., *a*1960; H. F. Adams & Co, and E. Woolley & Co, Dilworth House, 190 Broad Street, Birmingham 15.

Biswas, Nani Gopal, A.C.A., *a*1958; N. G. Biswas & Co, 10 Steyning Way, London N12.

Blech, Neville Franklin, A.C.A., *a*1959; Neville F. Blech & Co, 133 Sandhurst Road, London NW9.

Boxall, Eric Richard, A.C.A., *aS*1953; 103 Albury Drive, Pinner, Middx.

Carter, David Alan, A.C.A., *a*1961; D. Alan Carter & Co, 4 Blenheim Street, New Bond Street, London W1, and 27 Claire Court, Woodside Avenue, London N12.

Clowes, Richard Norris Thyne, A.C.A., *a*1960; Hines & Clowes, Atlas Chambers, Lloyds Avenue, Ipswich.

Collier, Peter, A.C.A., *a*1958; H. Heywood & Co, Martins Bank Chambers, Park Green, Macclesfield.

Cornwell, Richard John, A.C.A., *a*1960; R. J. Cornwell & Co, 99 Chartridge Lane, Chesham, Bucks.

Coulter, John David, A.C.A., *a*1959; Peter Windle & Co, 117 Hagley Road, Edgbaston, Birmingham 16.

Cox, David Richard, A.C.A., *a*1960; Hull Daily Mail Buildings, Jameson Street, Hull, and at Cottingham.

Cruse, Robert James, A.C.A., *a*1958; Taper, Biggs & Co, 57 Palace Avenue, Paignton, Devon.

Webb, Lawrence Albert, F.C.A., *a*1951; Luff, Smith & Co, Drayton House, Gordon Street, London WC1, and at 14 Ringwood Avenue, Finchley, London N12.

Admission to Membership under the Scheme of Integration

The Council acceded to an application for admission to membership of the Institute under clause 4 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Change of Name

The Secretary reported that the following change of name has been made in the Institute's records:

Gerald Arthur Smith to Gerald Arthur Carey-Smith.

Resignations

The Council accepted the resignations from membership of the Institute of:

Barrett, Charles William, F.C.A., *a*S1927; 6 Orchard Road, Smallfield, Horley, Surrey.
Henderson, Robert Douglas, B.A., F.C.A., *a*1936; 19 Compayne Gardens, London NW6.
Round, Timothy Peter, A.C.A., *a*1955; c/o Global Tours (Aust.) Pty. Ltd, Melbourne, Australia.

Deaths of Members

The Council received with regret the Secretary's report of the deaths of the following members:

Mr Edgar Charles Anderson, M.B.E., F.C.A., Bramhall.
„ Clive Gault Benson, B.A., F.C.A., Montreal.
Mr James Alfred Chapman, F.C.A., Newport.
„ Horace Claude Dawson, F.C.A., London.
„ Ralph Thornton Dibb, B.COM., F.C.A., Pietermaritzburg.
„ Richard Dixon, F.C.A., Taunton.
„ Hugh Edward Hughes, F.C.A., Liverpool.
„ George Robert Lowe, F.C.A., London.
„ James Cecil Luckin, F.C.A., Chelmsford.
„ John Ormerod Melrose, F.C.A., Southport.
„ John Lawrence Milligan, F.C.A., Overton, Hants.
„ David Leslie Milne, F.C.A., New York.
„ Christopher Charles Paus, F.C.A., London.
„ Frederick Arthur Roberts, F.C.A., Surbiton.
„ John Lees Smith, F.C.A., Market Harborough.
„ Herbert John Thornton, F.C.A., Solihull.
„ Arthur Robert Tyler, F.C.A., East Grinstead.
„ George William Welch, F.C.A., London.
„ Walter Trafford Williams, F.C.A., Leigh-on-Sea.

FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on January 19th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Aubrey Charles Gee, F.C.A., was by an Order of the High Court of Justice dated October 20th, 1961, adjudicated bankrupt, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Aubrey Charles Gee, F.C.A., had been proved and the Committee ordered that Aubrey Charles Gee, F.C.A., of Flat 1, 24 Hyde Park Square, London W2, be excluded from membership of the Institute.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Redmond Bruce Gallagher being a clerk under articles to a fellow of the Institute was convicted at the General Quarter Sessions for the City of Birmingham held on September 4th, 1961, on Indictment for that he on a day between January 9th and April 6th, 1961, with intent to defraud forged a railway season ticket available for travel between Birmingham and Leamington Spa and also on April 6th, 1961, did utter the said railway season ticket, so as to render himself liable to be declared unfit to become a member of the Institute. The Committee found that the formal complaint against Redmond Bruce Gallagher had been proved and the Committee ordered that Redmond Bruce Gallagher, a clerk under articles, of The Chase, Blackdown, Leamington Spa, be reprimanded.

Finding and Decision of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on January 4th, 5th and 29th, and February 7th, 1962

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Anthony Henry Lloyd, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that he was employed by an organization which in its business as consultants or advisers in management, costing methods and business organization and administration offers its services by advertising, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Anthony Henry Lloyd, F.C.A., had been proved and the Committee ordered that Anthony Henry Lloyd, F.C.A., of 139 Stanley Park Road, Carshalton Beeches, Surrey, be excluded from membership of the Institute.

MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

The Accounting Concept of Profit: an analysis . . . of the economic theory of income and capital; by P. Hansen. Kobenhavn. 1962. (Einar Harcks Forlag, presented.)

The American System of Practical Book-keeping . . .; by J. A. Bennett: twenty-fourth edition. New York. 1846. (Bonset, 34*s* 1*d*.)
Book-keeping and Accountancy for Solicitors; by P. Harrison and A. G. Hillman: second edition. 1962. (Butterworths, 50*s*.)
Cash Flow Analysis for Managerial Control: research report No. 38. (National Association of Accountants). New York. 1961. (N.A.A., $2.)

The Challenge of World Trade. (Canadian Institute of Chartered Accountants). Toronto. 1962. (C.I. of C.A., presented, $2.)
Data Processing Annual: punched card and computer applications and reference guide. (Gille Associates). Detroit. 1961. (G.A., 132s.)
The Elements of Income Tax and Profits Tax Law; by C. N. Beattie: fifth edition by C. N. Beattie and K. Wedmore. 1962. (Stevens, 35s.)
Experience with Return on Capital to Appraise Management Performance: a summary of practice. (National Association of Accountants). Accounting Practice Report No. 14. N.A.A. Bulletin, section 3. February 1962.
The Export Trade: the law and practice of international trade; by C. M. Schmitthoff: fourth edition. 1962. (Stevens, 65s.)
Factory Code Book . . . 1960. (Marshall Sons & Co). 1960.
The Growth of Public Expenditure in the United Kingdom; by A. T. Peacock and J. Wiseman. 1961. (O.U.P., 30s.)
Income Tax Principles; by H. A. R. J. Wilson, F.C.A., and K. S. Carmichael: fifth edition. 1962. (H.F.L., presented, 12s 6d.)
Investment and Growth Policies in British Industrial Firms; by T. Barna. Cambridge. 1962. (C.U.P., 12s 6d.)
The Law of Real Property; by R. E. Megarry and H. W. R. Wade: second edition. 1959. (Stevens, 75s.)
Management Aids for the Smaller Company. (Canadian Institute of Chartered Accountants). Toronto. 1962. (C.I. of C.A., presented, $2.)
Management Principles: a primer for directors and potential directors; by W. Puckey. 1962. (Hutchinson, 21s.)
Maxwell on the Interpretation of Statutes; by P. B. Maxwell; eleventh edition by R. Wilson and B. Galpin. 1962. (Sweet & Maxwell, 70s.)
The Organization from Within: a comparative study of social institutions . . . ; by C. Sofer. 1961. (Tavistock Publications, 25s.)
Paterson's Licensing Acts; by J. Paterson: seventeenth edition by J. N. Martin. 1962. (Butterworth, 90s.)
Post-war Investment Location and Size of Plant; by P. S. Florence. Cambridge. 1962. (C.U.P., 12s 6d.)
Principles of the Law of Damages; by H. Street. 1962. (Sweet & Maxwell, 63s.)
Slater's Mercantile Law; by J. A. Slater: fourteenth edition by Lord Chorley and O. C. Giles. 1961. (Pitman, 30s.)
U.S. Master Tax Guide for . . . 1962 tax planning. (Commerce Clearing House). New York. 1961. (C.C.H., 26s.)
Volledige handleiding tot het dubbel of Italiaansche Koopmansboekhouden . . . ; by J. F. Fleischauer. Amsterdam. 1838. (Bonset, 34s 1d.)

Diamond Jubilee Dinner

Nottingham Society of Chartered Accountants

The diamond jubilee dinner of the Nottingham Society of Chartered Accountants was held at the Sherwood Rooms, Nottingham, on March 7th, with Mr E. Cross, F.C.A., President of the Society, in the chair. Among the 500 members and guests present were:

Mr P. F. Granger, F.C.A., President of the Institute; Sir Geoffrey Barnett; Sir Harold Howitt, G.B.E., D.S.O., M.C., D.C.L., LL.D., D.L., F.C.A.; His Honour Judge Sir Henry Braund; Mr L. T. Rouse, H.M. Inspector of Taxes; Professor F. A. Wells, O.B.E., B.SC.(ECON.), PH.D.; Mr P. F. Carpenter, F.C.A., Vice-President of the Institute; Mr T. Moore, Chief Constable of Nottingham; Mr T. J. Owen, Town Clerk of Nottingham.

Memorable

'Your role in the future will be even greater than in the past, and that is what makes this golden year dinner so memorable tonight,' said Judge Sir Henry Braund, proposing the toast of 'The Nottingham Society of Chartered Accountants and its President'. He went on:

'In 1903, thirty-five strong and virile chartered accountants met in this city to hold the first annual dinner of this Society. They faced a programme which consisted of nine courses, nine songs and musical skits, and twelve speeches. Don't think I'm complaining. There have only been seven tonight, including cheese and some other items. But I simply could not imagine what twelve chartered accountants, who were not even qualified for the bar, could have found to say to each other in twelve separate speeches.' (*Laughter.*)

Mr Cross responded to the toast and then presented a ciné camera and equipment to Mr Thomas Ashton, F.C.A., who recently retired as Secretary of the Society.

Professional Integrity

Sir Geoffrey Barnett proposed the toast of 'The Institute of Chartered Accountants in England and Wales'. Accountancy, he said, was a most respected profession – 'it advises on spending and fights inflation'. He continued:

'I have a very great regard and respect for the Institute. It has become a hall-mark of professional integrity in this country and throughout the world. We may be a small country, but we contribute much to business in the world, and nobody contributes more to this business than the accountancy profession. The community owes much to its members.

'I have to pay homage to your President. He has a great weight of responsibility in guiding your Institute of which he has been such a true son, and guiding it to greater strength so that it is regarded as a symbol of integrity and honesty throughout the business world.'

Development of the Nottingham Society

In the course of his response, Mr Granger said:

'In a way the development of the Nottingham Society is a microcosm of the development of the Institute. We have the men who took the lead in the early 1900s. H. E. Hubbart, Robert Mellors, S. P. Derbyshire and the first secretary, W. R. Hamilton, whose name will be remembered by one of his ex-articled clerks tonight. With the exception of W. R. Hamilton, all these three first Presidents are commemorated in the names of their firms which are in existence today. Going a little further on we have Durose, Leman, J. N. Derbyshire, Robert Rhodes, Stanley Blythen, and one who has recently left us, Sir Charles Pain.

'It may interest you to know that Robert Rhodes in January 1879 was earning £1 per week and he must have been doing well because he got a 4s rise on February 8th. Similarly, S. P. Derbyshire was in receipt of 20s per week but there must have been doubts about him because he was put up (in the wages book) to 28s and then crossed off back to 24s. Round about this time there is recorded the payment of 5s per week for thirteen weeks to one Nightingale Derbyshire.

'Going a little further back, to 1850, I find in Robert

Mellors' account book that at the age of 15 he started his working life by buying a cup and saucer for 1½*d*, a sugar box and comb for 2½*d*, the *Family Herald* for 3*d*, and acid drops and an orange for 1½*d*; his lodgings and sundries cost him rather less than 2*s* 6*d* per week. His total expenses from March 18th, 1850, to March 12th, 1852, were £15 7*s* 10¾*d* and against this he received £3 18*s* in wages and £11 7*s* 10¾*d* from his father. So much for the early days of a young man 112 years ago . . .

'I must now apologize for sounding egotistical but without the constant help and support that have been afforded to me by members of this Society, in full measure, I could not have been here as President today. I cannot say more than "thank you" for constant help when I was secretary in the early thirties, and President of the Nottingham Society, and over the last twelve years or so as your Council member. No one could have had more loyal support.' (*Applause.*)

Sir Harold Howitt, who proposed the toast of 'The Guests', mentioned that he entered articles two years after the formation of the Nottingham Society in 1902, and said it was a great joy to attend the dinner 'back on my old native ground of Nottingham of which I'm so proud'.

Mr L. T. Rouse, responding, said that all over the country relations between chartered accountants and inspectors of taxes were good, and added: 'But I can say most sincerely that in no place I have been have relations been better between the profession and the Revenue, than in Nottingham.'

Mr John Hill, presenting a silver salver to Mr Granger, referred to his great work for accountancy in the area and now he had reached 'the highest honour of his chosen profession'.

The evening ended with a toast to Mrs Granger.

Responsibilities of the Professional Man

Birmingham Chartered Accountants' Annual Dinner

A professional man's only justification for existence is that he should serve the community, and the better his background, the greater should be his responsibilities, said Mr Frank Blennerhassett, a Birmingham barrister, at the annual dinner on March 8th of the Birmingham and District Society of Chartered Accountants. The President of the Society, Mr C. J. Mason, F.C.A., was in the chair and there was a very large attendance.

Proposing the toast of 'The Institute of Chartered Accountants in England and Wales', Mr Blennerhassett said that the phrase 'the future and health of the Institute' could be and should be much more than a meaningless convention. The object of the Institute, he said, was to encourage all that was finest in professional life and condemn all that was bad. 'On that fundamental principle, on which the existence of your Institute depends, I should like to dwell for a moment,' he went on.

'Your Institute will not this year be the same as it was last year. It will be a little bit better or a little bit worse. Whether it is better or whether it is worse depends only to a limited extent on the officers who govern the Institute, because no institute can be better than the sum of all the individual members. It is right that we should think of it not as some body to which we owe allegiance, but as a body which is the culmination of the individual members.

'The only justification a professional man has for his existence is that he serves the community of which he is a member. I feel that because of his background and the opportunities that may have arisen for him in life, he probably owes a greater duty and has a heavier responsibility to the community than the man whose circumstances have been otherwise.

Challenging Age

'We live in an age in which our standard of living has never been higher. We should ask ourselves whether we have raised the standards by which we are living. I don't know of any time in history when it was more important than it is now to seek out and hold on to those things which matter most in life.

'In this day and age, most people seem impotent, unable to do anything about the course which events are taking. They feel that the weight of their opinion is so small that they can make no contribution. We in this country feel that we are living in a time in which we are no longer taking a leading part in world affairs. That is no reason why we should lower our standards of honesty and integrity, or lower our standards of industry and justice. The circumstances in which we live should, rather, be a challenge. We should appreciate the tremendous influence we can bring to bear if we make the effort to do so.'

Wide Fields

Replying, Mr P. F. Granger, F.C.A., President of the Institute, said that one of his jobs as he went up and down the country was to talk to the students. He thought Birmingham was fortunate in having a first-class group of young men coming along; some 200 of them had been very impressive in a recent 'free-for-all' discussion. Continuing, he said:

'I would like to make some remarks about this Institute of ours and the members of it. We are now some 35,000 in number and the members impinge on all aspects of life – business, professional, civic, Government and otherwise. So wide are the fields of our activity today that the problem for the young man or woman after qualifying is to know what line of country to enter. He or she can remain in the profession for one year or so, or for good; or elect for industry or business, or Government service, or go abroad. The point I am making is that our qualification has world-wide significance, but as in all walks of life, there is a debit for every credit, and therefore the possession of it carries its responsibilities. We are, in whatever capacity we earn our daily bread, dedicated to facing facts and from those facts, if linked with values, it is our job to give the true and fair view. It is not always easy to find the truth, as we all know, but it is our job as members of a great profession and Institute to find it if we can, at whatever cost.

'In order to carry out our job, particularly in view of the prospect of the Common Market, we must recruit the very best young men and women we can get, and this means, I suppose, that as more and more of the abler element go to the universities, we must – and it is essential that we should – recruit more and more from there. In so doing I am aware that we are competing with all other employers who want the best. At the moment we are recruiting some 3,000 articled clerks per annum, but the proportion from the universities is not as high as we should like it to be.'

Mr Granger went on to refer to the committee recently formed to look into the whole question of relations with the universities, and said that the committee had already started on its work. He stressed that there was no foundation in the idea that the Institute was not interested in graduates as articled clerks.

Valuing Stock-in-trade

Turning to the valuation of stock-in-trade, Mr Granger said:

'One of our problems, and it is a general problem, relates to the valuation of stock-in-trade and work in progress. We cannot obtain a true and fair view of profit without considering in some detail the quantity and basis of valuation of stock both at the beginning and end of the accounting period. The Council is about to issue as one of our series of statements on auditing, that relating to stock-in-trade and work in progress. I hope all members will take due note of what is written. It is not an easy problem and of course the Revenue are concerned as well. We have taken a great deal of trouble and there has been much heart-burning over the document.'

Continuing, the President said that the past year had been a 'lively period' for the Institute, and said:

'At the present time we are considering the report of the Parker Committee on Education and Training for the Profession and also we are just getting in the reports from the district societies on the problems of the small practitioners. I would like to pay my tribute to the self-effacing work which has been carried out by the presidents, committees, sub-committees and secretaries of the district societies in dealing with these reports. We have, at Moorgate Place, received a lot of information which the District Societies Committee will have to consider and then the Council. I am very hopeful that arising out of this inquiry, our members (and wherever, and however remote they are, they are our members) will feel that we are doing our best at headquarters to see that we can help them.'

In conclusion, Mr Granger spoke of the appeal being made on behalf of the Chartered Accountants' Benevolent Association by Sir William Carrington, F.C.A., President of the Fund. 'I do hope all members will take notice of this appeal and subscribe,' said Mr Granger. 'Our scale of relief is what is appropriate and right for a great profession like ours but it can only be maintained if the members assist us.'

The toast of 'Our Guests' was proposed by Mr C. J. Mason, and Professor A. L. d'Abreu, O.B.E., CH.M., F.R.C.S., Dean of the Faculty of Medicine at Birmingham University, responded.

There was a new departure this year in that the toast of 'The City of Birmingham' was given and acknowledged only formally. It was proposed by Mr Mason, and the Lord Mayor, Alderman Eric E. Mole, O.B.E., J.P., replied.

Notes and Notices

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

The annual meeting of the Board of Governors of The Chartered Accountants' Benevolent Association will be held at 55 Moorgate, London EC2, at 2.15 p.m. on Wednesday, March 28th.

PROFESSIONAL NOTICES

MESSRS D. W. COATES, WEST, GRIMWOOD & Co, Chartered Accountants, of London, Cardiff and Swansea, announce with deep regret the death, on March 13th, of Mr W. P. GRIMWOOD, F.C.A., who has been one of their senior partners since the formation of the firm.

MESSRS ERNEST T. KERR & Co, Chartered Accountants, of Birmingham, announce that Mr C. R. COOKE, F.C.A., is retiring from the firm, which will be carried on under the same name by Mr E. LORD, F.C.A.

MESSRS LUCKIN & SHELDRAKE, Chartered Accountants, of Waterloo Chambers, Chelmsford, regret to announce the death, on March 3rd, of Mr JAMES CECIL LUCKIN, F.C.A., who had been a partner in the firm since July 1st, 1907.

Appointments

Mr D. H. A. Down, F.C.A., has been appointed to the board of Godfreys Ltd.

Mr A. R. H. Mullett, F.C.A., has been appointed a director of Midland Bright Drawn Steel and Engineering Co Ltd.

Mr Victor S. Smith, A.A.C.C.A., accountant to the Royal Dublin Society since 1945, has been appointed registrar of the Society.

Mr J. A. Soar, F.C.A., has been appointed financial director of Gilbarco Ltd; he continues as company secretary.

DOCTORS' AND DENTISTS' REMUNERATION

Chartered Accountant Appointed a Member of Review Body

Sir Archibald Forbes, G.B.E., C.A., has been appointed a member of the Review Body which is to advise the Government on the remuneration of doctors and dentists. Mr J. H. Gunlake, C.B.E., F.S.S., F.I.S.,

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

President of the Institute of Actuaries, has also been appointed a member.

The Review Body, which is under the chairmanship of Lord Kindersley, has been set up by the Government in accordance with the recommendations of the Royal Commission, under Sir Harry Pilkington, on the remuneration of doctors and dentists.

EASTERN TOUR

Mr Percy F. Hughes, Editor-in-chief of *The Accountant*, and Chairman of Gee & Co (Publishers) Limited, accompanied by Mrs Hughes, has recently returned from a visit to Israel, Iran, Pakistan, India and Ceylon, having met accountants and Inland Revenue officers in those countries.

A flower garland welcome for Mr Hughes on his arrival in Bombay.

Mr Hughes discussed with officials of the various accountancy bodies the particular problems that are faced by the profession abroad and gave a number of lectures in India. In particular he was asked to inaugurate a refresher course for accountants in Calcutta and gave the opening address on the subject of *The Accountant* Annual Awards. In Madras he spoke to members of The Institute of Chartered Accountants of India in that city and visited premises which on completion will be occupied by the South Eastern Region of The Institute of Chartered Accountants of India. Among leading members of the profession in Madras, Mr Hughes met Mr P. Brahmayya, Vice-President of the Indian Institute, and Mr S. Viswanathan. In Bombay Mr Hughes was privileged to meet Mr S. N. Desai, President of The Institute of Chartered Accountants of India, and Mr N. Mody, a Past-President of the Indian Institute. He met also Mr B. L. Shah, of Charles Lambert & Co, the leading accountancy booksellers in India; our photograph shows Mrs Shah presenting a garland of roses to Mr Hughes.

Later, Mr Hughes travelled to Pakistan and in Karachi attended a reception given by Mr I. B. Wilson, F.C.A., Chairman of the Karachi Regional Committee, The Institute of Chartered Accountants of Pakistan, at which he met a number of practitioners both European and Pakistani, including members of the Council of The Institute of Chartered Accountants of Pakistan. He also visited Colombo, where he had discussions with the Income Tax Committee of the Ceylon Chamber of Commerce.

On the outward journey, Mr Hughes met Dr Aaron R. Rojansky, President of the Association of Certified Public Accountants in Israel, and in Tehran he discussed the state of the accountancy profession in Persia with leading members of the profession there; he also had a meeting with representatives of the Central Board of Finance.

REPORT ON MONOPOLIES AND RESTRICTIVE PRACTICES ACTS

The Board of Trade's annual report on the operation of the Monopolies and Restrictive Practices Acts, 1948 and 1953[1], was published this week. The report includes a summary of the work and expenditure of the Monopolies Commission during 1961.

APPOINTMENT OF ASSISTANT OFFICIAL RECEIVER

Mr Francis Durkin has been appointed an Assistant Official Receiver for the Bankruptcy District of the County Courts of Newcastle upon Tyne, Carlisle, Durham, Sunderland and Workington and Cockermouth; and also for the Bankruptcy District of the County Courts of Stockton-on-Tees, Darlington, Middlesbrough and Scarborough. The appointment took effect on March 12th, 1962.

INTERNATIONAL FISCAL ASSOCIATION

Mitchell B. Carroll Prize

The International Fiscal Association which has as its object the study of international fiscal law, and which instituted the Mitchell B. Carroll Prize awarded annually for the best monograph submitted, has announced that the award will now be open not only to candidates dealing with a special subject set each year by the Association, but to all those whose work, whatever its actual subject, makes a theoretical or practical contribution to the study of the effects of taxation, whether it concerns the effects of international taxation or comparative tax laws.

The prize is to be awarded for a typewritten or printed paper devoted to international taxation or comparative tax law. In even years (1962, 1964, etc.) it will be awarded for a work of a legal nature and in odd years (1963, 1965, etc.) for one of an economic character. All persons under 35 years of age on July 31st of the year in question may compete, whether or not they are members of the Association.

The closing date for entries, which should consist

[1] H.M.S.O. Price 8*d* (by post 10½*d*).

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

of seven copies, is April 1st. Further details about the prize may be obtained from the General Secretariat of the Association, Nationale Handelsbank Building, 250 Singel, Amsterdam, Netherlands, or from the secretary of the United Kingdom Branch, Mr D. L. Main, F.C.A., 9 Basinghall Street, London EC2.

NORTH YORKSHIRE AND SOUTH DURHAM CHARTERED ACCOUNTANT STUDENTS' SOCIETY

First Annual Dinner

The first annual dinner of the North Yorkshire and South Durham Chartered Accountant Students' Society was held on March 2nd at the Corporation Hotel, Middlesbrough. The President of the Society, Mr R. W. Swinbank, F.C.A., presided over the company of more than one hundred members and guests who included Mr C. U. Peat, M.C., M.A., F.C.A., a member of the Council and a Past-President of The Institute of Chartered Accountants in England and Wales; Mr J. H. Elringham, M.B.E., T.D., B.COM., F.C.A., President, North Yorkshire and South Durham Branch of the Northern Society of Chartered Accountants, and representatives of the Northern and Cumberland Students' Societies.

Mr Peat, proposing the toast of the Society, said that the students' society could exercise great power by advancing ideas to improve the profession and help recruitment. Our work is always expanding, he continued, and we are moving into exciting new fields, particularly in the realm of management accounting.

During the course of the evening Mr Peat presented the Peat Prizes in respect of the Institute's examinations held in November 1960 and May 1961 to Messrs G. R. Belshaw, J. H. Murray, R. Peacock and R. E. W. Shawcross. Mr Swinbank expressed appreciation of Mr Peat's generosity in introducing the prize fund and for presenting the first awards.

The toast of the guests was proposed by Mr M. G. Rider, honorary secretary of the Society, and Mr F. Scarbrough, Northern Area Training Officer, British Iron and Steel Federation, responded. The Dinner Committee consisted of Messrs J. A. T. Tuddenham, A. Lightfoot and A. F. Ritchie.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

Mr John Doggett (Inland Revenue Solicitor's Office) will give an address on 'The responsibility of the Christian professional man today', at 6 p.m. on Wednesday next, March 21st, in the Oak Hall of the Institute, Moorgate Place, London EC2. All who may be interested will be welcome.

MANAGEMENT ACCOUNTING COURSES

Two two-day courses designed to examine the basic features and processes of planning and control as applied to business will be held in London on March 27th and 28th. They will be repeated in Manchester on May 1st and 2nd. Subjects will include integrated planning and control, long-term planning, and control of financial policy. Speakers will be Mr S. V. Bishop, M.C., F.C.A., Mr A. W. H. Lamond, B.L., C.A., F.I.O.M., M.B.I.M. and Dr James M. S. Risk, B.COM., PH.D., F.C.I.S., F.B.I.M.

Further particulars, together with the full list of courses for the spring session, may be obtained from Management Courses Ltd, 8 St George's Terrace, London NW1.

MIDLANDS MANAGEMENT CONFERENCE

'Better management decisions' will be the subject of this year's Midland Management Conference to be held at Leamington Spa, Warwickshire, from March 29th–30th. Organized by the British Institute of Management, the conference will examine some of the key factors and latest aids and techniques for the improvement of decision making.

Among papers to be presented are 'Decision making by top management for maximum profitability', by Mr J. G. Cookson, F.C.A., manager, management services group, Courtaulds, Ltd; 'The delegation and co-ordination of decision making – a case study', by Mr S. V. Bishop, M.C., F.C.A., plans and controls co-ordinator, Massey-Ferguson Ltd, and 'Capital budgeting decisions', by Mr A. E. Halford, O.B.E., of Associated Electrical Industries Ltd.

Further details of the conference may be obtained from the conference secretary, British Institute of Management, 80 Fetter Lane, London EC2.

ANNOTATED TAX CASES

Part 8 of Volume XL of the *Annotated Tax Cases*, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is published today and contains reports with notes on the judgments of the following cases: *E.Y.L. Trading Co Ltd v. C.I.R.* (Ch.D.); *In re Latham* (Ch.D.); *In re Matthews' Will Trusts* (Ch.D.); *Winter* (*Sutherland's Trustees*) *v. C.I.R.* (H.L.); *C.H.W.* (*Huddersfield*) *Ltd v. C.I.R.*; *Spencer & Garside v. C.I.R.* (Ch.D.).

The annual subscription to the *Annotated Tax Cases* is 50*s* post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

Auditing Stock-in-trade

THE problems which arise in connection with the valuation of stock-in-trade and work in progress are perennial and it is understandable that if, on occasion, the directors and officials responsible encounter difficulties therewith, then the auditor, with more academic but less technical knowledge, must sometimes be in a dilemma when satisfying himself that the definitions and degrees of value decided upon by the management are both equitable and consistent. It is fitting, therefore, that the Council of The Institute of Chartered Accountants in England and Wales, in its new series of statements on auditing, should turn its early attention to the auditor's duty with regard to stock, and its carefully considered and expressed views should help to crystallize the thoughts of many practitioners without as yet much experience in this, normally, the trickiest of all verification tasks.

The design of the Council's statement – which we reproduce elsewhere in this issue – is straightforward. In the opening section, it defines the general duty of an accountant, in his capacity as auditor, as being to arrive at 'an independent professional opinion' as to the extent to which directors, when presenting the accounts of a company to its shareholders, have complied with the relevant requirements of the 1948 Companies Act. Within this framework, the directors' responsibilities with regard to stock-in-trade and work in progress are to see that all quantities have been properly accounted for; that the quality has been accurately appraised; and that the bases of valuation selected are suitable to the circumstances. In turn, the auditor must ascertain the procedures of stocktaking and valuation adopted; decide if these procedures are appropriate; and test the degree of competence with which they have been applied in arriving at the totals.

The major part of the Council's statement thereafter is devoted to explanations as to what the auditor should do to satisfy himself on these three counts although few comments are necessary on the first. If the company issues written instructions on stocktaking procedure, the auditor should obtain or see a copy. If it does not, he should inquire as to what oral instructions are given or if a regular routine is followed each year, and make appropriate notes.

Thus equipped, the auditor may then go on to consider whether the procedures adopted by the company are sound. The Council straightway makes the excellent point that it may well be to everyone's advantage if such an appraisal can be made 'well in advance of the balance sheet date'. Suggested improvements, if implemented at once, can then help both the company and the

auditor. Among the instances which the Council gives as relevant is that of a company with a system of continuous stock records. The more demonstrably efficient these are and the more regularly and systematically are the physical quantities checked against them, the more accurate is the end of the year stocktaking likely to be. This in itself saves the company trouble and expense and also relieves the auditor of much of the burden of subsequent testing.

Another difficulty which may be surmounted by a preliminary examination – this time of the costing system in operation – is the value to be placed on work in progress. It is clearly desirable that the costing and financial records should be reconcilable if costing data is used for evaluating the work in progress element of the stock totals included in the financial accounts; among the other points which may similarly be defined beforehand in this connection are the relationship between materials used and output achieved, how the provisions made for scrapping and rectification are reflected in the records and how any elements of overhead and profit included are treated.

The Council also advises the auditor to ensure in the course of his preliminary survey of procedures that the 'cut-off' arrangements are adequate, that is, that:

> '. . . at the relevant point of time there is complete accord between the physical stock which is brought into account, the records of the physical movement of stock and the related financial records of purchases and sales and of debtors and creditors'.

Lack of liaison between departments – or rather the absence of a system which makes liaison impossible – is usually the cause of errors of this nature. These can have serious consequences at stocktaking periods and the four searching questions which the Council puts are designed to minimize this risk.

The last – and longest – part of the Council's statement outlines the audit tests to be planned and carried out in the light of the conclusions arrived at from the preceding appraisal of the client's procedures. Nothing of consequence appears to have been omitted from this comprehensive recital of techniques which, to the conscientious practitioner, will come as no more than a welcome refresher. To the other kind of practitioner (and there are, regrettably, still many), who does nothing more than have the stock sheet extensions and additions checked and then obtains from the client a certificate of the 'audited' total, it should certainly come as a salutary revelation. Much water has flowed past the Kingston Cotton Mills in the last sixty-six years and the celebrated words of the presiding judge in the immortal case connected with that concern are no longer fully definitive of the auditor's duties with regard to stock. Case law, in this instance, has been replaced by statute law in the form of the 1948 Companies Act and, additionally, as the Council points out, practitioners must also be aware that much higher levels of accounting and auditing standards now exist.

Apart from verifying the value placed on work in progress, perhaps the most difficult task confronting the auditor when checking stocks is satisfying himself that due provision has been made by the management for defective, redundant, obsolete and unduly slow-moving goods. If he attends to observe stocktaking or makes an intelligent perambulation of the stores during the audit (interim as well as final), he is often able to notice examples of physical deterioration in parcels of items, but in the more subtle cases of obsolescence through changes in invention or fashion, and redundancy through undue stock-piling, neither physical inspection nor, beyond certain limits, comparison with past records or the calculation of trading ratios will prove completely effective. This is a matter where consultation with management as to its policy – again before the balance sheet date – is highly desirable. Further, clients should be encouraged to use the stock-sheets themselves not as a mere catalogue of parts, prices and extended values but as a guide to the nature and contents of his stock by recording as much helpful detail as possible. The Council's statement does refer to these points but their importance in arriving at a realistic stock total cannot be too often or too strongly emphasized.

Nothing is more challenging to the auditor than a set of stock-sheets in which he senses something wrong whether the cause is incompetence, carelessness or criminal intent. The Council's statement, expressed as always with care and clarity, offers humane encouragement to – if we may combine two famous dicta by LORD JUSTICE LOPES and MR CYRIL CONNOLLY – the bloodhound imprisoned in every watchdog wildly signalling to be let out.

The Scottish Institute in 1961

HAVING once evolved a satisfactory design for a set of financial accounts, there is a tendency to accept it as a permanency. This year, the Council of The Institute of Chartered Accountants of Scotland has commendably resisted the temptation to follow a well-established pattern and has recast its income and expenditure account in order to place more emphasis on the cost of the various activities of the Institute. Proportions of 'administrative expenses' and 'establishment charges' have been allocated to the two other main expenditure headings – 'library and publications' and 'recruitment, training and examination of apprentices' – so that members, aided by four accompanying schedules, may now see precisely where the money goes. In 1961, for example, the administration costs accounted for 30 per cent of the Institute's total income of £66,000 and the instruction of apprentices for another 28 per cent. After other expenses, which include the non-recurring item of £8,207 (12·5 per cent) for putting its house in order structurally, the modest surplus of £4,322 (6·5 per cent) is added to the Institute's general funds, now standing at £125,939.

It is evident from the encouraging examination results that the new syllabus with the academic year as its centrepiece is proving a success. The examinations are now divided into five annual parts and are held each year in the spring and the autumn, the latter diet being primarily a second chance for those candidates who fail in the spring. In 1961, the percentage of spring passes in each part was higher (in some cases considerably) than that of the subsequent autumn passes. It is interesting to note also that – with the prospect of the academic year as an incentive? – well over 80 per cent of the candidates who sat Parts I and II passed either the spring or autumn diet. The corresponding percentage passes in Parts IV and V were 64 and 52 respectively. At December 31st, 1961, the total number of indentures registered was 1,947. This was 136 fewer than a year earlier but, on the other hand, the actual number registered in 1961 was 358, as compared with 273 in 1960, which suggests that the continuous decline since the record of 423 in 1958 has been arrested. Despite these fluctuations at one end of the pipeline, however, the membership of the Institute continues to increase steadily year by year and, at December 31st, 1961, was 7,075 as compared with 6,823 at the end of 1960.

A perennial and important part of the Institute's cultural activities consists of giving evidence and submitting memoranda to Government and other bodies on a comprehensive range of subjects within its sphere. The usual submissions were made to THE CHANCELLOR OF THE EXCHEQUER on the Budget and to the Board of Inland Revenue on points arising from the Finance Bill, 1961. Evidence, both written and oral, was given during the year to the Robbins Committee on Higher Education and information was supplied to the Wheatley Commission on the Teaching Profession. The Special Committee on Share Transfer Procedure made various suggestions to the London Stock Exchange and the Council, in co-operation with The Law Society of Scotland, approved for publication, subject to discussion with the Accountant of Court, a draft statement on the future of accounts of charge and discharge.

Inclining more to the social side but valuable for the exchange of ideas and the furtherance of friendship which such gatherings promote, were the ninth summer school at St Andrews University and the Institute dinner in Glasgow. Going further afield with similar objectives, representatives from the Institute travelled during the year to Canada, Switzerland, Denmark and the Netherlands to attend functions held by other accountancy bodies. At the Glasgow dinner, THE PRESIDENT announced that a European Congress of Accountants would be held in Edinburgh, in September 1963, at which the Institute, as the oldest existing accountancy body in the world, would be the host.

Rounding off the record of a busy and successful year, the Council makes a special plea for the greater support of The Scottish Chartered Accountants' Benevolent Association. Less than one member of the Institute in seven at present contributes to its funds, the demands on which grow more exigent each year.

Marriage Settlements – With a Difference

by K. BUCKLEY EDWARDS

A MARRIAGE in the family has been regarded for generations as a suitable occasion upon which to transfer part of the family fortune to the younger generation, but only within the last century have the reasons for such a transfer been reinforced by estate duty considerations. Now, a marriage settlement or marriage gift enjoys substantial advantages under the revenue law, for subject to qualifications relating to the settlement or gift and the time when it is made, estate duty on the slice of capital transferred will be saved even though the settlor or donor dies immediately afterwards.

Normally, by virtue of section 2 (1) (*c*) of the Finance Act, 1894, a settlement or gift becomes liable to estate duty on the death of the settlor or donor within five years, but section 59 (2) of the Finance (1909–10) Act, 1910, takes gifts which are made in consideration of marriage out of 'the five-year rule'. It provides that:

> 'So much of paragraph (*c*) of subsection (1) of section 2 of the Principal Act and this section as makes gifts *inter vivos* property which is deemed to pass on the death of the deceased shall not apply to gifts which are made in consideration of marriage.'

According to the generally accepted view, however, the exemption does not apply to all gifts made in consideration of marriage, but only to gifts *inter vivos* in respect of which liability would otherwise arise on the donor's death within five years under section 2 (1) (*c*) of the Act of 1894. There is thus no exemption under this head where a settlor reserves to himself a life interest, or where a father having an interest for life in certain property releases it, upon his son's marriage, in order to accelerate the son's reversion, for in each of these cases there is liability apart from the liability in respect of *inter vivos* gifts imposed by section 2 (1) (*c*).

Conditions Precedent

The gift or settlement must be made before the marriage and in contemplation of it; or immediately after it (which means on the day of the marriage) and in consideration of it; or at any time after the marriage but in pursuance of an agreement made prior to it. Accordingly, a purely post-nuptial settlement is not made in consideration of the marriage, but it is not uncommon for the parties to make an agreement before marriage (sometimes referred to as 'marriage articles'), and at a date subsequent to the marriage to execute a settlement carrying into effect the trusts referred to in the articles.

There seems to be some doubt as to who can make a marriage gift or settlement. Clearly the parties to the marriage can, and the Inland Revenue concedes that gifts by the parent or grandparent of either party to the marriage qualify for exemption. In *Shadwell v. Shadwell* ((1860) 9 C.B. (N.S.) 159) the donor was the uncle of the husband, and aunts would appear to be in no different category. It is at least arguable, in the absence of much judicial comment on the point, that the rule extends not only to near relatives, but to any person who has a genuine interest in seeing the marriage established, such as an employer, god-parent or personal friend.

'In Consideration of Marriage'

Until the recent case of *Rennell (Lord) v. C.I.R.* ([1961] 3 All E.R. 1028) it was not entirely certain how far a marriage settlement might confer benefits on persons other than the husband, wife and future children of the marriage (who are all said to be 'within the marriage consideration') and still qualify for exemption. In practice, a gift to grandchildren in the event of the death of a child at an early age leaving issue, or an ultimate gift over to some collateral relative in the event of the husband and wife failing to have issue who attained a vested interest, was unlikely to disqualify the settlement. On the other hand, a gift of capital to the children of either husband or wife by a previous marriage was likely to take the whole, or at least a proportionate part, of the settled property out of the exemption. This was the effect of the decision in *Attorney-General v. Jacobs Smith* ([1895] 2 Q.B. 341) where the Court held that the consideration of marriage extended only to the husband and wife and children of that marriage. But this decision was given before the enactment of section 59 (2) of the Act of 1910.

Facts in Lord Rennell's Case

On March 20th, 1956, a settlement was made between a father, his unmarried daughter, her intended husband and trustees. It recited that a marriage was shortly intended to be solemnized

between the daughter and her intended husband; that it had been agreed that the husband should settle property in manner provided by a deed of even date, and that the father had agreed to make the settlement in question. The settlement was stated to be made in execution of the agreement and in consideration of the intended marriage. The operative part provided for a 'specified period' which began with the solemnization of the marriage and ended on a date selected so as to fall within the perpetuity period (see section 164 of the Law of Property Act, 1925).

The trustees were directed by the settlement to hold the capital and income of the trust fund upon discretionary trusts for a large class which included the daughter, her husband and their issue, the settlor's other children and their issue, and every other person who should at any time have intermarried with any of the issue. From and after the end of the specified period the trust fund was directed to be held on trust absolutely for the issue of the father then living, and if more than one in equal shares *per stirpes* with an ultimate gift in favour of the daughter's personal representatives. At the date of the settlement the father had six children living. Since the daughter's marriage the trustees had paid to her as income £4,290, and had paid to her eldest brother £18,330. Other objects of the discretion had received income payments similar to those received by the daughter.

On the settlor's death on March 3rd, 1959, the Crown claimed estate duty under section 2 (1) (*c*) of the Act of 1894 on the settled trust fund as being a gift *inter vivos* made by the settlor within five years of his death. It contended that the gift was not exempt from duty under section 59 (2) of the Act of 1910, since it was made on the occasion of the daughter's marriage rather than in consideration of it; and alternatively, that the settlement could not in law be a gift in consideration of marriage, since the parties to the marriage consideration did not take the whole of the otherwise taxable property. Buckley, J., had found for the trustees and the Crown appealed.

The Judgment

In the Court of Appeal, Lord Evershed, M.R., said there were two classes of marriage settlements: (i) a settlement made upon the settlor's own marriage, and (ii) a settlement made upon the marriage of someone else, usually one of the settlor's children.

In each case the beneficial interests might be confined to persons within the marriage consideration (husband and wife and their issue) or they might extend to or be exclusively in favour of 'volunteers' (persons outside the marriage consideration). Before the Act of 1910 the only case in which property settled upon a marriage settlement would be regarded as free from duty if the settlor's death occurred within the relevant time was a settlement by a settlor upon his own marriage in favour of persons within the consideration of that marriage. Section 59 (2) of the Act of 1910 was passed in the light of that circumstance.

In the present case the settlement had, in fact, been made in consideration of the daughter's marriage, and if the marriage had not taken place the settlement would not have been made. But the opportunity had been taken (somewhat unusually) to include in the marriage settlement beneficiaries outside the marriage consideration itself, and that raised the question of law as to whether the inclusion of 'volunteers' was fatal to the exemption contained in section 59 (2).

In *Cape Brandy Syndicate v. C.I.R.* (12 T.C. 358; 1 A.T.C. 293) Rowlatt, J., had said that 'in taxation you have to look simply at what is clearly said'. The words of section 59 (2) were perfectly clear and provided that the taxing statutes 'shall not apply to gifts which are made in consideration of marriage' – not merely gifts made *wholly* in consideration of marriage. The test propounded by the subsection was whether a gift was 'made in consideration of marriage' and there was no compelling reason for limiting the exemption to the case where the parties to the marriage were to take the whole of the settled property.

Conclusion

This decision, unless reversed by the House of Lords, or nullified by fresh legislation, will clearly give a fresh impetus to marriage settlements, which have tended of late years to give way to out-and-out gifts and settlements made on children while still in their infancy. In the case under review, although the settlement was made in consideration of the daughter's marriage, the income payments received by the daughter (and by other objects of the discretion) were less than one-quarter of the sums received by the eldest brother, who was the largest beneficiary. It is clearly an easy way of getting rid of the 'five-year rule' provided, of course, there is the convenience of an impending marriage and the decision of the Court of Appeal still holds good. Indeed, it was remarked by the Master of the Rolls that 'there may be hundreds of solicitors who are likely to follow (the) example.

Taxation and the Professional Man – II

by D. S. MORPETH, B.Com., A.C.A.

Service Companies

I SHOULD like now to say a few words about service companies.

The idea of a service company is that of using a corporate body to provide office services, premises, staff, pay salaries, act as secretaries, etc. for the professional firm. Most professional bodies now permit the use of these under certain safeguards and conditions.

The shares in the service company are held either by the partnership or by the partners individually. It carries out the functions for which it was intended, earning a profit for so doing. This profit is subject to income tax and profits tax if over £2,000. The partnership must, in the initial stages, of course, finance the expenses of the company, so that there is normally a debt due by it to the partnership. The object is to accumulate some profits free of surtax which can be retained in the partnership as working capital or help towards paying out retiring partners. Since, however, the partner retiring is usually a senior partner, he will have accumulated a good deal more than his junior partners, and this could well increase financial difficulties where the money is being utilized as working capital. If not, it could be invested by the partnership to provide a retirement fund. There are several pitfalls in the operation of such a company which can reduce its advantages considerably. If not carefully set up, the Revenue can attack it from several directions, as follows:

1. *Amount of the profit charge made on the partnership.* The Revenue argue that such charge must be reasonable or they will attack it under section 137, Income Tax Act, 1952, and try to disallow at least a proportion in the partnership computations. The company must not, therefore, try to make more than a profit which is commercially reasonable, having regard to the circumstances.

What is commercially reasonable in the circumstances is a question for argument. The Revenue tend to look both at the partnership and the company together, saying that the company does not require finance as it is subsidized to the extent of its expenses by the partnership and is taking no commercial risks. I am sure that the more steps are taken to put the company on a proper commercial basis, as if it were acting on an arm's length basis, including a contract for, say, a five-year period, the stronger are the arguments against any Revenue attack. A great deal depends on the circumstances, but the Revenue have in some cases argued for a profit as low as 7½ per cent of the expenses, and in others accepted 25 per cent. Of course, these two percentages could well produce the same sum and I do not think, therefore, that to argue on a percentage of expenses is correct as the service company charge should not be computed on this percentage basis.

2. *Surtax direction.* The company is one to which section 245, Income Tax Act, 1952, applies – and each year must stand on its own feet regarding a surtax clearance. It is essential, in my view, to obtain such a clearance every year. The Special Commissioners expect a fairly high dividend to avoid a full direction, and will not usually settle at a figure much less than 35–40 per cent of the net profits as a net dividend.

This dividend is, of course, unearned income to the recipients, and as I have said a partner's share of profits has to be fairly high before a service company would be of much use to him.

3. *Transactions in shares.* Any transaction in shares of the company could in certain circumstances be attacked under section 28, Finance Act, 1960, notwithstanding that surtax clearances have been obtained each year. Such circumstances might be where the service company was an unlimited liability company and purchased its own shares at the asset value in order to pay out a retiring partner.

It is generally better, therefore, for the partnership to own all the shares so that there need be no transaction in shares when paying out a retiring partner.

If we assume that the expenses of the service company were £50,000 and the profit obtained on that was 20 per cent, the net amount accumulated for the year would not be much more than about £2,800 after tax and payment of a net dividend of about £1,870.

The question as to whether a service company is of value to the partners from the taxation point of view is one which can only be decided after examining all the circumstances.

One of the subsidiary benefits of a service company is that although the partners would be controlling directors, they would be able to participate under present Revenue practice in a lunch voucher scheme run by the company for its staff.

Indemnity and Accident Insurance

With the increasing amount of travelling being done today, not only on the roads, but in the air, many firms operate an accident indemnity insurance scheme for partners and staff. Probably most present schemes cover accidents from flying only, although it is perfectly possible to cover travel by other means both inside and outside the United Kingdom.

Where the firm does run such an accident scheme, the premiums are treated as admissible deductions so far as paid out in respect of members of the staff. Premiums paid out in respect of partners would not be allowable. In the normal course of events, the

The second and concluding part of a paper presented at the Eleventh National Taxation Conference.

object of the scheme is to provide for dependants in the case of accident.

The scheme usually is run through an insurance broker who is informed of the details of a journey either in advance or on a monthly reporting basis. The person going on the journey stipulates which of his dependants should benefit from any accident moneys paid out. Care must be taken that this policy is not one which gives the firm the right to the proceeds as they would probably be assessable as receipts of the profession. *Murphy v. Thomas E. Gray & Co Ltd* (19 A.T.C. 196; 23 T.C. 225) being a precedent in this direction.

On the other hand, where the employee has the right to nominate who should receive any proceeds in the event of his death, then the proceeds would be treated as part of his estate for death duty purposes. Probably the best answer to the problem is for proceeds to be payable to trustees of an accident fund for the benefit of members of the staff and their dependants, and for the trustees to have complete discretion, both as to whether they pay out anything, and if so to which of the deceased employee's dependants it is paid.

Partners, however, are in the position that premiums payable are disallowed, but there is no reason why proceeds should not be dealt with in the same way as those of the staff.

Provision for Retirement

We now come to the question of partners providing for pensions on retirement, both for themselves and their dependants.

Many professional people have in the past been unable to afford to retire. No means were available by which they could save out of untaxed income enough to provide themselves or their widows with an adequate income on retirement. A partner's share of goodwill and his capital were the only capital assets available and it became necessary, therefore, for a retiring partner to sell his goodwill to the remaining partners. Unless these had private capital, the money had to come from their own savings or from borrowings. The use of goodwill as a partnership asset gave rise to considerable difficulties when the question of valuation for death duty purposes arose.

Alternative methods for retiring partners to obtain a pension were the use of life assurance, the premiums attracting a small measure of relief from income tax, but not surtax, the appointment as a consultant to the firm after retirement, and the granting of an annuity by the remaining partners.

The Finance Act, 1956, has at long last made provision for relief on the cost of pensions for self-employed persons, as well as for employees for whom no pension scheme has been provided by their employers. To go fully into the provisions and their ramifications is almost a paper in itself, so I intend only to deal with some of the aspects.

As will be known the allowable premiums are subject to certain maxima laid down according to age:

(*a*) For those born after 1915, maximum allowable premium is 10 per cent of the relevant earnings up to £750.
(*b*) For those born in 1914 or 1915, 11 per cent up to £825.
(*c*) ,, ,, 1912 or 1913, 12 per cent up to £900.
(*d*) ,, ,, 1910 or 1911, 13 per cent up to £975.
(*e*) ,, ,, 1908 or 1909, 14 per cent up to £1,050.
(*f*) ,, ,, 1907 or earlier, 15 per cent up to £1,125.

These increased limits, however, may not be claimed by persons born before 1915 if they have a right to a paid up pension in respect of full-time service in an office or employment formerly held. This might perhaps apply to a member of the staff eventually made a partner and where the rules of the pension fund of the firm require him to take a paid-up pension or give him the choice of doing so rather than accepting a return of premiums. Unless he chooses to accept a return of premiums, where he has such a choice, he will lose his right to utilize the increased limits. Care should be taken to see which is the better alternative, bearing in mind that the return of premiums bears tax at less than a quarter of the standard rate and could be used to purchase a deferred annuity.

A premium paid may, if paid within a certain time limit, be related back to a fiscal year previous to the one in which it is actually paid. Such time limit has been amended by section 41, Finance Act, 1960. Where a notice of assessment for a fiscal year is made either after the end of the year or within six months of the end of the year and the premium is paid within the period beginning with the end of the year and ending on a date six months from the date on which the assessment became final and conclusive, it may on election be referred back to that fiscal year. For the purpose of measuring the period of six months from the date on which an assessment becomes final and conclusive, the commencing date is taken to be the day on which the prescribed limit of thirty days for the giving of an appeal expires; thus the six months' period applicable to an assessment made on November 30th would commence on December 30th.

This time limit for relating back a qualifying premium gives rise to serious consideration in cases involving a change in the persons carrying on a partnership, in that it is not commonly possible to decide what premium can be paid to obtain maximum relief during the time limit as laid down, because no decision can usually be taken as to whether or not to elect for the continuation basis under section 19 (3) of the Finance Act, 1953, until after the deadline under the 1956 Finance Act has expired. It would appear, however, that if an election is made for continuation under section 19 (3) of the Finance Act, 1953, section 19 (4) (*a*) of the Act provides for the

assessment concerned to be revised into two periods, being pre and post the date of the partnership change, and if no such election is made, then the assessment will still be revised to take account of the cessation adjustment.

It seems, therefore, that any payment of a premium to secure a retirement annuity could be made up to the date, being six months after the expiration of the appeal period of the revised assessments having become final and conclusive. This clearly gives an advantage in that premiums paid can be so adjusted to the eventual share of profits, resulting either from continuation or cessation basis that no premium is paid in excess of the maximum allowable premium.

It is not always convenient, however, to have this delay in taking out a policy, since the earlier the policy is effected the greater the retirement benefits. In addition, if single premium policies are taken out each year, adequate provision for a widow becomes virtually impossible since the fund available for the widow's pension would be limited to the premium, plus interest thereon. An early death would then be disastrous. The normal procedure is to take out a basic annual policy, the premium of which is well covered by the share of average profits. Any balance underpaid for the year is then topped up by a single premium policy each year paid within the due time limits. No medical examination is necessary where the death benefit is limited to the returns of premium paid plus interest.

If the annual premium paid proves excessive in relation to the year's share of profits, the excess may be carried forward to the next year, but if the amount paid in a year plus the amount brought forward to that year exceeds the permitted maximum for the year, the excess cannot be carried forward and the relief is lost. Where relief is lost then a proportionate part of the ultimate annuity will not rank as earned income when received.

It should be remembered that a retirement annuity contract providing for a return of premiums with interest on death can be a good alternative in cases where the health of the individual is such that he cannot take out life assurance. There is a vast variety of types of policy available from the various life offices to suit most individual tastes and circumstances. It is advisable, therefore, to go to a firm of pension consultants for the best advice. The alternative is a considerable amount of hard work, making necessary comparisons.

There are two basic insurance methods of providing for retirement, however, a full comparison between which would take some time. In the case of the retirement annuity, contract premiums are, within the limitations described, allowed as a deduction from gross income year by year, but the pension when received is taxable as earned income. The policy contract cannot be surrendered, nor is it negotiable or assignable. The benefits can only be in the form of pension payments and there can be no commutation of such pension for a lump sum.

The alternative plan of taking out an endowment policy and purchasing with the maturity proceeds an annuity, is free from these restrictions and only the interest part of the annuity is taxable as unearned income. The premiums, however, only attract a small measure of relief for income tax and none for surtax. A proper comparison between these two alternatives depends on the circumstances of the individual. The cost to a high surtax payer of current premiums for a retirement annuity may be low and unless he is anticipating a higher rate of surtax on his income after retirement, the retirement annuity method would probably be his best course.

A young man who is not liable to surtax may, however, find it advantageous to use the endowment policy method until his income rises to the point where surtax does become significant. He may then convert to a paid up policy and take out a retirement annuity. The endowment policy might well be useful as security for loans etc.

The final subject I would like to touch on is that of estate duty.

Estate Duty

It has been said that estate duty in Britain is entirely a voluntary tax. There are so many ways of avoiding or reducing duty on one's property that this may well be so. How does estate duty affect partners and their estates?

A partner's interest in a partnership is aggregable with the rest of his estate as personalty passing on his death. Such interest may be the value of his share ascertained on the winding-up of the partnership, or may be ascertainable under the provisions of the partnership deed, the surviving partners being entitled to purchase it at such value. Goodwill is one of the assets of a professional partnership which may have to be taken into consideration.

Where partners are non-related, there is a presumption that any consideration for the transfer of an interest is a full consideration, and any element of gift must be proved. This is so, even where the consideration is merely an undertaking to give all one's time and attention to the partnership affairs. This was the decision in the *Boden* case ([1912] 1 K.B. 539) which, although it referred to goodwill only, is thought to extend to any partnership assets. Non-related partners' interests can, therefore, be dealt with in the following ways:

(*a*) The retiring or deceased partner's interest, ascertained under the partnership agreement probably including something for goodwill at the date of retirement or death, is purchased for cash by the remaining partners. Where the partner is alive at the time of his retirement, he may have time to dispose of his cash for death duty purposes. If he has died, the purchase consideration will be part of his estate.

(*b*) The partnership agreement can stipulate that a partner has only the right to his capital and current account balances, and in consideration for his interest in the assets passing to the remaining partners, they covenant to pay him

and his widow an annuity. Where such annuity is provided for in the agreement, there would be a passing of the capital value of the annuity on the partner's death to his widow. This would, of course, be treated as a separate estate.

(*c*) Instead of the consideration for the partner's interest being a covenant for an annuity, it could be a mutual undertaking by all the partners as in the *Boden* case. In this event, the partner or his widow would have no right to an annuity, even although there was an informal understanding amongst the partners that one would be payable. Such informal understanding would not give rise to a passing of an asset on the partner's death.

(*d*) Where the partnership is one where the older partners wish to realize their share of goodwill in some capital form, incoming partners or partners who wish to increase their share, can purchase such interests from the older partners as well as the future interest expectant on their death. In this way, the older partners are selling some of their immediate interest and the whole of their future interest at the date of death for a present consideration which can be dealt with for estate duty purposes as they please.

In cases of related partners, the presumption is that a disposal of an interest in the partnership was a gift, although this can be rebutted in the case of goodwill as the *Boden* case has shown. There is nothing, of course, to prevent a valid gift of an interest in the partnership, subject to the usual survivorship problem. The position is, however, more complicated than for non-related partners.

(*Concluded.*)

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

UNITED STATES

Professional Ethics: American Institute's New Rule

MEMBERS of the American Institute of Certified Public Accountants ratified on March 8th a stronger rule of professional ethics which prohibits them from auditing financial statements of companies in which they have a financial interest.

The new rule states that a member C.P.A. will not be considered independent – and therefore will be forbidden to express an opinion on a company's financial statements – if he has any direct, or material indirect, financial interest in the enterprise, or if he has been an officer or director during the period covered by the financial statement.

Mr John W. Queenan, C.P.A., President of the Institute, expressed his satisfaction with the new 'independence rule', which was carried by a vote of 12,713 to 4,097.

> 'Freedom from influence, persuasion or bias – complete independence – is one of the corner-stones of the C.P.A. profession,' Mr Queenan said. 'Our members throughout the country know that the quality of the profession is measured no less by the integrity of the individual C.P.A. than by the excellence of his technical performance.
>
> 'The new rule represents no new concept of independence, but, at a time when the C.P.A.'s influence in the business world is steadily increasing, his independence and objectivity must be clearly defined. This is done to allay any inference that a conflict of interest could impair that independence.'

The new rule becomes effective from January 1st, 1964. This will allow members time to make necessary arrangements to divest themselves of commitments which are in conflict with the new rule.

The previous rule held that Institute members could not give professional opinions on financial statements of publicly-owned companies in which they held a 'substantial' financial interest. In the case of privately-owned companies, certified public accountants having such an interest in the companies could not certify statements to be used for credit purposes, unless the interest was disclosed in the auditor's report.

The Institute first considered the new rule of ethics at the 1960 annual meeting, but action was delayed to give members sufficient time to consider the issue. At the annual meeting last November it was approved for submission by mail ballot to the entire membership, which totals about 43,000.

Opponents of the new rule have contended that the holding of directorships and investments does not necessarily affect the auditor's ability to apply independent judgment. They have felt that adoption of the new, stronger rule would reflect on their professional reputation by implying that C.P.A.s serving as directors or owning stock in client companies have not exercised independence in passing judgment on financial statements.

Mr Richard S. Chamberlain, C.P.A., chairman of the Institute's Committee on Professional Ethics, said such an implication was never intended.

> 'Nationwide attention on conflicts of interest and standards of conduct in many areas of public life have made it imperative for us to adopt an unequivocal rule on independence which bars even the appearance of a conflict of interest,' Mr Chamberlain said.
>
> 'The C.P.A., in his unique role in our present business community, must give every reasonable assurance that his conclusions on complex business and financial transactions are objective, impartial and unbiased.'

When a C.P.A. applies for admission to member-

ship of the Institute, he agrees to abide by its rules of professional conduct, realizing that they may in some cases be more exacting than those of the State board of accountancy which issued his certificate. A member renders himself liable to expulsion or suspension by the Trial Board of the Institute if he infringes any of the rules of conduct.

Professional Incorporation

IN spite of an opposing resolution of the American Institute's Council, fifteen States are reported by *The Journal of Accountancy* to have legislated for professional incorporation of some kind, eleven of them permitting incorporation by certified public accountants.

There is much strong debate on the subject within the accounting profession and the *Journal* has questioned Council members and examined studies made by other professions in this connection. One of the main arguments in favour of incorporation is said to be the tax benefits to be obtained both from pension plans and the accumulation of reasonable reserve funds. The ten-year refusal of Congress to permit tax legislation for pensions for the self-employed has led a number of members of the accounting profession to urge reconsideration of the Council's resolution.

Some members suggest following those professions which accept professional incorporation under special statutes, requiring all stockholders to be members of the profession and to accept the same personal liability as if they were partners. A subcommittee of the American Institute of Architects is cited as having recently considered the whole subject without reaching any conclusion.

It is not surprising to note that the strongest objection among C.P.A.s is that they should avoid anything which might suggest that they wished to limit their liability, or which prevented professional services from being essentially personal. The *Journal* concludes that agitation will continue as long as Congress fails to provide tax equity for the self-employed.

CANADA

Staff Training

MR DONALD C. SCOTT, C.A., divides staff training into two main headings – 'on the job' training and 'formal' training – in a recent article in *The Canadian Chartered Accountant*. He regards the former as of paramount importance and stresses the responsibility of the practitioner for giving his students a sufficiently broad and varied training. Otherwise, he says, he is doing a grave disservice both to the student and the profession.

The day of the indentured servant is past and good students demand good salaries. While the changes in accounting techniques, in recent years, are more dramatic, a corresponding change is taking place in auditing philosophies and techniques, though it is being recognized much more slowly. Audit firms will, he says, in future require a higher percentage of senior men than at present. In this connection Mr Scott refers to the recommendation of the Canadian Institute's subcommittee on long-range educational planning that, by 1970, entrants to the profession be restricted to university graduates. Since they will need to pay them well, practitioners must make the maximum use of their capabilities, in order to provide clients with the services they require at fees they will be willing to pay.

Mr Scott takes a Toronto firm as an example of the kind of development that is taking place in Canada in this direction. The firm has a full-time director of staff training, based in Toronto. He supervises the training programme in Toronto and co-ordinates training in other offices throughout Canada. Each office has a senior man responsible for staff training, and a programme is developed for each office, with the help of the director.

The firm offers three formal courses. The first bridges the gap between university and practice, for in Toronto the vast majority of students come from the university. The second follows the Intermediate examinations. It comprises lectures and case discussions to review audit techniques and develop the students' responsibility. The third course is held in the final year to broaden the horizons of students. It concentrates on phases of accounting not necessarily encountered in day-to-day work, such as investigations, financial planning, capital budgeting and estate planning.

NEW ZEALAND

New Zealand Society of Accountants' Annual Report

THE annual report and accounts for 1960–61 presented at the New Zealand Society of Accountants' fifty-third annual meeting held in New Plymouth last Wednesday, records a total membership of 7,064 as at November 30th last – an increase of 161 over the previous year's figure. An analysis of the membership shows that there were 1,957 public accountants (529 fellows, 1,428 associates) and 5,107 registered accountants (316 fellows, 4,791 associates).

During the year the newly-constituted public accountants' committee discussed a wide variety of matters of concern to public accountants. Arrangements, which the committee has at present in hand, include two projects on staff training in large and medium-sized practices and it is hoped to arrange a summer course for public accountants next year.

In the year under review, the report states, representations were made to the Government on certain provisions of the Inland Revenue Amendment Act, and other taxation legislation. Other legislation passed during the year affecting the profession included a measure for the compulsory audit of the trust accounts of land agents.

The Institute of Chartered Accountants in England and Wales

STATEMENTS ON AUDITING

2. Stock-in-trade and work in progress

As was pointed out in Statement No. 1, 'General Principles of Auditing', [reproduced in *The Accountant* of August 19th, 1961] ***a general statement of the degree of professional competence required by law of an auditor is to be found in the judgment of Lord Justice Lopes in the case of*** **In re Kingston Cotton Mill Co** ***([1896] 2 Ch. 279) where it was thus expressed:***

> *'It is the duty of an auditor to bring to bear on the work he has to perform that skill, care and caution which a reasonably competent, careful and cautious auditor would use. What is reasonable skill, care and caution must depend on the particular circumstances of each case. . . . If there is anything calculated to excite suspicion he should probe it to the bottom but in the absence of anything of that kind he is only bound to be reasonably cautious and careful. . . .'*

This broad statement is no doubt still a valid exposition of the legal test applicable in general; but it has been widely recognized for many years that it does not give sufficient detailed guidance to auditors on the steps which are appropriate for them to take before accepting as valid the amount at which stock-in-trade and work in progress are stated in the balance sheet. This item presents many difficulties for auditors and accordingly the Council of The Institute of Chartered Accountants in England and Wales issues this statement for the guidance of members in determining their audit procedure. It relates primarily to company audits but the considerations outlined apply equally to other audits which involve consideration of stock-in-trade, subject to any statutory provisions or instructions governing the scope of such audits.

The examinations and tests indicated in this Statement are not exhaustive. Alternative or additional steps may be necessary according to circumstances. Some paragraphs may imply a degree of organization or control normally found only in large or medium-sized businesses, but the underlying principles apply to companies irrespective of their size and the extent of internal control in operation.

(This statement is the subject of a leading article elsewhere in this issue.)

General Duty of Auditors

IT is still true, as was established by the *Kingston Cotton Mill* case, that it is no part of the auditors' duty to take stock, but this does not mean that auditors have no duty in relation to stock.

(2) In the *Kingston Cotton Mill* case, the auditors passed accounts in which the stock-in-trade was grossly overstated, but they did so honestly in reliance upon certificates as to stock-in-trade given by a director who was also manager and a man of acknowledged competence and high reputation and trusted by the other directors. The manager's certificates were in fact wilfully false. The auditors were exempted from liability. If they had suspected the genuineness of the certificates (which they did not) the auditors could have detected the fraud by reconciling the changes in stock quantities as between the beginning and end of the financial year with the purchases and sales records; having no such suspicion, they did not do so.

(3) Since the *Kingston Cotton Mill* case there have been two important developments to which in the opinion of the Council auditors should now have regard, namely:

(*a*) the duties of auditors have been extensively defined by the Companies Act, 1948, section 162 and the Ninth Schedule, in terms which were no part of the law in 1896 and which make some of the observations of the Court of Appeal in 1896 as to the duties of auditors inappropriate;

(*b*) there have been great improvements both in the standards of company accounting and in the standards of auditing.

This statement is therefore issued by the Council for the assistance of members in carrying out their duties as auditors.

(4) Essentially, the duty of the auditors of a company is to arrive at an independent professional opinion on whether the directors have properly carried out their own duties in the preparation of accounts for presentation to shareholders. The directors have a statutory duty to take all reasonable steps to secure compliance with the requirements of the Companies Act, 1948, regarding the keeping of proper books of account and the presentation of annual accounts showing the true and fair view required by the Act. In relation to stock-in-trade and work in progress it is therefore the directors' responsibility to ensure that:

(*a*) the physical quantities owned by the company are properly ascertained and recorded;

(*b*) the condition is properly judged;

(*c*) the amount to be carried forward in the balance sheet has been properly determined on an

appropriate basis or appropriate bases by suitable methods

(5) In order to reach an opinion on whether the directors have properly discharged that responsibility, the auditors will need to:

(*a*) ascertain the procedure which has been adopted;
(*b*) consider whether that procedure is sound, having regard to the particular circumstances of the company;
(*c*) test the competence with which the procedure has been carried out.

(6) It is a usual and desirable practice to obtain from a director or other responsible official of the company a stock certificate at each balance sheet date. This provides the auditors with a formal statement by the responsible official in support of the amount at which stock is stated in the accounts. Such a certificate does not relieve the auditors of their duty to decide, by means of appropriate tests, whether they can properly reach the opinion that the directors have in fact discharged their responsibility.

Ascertainment of the Company's Procedure

(7) The manner in which the auditors will ascertain the procedure which has been adopted will depend on the circumstances of the company. Large organizations will usually have written instructions to which the auditors have access. Smaller concerns may issue oral instructions or may rely on the routine established for many years; the auditors of such a company should inquire of the individuals concerned as to the procedure which is followed and prepare their own notes thereon.

(8) Inquiries may be facilitated by the use of a questionnaire, which can be completed either by the company or the auditors. Alternatively a short list of essential points may be used as an *aide-mémoire* in discussion with the company's officials.

Consideration of the Company's Procedure

(9) The ascertainment of stock quantities is a physical operation and may be by means of an annual stocktaking, without supporting records, or by a periodical or continuous comparison of stock records with actual stock. The essential operations involved in ascertaining the quantities to be taken into account are:

(*a*) identification of the articles and their ownership;
(*b*) counting, weighing or measuring them;
(*c*) recording the information.

Methods of carrying out those operations will vary according to the size and circumstances of the business and the nature of its stock records. In planning their work the auditors will need to assess the effectiveness of the procedure adopted in the business.

(10) Experience shows that it may be desirable for the auditors to make their assessment of the company's procedure and to give consideration to the basis on which stock is to be included in the accounts well in advance of the balance sheet date. This may enable them to suggest improvements which will benefit the company by preventing difficulties which would otherwise emerge at a later stage and might be capable of being resolved only with considerable trouble and expense, if at all. Such improvements will also facilitate the work of the auditors in their subsequent testing of the procedure. Some considerations which are relevant in making this assessment are indicated in paragraphs 11 to 16 below.

(11) *Quality of staff.* Is the stocktaking performed carefully and systematically by persons fully informed of the duties involved?

(12) *Independence of staff.* Is the stocktaking carried out by or under the supervision of persons who do not also have charge of stock-keeping?

(13) *Stock records.* Where stock records are kept (as distinct from the making of an annual inventory without supporting stock records) the auditors will be concerned with such questions as:

(*a*) are the records kept accurately and up to date?
(*b*) are the physical quantities checked against the records at the year end, or continuously throughout the year?
(*c*) where the checking is continuous, is it done systematically either by an appropriate spread over the year or by choosing times which may reduce the work and risk of error (for example, when stocks are at their lowest, either seasonally or individually)?
(*d*) is the checking so planned that each category of stock is checked at least once a year?
(*e*) what is the procedure for investigating the causes of differences revealed on checking and for amending the records?
(*f*) are the methods of recording and control of stocks such that unexplained differences are kept within reasonable limits?

(14) *Work in progress.* Physical checking of work in progress will often not be possible by methods similar to those adopted for unused stocks. Reference to costing records is frequently necessary and it may not be possible to separate the question of physical quantity from the question of the amount to be attributed to the work in progress. Where it is not possible or practicable to identify the work in progress with either the components which have gone into it or the products which will emerge from it, the auditors will be concerned with such questions as:

(*a*) what is the costing system from which the work in progress is ascertained?
(*b*) is the costing system reliable and in particular is it integrated with the financial accounting?
(*c*) to what extent are checks made by reference to statistical information concerning outputs of main products and of by-products (if any) which ought to be obtained from materials used?

(*d*) what is the system of inspection and reporting thereon to enable allowance to be made in the costing records for scrapping and rectification?

(*e*) [1]what is the basis on which overheads are dealt with in the costing records?

(*f*) [1]is any profit element included for which adjustments are required?

(15) *'Cut-off' procedure.* To ascertain the stock-in-trade and work in progress at the balance sheet date requires suitable 'cut-off' arrangements, that is to say arrangements which will ensure that at the relevant point of time there is complete accord between the physical stock which is brought into account, the records of the physical movement of stock and the related financial records of purchases and sales and of debtors and creditors. On this aspect the auditors will be concerned with such questions as:

(*a*) what is the procedure for linking sales records with stock records, so that goods invoiced to customers are not included in the stock even though still held?

(*b*) what is the procedure for linking purchase records with stock records, so that the purchase of all goods taken into stock is recorded and all goods purchased are included in the stock, whether held on the company's premises or elsewhere?

(*c*) where the stocktaking is by annual inventory without supporting stock records and the whole or any part of the stocktaking was carried out before or after the balance sheet date, what is the procedure for adjusting the inventory to take account of movements in and out between the stocktaking date and the balance sheet date?

(*d*) if the nature of the business involves holding goods belonging to others (for example, goods on consignment or customers' own goods awaiting processing) what is the procedure for ascertaining that such goods are not included in the inventory?

(16) *Condition of stock.* Stock which is slow moving, obsolete or damaged requires consideration by a responsible official in order to determine its treatment in arriving at the amount at which stock is to be stated in the balance sheet. The auditors will therefore be concerned with questions such as:

(*a*) what is the procedure for ascertaining and recording the condition of stock and for reviewing the rate of turnover?

(*b*) who is responsible for considering the results of that procedure and for determining the basis on which slow moving, obsolete or damaged stock is to be stated in the accounts?

Audit Tests of the Company's Procedure

(17) Audit tests of the company's procedure will be planned in the light of the auditors' assessment of its soundness in principle and with the object of enabling them to form an opinion on whether the procedure is properly operated and is effective. An appropriate series of tests will be based on the considerations referred to in the following paragraphs.

Ascertainment of physical quantities and ownership

(18) Appropriate audit tests will include all or some of the following as the auditors may decide:

(*a*) examination of the count sheets (including 'rough' sheets where these have been copied to new sheets) where there is only an annual stocktaking unsupported by stock records; this examination will extend to the adequacy with which the items have been described to enable them to be identified for subsequent steps such as pricing and assessment of condition;

(*b*) examination and testing of continuous stock records, where these are kept; this examination will be designed to test the reliability of the records and will include consideration of the results of actual counts, the extent to which differences have arisen as compared with the records and the manner in which those differences have been recorded and investigated;

(*c*) examination and testing of the links between purchase records and stocks and between sales records and stocks, with the object of testing the operation of the 'cut-off' procedure (paragraph 15);

(*d*) examination of records of stocks belonging to the company but held by others (for example, stocks overseas, or on consignment, or with outside warehousemen) and consideration of the appropriateness or otherwise of the quantities involved being in the hands of the bailees concerned; where significant quantities are so held the records to be examined will include reports on inspections made by the company's staff and the certificates from the bailees, with particular attention to any reservations by the bailees indicating that they do not accept responsibility for the accuracy with which the nature and/or quality of the stock are described;

(*e*) general scrutiny of the inventory or the stock records (and comparisons with the previous year) including attention to the possibility of material omissions or the inclusion of items such as loose tools which ought not to be included because they appear elsewhere in the accounts;

(*f*) where applicable, tests by reference to statistical information covering matters such as yields which may be expected from given quantities and normal losses or gains by evaporation or absorption of moisture;

(*g*) in relation to work in progress, examination and testing of available records including costing records and work tickets attached to unfinished articles and, where there are long-term con-

[1] See also paragraph 22.

tracts, examination of the relevant contracts including any modifications thereof and other information such as subsequent cost reports and estimates of costs to complete;

(*h*) general scrutiny of records for appropriate initials and signatures indicating responsibility for the work which has been carried out by the company's staff.

Age and condition of stock

(19) Where stock is defective (through faulty manufacture or deterioration during storage) or is obsolete or unduly slow moving, these factors must be taken into account in determining the amount at which stock is stated in the balance sheet. Appropriate audit tests of the company's procedure for judging the physical condition will normally include:

(*a*) scrutiny of stock records during the tests referred to in paragraph 18, to ascertain what information as to condition and slow moving stocks has been recorded and what action has been taken on that information;

(*b*) comparison with the stock records relating to the previous balance sheet date;

(*c*) examination by reference to normal experience of wastage due to rejects and deterioration;

(*d*) examination of the relationship between stocks and turnover, including consideration of current trading conditions and any changes in sales or stockpiling policies;

(*e*) discussion with the management.

Attendance to observe stocktaking

(20) Where the auditors consider that such a step would be of assistance to them in the performance of their duties and would be reasonable and practicable in the circumstances, they may attend occasionally at one or more of the locations to observe the actual stocktaking, whether the stocktaking is done periodically or on a continuous basis. This may be particularly helpful in the first year in which the audit is undertaken and thereafter from time to time, particularly when there have been changes in the procedure or where there are no stock records other than the annual inventory. Such observation by auditors will enable them to consider whether the stock checkers are complying with the procedure laid down and whether it is adequate for internal control purposes. During such observation the auditors may consider it desirable to test some of the counts made by the company's officials.

(21) When the auditors decide to attend to observe stocktaking on the lines indicated above they should avoid misunderstanding by making clear to the management the reason for any such attendance. The presence of auditors at stocktaking does not relieve the management in any way of their responsibilities. The auditors are neither stocktakers nor valuers nor have they any responsibility for supervising the stocktaking. Their presence is to enable them as auditors to consider the adequacy and effectiveness of the procedure. They will however be ready to advise or make recommendations, just as they would on other matters when they consider that the system of control is weak or is not being properly carried out.

Amount at which stock is stated

(22) Audit procedure will be designed to ascertain whether the amount at which stock-in-trade and work in progress are stated has been computed on a basis (or bases) and by methods which, consistently applied and having regard to the nature and circumstances of the business, will enable the accounts to show a true and fair view of the trading results and the financial position. The accounting principles involved are dealt with in Recommendation 22, *Treatment of stock-in-trade and work in progress in financial accounts*[1].

(23) After examining the principles adopted by the management, the audit procedure to test the application of those principles will normally include:

(*a*) tests of the stock sheets or continuous stock records with relevant documents such as invoices, costing records and other sources for the ascertainment of 'cost';

(*b*) examination and testing of the treatment of overhead expenses;

(*c*) tests of 'net realizable value' (or, as the case may be, 'replacement price') with current selling prices and current buying prices and other relevant information including changes in prices since the balance sheet date so far as the information is of assistance in determining the net realizable value in the ordinary course of business on the balance sheet date;

(*d*) tests of the arithmetical accuracy of the calculations;

(*e*) tests of the consistency, in principle and in detail, with which the amounts have been computed;

(*f*) consideration of replies to the inquiries which the auditors make of the company's officials;

(*g*) consideration of the adequacy of the description applied to stock-in-trade and work in progress in the balance sheet.

Scope of the audit tests

(24) The volume and nature of the tests which the auditors will need to do on the lines indicated in paragraphs 18 to 23 above are matters on which the auditors must use their own judgment in the light of their professional experience and having regard in particular to the nature of the business, the state of the records and their assessment of the soundness of the company's procedure.

(25) For small companies where the facilities for internal control are necessarily restricted and for any company whose procedure is unsatisfactory the auditors will need to extend their tests beyond what would otherwise have been necessary. For all busi-

[1] Reproduced in *The Accountant* of November 19th, 1960.

nesses however it is important that the auditors should have regard to the significance of the amounts involved in relation to the accounts as a whole so that time is not spent unnecessarily on extensive tests of items which cannot in any event have a material bearing on the presentation of a true and fair view.

(26) Where applicable, having regard to the nature of the business, the tests will include examinations 'in depth' (see paragraphs 17 and 18 of Statement No. 1, *General Principles of Auditing*[1]).

Overall tests

(27) Audit tests which may often be appropriate by way of overall assessment of the reliability of the records will include, according to circumstances:

(*a*) reconciliation of changes in stock quantities as between the beginning and end of the financial year with the records of purchases, production and sales;

(*b*) comparison of the quantities and amounts of stocks in the various categories with those included at the previous balance sheet date and with current sales and purchases;

(*c*) consideration of the gross profit ratio shown by the accounts and its comparison with the ratio shown in previous years;

(*d*) consideration of the rate of turnover of stocks and its comparison with previous years;

(*e*) consideration of the relationship of the quantities ready for sale and in course of production with the quantities shown in operating and sales budgets;

(*f*) where applicable, examination of standard costing records and consideration of the variances shown thereby and their treatment in the accounts.

[1] See *The Accountant*, August 19th, 1961, page 243.

Machine accounting

(28) To the extent that tests of the kind indicated in this Statement may be impracticable because of the use of machine accounting under which records are not always available by way of link between primary and ultimate records, the auditors will have regard to the considerations referred to in the Council statement on *Mechanized Accounting and the Auditor* as amplified by the Council statement on *Accounting by Electronic Methods*[2].

Independent stocktakers

(29) The scope of the work undertaken by independent stocktakers and valuers and the details given in inventories submitted by them will need to be considered by the auditors. The fact that the services of such persons have been used does not eliminate the auditors' duties in relation to the stocks certified by the stocktakers, though it may affect the extent and nature of the tests which the auditors will consider it necessary to apply themselves.

Auditors' Report

(30) If, as a result of their assessment of the company's procedure and their tests of its operation, the auditors are unable to reach the opinion that the records are reliable they will find it necessary to make an appropriate reservation in their report to the shareholders if the amounts involved are material.

(31) Similarly a reservation in their report will be necessary if in the opinion of the auditors the principles adopted by the company and/or the description applied to stock-in-trade and work in progress in the balance sheet are not such as to enable the accounts to show a true and fair view.

Weekly Notes

BALANCING THE ACCOUNT

IT is an article of faith among accountants that accounts must balance. In the case of the United Kingdom balance-of-payments accounts, the surplus or deficit on current account would be expected to be reflected in the statement of assets and liabilities at the end of the annual trading period. At least this would be the case if the entries in the various books were correct. As far as the United Kingdom balance of payments is concerned, not only are many of the entries inaccurate but some are often omitted. The consequence is that at the end of the year there is a discrepancy in the accounts which the statisticians euphemistically define as the 'balancing item'. It would not matter too much, bearing in mind the size of the transactions, if the balancing item were small or at least was reasonably constant from year to year. The facts are, however, that in 1959 it was £10 million; it was £364 million in the following year and in the first nine months' trading for 1961 it has been estimated at £220 million. So tenuous is the estimate that the figure published one year is likely to be revised in the next year's White Paper. For example, the next White Paper on the balance of payments is expected – so the March *Quarterly Bulletin* of the Bank of England states – to contain revised estimates for recent years.

Not merely does the overall figure vary widely from year to year, but the composition of the error also varies. The 'balancing item' is made up from a variety of sources and within each separate account there is scope for error. Thus, in respect of the annual import figure of £4,000 million, an error of

only 1 per cent contributes £40 million to the balancing item. Among the items in the invisible accounts, that for travel is most unreliable. Among other contributory factors are the unrecorded changes in the investment portfolios of companies and overseas residents. Monetary movements between financial centres in the sterling area also contribute their quota to the accounting error. Even bearing in mind the difficulties of keeping such records, it will come as a surprise to many readers that the figures upon which the United Kingdom's external financial position must be evaluated by the Government's advisers, are quite so tenuous.

HELPING THE RATEPAYER

CENTRAL Government participation in the finance of local government services is not likely to contract for the time being, if only for the reasons discussed in last week's leading article. The truth of those observations is underlined by the subsequently published General Grant (Increase) Order 1962 of the Minister of Housing and Local Government.

The object of this order is to provide a further £13 million to the proposed figure of £454 million of general grant to be transferred to the local authorities in England and Wales in 1961–62. This increase represents just over half the increase in the relevant expenditure upon which the general grant is based. Of the aggregate increase in such expenditure, just over half is attributable to the Burnham award to teachers. This payment is only the forerunner of further awards. Discussions between the Ministry and local authority associations are continuing and, quite apart from the promised increase for 1962–63 over and above the projected sum of £472 million, some agreement on the form and pattern of future central financial aid must emerge.

These latest increases, although relatively small in relation to the total grant aid, nevertheless underline the argument put forward in our leading article last week that at some stage in the not-so-distant future, local authorities will be expected to utilize their enhanced resources of rateable value in order to relieve the Exchequer. Future developments in central-local financial relations should bear watching.

RETAIL PRICE INDEX UNDER SCRUTINY

AS now calculated, the official index of retail prices is based on a pattern of expenditure known to exist nearly a decade ago. Clearly some revision has become an urgent necessity; and the basis for such revision exists in the continuing Family Expenditure Survey which was instituted in the report of the Cost of Living Advisory Committee for 1956. In their recent study – *Report on Revision of the Index of Retail Prices* (Cmnd. 1657), the Advisory Committee suggest that the weighting pattern for a revised index should be the expenditure over the three previous years, and that any necessary changes should be introduced annually in January.

The committee recommends that a new index series should be started as from January this year, using the pattern as suggested above, and with whatever changes in the items to be priced as the Family Expenditure Survey shows to be desirable. This new index will have as its base date January 16th, 1962, and for the whole of 1962 both the new and existing official index figures will be published. From 1963 onwards the revised index will alone appear, the new figures being given to the first place of decimals and not rounded to the nearest whole number as with the present index. This new reference basis is to be used for at least ten years.

Expenditure patterns for the present index are representative of families in which the head of the household earns up to £20 a week. For the new index, the expenditure limit is currently £30 per week. Food will be less heavily weighted in the new index, alcoholic drink will be much the same, tobacco appreciably lower, housing a little lower, durable household goods, transport and vehicles substantially higher, and services rather lower. Clothing and miscellaneous goods are unaltered.

The growing use of electrical appliances is the main cause of the increased importance of the durable household goods group. The rise in the transport and vehicles group is almost entirely due to a large rise in the expenditure on the purchase, maintenance and running of motor vehicles which more than outweighs a fall of some magnitude in rail transport expenditure. The fall in expenditure on services owes much to the declining popularity of the cinema.

The trends in the two index numbers will be watched with interest; the existing one will remain 'official' until the end of the year.

COST CONSCIOUSNESS

SPEAKING at a conference on value analysis last week, Sir Miles Thomas, chairman of Monsanto Chemicals, said that an apparent weakness of British industry was the great reluctance in many companies to disseminate information on costs to middle and lower management. He went on to say that there might be a fear that the information would be passed on to competitors. Even if this were so, however, the loss was small compared with the loss of incentive to reduce costs at levels where action was possible if information was not passed down the lines of command.

He was addressing a one-day conference organized by a firm of management consultants. Mr F. Garner, deputy chairman of Joseph Lucas, said that value analysis was the best single approach to the problem of material costs. Value analysis is a system pioneered in the United States by the General Electric Co. Under it, every component is subjected to close

scrutiny to see in what way costs can be reduced. It is therefore in a sense work study applied to materials.

The fact remains, however, that there is always a dual problem in management – first to get the facts and then to communicate them.

CAPITAL DIVIDENDS FROM ABROAD

IN *Rae v. Lazard Investment Co Ltd* the Court of Appeal last week allowed an appeal by the defendant company from the judgment of Plowman, J. (40 A.T.C. 270). The appellant company held shares in a company incorporated under the laws of the State of Maryland, which in turn held shares in another company incorporated in the same State. The first Maryland company had been carrying on two businesses and had transferred one of them to the second Maryland company so that the latter was treated as becoming entitled to a substantial portion of the earned but undistributed profits of the former. The second company had issued shares to the first as part of the consideration for the transfer of the business, and the first company had distributed the shares amongst its own shareholders, including the appellant company.

It was quite clear that if what had been done had been done by a company incorporated in or in accordance with the law of England, the result would have been that the shares distributed by the first Maryland company would have represented a distribution of profits of that company made since it had started operations and the appellant would have been liable, as were the taxpayers in *C.I.R. v. Reid's Trustees* (28 A.T.C. 65), to income tax under Case V of Schedule D on the ground that the shares represented 'income arising from a possession out of the United Kingdom'. As reported in *The Times* of March 14th, the Court of Appeal distinguished that case, which had proceeded on the basis that the South African company whose capital profits had been distributed was governed by a law similar to that which would govern an English company.

In the present case, the Special Commissioners had before them evidence that under the law of Maryland which was the proper law applicable to the transaction, the appellant company did not receive a dividend but received capital. The transaction was in effect a partial liquidation, permitted by Maryland law, and the Court of Appeal saw no reason why the English Courts should not give effect to what had been done.

TRADE IN SHARES

THE House of Lords by a majority (Viscount Simonds, Lord Morris of Borth-y-Gest and Lord Guest, Lord Reid and Lord Denning dissenting) last week dismissed an appeal by the Crown from the majority decision of the Court of Appeal in *J. P. Harrison (Watford) Ltd v. Griffiths* (40 A.T.C. 132). In the financial year 1953–54 the H. company incurred a trading loss of £13,585, which was available to be carried forward. Till some time during that year the company carried on business as merchants, but in October 1953 its memorandum was altered to permit it to deal in shares, and in December of that year it purchased for £16,900, of which £15,900 was raised by a loan, all the issued share capital (1,000 £1 shares) of the C. company, which at that time had no business but considerable accumulated profits. In January 1954 the H. company received from the C. company a net dividend of £15,901, which the H. company used to repay the £15,900 loan. The H. company then sold for £1,000 its shares in the C. company. There was no evidence that the H. company bought or sold any other shares in 1953–54, but it did carry on the business of dealing in shares during the following year. For the Crown it was argued that the shares in the C. company were purchased with a view to obtaining a dividend against which the H. company could claim to set off its losses. That argument, said Lord Simonds (according to *The Financial Times* of March 16th), rested entirely on the proposition that the essence of a trading transaction was that its object was to make a profit, and that the found object of the present transaction was the ulterior one of obtaining a dividend against which the losses of the H. company could be set off.

His lordship said that, attractive as this proposition was, it did not convince him. 'Here was a company whose object it was to deal in shares. It entered into a commercial transaction which, though it might be given an invidious name, contained no element of impropriety, much less of illegality. I can find nothing that enables me to say that it is not a trading transaction.' Lord Reid and Lord Denning agreed with the view which the Special Commissioners had taken, that the transaction in the shares of the C. company was not a trading transaction.

THE SMALL INVESTOR . . .

THE most important channels for private saving are the fixed interest media such as the building society deposit, of which there are nearly 4½ million accounts, worth in the aggregate almost £3,000 million. Some 30 million active savings accounts contain an even larger sum, while over 17 million people hold National Savings Certificates worth almost £2,700 million. Yet, far from offering the small saver security, the depreciation in the purchasing power of the currency has meant heavy losses for such savers.

According to Mr Richard Kellett in the latest Hobart Paper,[1] investment in the equity capital of the young and developing companies in Britain today would offer such savers a greater return, as well as benefiting British industry.

In Mr Kellett's opinion there are a number of

[1] *Ordinary Shares for Ordinary Savers.* Hobart Paper 16. Institute of Economic Affairs, 7 Hobart Place, London SW1. 5*s* net.

factors which prevent the small saver acquiring an interest in ordinary shares. The first, he says, is the well-known fact that many stockbrokers do not like dealing with small investors (although a contrary view was firmly expressed by Lord Ritchie, Chairman of the Council of the Stock Exchange, at a conference held last Wednesday – referred to in the following note. Lord Ritchie stated that the Stock Exchange welcomed the small investor and that 'two out of three firms have their names on the short list of brokers which is sent out to small investors who request information').

Then, states Mr Kellett, there is the present stamp duty which is a real discouragement to the small potential investor, and, thirdly, there is the discrimination of the tax system against 'unearned' income. Mr Kellett argues that there may have been some case for the latter in times long past when the main source of capital was inherited wealth; nowadays it is an anachronism. The proposal to tax capital gains must also deter such investment; in any case, the era of easy capital gains has passed.

The author believes that in the long run the main flow of new equity capital must come from the private saver since much of the current institutional investment in equities tends to favour the safe 'blue chip'. While Mr Kellett's thesis for the encouragement of equity investment by the small saver has much to recommend it, the notion that such individuals should be encouraged to acquire shares in young developing companies does not seem altogether wise. There is always danger in putting a nest egg into one basket and it would be a tragedy if such investors were to burn their fingers. No doubt the unit trust movement has its shortcomings, but the spread of risks offered by a sound trust makes the units a better proposition for the small saver than a single equity.

. . . AND WIDER SHARE OWNERSHIP

THE crusade of the Wider Share Ownership Committee to popularize equity investment with the small saver took a further step forward this week with the publication of a comprehensive survey entitled *Savings and Attitudes to Share Owning*, prepared for the Committee by Dr Mark Abrams.

Conducted among a sample of 568 men in the 'four highest of the six social grades of the British population', the survey indicates that the most favourable reaction from non-owners to share-owning is from those under 40 in the higher social grades. As one might expect, there was an increased reluctance to change saving habits among the older groups. Most non-owners, it seems, are convinced of the national and industrial benefits to be derived from wider share ownership, but they regard share purchasing as 'risky' and 'complex' and do not feel that there is anything to be gained from investing relatively small amounts. There was also much uncertainty as to the best way of obtaining advice on shares. Half of the non-owners reacted favourably to a regular share purchasing scheme – mainly younger men in the lower grades.

Eleven per cent of the non-owners had over £500 in long-term savings. Assuming that each of the 11 per cent were to buy shares, states the survey, then the number of shareholders would roughly double (from approximately 3·4 to 6·8 million). It was considered that the removal of the 2 per cent stamp duty would greatly encourage such growth.

The survey was presented on Wednesday at a conference organized by the Wider Share Ownership Committee presided over by the Committee's Chairman, Mr Maurice Macmillan, M.P. The opening address was given by Mr Henry Brooke, M.P., Chief Secretary to the Treasury and Paymaster-General, who referred to the part companies themselves can play. In the last few years, he said, a great deal of progress had been made in the direction of producing more informative company reports. It was exceedingly important that the process of providing full and comprehensible information should continue.

Other speakers were Mr S. P. Chambers, Chairman of Imperial Chemical Industries Ltd – who criticized the 'whole forest of special reliefs' given to almost every form of saving other than that invested in the risk of private enterprise – and Lord Ritchie, Chairman of the Council of the Stock Exchange. Lord Ritchie said that he would like to 'blow sky high' the idea that the Stock Exchange could not be bothered with small clients – 'we welcome small investors, we welcome small new business', he declared.

With regard to the survey, Lord Ritchie said that the picture presented was encouraging but gave no room for complacency. On one side the steady increase of shareholders was confirmed. In 1948 – 1¼ million; 1952 – 1¾ million; 1960 – 3·1 million and now between 3·2 and 3·6 million. It also showed that there were an enormous number of people in the country on the threshold of buying shares. It showed too, that young people were particularly interested in share buying and in general less inclined to be obstinately and dogmatically opposed to share ownership. On the other hand, it was quite clear that there was still a lot of ignorance about stocks and shares and also uninformed prejudice.

Lord Ritchie stated that it had been decided by the Council of the Stock Exchange to commence corporate advertising in order to make more generally known to the public the part played by the Stock Exchange in commercial life. The campaign is to start at the beginning of next month.

Lord Ritchie concluded his remarks with an attack on the Government for what he called their 'restrictions and barriers'. The City of London, he declared, had not reached its pre-eminence in the past by taxation and restriction, and the Government should 'consider forthwith what existing barriers they can remove', instead of thinking up new schemes which would hamper business.

ACTIVITY IN MACHINE TOOLS

MUCH publicity has been given to the slowing down in the rate of investment in new building, plant and equipment. Most manufacturers of industrial equipment have been fairly confidently promised a less than buoyant year, at least so far as the home market is concerned.

Estimates put out last week-end by the Machine Tool Trades Association are in consequence quite encouraging. Although the value of orders on hand fell from about £117·5 million to about £116·8 million between November and December, the machine tool industry has begun 1962 with 10 per cent more work on its books than it had at the same time last year. Outstanding orders for the home market were up 4 per cent on a year earlier and those for export up by as much as 32 per cent. The industry's order book began to improve in value through the year until August but after this date orders began to level off as deliveries accelerated.

It would appear, therefore, that the machine tool industry is following the general pattern predicted for the capital goods industry this year, except that the export performance so far in 1962 has been particularly satisfactory, while the showing in the home market has been less disappointing than might have been expected from forecasts of activity made in the closing months of 1961.

This is My Life . . .

by An Industrious Accountant

CHAPTER 116

YOUNG accountants often find themselves applying for new and better jobs during their laborious struggle up the long road to the top. It's too easy to make a mistake during the climb. Rarely are the stumbling blocks marked in advance.

Some time ago I interviewed some applicants for a vacancy in our accounts department. The first candidate was very impressive. He was a slim, eager young man, recently qualified, with all the obvious advantages; personable, well-spoken, a sound school record, captain of the local tennis club, already holding a good junior accountancy job. He was admittedly ambitious and I felt he'd go far. So I explained our requirements carefully and really hoped he'd make the grade.

He interviewed well; he queried every detail, salary increments, rotational assignments, etc., and answered fluently. But soon I began to be conscious that our positions were being reversed; he was interviewing me. Under the sleek blond hair, behind the narrowed eyes, he was collating data for future reference. So I let it run for a while, then suggested gently that he'd better put his cards on the table.

He halted in mid-question; his jaw dropped. 'You're obviously not interested in the job, you know,' I said, 'But that's all right, just so long as we both appreciate it. I'm very happy to tell you about job prospects here and elsewhere; what's the real set-up?'

He was rather crestfallen as he admitted that he'd just accepted another job. He'd come to me for interview experience and to compare working conditions. I tried to help him, as he was still young in the ways of the world, but he seemed to resent bitterly having had to disclose his deception. He broke off our talk and we parted with some constraint; his duplicity had let him down.

The final candidate for our vacancy was an even more likely type. An ingenuous, curly-headed character, patently devoid of guile, he talked freely of his past and future. He sold himself equally well to Prinny, our personnel director, and to cut a long story short he accepted the job shortly thereafter. He called in on the Wednesday to say thanks to us and to arrange final details; all went pleasantly. We arranged that he'd start work with us the following Monday.

On Friday the blow fell. He telephoned that morning in some perturbation to say that he'd just heard from a company which had interviewed and rejected him a month previously. They had changed their mind, they said. They offered him their job, which was nearly £200 per annum better than ours, with better prospects also. As he saw it, he had no option. He had accepted their offer. But he felt badly about it; he wanted to come round to explain and apologize.

Well, I didn't demur. After all, he had to look after his own best interests; far be it from us to keep him against his will. But Prinny was most annoyed. He holds firmly to the ancient adage that a man's word is his bond. Besides, he felt affronted by our relegation to second fiddle and the reflection on our salary and prospects. Never had I seen him so disgruntled; never before had one of his choices backfired. He arrived in my room shortly after the young accountant and transfixed that flustered but well-intentioned stammerer with an outraged eye. 'You're to be congratulated on an improved job, sir, I understand,' he growled. 'I trust your new employer will find your word more reliable than has been my experience. You've no cause to be proud of your action today.'

His victim straightened up in bewilderment and stared at us; his hurt face mirrored a hopeless struggle between the urge to explain and the realization that explanation was futile. Then silently, with his chin held high, he turned and walked out of the office. He looked baffled; his honesty had let him down.

I was really sorry to see these young fellows suffer mortification. Still, they both looked like men who should do well; they'll have to learn to stand up to harder knocks on their climb to the top. The best laid plans gang aft agley.

Finance and Commerce

Explanation

COMPANY meetings sometimes develop an air of unreality; on occasion they give an impression that someone is trying to work a tremendous leg-pull. Normally, one must take it that shareholders are acting in good faith even when they ask questions that seem 'out of this world'. There was the question at the meeting of Trinidad Sugar Estates Ltd on the auditors' report, for instance, about the 'information and explanations'. Mr E. Cassleton Elliott, C.B.E., F.C.A., the chairman, explained that the wording followed the Companies Act. The shareholder seemed to think that there might be some element of 'passing the buck', as he said, in the wording, although who might have been passing the buck to whom was not too clear. Did the auditor, in fact, asked the shareholder addressing the auditors' representative, have to ask for any explanations? And the reply was: 'Oh yes, quite a number of small ones.' And the incident closed with a polite: 'Thank you.'

It would be interesting to know what really was passing in the shareholder's mind to prompt such a question, but it will probably never be known. At least it can be said that the company had the right chairman to deal with the query. Mr Cassleton Elliott, later in the meeting on another point, said: 'You can't teach me anything about company law.'

Land Importance

Trinidad Sugar Estates, whose accounts provide this week's reprint, can see the probability of a very substantial increase in the value of its land asset. Basically it is a sugar-growing company with about 5½ thousand of its 8½ thousand acres planted, and its own sugar factory. Its fortunes have varied with the sugar harvest and market, but can be gauged from the fact that in roughly the first half of the last decade, the price of the 5*s* shares has been either side of par with a low of 3*s* 3*d* at one time.

Certain interests, however, have recognized the growing importance of the land for what in these days is called 'development' and the price of the 5*s* shares is now up in the region of about 45*s*. It has been 47*s*. And those who have bought the shares on the development prospect are anxious to turn the prospect into hard cash at the earliest possible moment.

With this aim, the 'ginger group' (as *The Daily Telegraph* City Editor called it) got two of its nominees on to the board in place of two retiring directors and a third as an additional director. Voting strength on a poll was 476,324 against 345,855. It was just a case of bowing to the will of the majority in a company democracy.

Land Values

What was the land worth or likely to be worth? Mr Cassleton Elliott was pressed for an answer. His view was that it would be entirely misleading to try to give shareholders any indication of future value. Certainly the Trinidad Government had requisitioned 170 acres and agreed a value, after negotiations, representing an average of just over £1,000 an acre. But in any case, he emphasized, the directors were not free agents to sell this acreage in the open market. So far as other sales were concerned, prices had varied from £1,480 an acre to £2,904 an acre according to the position of the land and the potential use to which it can be put. If the buyers of the land subsequently sold at a profit, they also had to do a good deal of work, including clearance, provision of drainage, water and electricity.

Mr Cassleton Elliott was in Trinidad last November and was able to outline to the meeting the conditions there. Shareholders, he said, should realize that the Government of Trinidad was in course of introducing a Town and Country Planning Act based on very similar lines to legislation in this country. The Trinidad Act was intended to come into force this March. In future, planning consent would be needed for any land development. And emergency powers had been taken to prevent change of existing user without consent.

Revaluation

It has been suggested to the board that there should be a property revaluation with a view to capitalizing the surplus value in a distribution of bonus shares. But the board's view was that there was no advantage to be gained by trying to re-value. There might be taxation difficulties on a number of aspects of development and sales. That side of the question would have to be carefully considered.

Also to be considered was the Trinidad Government's anxiety to see that sugar, one of the island's main industries, continued. The impression gained on the visit was that Government policy was to maintain agriculture as much as possible and at the same time to support industrialization so that surplus labour could be absorbed. It was made quite clear, said the chairman, that the Government would expect a substantial proportion of the company's estates to continue in sugar production.

Meantime, the company has instructed architects and town planning consultants to make a complete survey of the estates and to advise on the user and development of a large estate for residential, industrial and agricultural expansion.

From one angle, the company may be seen as sitting on a potential gold mine. But those who have had to deal with authority elsewhere in the matter of land development will understand the difficulties.

NOTES ON THE ACCOUNTS

(1) The W.I. Dollar has been converted at the rate of $4.80 to the £.
(2) There were no Contracts for Capital Expenditure for which provision has not been made in the Accounts at 30th September, 1961 (*1960, £6,280*).
(3) No credit has been taken for any amounts recoverable from the Rehabilitation Fund under the Trinidad Sugar Industry Special Funds Ordinance, 1948, beyond the amounts actually recovered up to 30th September, 1961.

REPORT OF THE AUDITORS TO THE MEMBERS OF TRINIDAD SUGAR ESTATES LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company so far as appears from our examination of those books, and proper returns for the purposes of our audit have been received from the Estate which we have ascertained have been correctly incorporated in the London books. We have examined the annexed Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given us the said accounts give the information required by the Companies Act, 1948, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Company's affairs as at 30th September, 1961.

We have also examined with the audited accounts of the Company and its Subsidiary Company the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account. In our opinion such consolidated balance sheet and consolidated profit and loss account, together with the notes, have been properly prepared in accordance with the provisions of the Companies Act, 1948, so as to give a true and fair view respectively of the state of affairs as at 30th September, 1961, and of the profit for the year ended on that date of Trinidad Sugar Estates Limited and its Subsidiary Company.

112-114, CANNON STREET,
LONDON, E.C.4.
1st February, 1962.

J. DIX LEWIS, CÆSAR, DUNCAN & CO.,
Chartered Accountants.

CITY NOTES

WITH the Budget looming ahead the stock-market's chief interest currently lies in new issues. The pre-Budget new issue rush has provided investors and punters with considerable scope. The pattern emerging, however, is the familiar one of support for equity offers but lack of support for fixed interest stock issues.

Property shares, offered on a low yield basis, have attracted heavy oversubscription with allotment in most cases having to be decided by ballot. Debenture and loan stock offers, on the other hand, have been left with underwriters.

The prospect of a premium on the equity and of a discount on the loan capital works both ways in the new issue market. The Middlesex County Loan where the terms were considered attractive when first announced, and which were apparently made more attractive still by an interim improvement in the gilt-edged market, was none the less heavily left with underwriters and opened at half a point discount.

Under conditions in which interest rates are on the down grade, the lack of response to fixed interest offers is apparently difficult to fathom. The fact of the matter is, however, that the bigger investors interested in this type of stock obtain stock on underwriting terms.

Over the stock-market as a whole, Budget preoccupation has restricted business to small dimensions and the optimism apparent a week or two ago has noticeably evaporated.

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

British Commonwealth International Newsfilm Agency Ltd *v.* Mahany

In the Court of Appeal – March 15th, 1962

(Before the MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice UPJOHN and Lord Justice DIPLOCK)

Income tax – Loss – Adjustment of liability – Annual payment made to a trading company – Whether recipient entitled to repayment of tax – Income Tax Act, 1952, sections 123 (Schedule D, Case III), 341 – Finance Act, 1953, section 20 (2).

In 1956 the appellant company was formed by the Rank Organisation Ltd (Rank) and the British Broadcasting Corporation for the purpose of supplying visual news on a world-wide scale, and of ensuring that the company should remain under British control, and of preventing the supply of visual news material being dominated by American interests. The company was incorporated on March 8th, 1957, and its main object was expressed to be the supplying of a service of world news. The subscribers, Rank and the B.B.C., held an equal number of shares, and each appointed the same number of directors. Later, the Canadian Broadcasting Corporation and the Australian Broadcasting Commission also took shares in the company, and each appointed a director.

It was expected that the company's activities would not be a commercial proposition in the early years, and on October 31st, 1957, Rank and the B.B.C. agreed that each of them would pay to the company an additional subscription equal to half the amount of the deficit. The agreement recorded that the aims of the parties were not those of commercial gain, and that the company's profits should be applied first in improving the quality and expanding the range of the service, and then in reducing the amount payable by subscribers for the benefit of the service. On the same day a deed of trust was executed reciting that

the four shareholders wished to ensure that the company should remain under British control, and that the news offered to subscribers should be collected and supplied in an impartial manner. The deed repeated the desire of the parties thereto that the control of the company should remain British, and that their aims were not those of commercial gain. The four parties covenanted with the trustees that as shareholders in the company they would use their best endeavours to ensure the implementation of recommendations made by the trustees regarding the policy and methods of the company.

In March 1958, it was apparent that the company would make a loss for the accounting period ending on the 31st of that month, and that Rank and the B.B.C. would have to make additional subscriptions to cover the loss. Rank had not had any business dealings with the company, though some of its subsidiaries had had to a small extent. In the hope of improving the tax position Rank and the B.B.C. made a deed of covenant with the company on March 28th, 1958, to cover the tax years from 1957–58 to 1964–65; and each covenanted with the company to pay to the latter in each covenant year a sum equal to half the deficit. The deficit for the period from March 8th, 1957, to March 31st, 1958, was £125,180, of which Rank's share was £62,590. Rank sent the company a cheque for that sum less tax, and gave it a certificate showing that the amount of tax deducted was £26,600 *17s 2d*. The company claimed repayment of that sum.

It was contended for the respondent that the payment under the deed of covenant was a trade receipt of the company. It was contended for the company that the sum in question was not a trade receipt, because there was not a *quid pro quo* for it, and because Rank had had no trading relationship with the company during the tax year in question. The Special Commissioners decided that the sum was a trade receipt, and that the company was not entitled to repayment of tax.

Held (affirming the decision of Mr Justice Plowman): the Special Commissioners' decision was correct.

Reviews

The Management Audit

Third edition by T. G. ROSE. (Gee & Co (Publishers) Ltd, London. 10*s*.)

This admirable little book is a tribute to its author. It was written originally in 1932 and one might have assumed that it would have by now become outmoded and old-fashioned. A perusal of it, however, quickly assures the reader that this is not so. It is a thoroughly modern book in its essential message on the subject of the necessity of reviewing management techniques at regular intervals.

Perhaps one passage gives a clue to the passage of time, here the author refers to the annual audit as setting out the true financial position of the company and states that the managing director 'is relieved of any fear or error or misdirection here owing to the annual financial audit carried out by an independent firm of auditors'.

By 1962, all realistic accountants of progressive outlook are aware that an annual audit of itself is insufficient protection for the managing director in financial matters. Managing directors now need to know a great deal more about accounts than some of them did thirty years ago, and it is to be hoped that accountants appreciate and acknowledge the necessity of knowing quite a lot about the responsibilities and work of managing directors.

For this very reason, the accountant in practice as well as in industry will find stimulation in much of this short work. Many of the tasks assigned to the management auditor are the sort of tasks which the practising accountant himself must tackle – and if Mr Rose is right about the qualifications needed for the job (fifteen years' experience is his yardstick), then one cannot but agree with his conclusions that a combined financial/management audit such as is now envisaged by even small firms of accountants with progressive ideas, would best be achieved by the accountant and management consultant working together; and if accountancy firms include experts or specialists in management among their senior staff so much the better.

Know Your Accounts

by MARIE MELLOR, A.L.A.A. (Macdonald & Co (Publishers) Ltd, London. 12*s* 6*d* net.)

Designed to provide a knowledge of book-keeping for those engaged in retail trading, this new manual deals with documentation, cash and credit transactions connected with buying and selling and the mysteries of the trial balance, profit and loss account and balance sheet. It also takes in its stride departmental accounts, bank reconciliations, machine book-keeping and partnership accounts as well as providing 'an introduction to the journal proper'.

As the standard is elementary, the contents are not likely to be of sustained value to articled clerks but its usefulness to shop assistants, anxious to acquire a basic background on commercial accounting, is apparent. The text is mainly occupied by practical examples and there are a number of exercises for the student to work out when he has mastered the

principles explained in the subject-matter of each chapter.

One wonders, incidentally, why the author still apparently prefers the designatory letters A.L.A.A. which went out in 1939 when, following amalgamation with another body, the London Association of Certified Accountants became the Association of Certified and Corporate Accountants.

Auditing Principles

Second edition by HOWARD F. STETTLER, C.P.A. (Prentice-Hall International, Inc., 28 Welbeck Street, London W1. 70*s* net.)

Many practising accountants never refer to an auditing textbook, except perhaps fleetingly, after they qualify. The excuses they offer – pressure of work, developments in other branches of accounting which have to be mastered etc. – are all valid but it must never be assumed that auditing techniques are static. They are changing constantly and it is at his own peril that the practitioner neglects to keep up with them.

One of the best ways of always being well informed is to read – and not just dip into – recent textbooks on the subject and one that can be recommended, both because it has just been newly revised and because to British practitioners it deals with auditing from the American angle, is Professor Stettler's treatise which is at the same time scholarly and practical. The chapters on internal control, inventories, the effect of electronic data processing on auditing, audit sampling techniques and management advisory services are all of particular interest and for any Rip Van Winkle who has not yet caught up with the McKesson & Robbins fraud, there is a succinct ten-page summary of the case in one of the book's appendices.

Practical Financial Statement Analysis

Fifth edition by ROY A. FOULKE. (McGraw-Hill Publishing Co Ltd, London. 69*s* 6*d* net.)

When the fourth edition of this able analysis was reviewed in these columns in 1958, Mr Foulke was quoted as saying that the absolute standards of commercial measurement which the accountancy profession was striving to establish were still some way off and that a further period of experimentation and change in the form of financial statements lay ahead. According to the fifth edition, just published, he is (and, we think, rightly) still of the same opinion because he states that 'room for continued development is axiomatic' and he emphasizes his point by quoting that 'change is the only permanence'. All this, however, seems to clash with the view of his publishers who begin their blurb with the words – 'Completely undated . . .'. How, one wonders, can a book which records transitory trends remain completely undated?

It may be said, as was said before, that Mr Foulke, who has spent a lifetime studying investment analysis, explains in exemplary detail how to extract the really essential information from financial accounts and, what is more, how to put the essence so obtained to good use. Perhaps his publishers are not so far off the mark after all. Mr Foulke is clearly in advance of his time but it may be that his more astute readers, taking full advantage of his prescience, render his text out of date almost as soon as it is released.

Income Taxes in the Commonwealth

Second Supplement. (H.M.S.O., London. £3 7*s* 6*d* net.)

The great merit of this most comprehensive work on the income taxes in the Commonwealth is that it keeps pace with the changes which are continually occurring in the many territories involved, so that there is always at hand a conspectus of which one can be sure, not only that it has been most carefully prepared, but is up to date – or as nearly up to date as is practicable.

This new supplement includes many reprinted pages for insertion in the loose-leaf volumes, while the number of manuscript amendments to be made has been kept within bounds. The most extensive changes noted deal with the income tax laws of Malta; for other territories with separate income tax jurisdictions the changes are comparatively slight, but none the less important to know.

Only those who have been faced with the problem of finding out the current tax situation in a particular territory before the publication of this work, can appreciate what a blessing it is.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS COLLETT SMITH, ELLIOTT & Co, Chartered Accountants, of 20 Wormwood Street, London EC2, announce that as from March 31st, 1962, Mr HAROLD COLLETT SMITH, F.C.A., is retiring from the partnership but will continue to be associated with the firm for some time, as consultant. The practice will continue to be carried on under the same name by Mr PETER ALBERT ELLIOTT, B.A., F.C.A.

MESSRS COOPER BROTHERS & Co, COOPERS & LYBRAND and the firm of P. O. ÖHRLINGS REVISIONSBYRÅ, of Biblioteksgatan 26, Stockholm, announce that they have formed the Swedish firm of COOPERS & LYBRAND A.B. with offices at Stockholm, Luleå, Sundsvall, Falun, Örebro, and Mariestad.

MESSRS HARMOOD BANNER, LEWIS & MOUNSEY and MESSRS CASH, STONE & Co, announce that, as from May 1st, 1962, they are amalgamating their practices and that the joint practice will be carried on under the name of HARMOOD-BANNER, CASH, STONE & MOUNSEY. Sir WILLIAM CASH, M.A., F.C.A., Messrs G. K. COOK, F.C.A., W. P. SCOWCROFT, F.C.A., and A. W. WHITE, F.C.A., will act as consultants to the new firm. The practice will be carried on from the present addresses in Liverpool, London and elsewhere.

MESSRS KIDSONS, TAYLOR & Co, Chartered Accountants, of 1 Booth Street, Manchester 2, and Sardinia House, Kingsway, London WC2, announce that Mr G. S. ROSE, A.C.A., has been admitted into partnership as from March 1st, 1962. The firm's name will remain unchanged.

MESSRS LIND & Co, Chartered Accountants, of 338 Streatham High Road, London SW16, announce that Mr B. A. BURKE, F.C.A., will be taken into partnership as from June 1st, 1962, and that the firm's name and place of business will remain unchanged.

MR E. J. REYNOLDS, F.S.A.A., F.A.C.C.A., of 2 The Parade, St Albans Road, Hatfield, Herts, and Mr W. RUDERMAN, F.A.C.C.A., A.C.I.S., A.T.I.I., practising as W. RUDERMAN & Co, Midland Bank Chambers, Welwyn Garden City, Herts, have agreed to amalgamate their practices as from April 1st, 1962, under the style of REYNOLDS & RUDERMAN, operating from both addresses. Telephone numbers are unchanged.

Appointments

Mr G. G. Anderson, F.C.A., secretary of William F. Rees Ltd, has been appointed to the board.

Mr Jack Ashworth, F.C.A., has been appointed a director of Bank of London and Montreal, Nassau, Bahamas, and of Balfour Williamson & Co Ltd, London.

Mr Alan Christianson, M.C., F.C.A., has been appointed chief financial officer of South of Scotland Electricity Board.

Mr A. W. Gurney, A.C.W.A., has been appointed a director of Hadfields Steel Ltd and Hadfields Forgings Ltd.

Mr N. H. Martin, M.B.E., F.C.A., has been appointed vice-president and comptroller of the Northern Electric Co Ltd, Montreal, Quebec.

Mr E. C. Sayers, F.C.A., has been appointed a special director of Duport Ltd.

Mr D. R. Ward, F.C.A., has been appointed chief financial accountant of Hadfields Ltd.

CABINET POST FOR ULSTER CHARTERED ACCOUNTANT

Mr Herbert V. Kirk, F.C.A., partner in the firm of Palmer & Co, of Belfast, and member of Parliament for Windsor (Belfast) in the Northern Ireland House of Commons, has been appointed Minister of Labour and National Insurance.

His appointment follows the transfer of Mr Ivan Neill, the former Minister of Labour, to the vacant post of Minister of Education caused by the death earlier this month of Mr William Morrison May, P.C., F.C.A. (announced in *The Accountant* of March 10th).

SPECIAL COMMISSIONERS' OFFICE

It is announced that as from Monday next, March 26th, the Companies Division and the Income Tax (Special Assessments) Section of the Special Commissioners' Office will move to Lyon House, 31/37 The Broadway, Wimbledon, London SW19. Telephone: Wimbledon 9971.

The addresses of the other sections of the Office will remain unchanged.

IN PARLIAMENT

National Economic Development Council

Mrs CASTLE asked the Chancellor of the Exchequer whether the National Economic Development Council will be empowered to discuss the effects of take-over bids on investment and wages policy.

Mr BARBER: The Council will certainly be free to

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON, SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

take into consideration any factors which it may think have a bearing on investment and wages policy. My right hon. and learned friend has tried to make it clear from the beginning that he would not seek to exclude any subject from its discussions, and that he would not arrogate to Ministers the right to fix the agenda.

Hansard, Mar. 8th, 1962. Written Answers. Col. 88.

Income Tax

Mr CALLAGHAN asked the Chancellor of the Exchequer what is the product of a 1*d* rate of income tax.

Mr SELWYN LLOYD: On the basis of the Budget estimates for last year the product of each 1*d* of the standard rate of income tax and proportionate amounts of the reduced rates is £30 million.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

Board of Governors' Annual Meeting

The annual meeting of the Board of Governors of The Chartered Accountants' Benevolent Association will be held at 55 Moorgate, London EC2, at 2.15 p.m. on Wednesday next, March 28th.

Executive Committee Meeting

At a recent meeting of the Executive Committee the chair was taken by Sir William Carrington, F.C.A., the President of the Association, and six members were present.

Applications for assistance

Three new applications for assistance were considered; in two cases consideration was deferred until further inquiries had been made; in the third case a temporary grant was made. Twenty-one cases for further assistance were considered. In eighteen cases the grant was renewed; in two cases it was increased and in one case reduced.

Special Fund

One application for further assistance was considered and the grant was renewed.

Matters reported

The deaths of two beneficiaries were reported. Four special grants or donations made during the quarter were confirmed.

Integration

The Honorary Secretary reported that on January 22nd, 1962, the Court gave its assent to the integration of The Incorporated Accountants' Benevolent Fund with the Association.

THE ASSOCIATION OF SCOTTISH CHARTERED ACCOUNTANTS IN LONDON

Mr T. G. B. Matheson, C.A., presided at the annual general meeting of The Association of Scottish Chartered Accountants in London held on February 28th, at the Hall of the English Institute, Moorgate Place, London EC2. Messrs R. A. Collet, B.L., C.A., and R. T. M. McPhail, M.B.E., C.A., retired from the committee and were succeeded by Messrs H. M. Angus, C.A., and J. K. Laurence, T.D., B.L., C.A.

Golf Club

The annual general meeting of the Golf Club followed, with Mr R. Wood, the captain, in the chair. The annual accounts were presented to the meeting and a vote of thanks was passed in favour of Mr T. N. Ritchie, the honorary auditor, and he was reappointed for 1962. The Committee for the ensuing year was announced as follows: Messrs R. T. Scott, R. J. Jamieson, N. S. Matheson and J. A. M. Kinnear.

Replicas of cups won at the annual competitions in 1961 were presented to: Mr R. T. H. Scott, for the Past Presidents' Challenge Cup; Mr K. R. H. Murray, for the J. Ivan Spens Challenge Cup; and Mr N. S. Matheson, for the Bogey Challenge Cup.

It was announced that the 1962 meetings would be held as follows:

Wood Cup, against the Chartered Accountants' Golfing Society, on Friday, April 27th, at the Berkshire Golf Club.
Moore Cup on Friday, May 11th, at Gleneagles.
Annual Competitions on Tuesday, June 19th, at Worplesdon.

Mr R. Wood appointed Mr S. S. Berlanny as his successor as captain for 1962–63.

C. W. BOYCE PRIZES

The Bradford and District Chartered Accountant Students' Society have announced that the C. W. Boyce Prize in respect of the November 1961 Final examination of The Institute of Chartered Accountants in England and Wales has been awarded to Mr Brian Tetley (articled to Mr J. W. G. Mitchell, F.C.A.).

The Society's prizes for the runner-up in the Final, and for highest marks in the Intermediate examinations have been awarded to Mr A. T. N. Geoghegan (articled to Mr G. W. Pearson, F.C.A.), and Mr B. Dixon (articled to Mr L. Hodgkinson, F.C.A.), respectively.

KENT AND SUSSEX CHARTERED ACCOUNTANT STUDENTS' SOCIETY

The 1962 annual general meeting of the Society was held at the Royal Pavilion, Brighton, on February 24th, when some fifty members attended. The President of the Society, Mr A. G. J. Horton-Stephens, J.P., F.C.A., was in the chair and reported a year of

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

continued progress, particularly in the Eastbourne and Kent areas of the Society.

The following officers were elected for the year 1962–63:

President: Mr G. W. Davies, F.C.A.
Chairman: Mr D. B. Evans, F.C.A.
Vice-Chairman: Mr C. P. Beard.
Hon. Secretary: Mr T. T. Nash, F.C.A., 33 Lawrence Road, Hove.
Hon. Assistant Secretary: Mr C. J. Allan.
Hon. Treasurer: Mr T. P. Buckley.
Committee: Messrs D. J. Goodwin (Maidstone); A. G. S. Hodgson (Eastbourne); P. G. Jagger (Brighton); D. G. Marchant (Brighton). (Hastings representative to be nominated.)
Liaison Officer with Senior Society: Mr C. R. P. Goodwin, F.C.A.
Branch Secretaries: Eastbourne – Mr P. W. Morris, Messrs H. S. Humphrey & Co, 17 Gildredge Road, Eastbourne. Hastings – Mr L. N. P. Jones, Messrs White, Withers & Co, 3 Endwell Road, Bexhill. Kent – Mr G. M. B. Theaker, Messrs Foster, Finn-Kelcey & Co, 21 Bank Street, Ashford, Kent.

CERTIFIED ACCOUNTANTS' LONDON STUDENTS' SOCIETY

An amusing, instructive and lively mock company meeting was held at the Chartered Auctioneers' Hall, Lincoln's Inn Fields, London WC2, on March 13th. Mr F. H. Jones, F.A.C.C.A., prepared the manuscripts and acted as chairman of the company. He was assisted by Mr J. H. Hills, F.A.C.C.A., a member of the Council of the Association.

'THINKING IN FIGURES'

The use of analytical processes in mathematics for business management and for business education will be examined by Mr H. C. Edey, B.COM., F.C.A., a Governor of the City of London College and Reader in Accountancy at the London School of Economics, in a Travers lecture, entitled 'Thinking in figures', to be held at the City of London College on April 4th, at 6 p.m. The chair will be taken by Mr P. F. Carpenter, F.C.A., Vice-President of The Institute of Chartered Accountants in England and Wales.

Accommodation is limited and there is a registration fee of 5*s*. Application forms are obtainable from the Secretary, City of London College, Moorgate, London EC2, and should be submitted on or before March 30th.

PARTNERSHIP IN INDUSTRY

'A working partnership in industry' will be the title of an address to be given by The Rt Hon. John Hare, O.B.E., M.P., Minister of Labour, at a luncheon meeting of the Industrial Co-partnership Association to be held on March 28th, at Connaught Rooms, Great Queen Street, London WC2. The chair will be taken by The Rt Hon. Sir Geoffrey Shakespeare, Bt.

Applications for tickets should be addressed to Mrs I. S. Ramsey, M.B.E., secretary of the Association, 36 Victoria Street, London SW1. Telephone: Abbey 3342–3.

EXECUTIVES' CONFERENCE

A three-day conference dealing with some of the major problems confronting British industry today will be held at the Grand Hotel, Brighton, from May 10th–12th. Sir James R. H. Hutchison, Bt., D.S.O., T.D., J.P., will open the conference.

Organized by Industrial Administration Ltd, subjects for discussion will include: 'Take-overs'; 'Outdated managements'; and 'Company Organization'. There will also be a special session devoted solely to the Common Market.

Further particulars are obtainable from the conference organizer, Industrial Administration Ltd, 18 Thurloe Place, London SW7.

HOCKEY

Insurance H.A. 3 – Chartered Accountants' H.C. 2

The annual encounter between the Insurance Hockey Association and the Chartered Accountants' Hockey Club, played on March 14th, was as usual a closely contested match, with the Insurance H.A. just gaining the honours by reason of their more constructive attack. The close passing of their three inside forwards, Cardoza, Howells and Turner, was a feature of the game but for long periods they were well held by the Accountants' defence, in which Charlton was a tower of strength. The Accountants took the lead following a breakaway when Purnell scored with a fine drive. A few moments before half-time Turner equalized.

After the interval the Insurance H.A. went ahead with a good goal by Cheesman but the Accountants rallied and twice managed to get the ball into the net, but both times the goal was disallowed. Eventually, however, justice was served and Marcus levelled the scores. The last five minutes found the Accountants tiring but Angus in goal played manfully and made several good saves. The Insurance H.A. were not to be denied and Cardoza settled the issue with a fine shot with only a few minutes left for play.

Chartered Accountants' H.C. team:

P. Angus (Harpenden), M. A. Charlton (Rickmansworth), D. Cornfield (Wimbledon), M. J. Hodder (Berkhamsted), R. E. Brayshaw (Southgate), J. D. Liggatt, Captain (Broxbourne), D. Marcus (G.W.R.), R. G. Purnell (Blackheath), W. E. Lawes (Richmond), P. Duffin (Tulse Hill), P. Fishpool (Broxbourne).

Shareholders All?

TO the extent that economic growth is dependent upon the rate of investment, willingness on the part of the community to defer consumption and save is a prerequisite of higher living standards. There is general agreement that a major contributory factor to West Germany's economic expansion during the past decade has been the relatively low level of consumption which has permitted a correspondingly high rate of investment. As a source of investible funds emphasis tends to be placed nowadays upon the role of the institutional investor. It is true that the private investor is less of a force in the capital market than he once was, but the publicity often attached to institutional investment tends to obscure the fact that the largest financial institutions ultimately rely upon the inflow of numerous small funds from a large number of savers.

The truth of these observations is underlined by a recent survey among small savers sponsored by the Wider Share Ownership Committee which reveals that the bulk of small savings are invested in the Post Office Savings Bank among other such banks, in bank deposits and especially in building societies. Nevertheless, the same survey discloses that there are as many share-owners in the lowest white-collar grade as there are in the highest, although proportionately they form a smaller part. Furthermore, 10 per cent of all share-owners are skilled manual workers, although their proportionate stake in British industry is very much smaller.

Despite the evidence adduced in this report from the Wider Share Ownership Committee, which serves to confirm the findings of an earlier inquiry carried out in 1959 by the Acton Society Trust, the fact of the matter is that the majority of people do not regard shares as suitable forms of investment for the small saver. The reasons for this attitude are that equities are risky; share prices can fluctuate widely and, for the investor with limited resources, this type of investment is not worth while. In contrast, the attractions of a deposit in a building society for this type of saver are considerable.

There still seems to be little public awareness of the disadvantages of holding monetary assets in these days of secular inflation. Although the above-mentioned survey disclosed that 5 per cent of a sample of 568 men actually held some shares, the reasons adduced for this choice of investment depended not so much on the attractions of equities as an inflation hedge but rather because they offered the possibility of a tax-free gain. It was, it would seem, the element of gambling rather than the prospect of dividends that represented the main attraction.

Quite apart from the inherent risk for the small investor of putting all his limited resources into one basket, there are other considerations which influence his attitude towards share ownership, among which is a lack of knowledge of the market and the procedure for acquiring shares. Few small savers are capable of selecting their own shares for investment, although the survey conducted for the Wider Share Ownership Committee disclosed that once a person had made an investment, usually on the advice of his bank manager, a broker, or a friend, he usually followed his own choice thereafter.

Interest in shares as a form of investment for the smaller saver is clearly a development of relatively recent date. Habits die hard and the survey reveals that the attractions of share ownership are much more evident to the members of the under-forty age group than to their seniors. So marked is the divergence in outlook between the two age groups that the compilers of the survey conclude that the 'greatest potential for attracting new share-owners lies in people under the age of forty'. Unfortunately, this group tends on the whole to have few funds available for such investment, in contrast to the older age groups. As an alternative to outright share purchase, a system of instalment buying was suggested in the course of the survey. This seemed to attract in the main the younger age group and those in the lower income groups, but there was some evidence that many would be unwilling to commit themselves to making regular payments within the framework of a group scheme. The investment potential of the small saver is nevertheless considerable. According to the survey the two main middle income groups, numbering about ten million, contain as yet less than three-quarters of a million share-owners among whom the average shareholding is less than £500.

In an increasingly affluent society the rate of saving from all sections of the community is likely to increase. One estimate quoted in the report of the sponsoring committee suggests that the current annual flow of net savings by private investors is about £50 to £75 million, but by 1975 this may well reach a total of between £220 and £295 million. Quite apart from the overall increase in the volume of savings, there is the possibility for many savers who at present prefer building society deposits etc. to change their investment habits. At present, within the two highest social classes there are about one million men who do not own any shares, in addition to a similar number who own more than £500 each.

The basic question, however, remains difficult to answer. How should these resources be channelled into industrial investment? However strong the case for encouraging the small investor to take up equities, how many readers of this journal would, if asked by a client with less than £1,000 in life savings over and above his home and life assurance, recommend any single equity? With increasing industrial competition the task of spotting 'winners' for the small investor is becoming increasingly difficult. The emphasis laid upon the possibilities of tax-free capital gains by respondents in the above survey suggests that the publicity given to past stock-market booms has left its mark on the public mind to such an extent that equity investment is synonymous with making money easily. Nothing could be more disastrous for hopes of more extensive share ownership in British industry than that some small investors should suffer serious losses (for them) in their own holdings. The limitations and defects of the unit trust movement are real enough, but the fact remains that they offer to the small investor not merely the prospects of some capital appreciation to counter the erosion of his savings by inflation, but security through a spreading of risks on a scale that few private investors can ever hope to achieve.

It is undoubtedly to the credit of the Wider Share Ownership Committee that it has already in its short life done so much to stimulate interest in equity investment for the small saver. No doubt, as the committee suggests, the Government could help by removing or reducing the stamp duty. It is noticeable that no one has as yet referred to the implications of MR SELWYN LLOYD'S views on a separate corporate tax. If this were to be introduced on the American pattern with a negligible tax credit for the shareholder, it could harm the attractions of equity investment. The most important need, however, is an assurance of profitability coupled with security. It should not be necessary to make a take-over bid before some boards become alive to their responsibilities towards the people whose money they are handling.

Permanent Files for Tax Purposes

by FÉLICE V. SLADE, A.C.A.

WITH the complexity of tax work nowadays and the more frequent changes in tax staff than formerly, it is virtually essential in professional offices, if matters are not to be overlooked and time costs are to be kept to a minimum, that some form of permanent notes be kept for tax purposes. Whether they should take the form of separate files or of notes brought forward on the clients' ordinary tax files will depend to a large extent upon the size of the cases concerned.

Some of the points which the permanent notes might usefully cover are discussed below and for convenience those applying mainly to companies rather than to individual clients are dealt with first, under headings (1) to (4).

1. Capital Allowances

An increased rate of annual allowances may be obtained where the Commissioners of Inland Revenue are satisfied that the extent of use of an asset is such that the wear and tear suffered is greater than would be expected from normal use. It may be that a company has worked certain machines, say, double shift or more, for some years during which increased allowances were obtained, and then reverted to normal working. If no permanent note is made of the dates when abnormal working began and ended, and of the machines affected, it will be difficult to calculate any balancing allowance or charge without waste of time when an asset is sold.

Special rates of capital allowances may be agreed with the Inland Revenue for special classes of machinery where the rates in the published list are not wholly appropriate. A permanent note of the agreed percentages and of the types of plant to which they should be applied is then helpful in avoiding the inclusion of any asset under the wrong heading in the capital allowances computations.

A note should also be made of the date of any switch from the normal (diminishing instalment) basis to the alternative (straight line) system of calculation of capital allowances and of any change-over from the replacements basis to capital allowances. It is often the case that certain items of a company's plant and machinery are dealt with on a replacements basis and the remainder is included in the capital allowances computations; a note is then useful confirming which items are dealt with on which basis.

2. Stock and Work in Progress

From time to time questions are likely to be asked by the inspector concerning the precise basis of the valuation of stock and work in progress and – particularly if the audit and tax work are carried out by different departments – a permanent note on this matter will enable these questions to be answered with the minimum amount of time spent in discussion within the office or with the client.

3. Shareholdings

In the case of private companies a list of the shareholdings, kept up to date, is useful for reference not only in dealing with inquiries from the Inspector of Taxes but also, from time to time, when other questions arise.

4. Directors

For profits tax purposes in particular, a permanent note should be kept of the names of the directors – and of their shareholdings if there is no separate list of shareholders – stating also which directors are whole-time service or full-time working directors and whether the company is director-controlled.

A note of any dispensation obtained in respect of directors' expenses is of assistance in dealing with the income tax returns and assessments of the directors themselves.

5. Double Taxation Relief

Section 18 of the Finance Act, 1961, is probably the latest example of tax legislation that at first sight cries out for the need for some form of *aide-mémoire*. This section remedies the effect under the previous practice in relation to the assessment of foreign income – which was that there was at least one year's United Kingdom assessment against which no double taxation relief was given. A permanent note of the date of commencement of the foreign income will be appreciated when the source comes to an end, possibly many years later. Then, if the addi-

tional actual tax credit which was granted under section 18 for the 'opening' year exceeds the tax credit which would have been due for the period not charged to United Kingdom income tax because of the cessation provisions, an assessment will be raised under Case VI so that the liability on that assessment equals the 'excess' tax credit.

If no note of the date of commencement of the source is kept, a laborious search may have to be made in files that have possibly been closed and relegated to the store-room to ascertain which was the opening year for which the additional tax relief was received and with which comparison must be made to determine whether a Case VI assessment will arise. Certainly the onus is on the Inland Revenue to raise a Case VI assessment, if appropriate, and the inspector would then make the calculation, but, for other purposes such as forecasting a client's tax liabilities or advising on the effect of a proposed sale of a source of foreign income, the information should be available in the tax department.

With ordinary double taxation relief claims on, say, overseas dividends it is useful to keep a running note of the year to which the claims have been settled. It often happens that, owing to pressure of work or lack of information regarding overseas rates of tax, claims are not submitted for some time, meanwhile the supporting vouchers may be anywhere in the office, and this may mean that the tax clerk has to browse through the files for an unnecessary length of time to ascertain just what the position is in regard to double tax claims.

6. Maintenance Claims

In country estates maintenance expenditure may arise on non-agricultural and agricultural property respectively. The non-agricultural expenditure may be incurred on the mansion and on the non-agricultural property let furnished or unfurnished, while any agricultural repairs will be to the farm and agricultural cottages. It may be that the repairs appropriate to the furnished lettings are charged in the Case VI computation rather than in the maintenance claim, particularly if the total repairs expenditure on the non-agricultural property is more than sufficient to give rise to the maximum amount of maintenance relief on the property in that category. It may also be that the agricultural repairs are charged in the farm computation in order to obtain the tax relief more quickly than under a maintenance claim and, if a Schedule D election has been made in respect of any woodlands the repairs to, say, the foresters' cottages are probably charged in the Schedule D computation on those woodlands.

A brief note showing the various assessments against which the different types of repairs expenditure are claimed is worth keeping.

In the event of all the repairs expenditure being included in the maintenance claim it will likewise be necessary to differentiate between repairs to agricultural and non-agricultural property so that any excess maintenance relief may be claimed under section 313, Income Tax Act, 1952. From some of the bills it will be obvious to which property the expenditure relates, but for general purchases, such as paint, some arbitrary basis of apportionment is usually necessary. The ratio of the statutory repairs allowances on the agricultural and non-agricultural property, respectively, may be adopted but whatever basis of apportionment is used a note of it should be maintained.

7. Schedule A and Excess Rents Assessments

If a client owns numerous properties it may be difficult to keep track of the terms of letting, for example with regard to responsibility for repairs, rates, period of the lease, etc. Information on these points may be received piecemeal and be lost in the correspondence file by the time that, say, the excess rents computations are prepared, unless permanent notes, kept up to date, are maintained.

8. Woodlands

Notice of election to be assessed under Schedule D in respect of commercially managed woodlands must be given within two years after the end of the year of assessment for which it is first to operate, and must extend to all woodlands so managed on the same estate, except that woodlands that are freshly planted or replanted may be treated as being on a separate estate if the occupier gives notice accordingly within ten years after planting or replanting.

Care should be taken to identify the plantations transferred to Schedule D and, particularly if a large replanting scheme is being undertaken, an estate plan should be obtained distinguishing the various plantations and showing the approximate dates when it is proposed to commence the planting or replanting of each. This should prevent any claim under section 125, Income Tax Act, 1952, falling out of date and help to ensure that receipts and expenses in respect of only the specified areas are brought into the woodlands accounts submitted under Schedule D. Also the

acreages shown on the plan will enable the reductions in the Schedule B assessment to be checked. Such an estate plan and programme of planting or replanting belongs essentially to the permanent file as it may have to be referred to for many years.

9. Underwriters

Underwriters receive special treatment for tax purposes in several respects and the permanent file might well include notes stating:

(*a*) whether earned income relief is allowable on the profits (i.e. whether the client is actively engaged as an underwriter at Lloyd's). Such information is useful not only for checking the income tax liabilities on the underwriting profits but also in calculating any restriction for earned income relief in section 341 computations on losses from other sources;

(*b*) whether the client has elected to set sums aside in a Lloyd's special reserve fund;

(*c*) if so, what particular investments represent the Lloyd's deposit and premium trust fund etc. Interest from these investments may get 'lost' in the general list of dividends and interest and not be identifiable when the profits tax computations are prepared.

10. Earned Income

It is all too easy, when faced with a mass of notices of assessment for checking, to overlook the fact that assessments on salaries, pensions and profits from trades or professions are not the only ones that may give rise to earned income relief. Infrequently Schedule A and B assessments also rank for earned income relief, namely, when property is attached to or forms part of the emoluments of an office or employment of profit. Furthermore, dividends from shares allotted to an employee by his employer and taxed annuities can rank as earned income. If no part of the earned income relief is to be overlooked, a permanent note of the less obvious sources of earned income is worth while.

Conversely, if any partnership profits represent unearned income (because the client is a sleeping partner), the fact should be noted, as this will affect not only the entitlement to earned income relief but also the order in which the share of any partnership loss should be set off against other income under a section 341 claim.

In the case of directors' fees and commissions etc., it is also useful to have a note stating whether the income tax assessments are based on the income earned during the fiscal year of assessment or during the company's accounting year ending within the year of assessment.

If a married woman is in receipt of a retirement pension in her own right rather than by virtue of her husband's contributions, a note should stress this fact so that the additional personal allowance (wife's earned income relief) and wife's reduced rates relief are not overlooked.

11. Age of Client

In personal tax cases the age of the client is a material factor for such purposes as age relief or age exemption, retirement annuity relief, payment of post-war credits, entitlement to retirement pension and cessation of National Insurance contributions. A permanent note of the age of senior clients is helpful in avoiding the oversight of any appropriate claims or the receipt of a pension.

12. Post-war Credits

A permanent note of the amounts of any post-war credits, showing the years and numbers and, if possible, the whereabouts of the certificates will save time when a claim for payment of the credits comes to be made and, when payment has been made, if a note of the date of settlement is added to the record, a ready answer is provided to the question which may arise from time to time in the future – 'Has old Mr——— drawn his post-war credits yet?'

It is obvious that a note ought also to be made when a younger person has been paid his credits by virtue of his suffering from one of the specified disabilities.

13. Non-entitlement to Allowances

It is sometimes useful to have a note confirming that a client is *not* entitled to certain allowances. For example, in the case of a widower or widow the question arises whether he or she is entitled to housekeeper relief, and, if an answer in the negative is received, it is scarcely necessary to repeat the question every year when preparing the income tax return. The same applies to dependent relative relief. The question should be raised at least every six years but meanwhile a note on the permanent file (showing the date of entry) removes doubt and saves the client from being troubled with unnecessary questions.

14. Deeds of Covenant

There is a danger that a deed of covenant may expire and not be renewed promptly, with the result that one or more payments after the date

of expiry may have to be regarded as gifts not ranking for tax relief, in which case both the covenantor and covenantee may suffer financially. A permanent note showing the following particulars should prevent this happening: (1) date of deed; (2) due dates of first and last payments; (3) amount of annuity, showing whether covenanted gross or net; (4) interval at which payable; and (5) names of convenantor and covenantee.

Such a record will also enable ready reference to be made, upon a change in the standard rate of income tax, to all covenants expressed in a gross amount so that client covenantors may be advised to amend the net amount of their future payments appropriately.

It is suggested that pre-1939 free of tax covenants should be specially marked to avoid any error being made in the calculation of the gross amounts of the annuities.

In the event of a client entering into a covenant in favour of, say, someone in his employment, so that a claim for surtax relief is debarred, a note to this effect should be made so that periodically the position may be reviewed and in the event of the employment ceasing before the covenant has come to an end, a claim for surtax relief for the future may be established.

15. Tax Reserve Certificates

A record of any tax reserve certificates held, showing the dates, numbers, amounts, rates of interest allowable and how each certificate was used, together with a note of the whereabouts of unused certificates, is of assistance particularly when a client buys the certificates at fairly frequent intervals (say, £*x* per month by bankers' standing order) or when he provides for more than one year's tax liabilities at a time.

It is not always most beneficial to use the earliest certificates first, particularly if they have been bought, say, monthly, and if the best advice is to be given to the client when tax demands are passed for payment, an up-to-date summary of the certificates held is essential; this presupposes, of course, that the method of purchase of the certificates will first have been discussed with the client and if they are bought at random that the client will have sent in details of his purchases. Such notes can also help to prevent an over-reserve for tax liabilities with a consequent loss of interest on the certificates.

16. Sources of Information

In the larger personal tax cases it is often necessary to apply to quite a number of persons for information for the income tax return etc. The client may, for instance, own estates in different parts of the country with a different agent in charge of each; local accountants may also be employed as well as overseas agents, one or more solicitors, a stockbroker and private secretary, and there may be several accounts at different banks as well as underwriting agents, trustees, etc.

A note of the various sources with brief details of what information is available from each will obviously save time, not only annually when information is being sought for the income tax return, but also at other times when correspondence arises on any of the items.

17. Historical Notes

Especially in the larger personal cases too, valuable information, particularly of events, may become buried in the correspondence file which grows in size all too rapidly. If, for instance, separation of a husband and wife has occurred, the date on which the separation took place and the basis of any apportionment of the child allowances is worth recording permanently.

Notes of a variety of items which may have to be referred to in the future at long intervals can act as very useful 'minutes'. For both companies and individuals, brief references to any outstanding topic of correspondence with the Inland Revenue, giving dates, can be useful if, for instance, some years later a new inspector starts an argument or inquiry on a point that has been thrashed out before.

Also, some clients ask to be supplied with a copy of, say, the income tax returns or Schedule D computations and if no note to this effect is made there is a danger, particularly in the event of changes in staff, of such requests being overlooked.

* * *

These suggested topics are not intended to be exhaustive and others will readily come to mind. On the other hand it will be argued by some that certain of the notes suggested for companies are best included in an audit permanent file; this may well be so, although some firms do not keep such a file.

The important point is that permanent notes should be held *somewhere*, kept up to date and referred to at least annually when the individual's tax returns or the company's computations are prepared. No one client's 'permanent file' is likely to have to cover all the points discussed here, but it can be of the greatest assistance whether it consists of merely one note or of several pages of memoranda.

Fixing the Rates

by A. R. ILERSIC, B.Com., M.Sc.(Econ.)

SPECULATION regarding the outcome of the 1963 revaluation for rating purposes has been widespread in local government circles and elsewhere for much longer than the past few months. It was therefore quite fortuitous that some tentative estimates of mine[1] regarding the possible consequences of that revaluation should have attracted considerable publicity, while others made earlier did not. In response to the public discussion which ensued, Dr Charles Hill, the Minister of Housing and Local Government, informed the House of Commons earlier this month that 'householders as a whole all over the country will not sustain an increased proportion of the rate burden'. This part of his statement attracted rather more publicity than the important qualification that the experience of ratepayers in different areas would vary. This was generally expected and the White Paper *Revaluation for Rates in 1963* (Cmnd. 1663), which appeared last week, indicates the prospective variation between different areas. Thus, in a dozen counties and county boroughs domestic ratepayers' share of the aggregate rate contribution will fall by 16 per cent or more; in three other rating authority areas there is a corresponding increase.

What Went Wrong?

According to the White Paper the share of domestic ratepayers in the aggregate rateable value for England and Wales will fall from 42·04 to 41·35 per cent. It is this figure which is in such marked contrast to earlier estimates, all of which were influenced by the statement of the former Minister, Mr Henry Brooke, in the second reading of the Rating and Valuation Bill in November 1960, which foreshadowed significant increases in the householders' shares. Post-mortems are always depressing but it is essential to know what went wrong. In this particular case, what happened to falsify general expectations and, as *The Times* commented, probably surprised Mr Henry Brooke more than any one else? The purpose of the Rating and Valuation Act under which the revaluation was held was to bring all valuations on to a current rental basis. Since domestic property was (and still is) valued on the basis of 1939 rentals, while industrial and commercial property is valued on 1956 rentals, subject to 50 and 20 per cent derating relief, respectively, the only question was: 'To what extent will the values in each of these main classes of hereditament increase?'

In one of my own estimates the factors used to convert current values on to a 1963 basis are given in the first row of the following table.

	Domestic	Industrial	Shops	Commercial	Miscellaneous	Crown
My estimate	3·5	3·0	2·1	2·1	1·5	1·5
White Paper	4	6	3·5	3·5	3	3

Applying these factors to the distribution of rateable value as at April 1961, the relative share of domestic property was expected to increase from 47·6 to 60·5 per cent, equal to an increase of 27 per cent. Similar estimates had been made, in particular by Mr R. A. Chisholm, F.I.M.T.A., County Treasurer of Cheshire, and by Mr Philip Bean, a chartered surveyor and valuer, which varied about my own figure. All were agreed, however, that the domestic ratepayer would contribute proportionately more after April 1963. It is possible from the data given in the White Paper to estimate roughly the comparable factors necessary to convert current values within each main class of rateable value on to the 1963 basis and produce the inter-class distribution of rateable value predicted after April 1963 in the White Paper. This is possible because it is stated that values of domestic property have been increased fourfold, and given the resultant percentage change in the distribution disclosed in that document, a little arithmetic fills in the gaps. The approximate factors on the basis of the White Paper results are given in the second line of the above table. While strict comparability is not possible due to the slightly different classification used in the White Paper, there seems to be no good reason for believing that these derived figures are seriously inaccurate.

Misleading Comparison

The most important figure is that relating to industrial hereditaments and, for reasons given below, the factor for commercial property is significant. These two figures must, however, be adjusted to take account of the loss of the derating relief as from April 1963. Thus, since industrial hereditaments are currently derated to the extent

[1] To appear in the *Journal of the Royal Statistical Society*, June 1962.

of 50 per cent, the effective overall increase in that class of rateable values is threefold. The same approximate result is derived for commercial properties when allowance is made for the loss of the current 20 per cent relief. It would appear, therefore, that the rateable values of industrial and commercial hereditaments have been increased about three times, compared with a fourfold increase in domestic values. This comparison is utterly misleading. Whereas a fourfold increase for domestic ratepayers is not unreasonable, bearing in mind that current rateable values are based on 1939 rentals, the same is not true of the other two classes of hereditament. Both industrial and commercial property were valued in 1956 on a current rental basis, although a measure of derating was granted to each class. When allowance is made for the loss of de-rating, the implication is that the rentals of these two classes of property have during the past seven years risen by 200 per cent. This is quite ridiculous. Some increases there undoubtedly have been; for example, Mr Philip Bean in a paper, 'The next revaluation', read to the Rating and Valuation Association's conference last September, contended that there was 'a growing volume of rental evidence coming to hand' from which 'it would seem that the net annual value of shops and commercial premises could be increased by more than 50 per cent'. Mr Bean based his forecasts of the 1963 revaluation on the basis of an overall increase in such rentals of about two-thirds. In the case of industrial property he considered that a 50 per cent increase was fair. Yet the official figures given in the White Paper can only be explained on the basis of an increase nearer 200 per cent.

Possible Explanation?

Just how this result has been achieved, it is difficult to say. The most obvious explanation would be that the 1956 valuation did not in fact produce rateable values for commercial and industrial properties which were based on the then ruling rentals. This argument is of doubtful validity, although in some areas it is just possible that it applies. An authoritative study, *The Rating of Dwellings* (page 89), sponsored by The Institute of Municipal Treasurers and Accountants, concluded that the 1956 revaluation achieved 'a greater measure of uniformity in assessment than in any (revaluation) that has gone before'. Mr Henry Brooke stated in the second reading of the Rating and Valuation Bill that commercial properties were entitled to expect some reduction in their share of the rate burden under the 1963 lists in view of their high assessments in 1956. These had already been reduced by 20 per cent in the following year to moderate the impact on that class of occupier. Nor can the felicitous outcome for domestic ratepayers as a class be explained by the higher statutory allowances to be given against the new gross values. The only explanation which makes sense is that industrial valuations in particular, if not commercial, have been raised to the maximum possible extent. On the assumption that the same rate revenue is raised in 1963–64 as in the current financial year, industry will contribute about £118 million as against £80 million as at present. As a class, commercial property occupiers will contribute relatively less than at present, about 10 per cent. In absolute terms, however, given the rising trend of rate payments the aggregate payment from this class is not likely to change as between 1962–63 and 1963–64. The implications of these higher valuations will be felt in the years ahead, as the argument in the leading article in this journal a fortnight ago pointed out.

Variations in Domestic Rating

The considerable variation between the changes in the share contributed by domestic ratepayers in different rating areas was generally expected. It was expected, however, to occur in the opposite direction. It is clear from the White Paper that the burden will be increased on domestic ratepayers in those areas where there is little, if any, industry, i.e. in the southern counties. All the earlier private estimates predicted the reverse situation, i.e. heavy increases for householders in the industrial areas. Since the burden has been thrown on to the industrial ratepayer that forecast has been disproved. It is nevertheless important to remember that in those areas where the householder gets relief, there must be a corresponding increase in the rate charge for the other two main classes of ratepayer. Even the regional variations themselves are, as the White Paper carefully points out, no guide to what individual ratepayers' experience is likely to be. In a rating area such as Berkshire, where the householders' share of the rate burden is estimated to increase by 11 per cent, individual householders are likely to have very different experiences. The valuation of the modern bungalow must be increased much more than the older and less convenient house. Much the same is true of commercial properties. The biggest uncertainty of all is the 20 per cent increase in the rate deficiency grant, which has played its part

in mitigating the effect of the revaluation on the domestic ratepayer. But, until we know how the total rate deficiency grant is to be distributed, it is impossible to judge which areas it will help most.

The most gratifying feature of the White Paper is the clear statement that the Minister does not propose to exercise his powers of abatement, since in no case is the prospective increase deemed to be unreasonable or 'excessive'. In a paper 'Some consequences of the 1963 revaluation', read to the Rating and Valuation conference last September, I criticized the proposals for abatement on the grounds that they could not be operated equitably and, in any case, they represented a breach of the basic objectives of the 1963 valuation. On the other hand, since the distribution of industry throughout England and Wales is not even as between rating areas, as a result of the very sharp increase in industrial valuations, residential property in such areas is to enjoy for the next quinquennium a quite substantial subsidy at the expense of industry. Organized industry was very displeased over the Minister's powers to abate 'excessive' domestic valuations and obtained an assurance that such relief would be for the duration of the next quinquennium only. It seems very likely that during the next few months the Minister of Housing and Local Government will be hearing a great deal from industry about his proposals!

On reflection it seems clear that the 1963 valuation, like that of 1956, has been bedevilled by political considerations. It will, in due course, be seen as just another stage in the sorry history of valuation reflecting the political morass into which the whole question of local government finance has become bogged. The local rate as a tax undoubtedly has its defects, but in the past 350 years no one has thought of a better substitute. It cannot be sufficiently stressed, however, that those defects are not overcome by following a policy based on political expediency.

Weekly Notes

SCOTTISH INSTITUTE'S NEW PRESIDENT

MR JAMES C. STEWART, C.A., was elected President of The Institute of Chartered Accountants of Scotland for the year 1962–63 at the Institute's annual meeting held in Edinburgh last Wednesday.

Mr Stewart was educated at Bearsden Academy and Glasgow High School. In 1922 he became apprenticed to Messrs Aitken & Ramsay, Chartered Accountants, of Glasgow, and was admitted to membership of the former Institute of Accountants and Actuaries in Glasgow in 1928, when he joined the firm of Messrs Wilson, Stirling & Co, Chartered Accountants, of Glasgow. He was made a partner in that firm in 1938 and has been senior partner since 1957.

Mr Stewart has been a member of the Council of the Institute since 1956 and has served on numerous committees, including the Examining Board from 1951 and the Glasgow Local Committee from 1953. He is a director of The Accountants' Publishing Co Ltd, and is Convenor of the Glasgow Library Committee of the Institute. From 1950 to 1951 he was a member of the General Examining Board of the Chartered Accountants of Scotland which operated prior to the amalgamation of the three Scottish accountancy bodies in 1951. At present he is Vice-Chairman of the Overseas Accountancy Examinations Advisory Board, on which the Scottish Institute is represented along with The Institute of Chartered Accountants in England and Wales and The Institute of Chartered Accountants in Ireland.

Apart from Mr Stewart's professional practice, he is a director of three public companies and several private companies. He was a member of the Scottish Departmental Committee on Prescribing Costs from 1957 to 1959 and, for some years in the 1940s, was Secretary of the New Kilpatrick Unionist Association. Before the formation of Bearsden Burgh, he was a member of New Kilpatrick District Council. He is at present, as the Institute's representative, a director of the Glasgow Chamber of Commerce.

He is keenly interested in church affairs, being a member of Bearsden North Church, of which he is an Elder and Clerk to the Deacon's Court. His church has nominated him to membership of the Dumbarton Presbytery. His chief hobby is photography.

Mr W. L. Milligan, B.A.(CANTAB.), C.A., J.P., has been elected Vice-President for 1962–63. He was admitted to membership of the former Society of Accountants in Edinburgh in 1933 and three years later became a partner in the firm of Messrs Chiene & Tait, Chartered Accountants, of Edinburgh, where he is now senior partner. Mr Milligan has been a member of the Council since 1957. (The annual meeting will be reported in *The Accountant* next week).

PLAIN WORDS TO THE CHANCELLOR

ON Monday the Chancellor of the Exchequer received an open letter about his coming Budget which must have been a somewhat chastening experience. It came from the Council for the Reduction of Taxation and it told Mr Lloyd in no uncertain terms that his efforts to curb the growth of public expenditure had signally failed. After pointing to the increase in taxation since 1951, and the fall in the real value of the currency by one-third since 1948, the Council told Mr Lloyd that the increase in public expenditure was the primary cause. It also took the Chancellor to task about the practice of taking special deposits from the banks and made dark references to the use of the printing presses to create money, with the inevitable concomitant of inflation. The Council asserts that 25 per cent is the maximum safe proportion of the gross national product which should be taken by taxation in peacetime.

BANK RATE BACK AT 5 PER CENT

MUCH has been made of the fact that the restoration of Bank rate last week to 5 per cent has been completed with a reduction of ½ per cent only a fortnight before the Budget and only shortly after the reduction from 6 to 5½ per cent.

The continuing inflow of short-term funds is the main cause of the change and it will be surprising if the gold reserves when next published do not show a further increase. The improved prospect for exports, and it has to be emphasized that the improvement so far has only been in prospects and not in reality, has also no doubt decided the authorities to relax the credit situation somewhat.

It is inevitable, however, that a reduction even of ½ per cent so close to the Budget is bound to give the new Bank rate some particular connotation for the internal economy. There have been indications that the slowing down in the production of capital goods in the last few months has been more serious than the Government bargained for and there is little doubt that a continuing rigorous credit policy at home is likely to affect particularly building construction and new plant and equipment. The whole doctrine of contraction of the internal market to stimulate exports has been seriously challenged of late, since it has been widely admitted that to reduce the demand for goods in the domestic market is not automatically to increase the flow of exports.

For a number of reasons, therefore, the return to 5 per cent has been taken as a signal that better business prospects all round are to be officially stimulated for the rest of 1962 and that the Budget when it comes will be a less severe affair for the taxpayer than was expected in the closing months of 1961. One consequence of all this will inevitably be that discussion of the impending capital gains tax proposals will have an added fascination.

TRADING FOR CAPITAL GAINS

THE quotation below is from an article by Mr William Rees Mogg in the City Section of *The Sunday Times* last Sunday.

> 'The Chancellor seems to be planning a short-term gains tax, with no allowance for losses, and it is very doubtful that he will feel able to reduce or abolish stamp duty, even for non-residents. There can be no doubt that this type of capital gains tax will be widely attacked and resented.
>
> 'A tax on people who trade for capital gains can certainly be justified, but it must be on the same basis as the taxation of any other trade. A Stock Exchange dealer, amateur or professional, is carrying on a perfectly lawful and in fact a useful occupation; he takes a risk, makes a market and hopes for a profit. A situation in which the Government shares only his winnings could easily lead to him paying large sums of tax in a year in which he had made – as speculators of any kind often do make – a net loss. Such a discrimination is inherently unreasonable; it would be avoided by some and rightly resented by others. It is essential that any form of taxation should be manifestly fair.'

The idea of a professional stock exchange dealer not being allowed to deduct his losses is certainly a startling one.

MISS JACQUELINE DU PRÉ

CONGRATULATIONS to Mr Derek du Pré, Secretary of The Institute of Cost and Works Accountants, and former editor of *The Accountant*, on having such a talented seventeen-year-old daughter in Jacqueline, whose outstanding success as soloist in the Elgar Cello Concerto in her first B.B.C. Symphony Concert at the Royal Festival Hall on Wednesday of last week has been universally acclaimed.

Jacqueline du Pré made her début at the Wigmore Hall, London, a year ago, receiving high praise from the music critics. Since then, she has played in London, at the Bath Music Festival, in the provinces, and in the Netherlands. She has also broadcast and played on television. In the next few months, she will be a soloist in Chester Cathedral, at a Promenade Concert in the Royal Albert Hall, at the Cheltenham Festival, and at the Edinburgh International Festival.

AID FOR DEVELOPMENT

DESPITE all the publicity which may suggest that the contrary is the case, of the total aid to developing countries amounting to $8,000 million in 1960, only 5 per cent came from the Sino-Soviet bloc. The balance was provided by the O.E.C.D. group of nations together with Japan, although the main supplier was the U.S.A. whose contribution represented about 45 per cent of the whole. It is noteworthy that France's contribution was more than double that of the United Kingdom.

Among other facts reported in a recent O.E.C.D. report[1] is that aid from the international agencies is expanding; it was 15 per cent of the total in 1960. Private aid was much increased in 1960 although the bulk of the funds continue to come from governmental sources. All the indications are that the supply of such assistance to the developing countries is increasing. If the United Kingdom is to play its full role in this important field, an improvement in the balance of payments position, if for no other reason, is imperative.

AIESEC

TO most members of ICAEW (The Institute of Chartered Accountants in England and Wales) and other kindred bodies (ICAS, ICAI and ACCA among them), AIESEC may sound like nothing more than 'always dry' but the mnemonic does in fact stand for the Association Internationales des Etudiants en Sciences Economiques et Commerciales. The aim of this body – which is independent and non-political – is to promote international understanding in economics, commerce and law and it aspires to do so by holding seminars and study tours and by arranging the exchange of commercial traineeships for students during long vacations.

A report of its activities during the past year and its plans for the immediate future are contained in the 1962–63 handbook of its London Joint Committee operating from the London School of Economics. It is expected that this summer 300 British students will go abroad under the traineeship scheme out of an international total of 3,000. As these visits are on a reciprocal basis, the more firms in this country willing to offer vacancies, the greater is the number of British students that may go abroad. One advantage which may accrue to companies participating is the possibility of recruiting suitable graduates for permanent positions from the ranks of ex-AIESEC students. Full particulars of the scheme may be obtained from the secretary of the London Joint Committee, Mr J. C. Hartley, at Houghton Street, London WC2.

LIFE ASSURANCE AND INCOME TAX

AT its fourth sessional meeting held in Edinburgh last week, the Faculty of Actuaries heard a paper by Mr W. Lundie, C.A., F.F.A., on 'The development and incidence of United Kingdom taxation in relation to mutual life assurance'. Introducing his subject, Mr Lundie explained that the object of his paper was to show that, however irrational and unsatisfactory the results of the present basis of assessment to income tax of mutual life assurance companies might be, the system had developed in a logical manner and could be explained rationally in terms of the general framework of United Kingdom income tax and the special nature of life assurance. Mr Lundie dealt with his subject in four sections. In section 1 he described the general framework of taxation in the United Kingdom. He considered those provisions relevant to life assurance companies and analysed the position which would arise in the absence of special legislation (as to which see in particular Part XX of the Income Tax Act, 1952) applicable to life assurance. This specialized legislation came in for closer examination in section 2, where Mr Lundie described how it had evolved. In section 3 the speaker described the present position, analysing the liability to tax of a mutual life assurance company under the present law and practice. To do so he employed an algebraic treatment of the possible bases of assessment, preferring this to an arithmetical treatment, as the former allowed him to be as general as possible. Finally, Mr Lundie discussed the consequences of the present position and suggested how future legislation might remove anomalies and simplify the system.

SHORTENING APPEAL COURT PROCEEDINGS

THE Court of Appeal is endeavouring to cheapen the proceedings before it by shortening the amount of time spent in open Court in the reading of documents which have already been available to the Court. By way of experiment, therefore, the Lords Justices have arranged to read, before each appeal comes on, the following documents:

(1) the pleadings or the originating summons (or their equivalent);
(2) the order of the Court below which is being appealed from;
(3) the notice of appeal and the respondent's notice (if any);
(4) the judgment of the judge appealed from, together with the reports of the cases cited by him in the judgment.

The experiment has the full support of the Lord Chancellor and the Court of Appeal has consulted representatives of the Bar and of The Law Society.

In making this announcement on March 22nd, Lord Evershed, the Master of the Rolls, emphasized the importance of the careful drafting of notices of appeal so that the Court could understand beforehand the points which were going to be raised.

SETTLEMENTS HELD TO BE IRREVOCABLE

LAST Tuesday the Court of Appeal, by a majority of two to one, allowed the appeals of the tax taxpayers from the decision of Mr Justice Plowman in *Jamieson v. C.I.R.* and *Wills v. C.I.R.* (40 A.T.C. 242). The dispute turned on the construction of section 399 of the Income Tax Act, 1952, which is part of the fasciculus of sections directed against settlements on the infant children of the settlor.

The section provides that a settlement shall not be deemed to be 'irrevocable' if, *inter alia*, the terms

of it provide for the determination of the settlement by the Act or on the default of any person.

In the settlements in question, the trustees had an overriding power to appoint capital to one or more beneficiaries. The Crown argued that since all the trust fund could be appointed to one adult beneficiary who could then require the fund to be transferred to him, therefore this power of appointment was a power to determine the settlement. Mr Justice Plowman held himself bound to accept this argument in view of the House of Lords' decision in *Kenmare v. C.I.R.* (36 A.T.C. 189). However, the Court of Appeal, according to *The Times* of March 28th, have distinguished that case.

The appeals related to years prior to 1958–59, the settlements being saved from section 399 for subsequent years by virtue of the amendment made to the second proviso by section 20 (5) of the Finance Act, 1958. This amendment has the result that a power to determine the settlement is still not fatal, provided that neither the settlor nor his wife can thereby benefit.

This is My Life . . .

by An Industrious Accountant

CHAPTER 117

OUR personnel director, Prinny, is becoming a source of concern to all our accounts staff; if he continues on his present course of misbehaviour I'll need to institute reforms which may prove painful to more than one.

Firstly, let it be clear, we like Prinny. As personnel directors go, he could be worse. Many's the pleasant afternoon tea we've shared while discussing our problems of job rotation or long-term training for potential chief executives or annual salary increases. Many's the steaming pot of morning coffee we've emptied, laden with cream and brown sugar, while we tried to settle personal disagreements over staff status or insubordination. Listening to Prinny chuckling over lunch, his pink jowls shaking, his waistcoat heaving . . . have I perhaps given the impression that Prinny likes the gastronomic good things of life? That he's a gourmet if not a gourmand? Well, that's just the trouble. He's too fat.

It started when he had a routine medical check-up shortly after Christmas; after one horrified look at the scales, his doctor gave him a lecture which really worried him. Lose two stone fast, or else. . . . For Prinny, it was time to act.

We thought he was joking at first, when the chocolate biscuits vanished from our various meetings to be replaced by plain, wholesome oatmeal wafers. He grinned wryly as he produced little vials of saccharine tablets which he dropped into his cups of tea; he became morose as he waved away potatoes or butter at lunch. He became quite irritable by mid-afternoon. He smoked feverishly throughout the day, each pang of hunger triggering off a reflex fumble for his cheroot case.

Then one morning we had a meeting about holiday schedules; we had been talking quite some time when I realized that our coffee hadn't arrived. 'You chaps are always thinking of your stomachs,' said Prinny with an irascibility, not to say rudeness, far removed from his normal geniality. I sympathized with him too much to make an issue of it, seeing which he relented and we went out to look for the trolley which by now had gone far on its way to our general office.

Being accustomed to having our own individual tea-trays which are prized perquisites with a chequered history of heartburnings and jealousies for years back, we hadn't actually seen the trolley in action for a long time. It was worth seeing. It had developed since its inception as a carrier of biscuits. A seething crowd of clamorous junior accountants surrounded it, stretching, grabbing, balancing precariously huge mounds of food. Some had massive hot-dogs bulging with salad and sausage; some had double-decker sandwiches and cakes. My cost accountant was declaiming something about enjoying his breakfast. There was ten minutes' solid eating on the plate beside him. Prinny gazed with bulging eye like a Spanish bull under the banderillas; he looked about to charge.

But I was proud of my staff. Granted that they were caught red-handed, that the thing had got out of hand; but they neither panicked nor looked defiant. They dispersed with quiet dignity and the food seemed to vanish imperceptibly; almost instantaneously they seemed to be either back at work or else sipping tea – legally and properly – biscuit in hand. The only blunderer was the cost accountant who tried to gobble too fast; suddenly he choked and left hurriedly with heaving shoulders.

Prinny said nothing as we left; but later he announced that he was considering abolishing the trolley and we nearly had a row. That the privilege was being abused was true; but the remedy was not abandonment but control, which must be based ultimately on good sense. This thorny question has bedevilled industrial relations for years; it was up to us to handle it intelligently. Unfortunately it got Prinny on the raw in his comparatively emaciated condition. He's been picking on us since for every trifle; the atmosphere in our section is becoming tense. It seems the existence of food should be unworthy of notice in the highly rarefied intellectual stratosphere of accountancy.

Prinny is due for another check-up next week. Unless his drastic dieting is relaxed, there's trouble ahead.

Finance and Commerce

Hartley Baird

THIS week's reprint is from the accounts of Hartley Baird Ltd for the year to April 30th, 1961. Hartley is a subsidiary of Camp Bird Ltd and in its turn has a subsidiary, H. J. Baldwin & Co Ltd, which again in turn has a subsidiary, Wireohms (Universal) Ltd. The net result of the chain of interests is decidedly complex and the complexity is not eased by the fact that Hartley's auditors 'are unable to say that the consolidated profit and loss account reflects a true and fair view of the group's loss for the year so far as concerns members of the company'.

It will be noted from the reprint that the Baldwin figures, made up to the same date, have been separated from the consolidation to 'give members a clear view of the results of all subsidiaries other than Baldwin and the composition of the Baldwin loss'.

The Baldwin directors, Hartley's report says, attribute the Baldwin loss to realization at prices under cost or book value of the balance of the stock of refrigerators and other appliances held at May 1st, 1960, writing down of the investment in certain subsidiaries, and the making of further provision against debts due from subsidiaries, the collection of which may be in doubt.

Stocks

One great source of uncertainty is the Wireohms position on which the Baldwin directors are taking legal advice. Wireohms had been a Baldwin associate company but was made a wholly-owned subsidiary on April 28th, 1961, to enable the directors to deal with the numerous inter-company problems existing, 'more especially the valuation of the stock-in-trade and work in progress'.

The statement on Wireohms continues:

'The auditors of Wireohms (Universal) Ltd have reported that the stock certificate signed by certain directors of that company and the stock sheets produced to them for the purposes of audit for several years prior to 30th April, 1960, were incorrect, as a result of which the directors of that company have written off £43,266 as at 30th April, 1960.

'In their opinion, the stock sheets and records that are available are such that no useful purpose would be served by further detailed checking, as even the most exhaustive tests could not enable them to verify the figure for stock-in-trade and work in progress either at 30th April, 1960 (£125,481), or 30th April, 1961 (£65,768), and in these circumstances the auditors have been obliged to accept the certificate of a director of that company who did not sign the incorrect stock certificates referred to above.'

Profitable Now

Mr Hartley, for his company, refers to the investigation into and reorganization of Baldwin, the principal subsidiary, instigated in the latter half of 1960. When finalizing the accounts for 1960, he says, an endeavour was made to make provision for such amendments and adjustments to Baldwin's accounts as were then ascertainable.

But subsequent and fuller investigation has revealed that the provisions were inadequate and the year to April 1961 'has been loaded with the balance of adjustments and write-offs necessary to clear up the situation'. The result is the Baldwin after-tax loss of £86,017 in the year to April 1961, the major portion of which has had to be included in the Hartley accounts for that year. The effect has been to wipe out the profits made available to Hartley from other subsidiaries. But for the Baldwin situation, the Hartley group, he says, would have earned a profit in the year under review.

What is done cannot be undone, but there is the assurance from Mr Hartley that in the current year all subsidiaries, including Baldwins, are operating profitably and indeed, he says, their internal accounts confirm this to be the case. Future accounts, he promises, will be presented at a much earlier date. The delay on this occasion was caused by the Baldwin problems.

Growth

TEN years or so ago, there emerged from the nationalization of cable and wireless communications a new investment trust company, Cable & Wireless (Holding). Sir Edward Wilshaw, now governor, insisted that compensation should be invested rather than distributed. This year, he looks back:

'When we commenced business as an investment trust in 1950,' he says, '£100 of our stock would have been bought for £96. Since that time, a further investment of £115, making a total of £211, would have sufficed to take up the full entitlement of shares issued by way of rights.

'Today, the shares so purchased plus those issued free by way of capitalization of reserves would be worth some £860. During the same period, gross income receivable would have risen from £6 to £27, the latter representing a return of £12 16s per cent on the total sum invested.'

Undoubtedly, the company became an investment trust at the right time. What investors would like to know is whether the time is still right. If one could only job forwards as well as backwards!

Auditors' Report

We have examined the books and accounts of Hartley Baird Limited for the year ended 30th April, 1961 and also the Group Accounts of the Company and its subsidiaries dealt with thereby with the audited accounts of those companies certain of which have been audited by other firms. In our opinion proper books of account have been kept and the Balance Sheet of the Company, which is in agreement therewith, together with the Group Accounts comply with the requirements of the Companies Act, 1948.

Subject to certain of the following remarks we have received all the information and explanations which we considered necessary:—

(i) As related in paragraph 4(c) of the Directors' Report the auditors of one subsidiary (an associated company in 1960) state that they have been unable to verify the figures for stock in trade and work in progress either at 30th April, 1960 (£125,481) or at 30th April, 1961 (£65,768).

(ii) Included in Investments in Associated Companies at a valuation of £48,000 are certain shares, previously held by a former subsidiary at a substantially lower figure, which were acquired by Hartley Baird Limited following upon an agreement for the sale of the subsidiary during the year. We have been unable, from such information as is presently available to us, to satisfy ourselves as to the value now attributed to these shares.

(iii) With regard to the amounts receivable from associated companies, we have reason to believe that a substantial part could not at present be settled by the principal debtors. The recovery of such debts is therefore, in our opinion, largely dependent upon the invocation of guarantees given by Camp Bird Limited which is the holding company of Hartley Baird Limited.

(iv) The freehold land and buildings of Hartley Baird Limited have been out of full operational use for several years and we can express no opinion as to the value of these items.

(v) The record of the subsidiary concerned does not in our opinion justify the value of £30,331, largely attributable to that company, which is carried forward in the Consolidated Balance Sheet under the heading of Intangible Assets.

Except in so far as they may be affected by the foregoing reservations in our opinion the Balance Sheet and Consolidated Balance Sheet give, respectively, a true and fair view of the state of affairs of the Company and of the Group at 30th April, 1961 and the Consolidated Profit and Loss Account gives a true and fair view of the profit dealt with in the accounts of Hartley Baird Limited for the year then ended; moreover, by reason of the inability of the Auditors of the subsidiary referred to in (i) above to verify the figures for stock in trade and work in progress either at the beginning or at the end of the accounting year, we are unable to say that the Consolidated Profit and Loss Account reflects a true and fair view of the Group's loss for the year so far as concerns members of the Company.

BROWN FLEMING & MURRAY,
Chartered Accountants.

LONDON, *6th March, 1962.*

HARTLEY BAIRD LIMITED

Notes on the Accounts

1. Fixed Assets

	At Cost or Valuation	Depreciation to date	Book Value 30.4.1961	1960
	£	£	£	£
(a) HOLDING COMPANY				
Freehold Land and Buildings	64,882	—	64,882	*64,882*
Plant and Machinery	5,854	5,254	600	*2,600*
Fixtures and Fittings	4,979	3,979	1,000	*2,550*
Motor Vehicles	869	219	650	*750*
	£76,584	£9,452	£67,132	*£70,782*
(These assets were not in full operational use at 30th April, 1961.)				
(b) SUBSIDIARY COMPANIES	£	£	£	£
Freehold Land and Buildings, Minerals and Kilns	580,295	29,355	550,940	*406,272*
Leasehold Land and Buildings	—	—	—	*5,207*

	1,133,825	354,766	779,059	*596,128*
Tools and Dies at Valuation	6,415	—	6,415	*1,826*
	£1,140,240	£354,766	£785,474	*£597,954*

(c) Freehold Land and Buildings of a Subsidiary Company are subject to a leasehold interest expiring in October, 1980.
(d) Depreciation has not been provided against Freehold Property having a book value of £238,026 (*1960: £460,877*).

2. Subsidiary Company not Consolidated

The Accounts of a Canadian Subsidiary have not been consolidated as the Directors are of the opinion that their preparation would involve delay out of proportion to the value of such Accounts to the members of Hartley Baird Limited.
The loss of this Subsidiary for the year ended 31st March, 1961, attributable to the Holding Company is approximately £1,933, and this has been provided for in the Accounts. There are no profits or losses for prior years attributable to the Holding Company.

3. Amounts receivable from Associated Companies

	HOLDING COMPANY 1961	HOLDING COMPANY *1960*	GROUP (*including holding company*) 1961	GROUP (*including holding company*) *1960*

Mortgage	143	
Freehold Property	29	
Premium on acquisition of Shares in Subsidiaries	37,509	
		67,464
		NIL

6. Cumulative Preference Shares

The Cumulative Redeemable Preference Shares of Hartley Baird Limited may be redeemed at any time on or after 31st December, 1968, and in any case shall be redeemed by 31st December, 1978, at a premium of 1s. per share. The Company may also from time to time redeem all or any of such shares by purchase in the market at a price not exceeding 21s. per share.
The Cumulative Preference Dividend of H. J. Baldwin & Company Limited has been in arrear since 31st March, 1961.

7. Directors' Emoluments

	1961	*1960*
	£	£
Fees	708	*1,357*
Remuneration	8,009	*12,616*
Pension contributions	383	*2,090*
Compensation to a former director	5,000	—
	£14,100	*£16,063*

8. Balances Brought Forward

	£
Subsidiary Companies at 30th April, 1960—deficit	23,200
Add: Balances of Subsidiary Companies sold during the year and provision for sale of an investment	20,687
	43,887
Less: Adjustments in respect of minority interests	4,137
Deficit	£39,750

9. Adjustments Relating to Former Years

	1961	*1960*
	£	£
Amount recovered in respect of a former Subsidiary	11,859	—
Taxation	5,404	*2,862*
	£17,263	*£2,862*

10. Commitments for Capital Expenditure—Group

Commitments at 30th April, 1961, not provided for in these accounts amounted to £26,044 (*1960 £8,288*).

11. Guarantees

At 30th April, 1961, there were contingent liabilities of the Group in respect of Guarantees (including Holding Company £50,000 (*1960 £50,000*)) of £173,000 (*1960 £188,000*).

12. Rates of Exchange

Foreign currency items have been converted into sterling at the appropriate rate ruling on 30th April, 1961.

CITY NOTES

THE anticipated capital gains tax now seems to have outweighed most other factors in stock-market calculations. The visible sign is a rush of and for new issues. Invisible, but audible, is the rumble of conjecture on the form which the tax is to take.

The City is apt to develop a persecution mania under such conditions. The Sword of Damocles, whose thread the Chancellor is expected to cut on Budget Day, is variously forecast as razor sharp on one hand or as a blunt instrument on the other.

By the same token, opinion seems widely varied on the likely effect of a gains tax on the stock-market itself. Some maintain that such a tax will make no difference to speculative ardour. A taxed gain, it is argued, is better than no gain at all.

The other extreme is to suggest that short-term speculation will disappear entirely. The answer probably lies midway between the two extremes. It is difficult to convince speculators or short-term operators that there is justice or even logic in a tax on short-term gains. Even the Chairman of the Stock Exchange has insisted that the tax is entirely a political manoeuvre.

In its preoccupation with the tax the Stock Exchange, however, is tending to overlook the possibility that the Budget may contain measures of far greater economic consequence.

Reviews

Measurement and Control of Office Costs

by S. A. BIRN, R. M. CROSSAN, and R. W. EASTWOOD. (McGraw Hill Publishing Co Ltd, London. 58s.)

The objective of the method described in this book is to control office costs by setting standard times for routine office operations. In modern businesses, repetitive factory operations are scientifically measured and performance is controlled against standards. Manufacturing costs are subject to the closest scrutiny, but efforts to apply the same techniques in the control of office costs have run across many obvious difficulties. The system proposed by the authors of this book is a development of M.T.M. (methods-time measurement) which has been successfully employed in factory operations.

Experts in control of factory costs will know that the setting of standard times for each different operation is a tedious and lengthy task. However, the authors point out that many office operations are in fact less varied than factory work and can be reduced to a reasonable number of standard movements for which times can be fixed. These standards, which are listed in the appendix to this book, are called 'master clerical data' (M.C.D.) and can be applied to most routine office operations. As pointed out in the preface, M.C.D. can only be applied to those office tasks where work is done mainly with the body and mental operations are limited to searching, matching, copying, etc. Creative thinking cannot be measured and probably never will be.

The authors have had practical experience of the application of M.C.D. in the control of office tasks such as receiving and checking orders, filing, invoicing, punched-card operations, etc. Detailed descriptions of working methods are given, accom-

panied by some sound advice on the psychological approach to this kind of work. It is difficult to say just how widely M.C.D. can be employed, but certainly this book should be of considerable interest to anybody in a methods department of a fairly large organization working on the control of office costs.

The Organization from Within

by CYRIL SOFER. (Tavistock Publications Ltd, London. 25*s*.)

Mr Sofer has written a highly individual and personal account of three assignments in the field of what is often termed 'industrial psychology' and has made a very readable account of his activities. However, one cannot help reflecting that, large as is the undoubted scope for work of this nature, many of his clients ought to be able to settle their own affairs more expeditiously and of their own volition given a little more personal charity and a little less self-interest. Unhappily, however, conditions such as the author describes exist only too often.

It is equally sad to read of the interview with a company's auditor who had obviously never experienced the tremendous assistance which vocational guidance can give. Mr Sofer records: 'The auditor himself was puzzled and sceptical about my role and the value of any contribution the [Tavistock] Institute [of Human Relations] might make.' Thereafter no further mention of the auditor occurs.

There is no doubt that the profession is often the loser on occasions when an auditor makes no attempt to see the value of the contribution someone less 'traditional' in outlook than himself can make in a client's business affairs. Certainly, most men of merit in professional life have in fact developed their own experience of psychology in trying to deal with staff promotion problems in conjunction with their clients – particularly at board level; and they will be sensibly sympathetic to the systematic work recorded in these case studies, and the analysis of the theory underlying that practice, which constitutes the second portion of this interesting book.

Accountants who read this record of a new professional service to industry cannot fail to widen their understanding of a difficult modern problem, especially as portrayed in the first case study entitled appropriately 'An industrial setting'.

Playing with Infinity

by Professor RÓZSA PÉTER. (G. Bell & Sons Ltd, London. 25*s* net.)

Many continental mathematicians have a gift for writing entertainingly about their subject and Professor Péter is no exception. For more than 250 pages, she conjures with numbers, symbols and shapes so adeptly that the reader is beguiled into forgetting that the book, in fact, is all about arithmetic, algebra and geometry. This is the author's intention because she believes that art and science are closely linked and that there is no reason why the principles of mathematics should not be presented in an attractive form. Professor Péter certainly succeeds in doing this and if her arguments become a little difficult to follow when she warms to her work (the titles she gives to the three parts of her book – The Sorcerer's Apprentice; The Creative Role of Form; and The Self-Critique of Pure Reason – are perhaps indicative of the progression towards the higher flights of argument), this will not deter the serious reader.

Credit must also be given to Dr Z. P. Dienes for a felicitous translation from the text of the original Hungarian.

Marketing for Profit

by DOUGLAS P. GOULD. (Reinhold Publishing Corporation, New York; Chapman & Hall Ltd, London. 44*s*.)

Basis for Marketing Decision

by LOUIS CHESKIN. (Business Publications Ltd, London. 35*s*.)

Both of these books are by American authors; both concern techniques of selling. There the resemblance ends.

Mr Gould's book will certainly appeal more to accountants – especially those who appreciate the assistance of their economics training and continue to make use of graphs for practical and helpful purposes. A great deal of this book consists of examples of cases which will be readily appreciated, often involving comparisons of marginal profitability from department to department or between a number of selling lines. Throughout, the emphasis is on control of selling in a planned, scientific manner, although the feeding of ideas upwards is not overlooked.

Mr Cheskin, on the other hand, is concerned almost exclusively with the technique of what is known as 'motivation', and research into the personal likes and dislikes, prejudices and weaknesses of the buying public. To quote Mr Cheskin: 'Motivation research is the type of research that seeks to learn what motivates individuals in making choices. Motivation researchers employ techniques designed to reach the unconscious or subconscious mind because preference generally is determined by factors of which the individual is not aware. . . . The best ads. are motivating ads. not ads. that are consciously recalled. An ad. does not have to be remembered to be motivating.'

Having set forth and amplified the technique in the first half of his book, Mr Cheskin uses the second half for a series of studies, some actual, some hypothetical, introducing in statistical-tabular form the results of applying motivation research to each problem.

There is no doubt that there is a 'fringe area' between what top management needs in order to

understand and plan its activities in the field of sales, from its consultants, its salesmen, its factory managers and its accounting staff. The provision of information suitable to studies such as are dealt with especially in Mr Gould's book, must largely be the province of management accounting. In many cases – and especially to the smaller business unit – it may well fall to the professional accountant to provide such services; and to appreciate what is involved by first reading Mr Gould's book cannot but assist any aspiring management accountant on his way.

Certainly to read Mr Cheskin's book must open one's eyes and broaden one's ideas, and for accountants this should be sufficient justification.

National Income and Expenditure

by Richard and Giovanna Stone. (Bowes & Bowes. London. 15*s*.)

This book replaces a further revision of the well-known pamphlet on the same subject by Meade and Stone which served so many generations of post-war students of the subject. It is more ambitious in its scope than the earlier editions and discusses the problems of deflating national income series over time, as well as the problems of international comparisons, with special reference to British and American data. It is, however, very clearly written and remains by far the best introduction to the subject for the serious student.

Investment and Production

by Vernon L. Smith. (Harvard University Press. London: Oxford University Press. 60*s* net.)

This new study in the excellent series of Harvard Economic Studies originated in a doctoral thesis on the economic basis of the replacement of capital equipment within industry. Inevitably the standard of exposition is at a level suitable for fellow economists, who must be well-acquainted with the modern mathematical approach as well as diagrammatic exposition. It is basically a theoretical study of the theory of the firm. It is exceptionally well written for this type of work and the technician, who is normally well-equipped with an understanding of mathematics, will find in this book a stimulating approach to the evaluation of investment policy in the business undertaking.

Indian Tax Structure and Economic Development

by G. S. Sahota. (Asia Publishing House, London. 21*s* net.)

The importance of fiscal and budgetary policy for purposes other than revenue raising are not always appreciated, even a quarter of a century after Keynes' *General Theory* appeared. This little book which is one of a series of studies undertaken by the Institute of Economic Growth in Delhi, discusses the basic facts of Indian taxation. It shows how tax policy has been used to stimulate investment and to reduce consumption, and discusses the value of budget surpluses as a source of investible funds in the developing economy. For the reader interested in India's economic problems it will have a special appeal.

The Law of Stamp Duties

Third edition by J. G. MONROE, B.A., Barrister-at-law. (Sweet & Maxwell Ltd. London.)

The principal change in this edition is that the work now includes the complete text of the Stamp Act, 1891, and amending Acts. The author has also extended the treatment of the section providing for exemption from conveyance duty of conveyances between closely associated companies, and there is a separate chapter on unit trusts.

Now that the complete text of the Acts is available in the book, one wonders why the author has attempted to paraphrase section 55 of the Finance Act, 1927, dealing with reliefs in relation to company reconstruction. The section, which is tabulated, can just be understood if read carefully; whereas the author's paraphrase chiefly consisting of a 240-word sentence, untabulated, imposed a much greater strain on at least one reader than does the section itself. Although it might appear to be special pleading, it is suggested that the publishers in future editions might show the *Annotated Tax Cases* reference in all cases where a reported decision is noted and has been included in that series of reports. Some thirty-one of the cases cited in this edition of *Monroe* fail to show the A.T.C. reference, although in fact that is frequently the only report which includes the stated case.

MacGillivray on Insurance Law

Fifth edition by DENIS BROWNE, M.A., Barrister-at-law. (Sweet & Maxwell Ltd, London. 2 vols. £12 12*s* net.)

The part played by insurance in modern economic and financial life has increased enormously, particularly since the last war. The growing wealth and standards of living of the population have brought with them an enormous demand for insurance of property and life and limb, not to mention the special fillips given by the tax advantages to be enjoyed by means of life policies, whether by ordinary life insurance relief from income tax, or through retirement benefit schemes, or through policies designed to minimize the effects of estate duty. Even the growing concern with maintenance relief for Schedule A has increased the tendency to take out insurances on property.

As may be imagined, however, the problems to which insurance law can give rise are extremely complex. Moreover, the sums involved are now so

great that the cost of obtaining good and disinterested advice is money well spent. It would be difficult to imagine any problem on insurance (other than marine insurance) with which *MacGillivray* does not deal. One says *MacGillivray* because that is the title which the work will no doubt continue to bear, notwithstanding that since the fourth edition appeared the original author has died and this new edition is the responsibility of Professor Denis Browne who for so many years collaborated with Mr MacGillivray in procuring for the work the prestige which it so deservedly enjoys.

Indeed, the fifth edition is an even greater achievement than its predecessors. Professor Browne has very properly excised the long section on general company law and has used the space as well as that made free by some expert pruning, for the new material which the passage of time, since the fourth edition, has thrown up. The estate duty treatment of life policies was materially changed in 1954 and Professor Browne deals with this change in the course of a masterly disquisition on the subject of estate duty. In books on special branches of the law, the treatment of the relevant stamp duties is often fragmentary and therefore misleading; but Professor Browne devotes no less than twenty-three pages to this one topic, all of which are very much to the point and indicate the care with which he has assembled and sifted his material.

The work is for the first time split into two handy-sized volumes but a full and comprehensive index is given at the end of each volume. The whole production is of a very high standard.

Accountancy

by K. S. CARMICHAEL. (*The Sunday Times* Career Books. 3*s* 6*d* net.)

This guide to accountancy as a career tells of the progress of an imaginary articled clerk until he is fully established as a junior partner in a practising firm. The author (the omission of whose designatory letters will not conceal his identity to many) contrives to make tactful comparisons between the syllabuses of the leading professional bodies and conveys a vivid impression of the kind of life the young man who wishes to become a qualified accountant may reasonably expect. It is a pity that the titles of the Scottish Institute and its magazine are incorrectly given on some pages but that presumably will be put right when the book is reprinted.

Topolski's Legal London

Illustrations by FELIKS TOPOLSKI; text by FRANCIS COWPER; foreword by Rt Hon. The Lord BIRKETT, P.C. (Published for *The Lawyer* by Stevens & Sons Ltd, London. 3½ gns. net.)

Ten inches deep and fifteen inches wide, this outstanding example of the art of book production would make an excellent present to any legally-minded person. There are fifteen illustrations by Feliks Topolski of various aspects of legal life in London, each accompanied by a text written by Francis Cowper. However, neither picture nor text is subordinate to the other.

The work of Feliks Topolski is well known; the portraits are of actual legal individuals, although in most instances unidentified. Frances Cowper is a law reporter and a legal historian; his text is eminently readable, permeated with a love of his subject but accompanied by a dry humour and some gentle thrusts. In a mocking review of the architecture of the Central Criminal Court he mentions a particularly incongrous allegorical painting of 'naked nymphs prancing among flowery garlands, perhaps young persons in need of care and protection'. Describing a set of barristers' chambers he observes that the professional fate of its occupants depends on their clerk, but he is too discreet to say whether he thinks this a good or a bad thing. Last, but not least, there is the foreword in Lord Birkett's inimitable limpid prose.

The printing, paper, binding – everything, in fact, comprising this book contributes to a publication *par excellence*.

SHORTER NOTICE

THE RATING AND VALUATION ACT, 1961, with a guide and index, by Lord Meston, Barrister-at-law. (Property Owners' Protection Association Ltd, London. 7*s* 6*d* net.) This 40-page paper-backed booklet, expounds the provisions of the Act in illuminating fashion, and embodies a most extensive and useful index.

Stock Valuation Reconsidered

SIR, – After reading Mr Staubus's article 'Stock valuation reconsidered' (March 10th issue) I was moved to breathe a sigh of relief that it wasn't my misfortune to be taught accountancy at the University of California, because it surely isn't necessary to introduce so much complexity into such a basically simple matter.

The Institute of Chartered Accountants knows, as surely as does any other sensible body, that manufacturing overhead charges are just as much a part of cost as raw materials and labour, and that *purely from an academic point of view* they should be included in stock valuations at the end of a financial period. What they also know, fortunately, is that academic theory must give way to economic necessity and/or business prudence.

Since there are many items in accountancy incapable of accurate measurement – depreciation is only one example – accountancy can never be a science. I do wish the theorists would learn this basic fact.

Yours faithfully,

Heanor, Derbyshire. ROBERT LOWE.

Acquisition of Company: Determining Cost of Shares

SIR, – You began your interesting comments on the report and accounts of Turner & Newall Ltd ('Finance and Commerce,' March 10th issue) with the observation that 'reprint limitations do not permit full justice being done to the accounts'. One of the interesting features which you did omit was the fact that the auditors, Messrs Deloitte, Plender, Griffiths & Co, qualified their report as 'subject to the method of determining the cost of shares acquired in British Industrial Plastics Ltd as explained in Note 1 on page 14' and as reported by you.

The qualifying words 'subject to' indicate that the auditors are not satisfied with the method but my Aunt Fanny, who holds a few shares in the company, says that she remains in the dark as to what method would have satisfied them. Readers may remember that in the accounts of Leyland Motors Ltd at September 30th, 1952, a somewhat similar point was dealt with by the directors in a note reading as follows:

> 'The whole of the share capital of Albion Motors Ltd was acquired by the issue of 133,866 Preference Shares and 477,920 Ordinary Shares, all of £1 each, of Leyland Motors Ltd, and the investment is entered in the balance sheet of Leyland Motors Ltd at the nominal amount of the shares so issued. The company sought the advice of Counsel as to whether, in view of a legal decision, the excess of the value of the shares so issued over the nominal amount constitutes a premium within the meaning of section 56 of the Companies Act, 1948, but the two counsel consulted were unable to agree. Such premium (if any), if based on the book value of the net assets of Albion Motors Ltd, at the date of acquisition, would amount to £2,108,829.'

No doubt the Jenkins Committee will have something helpful to say on this point; meantime our course will vary between port and starboard depending upon the choice of counsel invited to act as pilot through these broad and shifting waters.

Yours faithfully,

AUNT FANNY'S NEPHEW.

Football Club Transfers

SIR, – Can you or one of your readers tell me how football club transactions are dealt with?

Recently Johnny Byrne was transferred from Crystal Palace Football Club to West Ham Football Club at a fee of £60,000, plus the transfer of Ron Brett, a West Ham player, to Crystal Palace.

In West Ham F.C.'s accounts would the payment be debited to a 'Fixed asset' account or to a 'Stock of footballers' account, with book-keeping entries to record the transfer of Ron Brett? If the £60,000 goes to 'fixed assets' would the player be 'depreciated over his normal working life' and would investment and other capital allowances be claimed? Also, is it possible for there to be a balancing charge or allowance on the transfer of Ron Brett?

You will appreciate that I am only interested in a humorous sort of way.

Yours faithfully,

Croydon, Surrey. J. T. H. WILLIAMSON.

[The secretary of West Ham United Football Club comments: Players are not considered as fixed assets as obviously from time to time transfers are effected between clubs, transfer money is dealt with by a separate 'Transfer account'. In particular cases, money which is paid on an instalment basis can of course be paid over a period of time, in which case the transfer money may be included in accounts for different years.]

Every Little Helps

SIR, – Who says the Civil Service are lacking a sense of humour?

After serving on a Ministry Panel I was offered a small fee of £8 8*s* for attending meetings. I suggested that I wished to waive my claim. The reply I received from the Ministry concerned was as follows:

> 'We would certainly not press you to claim for expenses, and I can assure you that your waiver of these will be reflected in the Budget which the Chancellor will be introducing shortly.'

Yours faithfully,

F.C.A. (London).

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Godden *v.* A. Wilson's Stores (Holdings) Limited

In the Court of Appeal – February 27th, 1962

(Before THE MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice UPJOHN and Lord Justice DIPLOCK)

Income tax – Cessation of trade – Termination of service agreement – Payment of sum therefor – Whether that sum deductible by company – Income Tax Act, 1952, sections 122 (Schedule D, Case I), 137 (a).

Down to March 31st, 1958, the company carried on business as a rubber and coco-nut planter in Malaya, and its profit for that period was assessable under Case I of Schedule D. On March 15th, 1958, an agreement was made for the sale of the company's estates, and the sale was completed on March 31st, 1958, and on that day the company's business was discontinued.

The manager of the company's estates in Malaya had served the company in that capacity since 1946, and the terms of his service during the material period were stated in a letter dated August 19th, 1957. The agreement recorded in the letter was to be for six months certain and thereafter subject to six months' notice on either side, and notice was to be given on March 31st or September 30th in any year. On February 25th, 1958, the board directed that the manager should be given formal notice to terminate his employment as from March 31st, 1958, and that he was to be paid £1,900 representing the salary for the six months to September 30th, 1958, and the estimated commission he would have earned in that period. This payment was to cover any claims the manager might have against the company. These arrangements were accepted by the manager in a letter dated March 7th, 1958. The £1,900 was paid to the manager on March 28th, 1958, and was charged in the company's profit and loss account for the nine months ending March 31st, 1958.

It was contended on behalf of the appellant that the £1,900 was not deductible in computing the company's profit for that period, in that the sum was not expended for the purposes of the company's trade, for the trade was about to end. It was contended on behalf of the respondent that the £1,900 was deductible, because it was a payment that had to be made in order that the company might be released from its liabilities under the letter of August 19th, 1957. The Special Commissioners decided in favour of the respondent.

Held (affirming the decision of Mr Justice Plowman): the £1,900 was not paid for the purpose of enabling the respondent to carry on its business and earn profits; and that the sum was not deductible in computing the profit of the period in question.

Griffiths *v.* J. P. Harrison (Watford) Ltd

In the House of Lords – March 15th, 1962

(Before Viscount SIMONDS, Lord REID, Lord DENNING, Lord MORRIS OF BORTH-Y-GEST and Lord GUEST)

Income tax – Dividend-stripping – Business of merchant till 1953–54 – Loss to carry forward – Purchase of shares in company – Dividend received from subsidiary – Loss on sale of shares – Whether trade of share-dealing carried on – Income Tax Act, 1952, section 341 – Finance Act, 1953, section 15.

The company carried on business as a merchant till a date in 1953–54, and that business then ceased. In 1952–53 the company incurred a loss of £13,585, which was available to be carried forward under section 341 of the Income Tax Act, 1952. On October 8th, 1953, an additional object was inserted in the company's objects clause, namely, to carry on the business of share-dealing. On December 4th, 1953, the company bought all the issued shares in another company for £16,900 and borrowed £15,900 for the purpose. The shares were bought on a blank transfer, which was not registered, and no stamp duty was paid. The subsidiary company had carried on business as a cloth merchant up to November 30th, 1953, when that business ceased, and the subsidiary then had a considerable sum available for distribution as dividends. On January 26th, 1954, the subsidiary declared a net dividend of £15,901 19*s* 3*d*, and this sum was received by the company. On the same day the £15,900 which had been borrowed, was repaid, and the shares in the subsidiary were sold for their nominal value, namely, £1,000. This was the only transaction in shares by the company in 1953–54, but in the following year it was admittedly carrying on a trade of share-dealing.

The company claimed to be entitled to set the loss of £15,900 against the net dividend of £15,901 19*s* 3*d* it received on January 26th, 1954. The Special Commissioners decided that the company was not carrying on a trade of share-dealing in 1953–54, and they restricted the amount of the loss claim to £3,314, which was agreed as being the correct figure in relation to the company's loss as a merchant.

Held (affirming the decision of the Court of Appeal) (Lord Reid and Lord Denning dissenting): the company was carrying on a trade in 1953–54, and the loss of £15,900 could be set against the dividend received in that year.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on February 22nd, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Peter James Neal Biggs, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of Clause 21 of the supplemental Royal Charter in that (*a*) he failed within a reasonable time or at all to answer or take any action in response to requests in relation to the accounts of three limited companies of which he was auditor made to him by the accountants for the owners of those companies; (*b*) he failed to reply to or take any action in response to three letters addressed to him by an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Peter James Neal Biggs, F.C.A., had been proved and the Committee ordered that Peter James Neal Biggs, F.C.A., of 'Falconia', Landkey Road, Barnstaple, Devon, be excluded from membership of the Institute.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Peter Henry Hodgson, A.C.A., was at the General Session held in the Old Bailey on June 20th, 1961, convicted on indictment for that he made an indecent assault, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Peter Henry Hodgson, A.C.A., had been proved and the Committee ordered that Peter Henry Hodgson, A.C.A., of 106 The Avenue, Ealing, London W13, be suspended from membership of the Institute for a period of two years.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Reginald William Allott, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of Clause 21 of the supplemental Royal Charter in that he signed the Accountant's Certificates required by Section 30 of the Solicitors Act, 1957, relating to the practice of two solicitors in practice together for two accounting periods which he knew or which he ought to have known were not correct, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Reginald William Allott, F.C.A., had been proved and the Committee ordered that Reginald William Allott, F.C.A., of 1 South Terrace, Moorgate Street, Rotherham, Yorkshire, be reprimanded.

New Legislation

The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective.

STATUTES
(5 & 6 Eliz. 2)

Chapter 20: House of Commons Disqualification Act, 1957

[*Reprinted pursuant to section 5 of the Act with amendments to the First and Third Schedules in force on January 1st, 1962.*]

An Act to make provision for disqualifying the holders of specified offices for membership of the House of Commons, and to repeal the enactments providing for the disqualification of the holders of offices or places of profit under the Crown and other offices, of persons having pensions from the Crown and of persons contracting with the Crown for or on account of the public service, and certain enactments disqualifying members of that House for holding other offices; to make corresponding provision in respect of the Senate and House of Commons of Northern Ireland; and for purposes connected with the matters aforesaid.

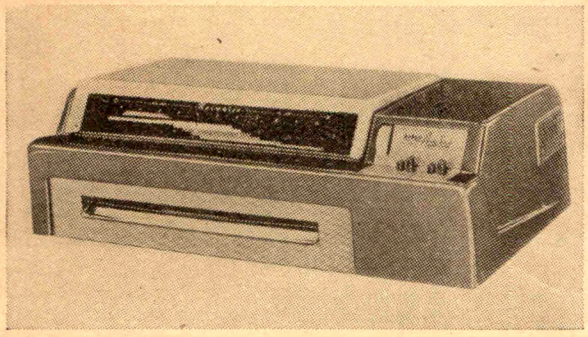
New Office

Range of Office Photocopiers

AN American company, Apeco, already known by name and reputation to a good many people in Britain, has recently set up a subsidiary in London for the sale of a range of photocopying machines and a binding system. The present series includes photocopiers for single sheet and book work. Other equipment will become available later on.

Lowest priced photocopier is the rotary *Century* at £49, which will eventually be obtainable from selected dealers as well as the manufacturers. This is a general purpose model for copying any standard type of office document. Most sophisticated is the *Uni-Matic* which copies in a single step. The original only is inserted into the machine and a copy is delivered automatically. *Uni-Matic* has push-button controls and a colour-code dial which acts as a guide to the operator in setting correct exposure time according to the tone value of the original. Price of this machine is £152.



Apeco Uni-Matic Copymaker

Other models include a portable exposure unit for book copying and a rotary exposure-development unit with a 14-inch feed. These sell at £35 and £89 respectively.

The *ComBind*, a hand-operated unit, incorporates a multi-hole punch and a device for inserting plastic binding into items like catalogues and reports. Small enough to go easily on a desk top, it costs £89.

Apeco Ltd, Wingate House, 93 Shaftesbury Avenue, London W1.

Translucent Wages Bags

NOTES and coins placed in the new *Checkmaster* wages bags can be counted without breaking the seal. The bags are completely translucent on one side and are made with a shaped flap which allows the corners of notes to protrude for counting purposes.

Made of white kraft paper and *Glassine*, the bags, in 4¼ in. by 3¾ in. size, are large enough for £5 notes. The latex-gummed flaps are immediately and firmly sealed by finger pressure.

Supplies are available through local printers and stationers, but the makers will send samples.

John Dickinson & Co Ltd, Packing Supplies Dept, Apsley Mills, Hemel Hempstead, Herts.

Time-saving Tax Forms

A MINIMUM amount of work is required in making out the necessary final returns for the Inland Revenue and Ministry of Pensions using a new form set produced by Moore's Modern Methods. The forms, which are printed on No Carbon Required paper, are equally suitable for use in mechanized or handwritten wages systems.

A three-part set of forms is made up as follows: P.9.(S) and P.11.(S) for Inland Revenue (top copy); the same forms for the Ministry of Pensions (second copy); Employee's Certificate (P.60) (third copy). These are used in conjunction with the Annual Declaration and Summary (P.35).

One set of forms is headed up for each employee and is aligned with the Form P.35. Entries are then made of the year's totals for pay, tax deductions, graduated pension contributions and superannuation – if any. By using an extra P.35 the employer can retain a copy for himself.

Moore's Modern Methods Ltd, 19–21 Farringdon Street, London EC4.

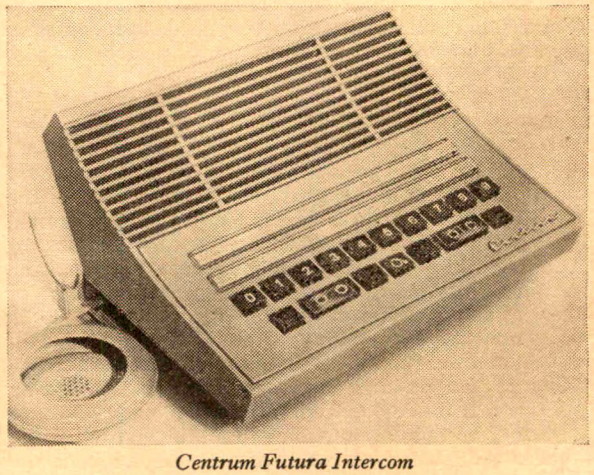
Dictation through Intercom

AUTOMATIC dictation facilities are now available to users of the *Centrum Futura* intercom system. This permits the same instrument to be used for dictation as for ordinary speech and can be used with a variety of dictating machines.

The *Futura* system operates through an automatic exchange, but dispenses with conventional telephones. These are replaced by small loudspeaking instruments which allow two-way speech without manual switching. Connections are made by push-button.

To connect with a dictating machine and to control all its functions, the executive uses a special set of buttons. Since he need press these only when actually switching from one function to another, he is free to move about the room while he speaks. Voice reproduction, even at thirty feet or so away from the instrument, is said to be of very high quality.

If a personal or paging call comes through during dictation, the instrument switches itself over to normal operation. On completion of the call, it automatically



Centrum Futura Intercom

Equipment

reverts to dictation, playing back the last few words as a reminder. Similarly, the executive can interrupt his own dictation by making an outgoing call.

Centrum Electronics, Terminal House, Grosvenor Gardens, London SW1.

High-speed Coin Handling

BRITISH silver coins are sorted, counted and batched by *M.1000-APTEC*, a machine linked to an electronic unit. Both parts are small enough to stand side by side on a table.

The machine's hopper is loaded with mixed coins. The counter, by illuminated indicator dots on its dials, indicates the running total (in sterling) of each type of coin and the total value of all. The machine stops itself when any one batch reaches a predetermined total. Results could, if desired, be printed out on a typewriter or punched into cards.

M.1000-APTEC is the result of collaboration between A.P.T. Electronic Industries of Byfleet and I.C.C. Ltd International Coin Counting Machine Co Ltd, 248–250 Tottenham Court Road, London W1.

Low Priced Add-listers

IMPROVED production techniques led to the reduction of prices on six existing *Addo* add-listing machines earlier this year. Now the company has announced two new models, the electric *148E* at only £62 and its hand-operated companion, *Model 148*, at £42. Each has a totalling capacity of one penny less than £1 million.

Features common to both models include: simplified keyboard; keys for whole numbers, non-add, repeat and correction; zero cut-out; and sub-total. A key interlock device on the electric version prevents double keying and therefore permits fast, accurate operation by touch.

Both add-listers could easily and cheaply be converted to decimal working.

Addo Ltd, 47–51 Worship Street, London EC2.

Portable Card Punch

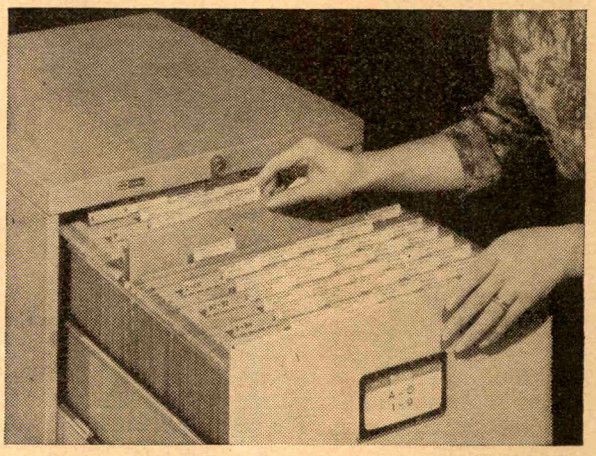
DATA can be punched direct into *IBM* eighty-column cards by salesmen, meter readers, inventory recorders or on the factory floor – to quote a few examples – by the *Port-A-Punch* just introduced to this country by IBM.

This pocket-size device comprises a punch board, the size of an IBM card, covered by a plastic template with guide holes over the punching position in the forty even-numbered columns. A special type of card, pre-scored in these columns, is put under the template and a pencil-shaped punching instrument is used to press out the pre-scored holes. An auxiliary card holder for attachment to the back of the punch holds up to fifty cards. Price £3 4s.

IBM United Kingdom Ltd, 101 Wigmore Street, London W1.

Flexibly Indexed File System

A HARD-WEARING and versatile indexing system is the special feature of *Flexatab* filing, which was introduced to the public for the first time at the recent Leeds B.E.E. Employing removable suspended folders for use in drawers, the system provides for siting index



Roneo Flexatab Filing

tabs in up to sixteen positions on foolscap folders, thirteen on quarto.

The tabs are made of robust transparent plastic and cannot be displaced by an accidental knock, the makers say. Title inserts, which are available in white and four different colours, leave space for three lines of typing.

There are two types of folder: one which is scored for expansion, the other with a one-inch gusset to allow for bulky contents. Each is slitted so that a metal fastener can be put in to hold papers in place.

Roneo Ltd, 17 Southampton Row, London WC1.

Fire Protection for Files

AN ingenious and relatively inexpensive method of protecting filing cabinets against fire is afforded by the *Duo-File* cabinet. This is an insulated cupboard which accommodates any standard four-drawer filing cabinet and also has provision for shelves, so that it can be used alone.

The *Duo-File* has a double steel skin packed with fire-resistant material and is claimed to withstand temperatures up to 2500°F. The door surrounds (it can be supplied with one or two doors) have double right-angle returns, thus giving a completely enclosed interior. The base is reinforced by heavy steel framing to give extra rigidity.

This cabinet has a number of practical advantages. Since any filing cabinet can be placed in it, the contents can be changed at any time, simply by removing the filing cabinet and no drawers need be emptied. Heavy interior locking bars afford a safeguard against tampering. Its weight of 3 cwt. is much less than that of most fire-protection equipment – an important point in many office buildings.

External dimensions: 27 in. deep by 22 in. wide by 57 in. high.

Price £60, plus 5 per cent purchase tax.

Agdon Steel Equipment Ltd, 329 Gray's Inn Road, London WC1.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS BABER, OWEN & Co, Chartered Accountants, of Bristol, announce that Mr R. L. OWEN, F.C.A., their senior partner, is retiring from the partnership at March 31st, 1962. He will continue as a consultant to the firm at 18 Baldwin Street, Bristol 1.

MESSRS BAKER, SUTTON & Co, Chartered Accountants, of Eldon Street House, Eldon Street, London EC2, announce the retirement of their senior partner, Mr A. J. M. ROBERTS, F.C.A., as from March 31st, 1962. Mr ROBERTS will continue to be available in a consultative capacity for the time being. Mr R. A. BAILEY, A.C.A., a senior member of their staff for some years, has been admitted as a partner as from April 1st, 1962.

MESSRS BLAND, FIELDEN & Co, Chartered Accountants, of 11 Sir Isaacs' Walk, Colchester, announce that Mr C. S. ROBINS, F.C.A., Mr C. A. GODDARD, F.C.A., and Mr MARK FIELDEN, B.A., A.C.A., have been taken into partnership. The name of the firm will remain unchanged. They also announce that their London practice has been merged with that of MESSRS BIRD & PARTNERS, under the name of BIRD, BLAND & Co, at 4 Broad St Place, London EC2. Telephone: London Wall 2122.

MESSRS W. L. GALLANT & Co, Chartered Accountants, of Leeds, and MESSRS WATSON & MCLAREN, Chartered Accountants, of Leeds, announce that they have agreed to amalgamate their practices with effect from April 6th, 1962, under the firm name of W. L. GALLANT, MCLAREN & Co. Mr F. B. WATSON, M.A., F.C.A., having retired, the partners in the new firm will be W. L. GALLANT, F.C.A., A. D. MCLAREN, M.B.E., T.D., F.C.A., R. OLDROYD, F.C.A., and R. HARRISON, A.C.A. The address of the new firm will be 24 Lower Basinghall Street, Leeds 1.

MESSRS ROBSON, MORROW & Co announce that, as from April 2nd, 1962, they will have moved their offices from 59 New Cavendish Street, W1, and their new address will be 4 Copthall Avenue, London EC2. Telephone: National 8971/8.

MESSRS THOMSON MCLINTOCK & Co, Chartered Accountants, of 57 King Street, Manchester 2, announce that as from April 2nd, 1962, their address will be 12 Booth Street, Manchester 2. Telephone: Central 1142.

MESSRS W. ROWLAND WALLER & Co, Chartered Accountants, announce that Mr W. A. WALLER, B.COM., F.C.A., and Mr F. A. WALLER, A.C.A., will retire from the firm on April 1st, 1962. The practice formerly carried on by the firm at Southend-on-Sea has been acquired by the retiring partners who will, in future, practise as WALLER & Co. This new firm will be amalgamated with the practice already carried on by the retiring partners as VERNON BAXTER & Co.

MESSRS WHITFIELD & Co, Chartered Accountants, of Leeds and Bradford, announce that as from March 31st, 1962, their address will be Leefield House, 116 Cardigan Road, Leeds 6.

MESSRS WILKINS, HASSELL & Co and MESSRS KENNEDY, FOX, OLDFIELD & Co, Chartered Accountants, announce that as from April 1st, 1962, their practices are to be amalgamated. The combined firm will be carried on under the name of WILKINS, KENNEDY & Co at 8 Queen Street, London EC4, 10 Warrior Square, Southend-on-Sea and Risborough House, Sycamore Road, Amersham. The London partners will be MESSRS ERIC F. WILKINS, F.C.A., R. G. MAIN, F.C.A., H. E. HASSELL, F.C.A., N. G. REEVES, F.C.A., A. W. GARNIER, F.C.A., and N. J. MILLARD, F.C.A., together with Mr B. CHANCE, F.C.A., who has been a member of the staff of MESSRS KENNEDY, FOX, OLDFIELD & Co for a number of years and has been admitted to partnership as from April 1st, 1962. The partners of the Southend-on-Sea firm will be Mr M. A. WREN, A.C.A., and the London partners, and the partners of the Amersham firm will be MESSRS D. G. WILKINS, A.C.A., H. W. S. WESTERMANN, F.C.A., and the London partners.

MESSRS JOHN M. WINTER & SONS, Chartered Accountants, of Berkeley Square House, Berkeley Square, London W1, announce that Mr DOUGLAS WINTER, F.C.A., retires from the firm on March 31st, 1962, but will continue to be available in a consultative capacity.

THE 'RED BOOK'

The 1962 edition of the *List of Members* (the 'Red Book') of The Institute of Chartered Accountants in England and Wales is now published and distribution is nearing completion. The 'Red Book' records a total membership of the Institute of 35,229 compared with the previous year's figure of 33,867. The following table shows the number in each class of membership:

Members in practice within the Metropolis		
Fellow	2,623	
Associate	637	
Incorporated accountant member F.S.A.A.	5	
Incorporated accountant member A.S.A.A.	5	
		3,270
Members in practice in the United Kingdom but not within the Metropolis		
Fellow	5,719	
Associate	1,459	
Incorporated accountant member F.S.A.A.	23	
Incorporated accountant member A.S.A.A.	6	
		7,207
Members residing in but not practising in the United Kingdom		
Fellow	9,971	
Associate	9,670	
Incorporated accountant member F.S.A.A.	814	
Incorporated accountant member A.S.A.A.	209	
		20,664
Members not residing in the United Kingdom		
Fellow	1,785	
Associate	1,403	
Incorporated accountant member F.S.A.A.	575	
Incorporated accountant member A.S.A.A.	325	
		4,088
Total		35,229

The changes made in last year's edition in order to conserve space – such as the omission of dates of election to fellowship – are now a constituent part of the year book, as is the breakdown of the London membership into various districts. Other information includes the names of Past-Presidents and Vice-Presidents; membership of the Council and its committees, and details of the district societies and students' societies. Details are also given of the objects and work of the Chartered Accountants' Benevolent Association, with which – subject to approval by the Court – the Benevolent Fund of The Society of Incorporated Accountants is to be integrated.

TAX RESERVE CERTIFICATES

It is announced by the Treasury that Tax Reserve Certificates of the ninth series issued from March 24th, 1962, until further notice, under the terms of the prospectus dated March 21st, 1961, will bear interest at the rate of 3 per cent per annum.

The rate of interest on certificates of the ninth series subscribed before March 24th, 1962, will remain unchanged.

The interest on Tax Reserve Certificates is free of tax. Grossed up at 7*s* 9*d*, the new rate of interest represents an equivalent yield of £4 17*s* 11*d* per cent per annum.

IN PARLIAMENT

General Commissioners of Income Tax

Mr HALE asked the Attorney-General what is the procedure for the appointment of Commissioners of Income Tax; and what precautions are taken to ensure that the Commissioners are representative of all classes of the community.

THE ATTORNEY-GENERAL: I assume that the question refers to the appointment of General Commissioners of Income Tax. Since January 1st, 1960, the authority to appoint General Commissioners of Income Tax has been vested in my noble friend the Lord Chancellor, though in a few Divisions appointments may also be made by the magistrates for the area. To assist him in discharging this duty my noble friend has set up Advisory Committees throughout the country, similar to those which advise him on the selection of candidates for appointment as Justices of the Peace. When appointing General Commissioners, my noble friend's primary concern is to find persons of integrity, discretion and impartiality who also have some experience of the manner in which the income tax operates and the way in which it can affect the taxpayer. Subject to these overriding considerations, he bears in mind the desirability of including among the General Commissioners persons from different sections of the taxpaying community.

Hansard, Mar. 22nd, 1962. Written Answers. Col. 61.

SOUTH WEST LONDON DISCUSSION GROUP

The next meeting of the South West London Chartered Accountants' Discussion Group will be held at the Kingston Hotel, Wood Street, Kingston upon Thames, on Monday next at 6.45 for 7 p.m., when the subject for discussion will be 'The Common Market'. Mr Rudolf Nieuwenhuis will open the discussion.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting for Bible reading and prayer will be held at 1 p.m. on Monday, April 2nd, 1962, in the vestry at St Mary Woolnoth Church, King William Street, EC3. The Scripture for reading and thought will be Romans, Chapter 8, verses 1 to 9 (The enabling of the Spirit).

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

CHESTER AND NORTH WALES CHARTERED ACCOUNTANTS

At the annual meeting of the Chester and North Wales Branch of the Liverpool Society of Chartered Accountants, held on March 16th, the following officers for the year 1962–63 were elected:

Chairman: Mr E. Catherall, F.C.A.
Vice-Chairman: Mr C. W. Robinson, F.C.A.
Hon. Secretary: Mr P. G. Lane, F.C.A., 20 Nicholas Street, Chester.
Hon. Treasurer: Mr J. G. Raymond, F.C.A.
Hon. Auditor: Mr Frank Hack, F.C.A.

Messrs G. R. Hargreaves, F.C.A., and J. G. Raymond, F.C.A., were re-elected to serve on the Committee and Mr J. R. Townley, F.C.A., was elected to the Committee.

THE INSTITUTE OF INTERNAL AUDITORS
London Chapter

The next meeting of the London Chapter of the Institute of Internal Auditors will be held on Wednesday next, April 4th, at the Kingsley Hotel, Bloomsbury Way, London WC1, at 6 p.m. The speaker will be Mr G. H. Day, of Heal & Son Ltd, and his subject will be 'Credit control'.

PRODUCING FOR EUROPEAN MARKETS

An interesting booklet entitled *Producing for European Markets* published recently by the British Productivity Council comprises the text of papers given at the joint B.P.C. and Export Council for Europe Conference at the 1961 Factory Equipment Exhibition, held in London last November. Contents include addresses on 'Europe's consumer goods requirements', 'Facing up to the challenge', and 'Europe's capital goods requirements'.

Copies of the booklet are obtainable from the British Productivity Council, Vintry House, Queen Street Place, London EC4, price 2*s* 6*d*.

ACCOUNTANTS' WEEK-END SCHOOL

The third residential week-end school of the British Association of Accountants and Auditors will be held at New College, Oxford, from July 20th to 22nd. Three papers are to be presented as follows:

'The Finance Act, 1962', by Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., Assistant Editor of *Taxation*.
'The law of master and servant', by Mr F. H. J. Wileman, LL.B., F.C.C.S., Secretary of the Corporation of Secretaries.
'Accounting as an aid to management', by Mr F. A. J. Couldery, F.C.A.

In addition there will be a taxation brains trust with Mr S. H. Reilly, A.C.A., as question master.

LOCAL GOVERNMENT SERVICES

The tenth annual return of education statistics containing information relating to all local education authorities in England and Wales for the year ended March 31st, 1961, was issued recently by The Institute of Municipal Treasurers and Accountants in conjunction with the Society of County Treasurers[1].

Total expenditure chargeable to rates and grants rose by £54,863,214 to £706,328,302 or an increase of £1,087 to £15,440 per 1,000 population. Primary education including nursery cost £216,139,859, secondary education £256,940,300 and further education £86,629,036. The average number of pupils on school registers totalled 6,984,433.

PRODUCT COSTING AND BUDGETARY CONTROL

Budgetary control can be applied effectively and economically in furniture firms. This is the theme of the second Furniture Development Council Costing Course to be held at the Charing Cross Hotel, London, on April 10th and 11th.

Speakers will deal with the benefits gained by management from the use of the Council's costing principles and budgetary control, the accounting work necessary will be explained, and two leading furniture manufacturers will lead discussions on their experience of budgetary control and standard costing.

The speakers taking part will include Mr Martin Callender, B.COM., F.C.W.A., managing director of Martin Callender & Co, Management Consultants; Mr A. R. Swannack, A.C.W.A., of Associated Industrial Consultants; Mr F. M. Dwiggins, of Arthur Andersen & Co, and two leading furniture manufacturers.

The course will last from 9.30 a.m. to 5 p.m. on both days and will cost eight guineas, including lunch and light refreshments. Applications should be addressed to The Furniture Development Council, 11 Adelphi Terrace, Robert Street, London WC2.

ECONOMIC CONDITIONS IN AUSTRIA

A further booklet in the 1962 series dealing with economic conditions in member and associated countries of the Organization for Economic Co-operation and Development has recently been issued covering Austria. Copies of the booklet are obtainable from H.M. Stationery Office, price 3*s*.

Economic Survey

THE 'new look', which was first introduced into the annual *Economic Survey* in 1960, has now become firmly established. It makes for easier reading and a better appreciation of the main economic issues facing the nation. Part 1 of this year's *Survey*[1], published on Wednesday, summarizes the economic happenings of 1961, outlines the prospects for 1962 and discusses certain aspects of current economic policy. Part 2 fills in the details of the outline history sketched in the first part and provides the relevant statistical evidence.
